

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

J. J. Little HISTORY OF RICHMOND.

CHAPTER VI.

RESOLUTIONS OF '98. BURN'S TRIAL.

During the summer of 1798, Virginia and the whole Union were agitated, from one end to the other, by the passage of the Alien and Sedition Laws. The power assumed, and directed to be carried out by these laws, struck with astonishment the republican party, and excited the most strenuous efforts to combat them. Far more excitement prevailed than during the momentous times of '88, and a stormy session of the Legislature was looked for. There was amazement, but no terror in Virginia; the attention of the whole State was directed to Richmond; men assembled to see what was to be done in the emergency, and many prepared to visit the Capital during the winter session to attend the deliberations of the Legislature. Every court-green, and every place of public meeting, had been a battle-ground between the friends and enemies of these measures, until the public mind was thoroughly wrought up on the subject; and the great contest was referred to the Assembly, where a decisive battle was expected. Soon after the opening of the Legislature, John Taylor, of Caroline, offered the celebrated Resolutions well known as the Virginia Resolutions of '98. They were written by Madison, and like every thing emanating from his pen, were clear in diction, lucid and forcible in argument, and temperate in manner. They have been subjected to the most thorough and fierce ordeal that the rancour of party spirit, aided by strong and well informed intellects, can devise; and they have stood the test. No point in politics is now better understood and believed in than that these laws were unconstitutional and unjust; no man now defends them, and no party would ever adopt them. These Resolutions, after declaring the warm attachment of Virginia to the Union, its value and its origin, and her determination to maintain the constitution of the United States, and of the State, against aggression; after declaring that the powers of the government are limited to the clear construction of the Constitution, and that if exercised wrongfully, the States have the right to interpose; then go on to speak of the improper extension of this power, evidently tend-

ing to consolidation, and finally to monarchy; they then assail the Alien and Sedition Laws as the abuse of powers delegated, and as grasping power not delegated; and finally declare that Virginia has ratified the Constitution as a safeguard to liberty, and that this being impaired by unconstitutional laws, she calls on her sister States to concur with her in this declaration, and in endeavoring to form measures by which to retain unimpaired the rights and liberties reserved to the States or to the people.

Parties were warmly divided on the passage of these Resolutions, and a very animated debate ensued. John Taylor, who brought in the Resolutions, was their most powerful advocate, and the most bitter and unrelenting opponent of the laws. He was a man well known for his attachment to republican principles; for the vigor and energy with which he enforced them; and for the ability and eloquence with which his views were uttered. Possessing a mind at once strong, keen, and discriminating; a spirit daring and resolute, he was well fitted to begin such a contest, and to bear its chief brunt. Beside his influence and efforts as a politician, he was an able lawyer, and one of the first scientific and practical farmers in Virginia. He wrote well both on politics and agriculture. Clear and concise, yet containing a spice of wit and a dash of sarcasm that rendered him an agreeable penman, his work on agriculture, called "Taylor's Arator," is the first work on the subject ever written in Virginia, and one of the first in the United States. So well written, and so practical has it been considered, that it is matter of regret that he did not divert his mind sufficiently from politics, after the passage of these resolutions, to have written out more fully his opinions and practices in agriculture. The work is a racy mixture of agricultural experiments and modes of procedure, with a defence of the institution of slavery in answer to the assault on it in Jefferson's Notes; amusing complaints of the poor system of farming generally pursued, and sarcastic political dissertations. He defended the resolutions, and proved the laws to be unconstitutional. Other able men were on the same side and spoke with great effect in favor of resolutions condemning such obnoxious laws. Wilson Cary Nicholas, William B. Giles, Mr. Mercer and Mr. Daniel were among these; men whose reputation is well known in Virginia for sound judgment and firm integrity,

as well as for the power of speech, that enabled them to defend with the tongue whatever their hearts or heads might dictate. William Pope and James Barbour were among the most ardent advocates of the resolutions; the first a man of wit and humor, and so imbued with it that he could not speak even on a subject that interested him as this one did, without giving full scope to his peculiar faculty. Although the youngest man in the House, James Barbour was one of the foremost in denouncing the laws, and his speech was considered the most effective that was delivered.

The three most able opposers of the resolutions were George Keith Taylor, the brother-in-law and friend of Marshall, General Lee and Edmund Brooke. To the first we owe our penitentiary system, and many other improvements in our criminal code; he was the most thoroughly informed man in the house on questions of law; an acute, profound and eloquent lawyer and politician. He defended the laws as necessary and proper under the state of affairs then existing; asserting that Congress had the right to punish offences against the law of nations, and to ensure domestic tranquillity, by preventing foreigners from interfering with our affairs of State; and that this the alien law provided for; that the common law did not punish sufficiently the licentiousness of the press, and that to prevent false and scandalous libels from being issued was not to abridge its freedom; and this, the sedition law prevented. General Lee, Edmund Brooke and others, men of great reputation for high-toned character and ability, followed in a similar strain.

The resolutions passed, were transmitted to the States composing the union, and excited discussion and called forth opinions wherever they went. In the ensuing session a great display of talent was looked for, as Patrick Henry had left his retreat, been elected to the Legislature, and intended to advocate a repeal of the resolutions; the friends and opponents of the laws were very active, and the best men of both parties were elected to the House; Madison, the author of the resolutions, was among them. Patrick Henry died; what his influence would have been it is impossible to say; had he entered the Legislature we should have seen another battle of the giants; had he been overmatched and overcome by his numerous and able opponents, he would have fallen Sampson-like dragging down his enemies with him. Richmond was again filled with a crowd anxious to see and hear; the resolutions had caused men to think on the powers of the Federal Government, and the public mind was stirred up. Kentucky was the only State that had responded to the resolutions, accepting them; every other one had either

passed them by, or condemned them. These replies called forth the celebrated Report of Madison, explaining and illustrating these resolutions. It settled the question in the minds of most men; and gave to our people the first clear and well-understood character of the Constitution. The opinions thus expressed and explained serve as a standard by which to measure the powers of the Constitution, and will ever be regarded as the most useful and lasting emanation from the mind and pen of Madison.

Richmond has then the honor that within it the first organized system of resistance was proposed; again, that in it the Federal Constitution was adopted after strict trial and thorough examination; and now again she has the honor almost alone, and in the face of opposition enough to have shaken a less determined people, of having shown how that Constitution is to be explained and carried out.

It was the custom of the ancients in granting honors and rewards to give crowns, arms, and tripods of precious metal to the most worthy. No city in this country possesses so bright a crown of civil honors, or can boast of such a tripod of fame as Richmond. In no other place have such men ever assembled, or such great and important public measures been adopted.

The trial of Callender, under these very laws which had been pronounced unjust, soon after agitated Richmond. It would seem as though the Federal judges desired to strike a blow to intimidate where most opposition had been made. Yet no opposition to law, no mob, nothing like nullification disgraced the Capital of Virginia. The law had its course, although believed unjust; yet by the ballot-box the people overturned the law, and impeached the judge whose arbitrary conduct had given offence. The noble stand taken by Virginia was rendered more imposing by the patience with which she bore a legal injury, and by the means of legal redress which she adopted.

During this time James Monroe was Governor. William Wirt, who knew him well and was then in Richmond, thus describes him. "In his stature he is about the middle height of men, rather firmly set, with nothing farther remarkable in his person except his muscular compactness and apparent ability to endure labor. His countenance, when grave, has rather the expression of sternness and irascibility; a smile however, (and a smile is not unusual with him in a social circle) lights it up to very great advantage, and gives it a most impressive and engaging air of suavity and benevolence. Judging merely from his countenance, he is between the ages of forty-five and fifty years. His dress and personal appearance are those of a plain and modest gentleman. He is a man of soft, polite and even assiduous atten-

tions; but these, although they are always well-timed, judicious, and evidently the offspring of an obliging and philanthropic temper, are never performed with the striking and captivating graces of a Marlborough, or a Belingbroke. To be plain, there is often in his manner an inartificial and even an awkward simplicity, which, while it provokes the smile of a more polished person, forces him to the opinion, that the Governor is a man of a most sincere and artless soul.

"Nature has given him a mind neither rapid nor rich; and therefore he cannot shine on a subject which is entirely new to him. But to compensate him for this, he is endued with a spirit of generous and restless emulation, a judgment solid, strong and clear, and a habit of application which no difficulties can shake; nor labors tire. His emulation has urged him to perpetual and unremitting inquiry; his patient and unwearied industry has concentrated before him all the lights that others have thrown on the subjects of his consideration, together with all those which his own mind, by repeated efforts, is able to strike; while his sober, steady and faithful judgment has saved him from the common error of more quick and brilliant geniuses, the too hasty adoption of specious but false conclusions. These qualities render him a safe and an able councillor.

"As the elevated ground, which he already holds, has been gained merely by the dint of application, as every new step which he mounts becomes a means of increasing his powers still farther by opening a wider horizon to his view, and thus stimulating his enterprise afresh, reinvigorating his habits, multiplying the materials and extending the range of his knowledge, it would be matter of no surprise to me if before his death, the world should see him at the head of the American administration. So much for the Governor of the commonwealth of Virginia, a living, an honorable, an illustrious monument of self-created eminence, worth, and greatness!"

On a night late in the month of August 1800, intelligence was suddenly brought to the city of Richmond, that an insurrection of slaves in the neighborhood had broken out, and that the insurgents were marching on the town. One thousand slaves had organized a rebellion under the command of two intelligent leaders, and in secrecy had perfected their plans. They were to attack the city by night, kill all who resisted, and all the males, divide the women and the spoil, seize on arms and munitions of war, and free all the negro race throughout the State. On this night they had assembled six miles above the city, armed rudely with axes and scythe blades, and the massacre and burning of Richmond was planned; but for a direct interposition of Providence, it would have succeeded. The police

was feeble, the town small and scattered, the militia and citizens totally unprepared, and the attack would have been terribly disastrous. A violent storm came on, with heavy rains that swelled the streams and impeded their assembling and their progress. A young negro, attached to his master, swam the stream and gave warning; consternation at first spread through the city, but the storm which checked the progress of the insurgents, gave time for preparation. The militia and the citizens were called out and armed, and the leading column of the slaves finding that their purpose was discovered, and that resistance was prepared, scattered and fled. The ring-leaders were caught and hung, and the attempted insurrection quenched in the blood of those who had set it in motion. It seems to have been a solitary attempt; the limited ideas and scanty information of the parties prevented them from knowing that their enterprise would fail and be avenged; they did not know the extent of our land and the population of it. The severity, and the justice too, with which this insurrection was put down, (for all the chiefs were hung who were concerned in it, and no one was hung who was not proved to have taken part,) intimidated and instructed the race, and no more slave rebellions arose near our cities or in populous parts of the country.

Religious fanaticism, that frequent instrument used by designing men, may have been one cause, the recollection of the freedom and license given by the British in their invasion another cause of this rebellion.

It is more probable, however, that the notions and discussions of freedom, engendered by the French revolution, had been heard by some of the city slaves during this time of high political excitement; and the success of the efforts of the same race in Hispaniola in overcoming and slaughtering the whites was fresh in the minds of all men. These discussions and this successful insurrection no doubt prompted the abortive attempt on Richmond. The result of this attempt was the formation of the Public Guard in Richmond; a regularly drilled, paid and commanded corps of men, organized for the protection of the arms and other munitions of war in the armory, to serve on duty near the Capitol, and to guard the penitentiary. It consists now of eighty-six men; they wear the uniform of the United States troops, and are commanded by Captain Charles Dimmock, an officer of the regular army. In every respect they are equal to the best troops any where found, and this is owing to the peculiar good qualities of the commanding officer in selecting and training the material of his corps. It is both an ornament and protection to the city.

In 1800 Richmond had but 5,735 inhabitants.

Its chief taverns were, beside those already mentioned, the Eagle Hotel on the south side of Main street between twelfth and thirteenth; and Boler's Ordinary on Main street, where the City Hotel now stands. The old Eagle was built in 1798; it was a large building forming the four sides of a square, its entrance being under a large arch way; for a long time it was the chief hotel in the city, being much frequented by members of the Legislature. The Ordinary was a plain one story wooden building; a place of much resort. The Union was afterwards built; the old Swan Tavern, on Broad street, was a place famous for political dinners; and the Washington, facing the public square, afforded thirsty members of the Legislature an opportunity of imbibing toddies and juleps to help off the tedium of a dry speaker, or to assist them in their patriotic endeavors to serve the public!

The whole city was very rough and very much needed improvement, especially in the upper part; Main street, above where the American Hotel now stands, was so rugged that carriages could not pass, and it formed even a disagreeable path for pedestrians. The Capitol stood alone on its square; and this square was an unenclosed common, marked by two deep ravines, with the hill-side covered with galled places, and bare of trees or shrubs, with only a few stunted pine bushes scattered here and there. A wagon road ran through it, between the Governor's house and the Capitol, and passed down eleventh street to Main; over which much country produce was brought into the city. Some of the Trans-Alleghany members were still accustomed to come down to the Legislature on horseback; and the five gallon bowl of toddy was daily made in the Governor's house for their refreshment, after they had closed the day's labors in the capitol. Houses extended stragglingly up Broad street; and a large pond of water, fed by rains, stood in what is now the most thickly built part of Shockoe hill; it afforded skating-ground for the boys, and was only drained when the streets were properly graded and paved.

The basin had been dug in a large grove of trees; woods surrounded and encroached on the town, and city and forest were intermingled. Most of the business was carried on in the lower part of the city; professional men had their offices, and business men assembled much lower down than at present. The position of the basin, in the upper part, gradually drew the chief business higher up town. The old United States Bank was kept on Main street between thirteenth and fourteenth, in a large three story house, the former residence of the first Mayor of the city, Dr. William Foushee; the store of Hubbard, Gardner & Carlton stands now in its place.

The first office of the Virginia Bank stood on the corner of tenth and Bank streets; the adjoining house was the residence of Dr. McClurg, who was for a long time president of the Common Council of the city; it was then esteemed one of the very handsomest houses in Richmond. These now form the Madison House.

The Farmers' Bank was in the corner house below the Eagle Hotel, now occupied by London's store. There was no church then in Richmond; one Episcopal minister, Mr. Buchanan, and one Presbyterian, Mr. Blair, preached on alternate Sundays in the hall of the House of Delegates, to the same congregation; St. John's church on Richmond hill being too high and distant, to be visited on Sundays over the rough streets. The hall presented a different appearance from its present arrangement. The entrance was by a side door in the south-east corner of the room; there were no galleries; the eastern part of the hall was cut off by a partition of wood and glass; the speaker's chair occupied the place of the present door of entrance, and instead of chairs for the members arranged in a semi-circle, there were benches running circularly round the room and leaving a clear oval space in the centre. In this place Henry spoke in the British Debt Case, and here Burr stood upon his trial.

Mr. Buchanan was a Scotchman, a man of wealth and of great simplicity of life and character; jovial in disposition and fond of fun and joking, he made a delightful companion. He was a bachelor, either from necessity or because he thought the joys of matrimony very much overrated; of middle size, and broadly built; dressed in the large loose coat, the long vest with its flap pockets reaching to the thighs, stockings and small clothes with silver knee and shoe buckles; lively and genial in manners, and so fond of fun that he did not always bear himself with sufficient seriousness in his religious services. These were days of fun and sport; neither parson objected to a quiet game of whist, and Buchanan was often accustomed to collect a party, and keep up the game for hours together. His habits were studious, and he built himself a small frame house as a study near Mayo's bridge, and there spent most of his time during the day. He also owned a farm near the city, including in it the spring bearing his name and the famous quoit-ground still frequented by the club; of this club he was one of the originators, and was a very regular and excellent player. Often when in his study he would be waited on by couples from the country, wishing to have the marriage ceremony performed.

On one occasion a countryman of his own came in, and the ceremony proceeded until the

parson came to that part of it, where the bridegroom takes his bride for better or for worse, &c. "Stap. Johnny Buchanan, stap," said Sawny. "I'll take her for better and noo for warse." Sawny seemed to have derived his ideas of matrimony from the business of horse-trading, where an unsound bargain was returned, or if unwarranted not taken. It is not related how Sawny was pacified, or what explanation was made. Buchanan belonged to a class now extinct, that of jovial, merry parsons, who bore lightly their ministerial duties, and enjoyed life as it passed.

Parson Blair was a married man, more sedate and dignified, and whose gravity often exposed him to the jokes of his brother parson; he possessed an abundance of dry wit and humor, and was fully a match for his friendly antagonist. He had a fair talent for versification, and wrote many fugitive pieces of merit; he was an excellent man in all the relations of life, and useful in his office. Richmond seems to have been a lively place, more famous for its amusements in racing, drinking and frolicking generally among the mass of the people, than for those of a higher intellectual character. Its citizens had abundant leisure, and spent their time in seeking amusement. The higher circle consisted of the families of the neighboring planters, who left their estates to the management of overseers, and spent the larger part of the year in Richmond, because of its social advantages. To these were added the better class of merchants and resident citizens, and the State officers with their families. In those days no man was considered "ex officio" a gentleman; he was a gentleman in office. These made up a fine, pleasant society, unsurpassed by any on earth for educated intelligence, dignity and courtesy of manner, urbanity and hospitality. They were men of leisure, who spent life in enjoyment; they were not money makers, nor did they feel the cares and anxieties of men of trade; their leisure and their natural disposition led them to cultivate those occupations and amusements, which rather refine the manners and add to our happiness, than those which increase the wealth and prosperity of a community.

The old-fashioned dress was now getting out of date; the stockings and small clothes were displaced by the pantaloons, and the changes made in dress and appearance leaned toward the French style. The mass of the people sympathized with the French in their struggle for liberty, and adopted many of their customs and much of their manners. French wines were more drunk, and the English drinks of ale and beer were less used. The most marked change, however, was in the laying aside the old-fashioned cocked hat, the breeches and stockings with top boots, and the substitution of the pan-

taloons and shoes. This sans culottes custom was of French origin, and did not make its appearance in this country to any extent, until after the expulsion of the French from St. Domingo; they came in large numbers to this country, and introduced their manners and customs. The adoption of republican principles in France, and sympathy in this country with them, led to the introduction of sans culottism, or pantaloon-wearing among us. This change of dress, with that of its corresponding political principles, is the greatest and most important revolution of modern times!

The bar of Richmond had always been of the highest calibre; it contained at this time some of the most talented men in the country, and many young men were rising through it to fame and extended reputation. John Marshall, one of its most prominent men, had just been appointed Chief Justice of the United States. His peculiar talents and very great ability were no where better displayed than in the trial of Aaron Burr for treason. It is proper to speak of this trial, of the men engaged in it, and give some account of the state of affairs at this time. Burr had been apprehended on the Mississippi and brought to Richmond for trial in 1807. The whole State had contributed towards other displays of eloquence; in this one the Richmond bar seemed to have been alone engaged, and well sustained their reputation as an able, eloquent, and talented body of men. The following is Wirt's description of Marshall. "The Chief Justice of the United States is in person tall, meagre and emaciated; his muscles relaxed, and his joints so loosely connected, as not only to disqualify him apparently for any vigorous exertion of body, but to destroy every thing like elegance and harmony in his air and movements. Indeed, in his whole appearance and demeanor, dress, attitudes, gesture, sitting, standing, or walking, he is as far removed from the idolized graces of Lord Chesterfield as any gentleman on earth. To continue the portrait; his head and face are small in proportion to his height; his complexion swarthy; the muscles of his face, being relaxed, give him the appearance of a man of fifty years of age, nor can he be much younger; his countenance has a faithful expression of great good humor and hilarity; while his black eyes—that unerring index—possess an irradiating spirit, which proclaims the imperial powers of the mind that sits enthroned within. This extraordinary man, without the aid of fancy, without the advantages of person, voice, attitude, gesture, or any of the ornaments of an orator, deserves to be considered as one of the most eloquent men in the world; if eloquence may be said to consist in the power of seizing the attention with irresistible force, and never

permitting it to elude the grasp until the hearer has received the conviction which the speaker intends. As to his person, it has already been described. His voice is dry and hard; his attitude, in his most effective orations, was often extremely awkward; as it was not unusual for him to stand with his left foot in advance, while all his gesture proceeded from his right arm, and consisted merely in a vehement, perpendicular swing of it, from about the elevation of his head, to the bar, behind which he was accustomed to stand. As to fancy, if she hold a seat in his mind at all, which I very much doubt, his gigantic genius tramples with disdain, on all her flower-decked plats and blooming parterres. How, then, you will ask, how is it possible that such a man can hold the attention of an audience enchained through a speech of even ordinary length? I will tell you. He possesses one original and almost supernatural faculty; the faculty of developing a subject by a single glance of his mind, and detecting at once the very point on which every controversy depends. No matter what the question; though ten times more knotty than 'the gnarled oak,' the lightning of heaven is not more rapid, nor more resistless, than his astonishing penetration. All his eloquence consists in the apparently deep self-conviction, and emphatic earnestness of his manner; the correspondent simplicity, and energy of his style; the close and logical connexion of his thoughts, and the easy gradations by which he opened his lights on the attentive minds of his hearers."

In the court over which this eminent man presided, Burr was to be tried for his life; and to aid the Attorney General, George Hay, in his struggle with the talent accumulated on the side of the accused, stood William Wirt and Alexander McRae.

Hay is described as a man of acquirement, rather than talent; he was a well read lawyer and a fair speaker. Patient, assiduous and courteous, he commanded respect; and the office which he had attained showed the estimation in which he was held. Without those brilliant qualities which flash out and dazzle an audience, he was a pertinacious, warm and determined champion of any cause that he took part in.

Wirt was a bright star in the galaxy of Richmond's most brilliant men. Although born in another part of the country, his education as a lawyer, and the honor acquired by him, belongs to Virginia. His faculties were in the embryo state when he came among us, and it was here determined in what manner they should be developed; and a noble intellect, and powers brilliantly beautiful, resulted from so genial a climate, and such goodly association. His personal appearance was remarkably prepossessing, and like a con-

tinual letter of recommendation caused a favorable notice to be taken of him. Tall and well formed, graceful in every movement, with combined dignity and playfulness of manner, he possessed that power which fascination of manner gives. His fine person, and graceful demeanor, were well set off by a handsome face, and a full, sonorous, well modulated voice. His taste was elegant, his knowledge abundant, his skill in debate of the first order, his good humor and self-possession not to be overcome by the ill nature, or the adroitness of an opponent. With these advantages of person, mind and manner, he possessed rare powers of description, raciness of wit and humor, and an elocution at once graceful and powerful; he could charm and persuade an audience, touch their hearts by his pathos, delight them by beauties of style and sentiment, and bear them on with him in the rapid flow of his eloquence. His mental qualities, however, corresponded with his personal ones; he was rather a showy man in both respects, than a solid or profound one.

Wickham, his frequent opponent, with far less eloquence and wit, possessed far more vigor and native strength of intellect.

Yet the amiability of Wirt, his conscientiousness, his laboriousness, his wit and elegance, combined with great versatility and adroitness, and his real power of eloquence, gave him a high rank as a man and an orator, and rendered him worthy of the office of Attorney General of the United States. Virginia owes him a debt of gratitude for his well written life of Patrick Henry. Without his carefully recording pen, the great and eloquent man of Virginia would have been gradually forgotten; or only remembered as one who, by some wonderful eloquence, put in motion the American Revolution. Wirt has deserved the praise that Sallust claims, when he says, "many have been applauded for performing heroic actions, many for relating them; and although the character of the historian is not considered so glorious as that of the hero; yet it appears to me a very arduous task to write history well, since the style must be suited to the subject." It is unfortunate for us that Wirt did not illustrate the lives of other great men of our State; we, as Virginians, would have been far better pleased, had he borne the title of the Virginia Plutarch, than that of Attorney General of the United States.

McRae was a young lawyer of talent, who had a reputation to make—and made it.

On the other side stood the accused himself, Aaron Burr, who took part in his own defence, and did not verify the old adage, that whoever pleads his own cause, has a fool for his client. His small stature, graceful figure, handsome, in-

tellectual countenance, the frank, military air, which he possessed; and above all, the keen, black eye, whose glance, when he was angry, so few could bear, and which has been compared in vindictiveness to the eye of a snake, rendered him, apart from the interest of the trial, an object of marked observation. His tact and talent completely directed his own able counsel, and very much contributed to the result of the trial. His speeches were short, but marked by great ability; and his whole bearing that of a man unjustly accused, and checked in the commencement of a great enterprise.

Luther Martiu, of Maryland, volunteered in the defence; his reputation was wide-spread; a bold, confident speaker, possessing eloquence, yet chiefly excelling in the power of positive assertion; he was so learned in his profession, that he bore the name of the law-ledger.

Benjamin Botte, another of the counsel for the defence, was a young advocate of great talents, whose abilities the discerning eye of Burr marked out, and who rendered his cause essential service. He possessed all those talents that render a man eminent, and would have risen high in his profession, and in public life, had not his existence been cut short, in the burning of the Richmond Theatre soon after.

Jack Baker was also among the lawyers employed by Burr to aid in his defence. He possessed wit and power of invective, talent to speak, and general ability; yet wanted the application that industry gives, and lacked solidity and comprehensiveness of mind. Burr employed him rather to keep him quiet; as he was one who exercised the power of saying what he pleased, and employed his wit and sarcasm on all around: to prevent his influence with the public, in thus rendering Burr's cause an unpopular one, as well as to obtain the aid of his wit against that of Wirt, was he retained.

The strong man in the defence was Wickham, at that time the first man at the Richmond bar. Wirt thus describes him: "He is, I am told, upwards of forty years of age; but his look, I think, is more juvenile. As to stature, he is about the ordinary height of men; his form genteel, his person agile. He is distinguished by a quickness of look, a sprightly step, and that peculiar jaunty air, which I have mentioned as characterizing the people of New York. The qualities, by which he strikes the multitude, are his ingenuity and his wit. But those who look more closely into the anatomy of his mind, discover many properties of much higher dignity and importance. This gentleman, in my opinion, unites in himself a greater diversity of talents and acquirements than any other at the bar of Virginia. He has the reputation, and deserves it, of

possessing much legal science. He has an exquisite and a highly cultivated taste for polite literature; a genius quick and fertile; a style pure and classic; a stream of perspicuous and beautiful elocution; an ingenuity which no difficulties can entangle and embarrass; and a wit, whose vivid and brilliant coruscations can gild and decorate the darkest subject. His statements, his narrations, his arguments are all as transparent as the light of day. He reasons logically, and declaims very handsomely. His popularity is still in its flood; and he is justly considered as an honour, and an ornament to his profession." This praise is too faint for the man, who possessed more jury-power than any other man of his day in Richmond; with all the adroitness and ingenuity granted him, there was besides, a degree of native pith and power unequalled either in extent or cultivation by any man at that bar. He was like a strong mau, well trained in the art of self-defence, and practiced on an hundred battle-fields.

Among the witnesses were General Wilkinson of the Army, and Andrew Jackson, afterwards President. The importance and the novelty of the trial, the imposing talents of the judge and the lawyers, the previous dignity and extended reputation of the prisoner, with the magnitude of the attempt and the obscurity in which it was involved, the witnesses, and the high political excitement of the times, all combined to bring crowds into Richmond to see and hear the progress of the trial and its result. The lawyers themselves entered into the case with far more spirit and animosity than is usual at the bar. And so ably was the discussion conducted, that it drew from Judge Marshall this praise, "The question has been argued in a manner worthy of its importance. A degree of eloquence seldom displayed on any occasion, has embellished solidity of argument and depth of research."

The result of the trial is well known; Burr was acquitted, yet lost all influence; Judge Marshall gained honor for his masterly opinion in the case, and the Bar of Richmond became more highly esteemed than ever.

It is probable, from all that can be gathered since, that many men of influence in the West were more or less implicated with Burr; and that he was guilty in their opinion of failing in an unbegun enterprise. Had he, instead of using so much caution as to conceal his plans, (a caution which it is true saved him in the trial for want of evidence,) made them known to the people, he might have set the government at defiance, and carried an army of adventurous Western men into the heart of Mexico. He would have been only in advance of his age in so doing; and had he lived, in this time, would have

precipitated a war with Mexico, or led an army into Cuba. Had his plan succeeded then, we should have been inevitably divided into Eastern and Western nations over one of which he would have ruled; the Valley of the Mississippi would have been the seat of empire; and the Atlantic States would have been merely the barrier frontier against foreign invasion.

It would be interesting to speculate on the course of empire which this trial in Richmond checked. What might have been the influence of Burr in that Western empire, of which he must have been chief, we cannot say; he possessed every faculty of command, and every quality of a great man, except sincerity. Had he been a truly brave man, impressed with the importance of his undertaking, he would have again attempted, what needed only the attempt to have succeeded. The trial developed the insincere character of the man; his very accomplishments knew nothing definite of his plans, and all men shrunk back from associating with one whom they could not trust, and in whom candor had no place. He sunk into deserved obscurity; no longer flattered and esteemed, the man who had stood high in the opinions of his countrymen, and held the office of Vice-President, became politically dead, and was shunned as a corpse would be. Like a serpent whose fangs are drawn, he was treated with contempt and disgust, yet avoided from the remembrance of his past malignity.

Among others at the Richmond bar was an old Scotchman, named Warden, remarkable for his strong tory prejudices, and his boldness in avowing them. Short and thick in person, of decidedly rough countenance, and an indifferent speaker, he possessed strong sense and much legal acuteness. Being often employed in collecting British claims, and having occasion to allude to the Revolution, he would always speak of it as "that great rebellion which you call your Revolution." By some contemptuous remarks, he excited the anger of the Assembly; who compelled him to make apology to their honorable body on his knees. Warden did so, and in a manner so satisfactory that he was never again required to make apology, although the offence was often repeated. It was done thus; on his knees at the bar of the House, he said, "I humbly ask pardon of this honorable house, and," rising quickly and brushing his knees, "a damned dirty house it is too." Daniel Call was another lawyer of much eminence; and there were many others of reputation in their day, whose names, from not being connected with any striking event, are not written in history. The memory of very few Virginians has come down to us, unless they were engaged in public life.

Among the chief physicians of the city, at this time, were Dr. William Foushee, the first Mayor of Richmond, and Drs. McCaw, Adams, McClurg and Cringan. They left no record of their talents and their labours; it was not an age when men wrote much, however much they may have thought, spoken or acted.

James Ogilvie, an eccentric and talented Scotchman, who taught school in Richmond at this time, may be mentioned among the men of Richmond. He educated many of the chief citizens of the town, General Scott, Leigh, Duval, Heath and others; and was famous for his fondness for and ability in teaching elocution. With his pupils, he attended Burr's trial; and often himself gave, in public, specimens of his own, and of his best scholars' powers, in recitation. He deserves some credit for improving the taste for public speaking throughout Virginia. His history is an interesting one; although a teacher and a wanderer in this country, he was heir to the earldom of Finlater in his own land; and after many trying vicissitudes of fortune, attained his honors, and died, by his own hand, soon after, a fate which was the result of mortified pride on some public failure in his favorite practice of elocution.*

CHAPTER SEVENTH.

BURNING OF THE THEATRE. WAR OF 1812.

The exciteable population of Richmond was thoroughly roused, by the insult offered to our Navy, in the affair of the Chesapeake, and they felt it the more keenly because it happened off the Virginia coast. Meetings were held, and speeches made of a decided war tone; so much were the people excited, that after offering their services to the General Government for war with Great Britain, they would probably have declared hostilities themselves, if Thomas Jefferson had not, by letters to the chief inhabitants, urged the pacification of the town and neighborhood, and advised that they should wait for the action of the government. Among the foremost of the hot spirits who urged measures of retaliation and called for war, was Benjamin Watkins Leigh, a young lawyer of the city. In one of his addresses, he likened the two countries to men who had quarrelled: "We have received a blow and we must strike one in return, or be forever disgraced," a sentiment that met a decided response among his auditors.

All the volunteer companies in the neighboring counties offered themselves to the government;

* For an interesting sketch of the intellectual character of Ogilvie, by one of his pupils, see the Southern Literary Messenger for September 1848.

and one or two troops of cavalry marched to the coast, as the British ship that executed the insult, was still off the harbor of Norfolk.

On this occasion, the distinguished General Scott was first brought out into military and public life. He marched as officer in one of these troops and although nothing was effected in the way of military exploit, still the march was of service to the country, by inspiring in that great man a taste for military life. This led him into the army, and by effort and talent he has attained the highest station in it; and won for himself, through service to the country, an extensive and honorable reputation. He belongs to the men of Richmond, inasmuch as he was born in its neighborhood, and lived, studied law, and married in it. As his earlier life was thus spent among its scenes, we may fairly conclude that the germs of his genius were here developed, and that character formed which has made him eminent as a man and as a General.

The excitement extended throughout the State; the papers of that day show a succession of spicy resolutions entered into by meetings of the people every where, and offers of service from volunteer companies, as well as the formation of new companies under the emergency. Had war been then declared, Virginia would have rushed into it with eagerness, and have brought a large force into the field. This period passed over with no other effect than to prepare the public mind for a future war, and to hasten its approach.

In 1811, James Munroe was again chosen Governor; being appointed, however, Secretary of State by President Madison, he resigned, and George W. Smith was elected to fill his place on December 5th, of the same year. He occupied the office for a short period only; as on the 26th of December he, with many others of the best citizens of Richmond, perished in the burning of the theatre; a short term of office being thus most sadly and prematurely brought to a close.

The old Theatre was a large, plain, wooden house, and was built in such a manner as to be a complete trap; there was but one entrance and that led through a narrow passage to the pit; from this entrance a flight of stairs ascended to the first tier of boxes, and from this tier another flight to the second. Thus it was impossible to empty the upper tiers of boxes until the pit was empty, and then only a tier at a time; the doors, too, all opened inwards, so that any pressure from within would prevent their opening, and thus hinder egress from the building. Among a people as fond of sport as our ancestors were, and who sought out all kinds of enjoyment, the theatre might be supposed to offer strong claims for support. We accordingly find it attended by the

chief persons of the city; and this attendance was frequent and constant.

On this night it was peculiarly crowded; a favorite actor and a fashionable piece had drawn about 600 persons to the house.

The pantomime of the Bleeding Nun was to follow the regular play; the thrilling interest of this piece had caused it to be repeated night after night, and crowds were drawn with unabated curiosity to see it performed.

The regular play had been finished and the pantomime commenced, when the scenery took fire from raising a chandelier; the lad to whose charge it was committed, on being ordered to raise it, reported that if it were done it would fire the scenes; the order was repeated peremptorily, the chandelier was raised, and fire spread rapidly over the inflammable substances of which the scenery was made. By that foolish, hasty order, the lives of 72 persons were lost, and gloom and bitter sadness spread over the city and the State.

A little presence of mind on the part of any of the performers could even then have saved the house, by tearing down the scenery or cutting the cords that suspended it. Those who saw the danger, had no coolness or presence of mind to aid others, but fled in dismay, and left the audience and the actors to their fate. As most of the performers were playing near the orchestra, the greater part of the danger was obscured from them and from the audience by a curtain; and the first notice of the danger was by the fire falling upon some of the performers. The flames spread rapidly over the combustible materials; and the audience, at first deterred by a cry from the stage that there was no danger, had remained quiet, thinking it perhaps a part of the performance.

As the fire flashed out in every part of the house, filling it with smoke and flame, the awful truth of their imminent danger burst suddenly upon them; and the voice of Mr. Robinson, one of the actors, exclaiming, as the curtain was torn down and the flames poured forth, "the house is on fire," was to many their sentence of death, and to all a sound of horror and dismay.

The people had rushed precipitately towards the door, and those in the pit, being nearest, had escaped; it was among the educated, the refined, the young and the lovely, that death came in all its horrors; their helplessness and innocence availed not against such an enemy; crowded in the narrow passages, struggling with one another, some trampled under foot, the door closed against them and kept so by their own weight and the pressure from behind, they stood waiting death, and that death the most awful one that imagination can conceive or fancy picture. Many clamored over the heads of the dense masses, gained

the windows and leaped forth at the risk of life and limb to escape the fire; springing from one death to another, many lost life in the fall, while others were maimed or crippled; some leaped out with their clothes on fire, and suffered from the fall and from the burning; others were pushed out by the multitude behind, who were writhing in the agonies of the flames, and began to fall from the highest windows one upon another in heaps; some with their clothes on fire and some half-roasted. As it was during the session of the Legislature, and many had come from all parts of the State to attend the gayeties of the season, there were some of the most beautiful and excellent of Virginia's citizens in that building. And they died! the young, the beautiful and the brave, cooped up like vermin, they died in the midst of enjoyments and in the heyday of youth and pleasure; and of the gay and lovely who assembled over night in this place of mirth, joyous in health and with eyes bright with pleasure, next morning the scorched and blackened corpses, shorn of beauty or comeliness, and awful in the pangs of this terrible death, were all that remained. How fit the description of the ball of Brussels, followed by the carnage of Waterloo, to this scene of joyous mirth, and the sad catastrophe following so quickly on it!

Noble examples were shown of self-devotion, and of courage more than human, in saving the sufferers from the flames. Husbands sought out their wives, parents their children, lovers and friends either found out safety or perished together. Governor Smith had brought his wife to a place of safety, and turned back for a young lady who had accompanied his party; his wife was carried on by the crowd and passed out safely; he, on returning, found her gone, and supposing her to have followed him, plunged into the house again and perished.

Benjamin Botts, who, as a lawyer, had distinguished himself in the trial of Aaron Burr, and was among the most eminent men at the bar, had gained a place of safety, and turned back to seek his wife, who had not been able to follow him; they perished together.

Lieut. Gibbon, in his death, illustrated one of those singular instances we have of the presentiment of danger; he had promised to accompany some young ladies this evening to the theatre, yet in a dream the night previous, had been so fully impressed with danger, of some unknown character, in going, that he endeavored to relieve himself from the engagement. The ladies, however, made light of his fears, and so rallied him, that he consented to go; yet, during the whole play, so firmly was the impression made on him, that he was observed to be restless and uneasy, like a man expecting danger from an unknown

source, or by ambuscade. When the cry of fire rose, and the flames rushed out, he became perfectly cool and composed, and prepared to meet, and escape from, the danger, which, in uncertain expectation, had disturbed him. Leading one young lady, and followed by another, he had gained the door before the crowd rendered the passage impassable, and then returning to save Miss Conyers, perished with her in the crowd of sufferers. He was a young, gallant, and accomplished officer of the Navy; the son of a father who led the forlorn hope when Stoney Point was stormed, and who had served with distinction throughout the Revolution. The son inherited the father's excellencies, and had he not been thus early cut off, would probably have distinguished himself in the ensuing war with England. He had lost an arm in the war with Tripoli, and being thus crippled, was unable to render proper assistance to his charge.

Alexander Marshall, of Wythe county, broke his neck leaping from a window, and many others received serious injury. Dr. McCaw, of Richmond, who was very active in directing others how to escape from the window, was among the last to leap down himself. In the fall he received an injury that crippled him for life; and he thus bore about him a mark of honor, for services rendered the State in saving its citizens, more honorable than the civic crown with which the Romans honored the man who had saved the life of a single citizen. Most of the dead were females of the higher walks of life; their position in the boxes, their helplessness and terror, their inflammable dresses, all combined to render them peculiar objects of injury. Had any one presence of mind enough to attempt it, the way of escape would have been easy, by springing on the stage, or into the pit, and thence through the door; some few escaped in this manner; the crowd, however, pressed on down the narrow stairs, impeding one another, until they choked up the passageway.

Imagination cannot picture such a scene in all its horrors. The screams and groans of the scorched and burning sufferers, the tears and exclamations of terror, the agonized cries for aid, the shrieks of despair, the frantic search for friends and relatives, the wailings over the dead and dying, the mournful sympathy of the spectators, the loud lamentations that rent the air, and the tumult that arose in the city when the news spread and the people collected around the scene of disaster; the burnt bodies, piled in heaps, offending the senses, by emitting the odor of scorched human flesh, the mangled corpses disgusting the eye, and over all the shrieks of those, who had lost friend, and parent, and child, borne on the midnight air, form a picture of most revolting inter-

est. And in the midst of this awful sight, the burning house stood out, at once the cause of all this agony, and the torch to light up the scene of misery and death.

What a place of woe has that spot been; how many bursting hearts have gathered on this awful place; the ground is literally watered with tears, the air filled with groans and lamentations, and lighted up by the funeral pile of the wise, the beautiful, and the excellent of our State.

It was the most awful stroke that ever afflicted Richmond; worse than pestilence, and more unsparing than war, the flames carried off in one red burial, those who made the delights of many homes; and by the suddenness and awful horror of the calamity, made grief more loud and sorrow more bitter, than if another and milder form of death had been sent.

Richmond became, like Ramah of old, a place of comfortless mourning.

The day after this fire, the Common Council of the city passed an ordinance forbidding any public show or spectacle, or any open dancing assembly for four months. Universal gloom spread over the town and throughout the State, for in every part of it there were some who had lost friend or relative in this great calamity. When intelligence was communicated to the Senate and House of Representatives, assembled in Washington, resolutions were adopted expressive of sorrow and sympathy, and it was determined by both houses to wear crape on the left arm for thirty days as a badge of this sorrow.

On the morning after this fearful conflagration, groups of citizens might be seen inspecting the burnt remains, engaged in the fruitless search for the bodies of those they had loved. Nothing, save ashes and burnt bones in heaps, showed where death had been; the mournful satisfaction of the battle-field, that although slain and mangled, its victims can still be recognized and buried by friends, was denied here; in one undistinguishable mass they lay, and were buried in one common tomb; alike and together in death, in burial, and in the lamentation that followed them. The bones were placed under that spot where the monument rises to their memory, as it was there that they were found most thickly collected.

I have conversed with one, an aged and intelligent man, who escaped from this building; his recollections of the horrors of the night were vivid and interesting. He rushed with others into the lobby, until it was filled with some two hundred persons; and they had begun to descend the steep, narrow, winding stairway, so narrow that two could with difficulty go abreast, and many were already falling over the handrail to the floor below, when a cloud of smoke, charged with oil from the burning scenes, suffocated the

whole mass of people, and he, with all around him, sunk down unconscious on the floor; the lower air being more pure, revived some, and they crawled and slid headforemost down this narrow stair, and were piled in a heap at the bottom. Many were crushed to death; this cloud of smoke rendered so many unconscious that they sunk in the boxes, and remained so until the fire roused them from this lethargy to a death far more awful. Many were drawn from this living, yet unconscious heap, and borne out into fresh air, and these recovered. Then began the awful scene of suffering from fire, and the struggle of those roused to their danger by the flames.

From this time a change was wrought in Richmond; the theatre had ceased to exist, and a horror of such exhibitions, based on the memories of the fire, prevented for a long time another from being built. The type and centre of gayety and frolic had disappeared, and on its foundation rose the first Episcopal church in the city. Men became more serious, other churches were erected, ministers employed, and the character of the people changed from a love of sport and frolic, to a more serious, sober state of mind. Nothing else could have roused up so gay and frolicsome a community.

The Monumental Church was built where the burnt theatre stood; it belongs to the Episcopalians, and is their metropolitan church. It was first built by a number of gentlemen who proposed to make it a joint stock affair, drawing revenue from the rent of the pews. This plan was changed, and the pews were sold; the majority of the purchasers were Episcopalians, and the church became the property of that denomination.

The war of 1812 did not much affect Richmond; no enemy approached her; although the citizens were mustered under arms when an alarm was spread that their ships were far up the river. During the attack on Crany Island and Norfolk, there was intense excitement in Richmond! volunteers were mustering, and citizens arming themselves and removing their families. Notice had been given that if the enemy approached with evident design to make an attack, three cannon should be fired, that the forces might collect and march down the river bank to meet them.

The Governor received information that the hostile fleet was at Sandy Point, some forty miles from Richmond, and was sailing up; he ordered the cannon to be fired; it was midday, and the scene of confusion and tumult that ensued beggars description. Men were arming, the military assembling, women shrieking; school boys released to a sudden holiday rejoicing in the confusion; staid and sober citizens rushing on the square, pistol in hand, and

old revolutionary ranger on thigh, shouting "where are they?" brimful of valor and patriotism; rusty fire-locks, and weapons of all kinds, were in demand; and as, in answer to the question "where are the enemy?" some wag made answer "off Sandy Bar," just below Richmond, instead of Sandy Point, some forty miles off, consternation became extreme among the feminine and the timid portion of the community, and a rapid system of depopulation commenced; shown in the emigration of horses, plate, furniture, women, children, and other valuables. Walter Scott's description of the arming of Monkbarrow would give an idea of the state of things that prevailed.

The alarm soon ceased when the state of affairs became known; the enemy sailed down the river, and the valour of the citizens had no opportunity of exhibiting itself. An attack by pirates could not have excited more alarm; and the fear was just, because Great Britain having employed the merciless Indians in her armies, on our frontiers, and having no similar race of savage allies in her sea service, had picked out and brought together all that was debased, all that was violent and blood thirsty, all that was lawless on land and piratical at sea; the vile of her own soil, the renegades of all nations; the deserters from the service of France, allured by the hope of plunder and license; the scum and offscouring of the whole earth, collected in a time when the license of long wars had increased, and cultivated all kinds of depravity; buccaneers, without a spark of that generosity and chivalrous courage which redeemed somewhat the reputation of those of old; men more merciless than the Indians, for they, if they took the lives of all ages and sexes, spared the honor of women; this horde of sea savages, fitly commanded, constituted that arm of service acting on our coasts. I appeal to the excesses committed at Hampton, under the eye of Admiral Cockburn, as proof that this character of the men and their leader is not overdrawn.

James Barbour, of Orange county, was Governor during this troublous time; he was a rare instance of the success that talent and energy can accomplish in our country. Born of a good family, poverty, intellect of a fine order and a persevering energy that carried him through all obstacles, were his only patrimony. Before he attained manhood he rode as Deputy Sheriff of his county, at nineteen was admitted to the bar, became distinguished early as a fluent and able speaker, and was elected at the age of twenty-one to the Virginia Legislature.

The passage of the Alien and Sedition Laws had roused the people of Virginia, and public feeling ran very high on this and all other ques-

tions of federal policy; among the first and foremost of the young and talented men who rushed into the discussion, was James Barbour. So much did he distinguish himself, that he was one of the six appointed to discuss the laws before the House, and his speech is reported to have been one of the most powerful of all that were delivered on that exciting occasion. He possessed, indeed, a pleasing flow of eloquence, and an energy and force of expression, accompanied by a gracefulness of gesture and dignity of manner, that made him one of our most impressive speakers.

He has the honor of having originated the anti-duelling law; by which some check was put to that barbarous practice, derived from our semi-savage ancestors, against which moralists have argued and divines preached, and over whose results grief-stricken families have mourned. He has the honor, too, of having sat in the gubernatorial chair of Virginia, in a time of trial and of difficulty; of having great and important duties to perform, and of having so well performed these duties that nothing but praise could attach to himself, and nothing but good have resulted to the commonwealth.

His integrity, knowledge of business, decision of character, and flowing courtesy of manner toward all men, made him friends and paved the way for future honors.

It had been feared that the disastrous scenes of the Revolution would be re-enacted; he visited in person our seaboard, arming and organizing militia; choosing the best men for command, regarding talent and ability rather than age and reputation. There can be no doubt that his energy and activity saved Richmond from the enemy. His appeals to the people, his addresses to the army, and his messages to the Legislature, show the ardour, the love of country, and the talents too of the man. Besides using all the powers that his office gave him, he pledged his private fortune for the defence of the commonwealth. With such a spirit to direct them, the people of Virginia could not be overcome; the defence of Craney Island, and the various battles and skirmishes, taught the enemy to dread our coasts.

Had such a man filled the chair during Arnold's invasion, the British would not have triumphed, or at least would have suffered in their triumph, and the disgrace would not have fallen on our chief city of surrendering to a handful of men without a blow. The storm and devastation of war passed from Virginia, because of the devotion of her rulers, and the well-directed valor of her sons.

HOME BLESSINGS.

I've lately set a gem within
My home so dear before—
But deariness can never come
To haunt the threshold more :
The sombre, shivering fend hath lost
The power he claimed of yore.

I walked along a darksome way
With dark imagining,
When suddenly beside the path,
I heard a wild bird sing ;
Careless, and gay it poured its notes,
The glad notes of the spring.

I caught it fluttering to my breast,
I soothed its trembling fear,
And now, that little warbler trills
Sweet ditties in my ear,
By day, or night my heart's at rest,
The gentle bird is here.

I have a fairy by my hearth,
Her voice is sweet and low—
And whispers of a Dream I loved
In childhood—long ago,
An Ideal, Fancy's pet ; 'tis strange
Its memory haunts me so !

I think it was a vision sent
By this same, gleeful sprite,
To warn me of two fates, the stars
Predestined to unite—
To pray my waiting, and foretell
My spirit's noonday light.

I have these precious gifts in charge,
A gem, a sprite, a bird—
All perfect images of one
I've wooed to trust my word—
The word that bound us—that sweet word
The angels gladly heard.

P. H. H.

A PAIR OF POETS.*

Here are two pleasant and fair-spoken young gentlemen, walking arm-in-arm down the temple of the muses, exceedingly well-dressed in the singing robes appropriate to the fraternity of bards, and wearing on their ample foreheads freshly cut sprays of the laurel. The excellent terms on which they appear to be with each other make them worthy of something more than a passing nod of recognition, for your young votary of song, for the most part, stalks moodily along by himself, and not unfrequently betrays a jealousy of other aspirants. They are the

Orestes and Pylades of verse-making. Let us therefore most respectfully salute them, and proceed to consider their claims in turn to the honours of their noble calling.

The rise of Mr. Bayard Taylor in the literary world has been exceedingly rapid. Five years ago, he was altogether unknown ; now he figures in the common-place books of selected poetry, and disputes with Halleck and Willis the first place in lyrical composition on this side of the Atlantic. He became first known to the public, we believe, in a very readable Book of European travels, with the affected title of "Views Afoot, or Europe seen with Knapsack and Staff," and a letter of introduction from Mr. N. P. Willis as preface. The sketches were spirited and graphic enough to have been put forth entirely on their own merits, without a puff *d'avance* from any body. Their success was in accordance with these merits, and from that day to the present time. Mr. Bayard Taylor has been uniformly lucky in his literary enterprises. We say lucky, because while we are ready to accord him all rightful praise (and that warmly) we are yet of the opinion that his rise has not been altogether legitimate, and that there has been an uncommon degree of humbug in the manner of achieving it. Directly after the publication of "Views Afoot" there seemed to be a band of *claqueurs* systematically engaged in applauding his performances. Thanks, we suppose, to the Home Journal, Mr. Taylor was the fashion. All that he wrote was unsatintedly praised. His poetry was copied into the daily papers. His handsome features went the run of all the daguerreotype galleries on Broadway from Brady's up, and were even hung out to the admiring gaze of Chatham street, with the autograph underneath them. It was, in a very small way, another exhibition of the early triumph of Lord Byron when he "woke up one morning and found himself famous." In a little time, Mr. Taylor connected himself with Graham's Magazine in the capacity of editor, and it is somewhat curious, that the very next number contained a full-length steel-engraving of the fascinating man, "with knapsack and staff;" and a complimentary allusion to him in the *Editor's Table*. We do not, of course, suspect Mr. Taylor of blowing his own trumpet in this way ; it was done by one of the *clique* to which we have already referred. And as an additional presumption of the operation of such a fame-manufacturing piece of machinery, we might recall the award to him for the Jenny Lind Prize Song when Mr. P. T. Barnum appeared in the character of Mæcenas. Every body thought and every body said that Mr. Taylor's verses were ridiculous, and we only wonder that he should have accepted the money awarded when there

* A BOOK OF ROMANCES, LYRICS AND SONGS. By BAYARD TAYLOR. Boston : Ticknor, Reed and Fields. 1852.

POEMS. By RICHARD HENRY STODDARD. Boston : Ticknor, Reed & Fields. 1851.

were other songs in competition which his native good taste in poetry must have assured him were every way superior to his own. It would have been a graceful and proper manifestation of friendship to defer publicly in favor of his fellow-poet, Mr. Stoddard, who had offered a song to the committee, of higher poetic merit and of sweeter cadence of expression.

Before the advent of the Swedish Nightingale, Mr. Taylor's connection with Graham had ceased. Another little circumstance, however, may be mentioned as occurring about that time. Mr. Taylor curtailed the name which had been given him by his sponsors in baptism. "Views Afoot" had appeared with the full name of "J. Bayard Taylor." What the "J." stood for, we never learned, whether mythological Jason or scriptural Joseph; but we suspected it was for James, and that the worthy poet was named after the distinguished James Bayard of senatorial renown. But 'Bayard Taylor' he thought would sound more like the name of a poet, and so the "J" was dropped. Very soon after this, Mr. Taylor fell under the patronage of the famous Horace Greeley, and became part and parcel of that infamous anti-slavery organ—the Tribune newspaper. Greeley sent him to California, and he came back to give us, in "Eldorado," by far the best and most entertaining account of the Gold Country that has been published. At this time, under Greeley's auspices, he is journeying in Europe, *en route*, we believe, for the interior of Africa, where he proposes to find out the sources of the Niger. Whether this expedition has originated in Mr. Greeley's exceeding affection for the negro and for every thing African, we are not informed.

We have gone into this rapid sketch of the rapid rise of Mr. Taylor for two reasons—first, because it is interesting as a literary history, and second, because, as we shall have occasion to bestow warm praise upon his poetry, we wish to have it understood that we do not belong to the band of *claqueurs*, whose business it is to exalt him.

One of the most observable traits of Mr. Taylor as a writer, is his *manliness*. In all that he has written appears the sincere and earnest purpose of expressing exactly what he feels, and a genuine self-reliance sustains him throughout and informs his poetry, which is yet as far as possible removed from the egotism of many of his class. In taking him for a companion in excursions to the domains of song, one feels that he is communing with a frank and enthusiastic spirit, and that wherever this spirit may lead the way, there will be found a bracing and healthful atmosphere. The respect and sympathy of the reader being secured beforehand by this straight-

forwardness (if we may so express it) and becoming individuality, the poet's verses commend themselves the more readily to his appreciation and admiration.

Coming to consider more nearly the poems, in an exclusively critical point of view, we are at once struck with the vigor and majesty of the language employed. It is not merely that Mr. Taylor uses the very best words in the vocabulary, *but that he rarely uses 'anything else.'* It is to be remarked, too, that these words are made up into phrases with exceeding felicity, and these phrases arranged with a rhetorical skill that few writers in the country have yet attained. Nor does the process seem to be, by any means, a laborious one. If it has cost the author much pains to round off and adjust his sentences and epithets, he has certainly acquired the *artem celare artem* to a degree very high perfection. At least, there is no sound of hammer heard in the putting together of his poetical materials. As at the building of Solomon's Temple, each stone falls readily into its proper position, and when the edifice is at length fully revealed to view, we marvel as much at the dexterity with which it has been erected, as at the exquisite proportions of its architecture.

In common with all those who have achieved great triumphs in song, Mr. Taylor possesses the imaginative faculty in large measure, and a love of the visible world around him akin to nature-worship. He does not allow his imagination to run riot, at any time, nor does he throw over his landscapes any more exaggerated tint than that warm flush of summer twilight which hangs above the garden of Boccaccio like a diviner atmosphere. In dealing with nature, his object seems less to reproduce in the minds of others the emotions excited in his own by wood and waterfall, or, indeed, fully to express those emotions than to paint with clearness and fidelity the real loveliness of each particular scene. There is, it is true, a tendency in him to impersonate the material universe, as if the rivulet were an individual existence whose murmurings were not only music to his ear, but the intelligible communications of a friend, and the pines were human companions whose "innumerable whisper" he comprehended more entirely than ever did Theocritus. In this way he seeks not unfrequently to explain the phenomena of nature by a reference to the laws of his own being. Poets of Mr. Taylor's particular stamp have done this before him, but none that we recollect combines, as he does, this passionate idealization of physical objects with the strictest observance of rhetorical rule. And Mr. Taylor himself, though seldom indulging in misty expressions, does sometimes push his similitudes into the haze of doubt-

ful meaning; in which respect he is not unlike Shelley in the regions of the ideal, or Coleridge at the dinner-table.

And, in this place, it may be well to say that such readers as make their first acquaintance with Mr. Taylor, through the medium of the "Book of Romances, Lyrics and Songs," will not, by any means, apprehend his capabilities as an artist. It is in "Lyrics" we think that our author appears to greatest advantage, though he would seem to think his "Romances" better entitled to our admiration. There is a reason for the superiority of his lyrical effusions, arising out of the fact that when he writes poetry, he dashes it off at a heat, (however inconsistent this may appear with the nicety and finish of the composition.) in intervals of leisure from the daily routine of the Tribune Building, whereby fancy rather than philosophy, images rather than thoughts, make up the staple of his discourse. His argument, for the most part, has no continuity, which mars a *Romance*, while a *Lyric*, having no argument, is generally better for the haste with which it is composed. In the volume before us, the Romances occupy the prominent place, and while the reader may see in them the defects to which we have adverted, he will find few of the excellences we have so much approved. We meet with nothing in the book so majestic as "The Continents," or so vigorous as the "The Fight of the Paso Del Mar." Yet are there passages well worth the quoting, for their intrinsic beauty, and as illustrating the poet's peculiarities. In the following extract from what is unquestionably the finest of the Romances,—"*Love and Solitude*"—the tendency to individualize inanimate things is beautifully manifested in the lines italicised. The poet describes a valley—

I see the close defiles unfold
Upon a sloping mead that lies below
A mountain black with pines,
O'er which the barren ridges heave their lines;
And high beyond, the snowy ranges old!
Fed by the pleteous mountain rain,
Southward, a blue lake sparkles, whence outflows
A rivulet's silver vein,
Awhile meandering in fair repose,
Then caught by riven cliffs that guard our home
And flung upon the outer world in foam!
The sky above that still retreat,
Through all the year serene and sweet,
Drops dew that finds the daisy's heart,
And keeps the violet's tender lips apart.
All winds that whistle drearily
Around the naked granite, die
With many a long, melodious sigh
Among the pines; and if a tempest seek
The summits cold and bleak,
He does but shift the snow from shining peak to peak.

In the same '*Romance*' is a tropical picture

of the most gorgeous coloring and wonderful accessories, fully sustaining all we have said of the vivid imagination of the author. It is the *Isle of Beauty* that has been set before us by many poets, in epic and in ballad, but never with such richness and glow—

Then wandering through the inland dells
Where sun and dew have built their gorgeous bowers,
The golden, blue, and crimson flowers
Will drain in joy their spicy wells;
The lily toll her alabaster bells;
And some fine influence, unknown and sweet,
Precede our happy feet
Around the Isle, till all the life that dwells
In leaf and stem shall feel it, and awake;
And even the pearly-blossomed shells
Wet with the foamy kiss of lingering swells,
Shall rosier beauty at our coming take,
For Love's dear sake!
There when, like Aphrodite, Morn
From the ecstatic waves is born,
The chieftain Palm, that tops each mountain-crest,
Shall feel her glory gild his scaly greaves,
And lift his glittering leaves,
Like arms outspread, to take her to his breast.
Then shall we watch her slowly bend, and fold
The Island in her arms of gold,
Breathing away the heavy balms which crept
All night around the bowers, and lifting up
Each flower's enamelled cup,
To drink the sweetness gathered while it slept.
Yet on our souls a joy more tender
Shall gently sink, when sunset makes the sky
One burning sheet of opalescent splendour,
And on the deep dissolving rainbows lie.
No whisper shall disturb
That alchemy superb,
Whereto our beings every sense surrender.
O, long and sweet, while sitting side by side,
Looking across the western sea,
That dream of Death, that morn of Heaven, shall be;
And when the shadows hide
Each dying flush, upon the quiet tide,—
Quiet as is our love,—
We first shall see the stars come out above,
And after them, the slanting beams that run,
Based on the sea, far up the shining track
Of the emblazoned Zodiac,
A pyramid of light, above the buried sun!

"Serapion," in our judgment one of the best things in the present volume, we quote entire. Mr. Young, the accomplished Editor of the *Albion*, has pronounced it "worthy of being read after Wordsworth's '*Lines to a Highland Girl*'—which," he justly says, "is the highest praise that we can bestow upon it."

SERAPION.

Come hither, Child! thou silent, shy
Young creature of the glorious eye!
Though never yet by ruder air
Than father's kiss or mother's prayer
Were stirred the tendrils of thy hair,
The sadness of a soul that stands
Withdrawn from Childhood's frolic bands,
A stranger in the land, I trace

Upon thy brow's cherubic grace,
The tender pleading of thy face,
Where other stars than Joy and Hope
Have cast thy being's horoscope.

For thee, the threshold of the world
Is yet with morning dews impearly;
The nameless radiance of Birth
Embathes thy atmosphere of Earth,
And, like a finer sunshine, swims
Round every motion of thy limbs:
The sweet, sad wonder and surprise
Of waking, glimmers in thine eyes,
And wiser instinct, purer sense,
And gleams of rare intelligence
Betray the converse held by thee
In the angelic family.

Come hither, Boy! For while I press
Thy lip's confiding tenderness,
Less broad and dark the spaces be
Which Life has set 'twixt thee and me.
Thy soul's white feet shall soon depart
On paths I walked with eager heart;
God give thee, in His kindly grace,
A brighter road, a loftier place!
I see thy generous nature flow
In boundless trust, to friend and foe,
And leap, despite of shocks and harms,
To clasp the world in loving arms.
I see that glorious circle shrink
Back to thy feet, at Manhood's brink,
Narrowed to one, one image fair,
And all its splendor gathered there.
The shackles of experience then
Sit lightly as on meaner men:
In flinty paths thy feet may bleed,
Thorns pierce thy flesh, thou shalt not heed,
Till when, all panting from the task,
Thine arms outspread their right shall ask,
Thine arms outspread that right shall fly,
The star shall burst, the splendor die!
Go, with thy happier brothers play,
As heedless and as wild as they;
Seek not so soon thy separate way,
Thou lamb in Childhood's field astray!

Whence camest thou? what angel bore
Thee past so many a fairer shore
Of guarding love and guidance mild,
To drop thee on this barren wild?
Thy soul is lonely as a star
When all its fellows muffled are,—
A single star, whose light appears
To glimmer through subduing tears.
The father who begat thee sees
In thee no deeper mysteries
Than load his heavy leger's page,
And swell for him thy heritage.
A hard, cold man, of punctual face,
Renowned in Credit's holy-place,
Whose very wrinkles seem arrayed
In cunning hieroglyphs of trade,—
Whose gravest thought but just unlocks
The problems of uncertain stocks,—
Whose farthest flights of hope extend
From dividend to dividend.
Thy mother,—but a mother's name
Too sacred is, too sweet for blame.
No doubt she loves thee,—loves the shy,
Strange beauty of thy glorious eye;

Loves the soft mouth, whose drooping line
Is silent music; loves to twine
Thy silky hair in ringlets trim;
To watch thy lightsome play of limb;
But, God forgive me! I, who find
The soul within that beauty shrined,
I love thee more, I know thy worth
Better, than she who gave thee birth.

Are they thy keepers? They would thrust
The priceless jewel in the dust;
Would tarnish in their careless hold
The vessel of celestial gold.
Who gave them thee? What fortune lent
Their hands the delicate instrument,
Which finer hands might teach to hymn
The harmonies of Seraphim,
Which they shall make discordant soon,
The sweet bells jangled, out of tune?
Mine eyes are dim: I cannot see
The purposes of Destiny,
But than my love Heaven could not shine
More lovingly, if thou wert mine!
Yes, Child! even now, there cannot be
Such boundless tenderness for thee.
Rest thou securely on my heart:
Give me thy trust: my child thou art,
And I shall lead thee through the years
To Hopes and Passions, Loves and Fears,
Till, following up Life's endless plan,
A strong and self-dependent Man,
I see thee stand and strive with men:
Thy Father now, thy Brother then.

After Mr. Bayard Taylor, we come to our contributor, Mr. Richard Henry Stoddard, some of whose most graceful productions have appeared in this Magazine. Of this young and gifted writer, it is difficult for us to speak without doing injustice to our sentiments, or violence to our inclinations, for while we admire him as a poet and esteem him as a man, we are yet of opinion that the greater part of his writings is based upon a false philosophy.

The first and by far the most important consideration in estimating the *poetic status* of a follower of the Muses, is to determine on his poetic theory. We do not mean his inclination toward the epic, or toward the lyric, his predilections for the diffuse or the brief and concentrated—but his understanding, as carried out in his poems, of the true end of this the most exalted of all Arts. Chaucer's aim, as his works make evident, was to dramatise the wondrously picturesque life of that old England which was around him. Carried away by the spirit of his age, it is true that he translated that interminable anti-popery epic, the "Romaunt of the Rose," but in his "Canterbury Tales," the author is most at home, and finds the most agreeable and congenial field for his powers. Of Shakspeare we say nothing, because he was a microcosm in himself, with no theory but human life, and power to paint it in all things, but coming down to modern times, we

are arrested by two names, Byron and Keats, to whom we may add another name—the name of Shelley. Shelley united to an imagination as transcendent as ever man possessed, a mastery of the art of verse, which is manifested but by very few of that long line of poets who have “enriched the earth forevermore.” Byron could and did write the best poem of its class, since the “Vanity of Human Wishes,” the finest reflective Epic—Child Harold—in existence, and the greatest cynical poem in the language. Keats has never been surpassed in the gorgeous magnificence of his imagination and his diction—or if surpassed by any one,—only by Shakespeare.

Now, why is Shelley read only by scholars and infidels, Byron studied only by romantic minds, Keats enjoyed only by the Epicurean *taster of Books*? We answer, without hesitation, *because their philosophy is false*—in other words, their poetic theory.

One of these writers is evidently high in favor with Mr. Stoddard—we mean Keats. In the selection of his subjects, he is thoroughly a follower of Keats. Witness his “Arcadian Hymn to Flora,” his “Hymn to the Beautiful,” his “Arcadian Idyl”—though this last has a smack about it of Tennyson—another favorite of Mr. Stoddard. Has Mr. Stoddard only adopted the diction of Keats, and, in himself, supplied the higher and more exalted philosophy in which his model was deficient? We are compelled to answer that in our humble opinion he has not.

In that striking poem, “The Castle in the Air,” this is most painfully evident.

“Oh what a life is mine!
A life of light and mirth,
The sensuous life of earth,
Forever fresh and fine.

A heavenly worldliness, mortality divine!”

Here is Mr. Stoddard's philosophy in a nutshell—the “sensuous life of earth,” is the main-spring of all he gives forth—no religion, no high feeling—no delineation of the sublimated joy of suffering in a holy cause, of dying for a beloved object—no *spirituality*, but all, to “speak by the book,” *sensuousness*. Then witness the choice of subjects for his “Pictures.” All is for the eye or the sense of the mere picturesque. Again, read his lines commencing, “Along the grassy slope I sit”—and mark how he only sees his Alice “moulder in the dust”—with nothing more.

We repeat, that Mr. Stoddard's theory, *philosophy of poetry*, if the reader prefers the term, is a false, because it is not a high one—and the poems of such writers have the very disagreeable effect of outraging all our convictions of what poetry should be. It is as though some light and sparkling aria, and never aught but such arias

were played upon an organ—the instrument made to give forth the grandest, most heart-subduing symphonies.

With all our objections, however, to the spirit of Mr. Stoddard's poems, we cannot—do not pretend to—deny his very great beauty and richness of diction: in his command of the rich, sensuous words of the English language, he is certainly the most notable of our young American poets; and we might with equal justice say, we believe, of *all* our poetical writers. The “Castle in the Air” is the nearest approach to the full, overflowing imagery of Keats' “Endymion” that we can recall to mind. Here is a passage which will display very adequately Mr. Stoddard's luxuriant and profuse imagination:

“When Eastern skies, the sea, and misty plain
Illumined slowly doff their mighty shrouds
And Heaven's bright archer, Morn, begins to rain
His golden arrows thro' the banded clouds,
I rise and tramp away the jocund hours,
Knee-deep in dewy grass, and beds of flowers:
I race my eager grey-hounds on the hills
And climb with bounding feet the craggy steeps,
Peak-listed, gazing down the clover deeps
Where mighty rivers shrink to threaded rills:
The ramparts of the mountains loom around,
Like splintered fragments of a ruined world,
The cliff-bound dashing cataracts, downward hurled
In thunderous volumes shake the chasms profound.”

This is Morning, and the reader will not fail to mark the freshness and buoyancy of the diction, equally with the thought. Here is its counterpart, however, Evening, which is superior in every point:—

“When Evening comes I lie in dreamy rest
Where lifted casements front the glowing West,
And watch the clouds, like banners wide unfurled,
Hung o'er the flaming threshold of the world:
Its mission done, the holy Day recedes,
Borne Heavenward in its car, with fiery steeds,
Leaving behind a lingering flush of light,
Its mantle fallen, at the feet of Night:
The flocks are penned, the earth is growing dim,
The moon comes rounding up the welkin's rim,
Glowing thro' thinnest mist, an argent shell
Washed from the caves of darkness on a swell:
One after one the stars begin to shine,
In drifted bed, like pearls through shallow brine;
And, lo! through clouds that part before the chase
Of silent winds—a belt of milky white
The galaxy a crested surge of light,
A reef of worlds along the sea of space.”

We have not troubled ourselves to italicise the notable lines in these two somewhat extended quotations;—the beauties of thought and imagery are unmistakable. The last eight lines are elaborated with a care which the author has succeeded in wholly concealing from the cursory reader, and the images are carved with the sharp outline of sculpture.

It is not, however, in this poem—"The Castle in the Air"—alone that Mr. Stoddard revels in the splendors of rhetoric and sensuous decoration. This intellectual revelry is not the exception, but the rule. Witness those rhapsodies, "Triumphant Music," "Hymn to the Beautiful," "The South," "Autumn" and "The Broken Goblet"—to which we might add, as a still further illustration of our remark, a poem which formerly appeared in the pages of the *Messenger*—we refer to "The Salver of Grapes." This last production is the flowing over of a cup, full to excess of the richest vintage—what our author calls "the wine of poesy." The rhapsodical, the luxuriant, the languid, the joyous meet and mingle in its winding periods and involved sentences, like the notes of rich, full music. The ardor of the writer is positively infectious, and while his verses are ringing in our ears, we are convinced with Mr. Stoddard, (alas! that such an Arcadian reveller should be *Mistered*.) that there is nought on earth "like brave and noble wine."

Why should we fill our pages with quotations or selections, when the tapestry of the verse is all of one pattern? Mr. Stoddard scarcely ever gets out of his sensuous, beautiful cloudland, instinct with all divine loveliness, and far above the cold earth where the abhorred "Sombre Real" meets and checks his day-dreams of romance. If he does stop dreaming, however, for a space, it is to give us some little song like the following, which we quote to exhibit another of his phases of style. It is entitled simply "Song."

"You know the old Hidalgo,
(His box is next to ours.)
Who threw the Prima Donna
The Wreath of orange-flowers:
He owns the half of Aragon,
With mines beyond the main;
A very ancient nobleman,
A gentleman of Spain.

They swear that I must wed him,
In spite of yea or nay,
Though uglier than the Scaramouch,
The spectre in the play;
But I will sooner die a maid
Than wear a gilded chain,
For all the ancient noblemen
And gentlemen of Spain!"

This runs very trippingly off the lips, and is characterized by an exceedingly graceful *manierism*. Another little song, commencing "The walls of Cadiz front the shore," is equally graceful.

In the following most graceful effusion, supposed to be sung by one of those interesting young gentlemen who linger beneath lattices by moonlight with guitars, the best spirit of amatory poetry is most happily caught:

A SERENADE.

The moon is muffled in a cloud,
That folds the lover's star,
But still beneath thy balcony
I touch my soft guitar.

If thou art waking, Lady dear,
The fairest in the land,
Unbar thy wreath'd lattice now,
And wave thy snowy hand.

She hears me not; her spirit lies
In trances mute and deep;—
*But Music turns the golden key
Within the gate of Sleep!*

Then let her sleep, and if I fail
To set her spirit free,
My song will mingle in her dream,
And she will dream of me!

We confess, however, that of all Mr. Stoddard's poems, there is, in our opinion, no one comparable to a little piece of six verses, called "A Household Dirge." The author has, in this edition, stuck it just before his "Songs and Sonnets," just after those trifling verses to "Lu Lu" and "Kam Pou"—when he assuredly should have placed it on the very threshold of his work—always provided there is any truth in the old precept of bringing on the good wine first. This little "Household Dirge" is a most touching, and tender lament; and far exceeds in beauty any thing in the volume. We quote it entire.

A HOUSEHOLD DIRGE.

I've lost my little May at last!
She perished in the spring,
When earliest flowers began to bud,
And earliest birds to sing;
I laid her in a country grave,
A green and soft retreat,
A marble tablet o'er her head,
And violets at her feet.

I would that she were back again,
In all her childish bloom;
My joy and hope have followed her,
My heart is in her tomb!
I know that she is gone away,
I know that she is fled,
I miss her everywhere, and yet
I cannot think her dead!

I wake the children up at dawn,
And say a simple prayer,
And draw them round the morning meal,
But one is wanting there!
I see a little chair apart,
A little pinafore,
And Memory fills the vacancy,
As Time will—nevermore!

I sit within my quiet room,
Alone, and write for hours,
And miss the little maid again
Among the window flowers,
And miss her with her toys beside

My deak in silent play;
And then I turn and look for her,
But she has flown away!

I drop my idle pen, and hark,
And catch the faintest sound;
She must be playing hide-and-seek
In shady nooks around;
She'll come and climb my chair again,
And peep my shoulders o'er;
I hear a stifled laugh,—but no,
She cometh nevermore!

I waited only yester-night,
The evening service read,
And lingered for my idol's kiss
Before she went to bed;
Forgetting she had gone before,
In slumbers soft and sweet,
A monument above her head,
And violets at her feet.

Mr. Stoddard has altered certain lines of the poem since its first publication, and, as usual, he has injured it. We have seen many of his poems, as altered, and we record here our conviction that Mr. Stoddard invariably mars their beauty.

With this very hasty notice of two of our most prominent and promising young poets, we must for the present content ourselves. We have endeavored to state frankly our opinion of their poetical powers and deficiencies, beauties and faults. On a future occasion we may recur to their works; meantime we leave them to "guard the Holy Land of Song"* with their best powers.

*Mr. Stoddard's Sonnet to Bayard Taylor.

CHRISTMAS, 1851.

Hurrah! for the brave old Christmas time,
When cares were all forgot,
When man could live, right merrily,
Contented with his lot.
Man's nature, when worn with care and woe,
With life disgusted feels,
And needs some fun, when the year is done,
If but to grease the wheels?
Then Hurrah! for the brave old Christmas time,
The day without a tear,
The day of rest, forever blest,
As the Sabbath of the year!

There was a time, when Christmas came
Like Israel's Jubilee,
And freedom gave to the weary slave
Of care and misery.
With a cheerful smile he prepared for toil,

As the weary year began,
And he almost blest, with a grateful breast,
The primeval curse of man—
For he looked for the merry Christmas time, &c.

Brightly the blazing fule log burned,
And merry was the laugh,
When the jovial host gave the Christmas toast,
And the wassail they'd freely quaff.
And the pointed jest, and the riddle guessed,
Or the joyful Christmas lays!
It was this to live in the good old time,
When Christmas was best of days!
Then a loud hurrah for the Christmas time, &c.

And then the stocking beneath the head
Of the innocent little child,
As it dreamed of St. Nicholas' fairy gifts,
And, dreaming, sweetly smiled—
And the jolly spree, and the heart of glee,
And the laughter, loud and long,
And the merry voice of the spirit free
In the chorused Christmas song!
It was this to live in the Christmas time, &c.

Our fathers, who lived in a former day,
Saw more in life to love,
And they praised, with a purer piety,
The Father of light above;
And they worked as hard, and they worked as well,
Though free from an engine's soot,
And were happier men, and better then,
And had a day to boot—
For they kept the brave old Christmas time, &c.

And the maidens, too, of a former day
Were just as bright and fair,
And as pure of heart, though devoid of art,
As the modern damsels are—
With love's first glow, (oh blush not now,
My pretty simpering miss)
They stood below the misletoe bough
And received the proffered kiss.
For they loved the brave old Christmas time, &c.

But now, in this age of progressive steam,
They cannot spare the time
To rest awhile from labour and toil,
From vices and from crime.
For they now destroy the mirth and joy
Of the merry Christmas scene,
And society's plan is to make of man
An *endless labour-machine*.
They forget the brave old Christmas time, &c.

The pious grace of a bigoted face
Frowns down the bright Christmas day,
And the war that men wage, in this "popular age,"
Has dethroned the fair Queen of the May!
As thus I behold each feast of old
Just standing on ruin's verge,
My joyous lay is dying away
In the fitful notes of a dirge.
Then farewell to the brave old Christmas time,
O'er its memory fall the sad tear,
'Twas a season of rest, but no longer is blest
As the Sabbath of the year!

• CARRIL.

CUPID'S SPORTS.

"Why, foolish painter, give those wings to Love?
Love is not light, as my sad-heart can prove:
Love hath no wings, or none that I can see,
If he can fly, oh! bid him fly from me!"

My good friend, we were conversing cosily together about Mr. Timothy Wilberforce and his love scrapes; we left him, if not on a bed of roses, at least in that half-dreamy, pleasant state of hope, which lures on innocent young gentlemen into entangling difficulties, from which few escape with sound hearts. We left him just peeping into that beautiful kaleidoscope of love which maketh all things fond and fair "one rainbow of the air." But yet he was in a state of uncertainty—a sort of betwixity and betweenity, which to say the least of it, was not altogether pleasant. He felt as if there was a connecting link just forged between himself and another, which "bound like steel about his heart forever;" and we happen to know that at this interesting period of his life, he could have been led and turned by a single hair, if the end of that hair had been held between the forefinger and thumb of our fascinating little Fanny. He had reached the sighing state, when one sighs and feels no pain,

"And oft he deeply sigh'd
And wished to travel on."

Little Fan on this eventful morning was up with the lark; she bestowed unusual care at her toilet, and yet her dress was simplicity itself: it was plain to see she was in a killing mood—not exactly designing to perpetrate premeditated murder, but every arrow was assigned its proper place in her dangerous quiver. A white robe with a pink ribband around the waist, its unwrinkled ends streaming towards her feet, was her simple attire. Upon her hair was loosely laid a pure white silken net, which left her tresses free to wave and swell. And oh, she had a beaming, joyous face, "an' lips o' drapping hinnie;"

"She was fresh as the spring, and sweet as Aurora,
When birds mount and sing, bidding day good morrow."

And—

"Love midst her locks did play,
And wantoned in her e'en."

Now, what chance would a susceptible young gentleman have to escape from a battery like this? Talk of batteries to mow down serried ranks. Here was one which picked off single men with unerring aim.

Tim had on his "tothers" too, but what are "tothers" on a man, compared with "the might—the majesty of loveliness?" He had early left his downy pillow and was strolling among the flowers, seeking an offering meet for her whom his fancy began to paint as altogether fascinating. He thought the speaking rose "a token fit to tell of things that words can ne'er disclose," so he pulled a half blown blush, a bud that seemed instinct with life, for love in its bosom sported and ruffled up the leaves. As he plucked it from the bush, he heard a little bell tingle, (it was the first breakfast bell,) and even this caused his heart to flutter, for he had once more to face that "laughing mou." As soon as he entered the door, our Fan came running to him bearing a silver tankard, frosted on the outside as white as snow, and crowned with fresh and fragrant mint. "Good morning—I've been waiting for you," she said, "I was afraid my julep would all be spoiled. You see I know how to brew a julep. Ain't it nice? Some of my friends tell me this is the way I make my arrows tell, but you know, Mr. Tim, I don't keep arrows for friends."

"Ah!" said Tim, "how bright you look this morning; arrows, or darts, or what not, you make one love you whether he will or no." (She curtsied to the floor.) He sipped, and then he took a deeper pull, and it seemed to him that the sparks flew around her like those that Vulcan sports when he strikes his heavy hammer on the whitened metal from his heated forge. Ah, Tim, thou art gone. I would not give a solitary fig for such as you—

"The courteous Red breast he
With leaves will cover thee,
And sing thy elegy
With doleful voice."

"Ah," she said, "you've pulled a rose, I see. I knew you'd bring me one; 'twas all I wanted to set my cap. Somebody will be coming by-and-by. You know there is 'no goose so grey,'" and then she laughed and placed the bud—not in her cap, but next her heart. Now, my gentle young lass, this thing of catching a bird is a science—not to be learned at Universities. No. It is not written in books. 'Tis a gift. All birds are not caught with the same bait, nor with the same kind of snare.

"Mr. Wilberforce, do you know any thing about Flora's language?"

"I only know," he said, "that bud is like you, Miss Fan."

"Take care how you give young ladies rose-buds: couleur de rose, half blown, means love. I'm not taking it to myself; I'm only warning you. A friend of mine, (she rattled away so fast

Tim had no chance to edge in a soft word,) once had a beau, who had gotten to the desperate point—ready to take the leap, but he was afraid to jump, you know, and he would sit for hours and never say a word, but look books, and as she didn't care much for shut up books, she gave him a plate of crackers and told him to amuse himself while she went about her business. Now if it had been me, I would have brought a bouquet of flowers and laid down Flora's dictionary by his side, and would have taught him the 'science,' like these boxers, (and she rolled her arms and fists one over the other.) I would have been dumb too, and we two dumb people would have opened our hearts, and he could have said yes, and I could have said no, and there the matter would have ended without half the time and trouble. Would'nt it have been funny?"

"Indeed," said Tim, "there would be no occasion for language, for,

'Why should feeling ever speak,
When thou canst breathe her soul so well.'

Thus matters were proceeding very naturally. "wery," when the door opened, and old uncle Tom, the house-servant, with his best bow, said, "Missis—breakfast, ma'am." Some how or other, it always happens so. Just in the very niche of time—when the blood is mounting up, and Cupid has his arrow's notch upon the tightened string. What did Tim care for breakfast?

Now, good sir, I have nothing to do with the eatables that were served on that table. Every thing was as nice as nice could be, sumptuous, abundant, elegant. But here was a situation that was "uncomfortable." A good sized table, with one seat at the head, and another at the foot, and nobody but two young people to occupy them, and this too for the first time; and there standing off, with a waiter under his arm, and looking respectful and distant, old uncle Tom, with eyes open—ears cocked. It looked odd and felt awkward. All you young married people, who, when the bustle of the honey moon is over, go quietly to your own homes, and sit down calmly "all aloney" at a breakfast table, know how it feels. What must it have been with a young lady and a young gentleman, where something more than a julep is brewing. It looks "unnatural," and would make any body feel "uneasy." Talk about roses and Flora's soft whispers before uncle Tom? Cupid, under such circumstances would place his finger on his mouth, and between his teeth hiss "She-e-e-e."

"Love's bondage is strong, but 'tis delicate too,
And hearts that are fondest are soonest afraid,
Love shrinks from the gaze like a bird from our view,
That sings the night long in the depths of the shade."

Tim tried to be easy, and he thought he would throw uncle Tom at least off the track; so he said gayly—"What has become of your cousin Bella, Miss Fan? You promised her, you know, to me."

"Yes, and I promised you to her, and you will be bound to ratify my promises."

"No doubt," said Tim, I shall have to say,

'Oh how Bella is my puella,
I'll kiss her *secula seculorum*;
If I have luck, sir,—she's my uxor,
Oh *dies benedictorum*.'

And as he said this, he gave her a glance of the eye, which said "You know I don't care for anybody but you," and which glance knowing little lassies comprehend full as well as the most choice expressions of the tongue.

"What bids the soul the emotion declare
By the glance of an eye when the lips do not dare,
'Tis love—'tis love in the heart."

My good friend, we have dwelt long enough upon this breakfast,—we must hurry on. We were forced to look in upon this scene, simply to ascertain how matters progressed. Cupid, you know, is no gourmand, the little God is contented with sipping the honey-dew, enjoying the dainties of soft looks, gentle sighs and whispers, and occasionally relieving the soft pains of his breast, "by stealing an ambrosial kiss." And all his devotees follow closely his example; indeed, we have known it not unfrequently to happen, that young gentlemen who were desperately smitten would feel qualmy at the very sight of provisions; as for young ladies, between fifteen and eighteen years of age, they were never known to eat at all. These are strange disclosures, but they are nevertheless true.

My friend, in this little drama enacting before you, there is no necessity to introduce a scene-shifter to pull aside any of the illusions which assist the fancy in theatrical representations; with the aid of your imagination, we pass at once to other scenes which occurred in that beautiful retreat, into which Cupid managed to inveigle our luckless Tim. Sterne in his inimitable character of uncle Toby, when he wished to depict the dangerous position in which my uncle was placed in his love affair with the widow Wadman, induces the widow to request uncle Toby to look into her eye for a moat that she professed had unfortunately afforded her pain. Each one of us feels at once the criticality of the situation. And auld Rabbie Burns, old Scotia's sweetest bard, describes his own feelings towards his sweetheart with a pen of light, when he says—"Indeed I did not know myself why I liked so

much to loiter behind with her, when returning in the evening from our labors; why the tones of her voice made my heart strings thrill like an Æolian harp; and particularly why my pulse beat such a furious ratan when I looked and fingered over her little hand, to pick out the cruel nettle stings and thistles." We find our friend Tim occupied precisely in a similar way.

"Oh, Mr. Wilberforce, do pick this briar from my finger," and so they were seated close together, with her right hand in Tim's left, and he was most delicately endeavoring to remove a very small thorn from her middle finger with a fine cambric needle. Tim would have given—not the world, that's too much—but he would have said, "I'd give the world just to press her little finger between my finger and thumb;" and he had been racking his brain for all manner of excuses to obtain that little finger in that improper position. But all at once, in the most friendly, kind way imaginable, without the least effort, the whole hand was laid most confidently in his. "Pulse beat such a furious ratan!" "Heart strings thrill like an Æolian harp!" I tell you, madam, if you never felt any thing of this kind, you have never been on an anxious bench, and have no right to give in your experience. And when she would wince as the needle would touch the briar, don't every body know that Tim felt the imagined pain keener than she the actual pang? And when at last the briar was removed, how did it happen that the hand was still retained in Tim's? These are questions which the disciples of Mesmer may answer. All we know about the matter is, that while that hand lay with its open palm upon the open palm of Tim and his right hand gently retained it with a soft kind of a mild pressure, and it was not withdrawn, "the minutes winged their way" with pleasure."

"Miss Fan," he began, "do you know I had no business to come here?"

"Not come here!—not come to see a friend! Why not come here? A little while ago I was talking to papa: you don't know what a friend he is of yours. He said he didn't know you, but your father and he were old cronies, and if you were half as good as the old fellow, you were welcome here. Tell him, he said, I'll try to hobble down by-and-by and see if he's like the old man. Do you know," she added, "that papa has been lecturing me this morning? He says he has but one fault to find of me, and that is, I'm a coquette. Coquette, because my heart is not frozen cold. Coquette, because I treat people as kind as I know how; as if it would be right for me to imagine gentlemen came a courting me before they told me so."

"Ah, but, Miss Fan, you can tell what a gen-

tleman means by his looks. Cupid is painted blind, but *you* know he has eyes—

'In one soft look, what language lies,
Oh, yes, believe me, love has eyes.'

Why does the poet say—(poets know something about love)—

'Turn away thine eyes of love,
Lest I die with pleasure.'

"Oh, yes, I know you men; you can quote poetry about love, and look very die-away, when there is not a particle of love in your composition. I can quote poetry, too," she said,

"Love's wing and the peacock's are nearly alike,
They are both of them bright, but they're changeable too,
And where'er a new beam of beauty can strike,
It will tincture love's plume with a different hue."

You all profess to be caught by every new beam, but you are as changeable as the breeze."

Tim was in the act of making a full declaration; he had it on the tip of his tongue; his heart was full; his hand was full too—he was playing with that little finger;—but he checked himself in mid volley; he thought he was too precipitate, and yet the opportunity kept coming. He only said, "You, Miss Fan, have learned how to catch and fix the beams."

"Oh," she said, "it's been my lot always to make discord."

"Then," said Tim,

"Let Love but gently touch the strings,
'Twill all be sweet again."

"Ah, but Mr. Tim, I must first have somebody to love. 'Twont do for little lassies like me to set sail by myself. I must have a pilot," and she laughed, and then she looked sad, and said, "I don't think I shall ever have a chance. We friends can talk it all over, but I'm doomed."

"Suppose," said Tim, "I was to say you have a chance now."

At this interesting point, as the tellers of nursery tales would say, Tramp, Tramp, Tramp! they both heard most distinctly that peculiar sound which indicates the approach of one hobbling with great difficulty upon crutches, coming closer and closer; Tramp, Tramp, Tramp! Tim had concentrated into his eye-balls every particle of a heart that he had this side the grave, but as the last tramp was evidently at the knob of the door, that little hand gently withdrew itself from the effort that had been made to extract a briar, and the eye-ball of our friend sunk fifty degrees in the scale of the thermometer of love in an instant. The peacock looked down upon

the ground, and seeing his feet, that beautiful fan was speedily closed.

"Oh, my papa!" she said, running towards him as the door opened, "here is Mr. Wilberforce." And so the old gentleman hobbled up to Tim and welcomed him to his country home, told him how long he had been confined with the gout, the very mention of which almost gave him a twinge, asked him how he and his little Fan had got along together, said she was a little vixen of a coquette, and abused her most roundly, but shewed beneath all the abuse that she was the very apple of his eye. And when she would rattle on as she did before him, of the agreeable time she had spent, and how delighted she was to see somebody in that secluded gloomy spot, how thankful she was when an old friend, like Mr. Wilberforce, came to see them, and begged that he would cheer up her father by giving him an account of what was going on in the world, while she attended to her household arrangements, the old man's eyes would sparkle and he abused her but the more.

It was an uphill conversation with Tim, he had not recovered from the revulsion of feeling which had sent the blood which was boiling in his veins back to the heart with too sudden a gash. He tried to rally but in vain. The old man talked of country life, of crops, of corn, of wheat, of tobacco, of hay, of oats, and cracked "of horses, ploughs and kye;" talked of dogs, and guns, and birds, and longed to be able to enjoy these things as once he had done. Talked of the friends of his boyhood, and the good old times, when Tim's father and he were at college together, said "old times were gone, old manners changed"—that the men were different, the women were not half as handsome, nothing like his Jenny, when he first went a courting. Ah, she was the lass with the raven locks!—and he seemed almost to be getting young again, and until he touched this last string, he found no sympathy in Tim, but he wakened up and argued manfully for the lassies of the present day.

How different wears the day, when young hearts throbbing with love, and emotion, and feelings refined by purest thoughts, are breathing in each other's ears "the tender tale," and are mutually giving and receiving "looks and tones that dart, an instant sunshine through the heart." Old Burns says:

"If heaven a draught of heavenly pleasure spare,
One cordial in this melancholy vale,
'Tis when a youthful, loving, modest pair,
In other's arms breathe out the tender tale
Beneath the milk-white thorn that scents the evening gale."

Now, my good madam, you know from ex-

perience how provoking are these interruptions to the progress of love. I have recorded this one unconsciously interposed by the good father of little Fan merely to warn young people against impatience under the infliction;—these *contre temps* will happen. If you bolt and doubly lock the door, just at the critical moment when you have said enough to commit you irrevocably, and before you have obtained an answer affirmatively or negatively, somebody will rattle at the knob, and though they find it locked and barred, entry will be demanded with a pertinacity that will not be denied. The best plan is to leave the door wide open. If ever you try to get rid even of a child under such circumstances, martyrdom would be suffered before it would evacuate the premises. I have seen young ladies try it, and I have found even their inventive faculties, that scarcely ever are at fault to remove obstacles unnecessarily interposed in such matters, wholly baffled. The only animal I ever heard of, whose presence advanced a courtship, was that of the cat when the gentleman said 'Pussy, may I have your mistress?' and when the lady answered, 'Pussy, say yes.'

Again we must imagine the old gentleman fatigued with the effort he had made; fatigued with talking, seeking his chamber, lolling listlessly in his cushioned chair, with his foot upon a pillow, satisfied with the reconnaissance, and composing himself to rest. Imagine a young lady, anxious to appear a good manager, superintending in private the making of cake, of ices and blanc mange for her desert, and giving directions for a neat and abundant dinner; imagine a young gentleman upon the tenter hooks of love, no longer doubting, but walking to and fro, conning over a set speech,—how he should bring about a full developement of his heart and secure a favourable result.

Now, according to our limited experience in courtship, we never knew a conned and planned speech to be of the least use, it wont fit, cut it and turn it as you may, it will not come in. We advise young gentlemen, therefore, to extemporize it, and trust to chance. It will not answer in love matters to commence at a subsequent meeting precisely where you left off at a previous one. When Tim was interrupted, he had just said, "Suppose I was to say you have a chance now." It would never do to begin there. The foundation must be laid anew,—it is like little Doves in building their nests—every time new straws are picked up, and carefully brought together. One brings the straws you know, and the other fixes them. There is nothing solid in what Cupid or his votaries say—all are flimsy straws. But they answer the purpose.

The candles were lit, the little round table at

which they sat the first evening, was again the centre of attraction, and we find our two friends sitting again close together, looking over a beautiful annual, "The Flowers of Loveliness." The engravings were most delicate, and the flowers were represented by female figures beautifully and tastefully arranged. They read the poetry together;—who cares a fig for prose when love has wakened a new life in his soul? And as they read, they

"Took in sounds that might create a soul
Under the ribs of death."

When two young people are examining pictures together, how close their heads approach, you not only hear the breathing, but you feel the breath. "Mr. Wilberforce," she said, "do you know I always loved to have somebody to read to me? And if that somebody is a friend, how pleasant it is."

"And," said Tim, "if the somebody is a lover, it would no doubt be more pleasant still?"

"That depends on circumstances; I've seen lovers, Mr. Wilberforce, that were not very loveable, but a friend who reads well almost makes a body love him."

"Do you know, Miss Fan, I love to have somebody to sing to me? A little song you sang, just before we parted the last time we were together, rang in my ears a long time."

"Oh," she said, "you were singing it in the road yesterday when I met you, I thought you had forgotten it."

"Can't you sing another little song, just to revive old recollections?"

"I promised you," she said, "to sing for you when you came to see me," and she ran to the piano, and played a soft symphony that crept along Tim's fibres, and then she sang with a touching pathos,

"Then should music stealing
All the soul of feeling,
To thy heart appealing,
Draw one tear from thee;
Then let memory bring thee,
Strains I used to sing thee;
Oh! then remember me."

And she looked round at Tim, and said again, "Strains I used to sing thee; Oh! then remember me." "But," said she, "friends always do that; I heard you singing, 'My heart's in the Highlands,' and I took it for granted some mountain lassie had it."

"Mountain lassie," said Tim, "you know who has it."

She took no notice of his remark, but sang the next verse until she reached the last three

lines, and then she turned to Tim again and repeated as before,

"Think of her who wove them,
Her who made thee love them,
Oh, then remember me!"

"Ah," said Tim, "It is useless to tell me that

'For thy impression on my mind,
No time nor power can move,
And vain, alas! the task I find,
To look and not to love.'"

And as he said it, he caught her eye, and she saw his heart.

"Her pure and eloquent blood
Spake in her cheeks."

"Miss Fan," he said, "will you love me back again?"

"Now," she said, "Didn't I tell you, you must not fall in love with me?"

"I couldn't help it, wont you?" and he took her hand, "cant you?"

She shook her head.

My good reader, if we keep you sitting here looking on at this scene, you will forget your ordinary avocations—they sat a long time, and little Fanny still shook her head—sometimes she would turn round and smile, sometimes she would look as if she was in the act of relenting, but the last we saw of her that night, she was still shaking her head.

THE SYCAMORES.

A SONNET FOR AUTUMN.

BY ALTON.

Ye dear old Trees—it seems but yesterday
Your noble forms, in green luxuriance twined,
Waved fondly graceful to the wooing wind,
Beneath the smile of Summer's genial ray:
But Winter scowls—and, oh, what sad decay!—
Bestrewing wide the frosty ground, we find,
To shrivelled scrolls, your beauteous leaves consigned,
And, with them—all your glory passed away.
Perhaps ye are a lesson unto me
That, though, unconscious of a single care,
The sanguine heart may beat with rapture free,
Yet should it for that gloomy day prepare
When, ah, deserted by Prosperity,
And thankless friends, it will shed the lonely tear!

STORY OF GOOD MR. BEAR.

HOW BY ACTING HONESTLY AND FORGIVING HIS ENEMIES
HE PROSPERED IN THE WORLD; AND RISING FROM
THE HUMBLEST STATION IN LIFE, CAME TO
REPRESENT FINALLY THE KENNAQUAHAI
DISTRICT IN CONGRESS.

A CHRISTMAS FANCY FOR GOOD BOYS AND GIRLS
OF ALL AGES.

DEDICATED

TO "FLOWER" AND "FEATHER."

My Dear Little Ladies—The story you are just about to read, was related to me by Mr. Bear himself, and he assures me that every word of it is true. Of course it is true: and Mr. Bear's history shows so well the policy of always acting honestly and kindly towards all men, even our worst enemies, that I determined to write it down and send it to my friend Mr. Thompson, in whose Messenger it might be printed, and read by you and all little ones at Christmas.

With the hope that it may please you, and all good little boys and girls who read it, I remain, my dear little ladies, (cap in hand,)

With the highest consideration,
Respectfully yours, ———.

CHAPTER I.

HOW THE CHILDREN SPENT CHRISTMAS EVE AT GRANDPA JOLLYSON'S, AND OF THE VISITOR WHO INTERRUPTED THEM.

Once upon a time, on a fine, clear, cold evening in December, a happy party of boys and girls were gathered round the broad fire-place of a pleasant, large room, in a fine, large house on the Blue Ridge, which afforded a fair view from the front door of the beautiful river Shenandoah and the "Fort Mountain" far off in the valley, blue against a bluer sky. There was Julia and Harry Gaston, and Nancy Carrayway, and many more boys and girls, and also little Charles Jollyson, his sister Fanny, and cousin Helen, a sweet girl of eighteen. Besides, there was grandpa Jollyson, a fine, hale old man, with gray hair and a clear, twinkling eye—the very soul of good humor in it—and grandma Jollyson, an excellent old lady who sat, knitting away, in the rocking-chair at the chimney corner.

First the children played all sorts of games, and it was all the merrier that they heard the wind coming from the mountains, through the branches of the leafless trees, and crying and complaining at the keyhole and around the gables of the house, to be let in out of the chill, frosty air, to the comfortable, roaring hickory fire which made every one's eyes glisten and sparkle with its radiance. But they only laughed at the

wind and drew nearer to the hearth and the crackling sticks, and betook themselves with new life to their games—which were "Thimble," the "Chair of Criticism," "William o' Trimety," and 'Tis oh sweet beans and barley grow, and you and I and all must know!"

They were very merry with these for a time, laughing, romping, and falling over the crickets, but at last they got weary and all settled down a little discontented on the stools and cushions. One little boy sat on a cricket, and another ran at him, and with a vigorous but threw him down; another wandering about blindfold tumbled over him, and this made a great noise; but they were not enlivened. One little boy yawned and said he was so sleepy, and another cried because his shoe had become unfastened. They were getting remarkably dull, when suddenly a loud knocking was heard at the door, and all were at once aroused.

Nobody stirred, however, and in a moment the knocking was repeated. At this grandpa Jollyson rose, and taking a light, with a look at the children, as much as to say, "you must behave now," went to the door and took down the bar. No sooner had he done so, than the children heard a voice say in a deep tone—

"Respected and excellent sir, a belated traveller, just arrived on horseback, requests of you a small portion of supper, and a little fire to warm his hands."

To which grandpa Jollyson's voice was heard to say courteously,

"Certainly, sir—with pleasure."

And the next moment he entered the parlor, followed by the traveller, who was a stout gentleman, dressed in a heavy suit of fur, with a heaver hat, an enormous shirt collar which covered half of his hairy cheeks, and a bushy black beard and moustache.

"Welcome, sir," said grandma Jollyson, with a twinkle of her bright eyes.

"Madam," said the stout gentleman, with a bow so low that the crown of his hat touched the carpet, "Madam, I am your very humble and obliged, obedient servant."

"Take a seat, sir, by the fire and warm yourself—you must be very cold."

"Madam," replied the stout gentleman, with another bow, "I am cold in truth, and I embrace with pleasure your kind offer and obliging invitation."

At this all the children scattered like a flock of birds, and made way for the hairy gentleman, who sat down on the extreme edge of a chair, with his hat between his knees. He did this so funnily, and his thick limbs fixed themselves so queerly on the carpet, that some of the girls could not refrain from tittering.

CHAPTER II.

HOW MR. BEAR DECLINED TAKING OFF HIS OVERCOAT,
AND WHAT WAS THE REASON.

At the sound of the tittering, the stout gentleman suddenly turned round; whereat all the children became suddenly quiet.

"Take off your gloves and overcoat, sir," said grandma Jollyson, smiling, "you are now at home."

"No, madam," said the hairy gentleman, sighing and snuffing the wind which came through the keyhole, with his long nose, "no, most excellent madam, pardon me for observing that I am not at home."

"At least then, sir, make yourself so, and take off your overcoat."

At this word "overcoat," the hairy gentleman clasped his hands piteously, and his knees shook so that his hat fell from between them, on the floor.

"I cannot, most worthy and comely matron, I cannot take off my overcoat," said he.

"Cannot!"

"Cannot is the word, most excellent lady—for nature has made me so. Yes, madam," continued the stout gentleman, wiping away two large tears which trickled down his long nose, "I cannot. This coat which you naturally deem a fur overcoat, is a *part of me*; these gloves which you suppose are riding gloves, are the natural growth of that portion of my unfortunate person; these fur boots which you wonder at—you and the dear little ones around me—are not fur boots, but natural hair; and this nose," placing his trembling finger on it, "is not the nose of a man!—no, excellent and praiseworthy matron! and you, most worthy Justice of the Peace and honorable ex-member of Congress Jollyson, no! it is the nose of—a bear!"

And Mr. Bear, in uttering his own name, burst into a convulsive sob and looked around him piteously, his large hairy legs all the time trembling under him, and his hairy hands clasped tight together.

"A bear, sir!" said grandpa Jollyson, "is it possible that a *bear* could speak so well as I perceive you are able to do, sir?"

"And so chastely and elegantly discourse," said grandma Jollyson.

"And wear his hat so fashionably," said grandpa.

"And bow so very elegantly," said grandma.

At these words Mr. Bear unclasped his hands and rose from his seat. Then backing almost on the children, who stood or sat, laughing or wondering, he made a bow far lower than before to grandma. "Madam," said he, "it is true I am

a bear—nothing less, and my lot in life has been hard to endure on that account. You have seen me overcome with emotion—pardon me, obliging and most charming lady."

"I could pardon anything in so elegant a—bear."

"Madam, he is the happiest of men—I—I—should say, alas! of bears."

—"One too whose sense is evidently so excellent."

"Madam, praise from so exalted a lady is indeed a balm to the wounded soul;" and Mr. Bear bowed.

"Sit down then, Mr. Bear, and we will have supper immediately," said grandma, smiling.

Mr. Bear sat down and after pondering for a moment, raised his head and thus spoke—

"Madam, and you most honorable ex-member Jollyson, the thought has occurred to me, that some portions of my eventful life might amuse my young friends here. I have passed through many vicissitudes as you may imagine, and these are not uninteresting. Should they desire it, I will relate for their amusement some part of that strange life. Say, my dear children, do you wish it?"

"Oh, yes! yes! Mr. Bear—please, Mr. Bear!"

And sitting down near him, they listened attentively to Mr. Bear, who looked round him cheerfully, and rubbing his nose, commenced as follows.

CHAPTER III.

MR. BEAR RELATES THE ADVENTURES OF HIS BOYHOOD,
AND TELLS HOW HE FORGAVE HIS ENEMIES.

"I was born," said Mr. Bear, "not so very far from this place, my dear children, that is to say, in the thick woods which extend just above Winchester, along that winding little stream called 'Redbud,' which gurgles over its mossy rocks and under the tall stems of water-flags to the Opequon.

"Unlike the good and excellent Jean Paul, who first saw the light, as he tells us, when the meadows were gay, and the early wagtails were flapping their wings, I was born, I am informed, in the dead of winter; and from the first, I say it with pride, was considered a child—hum!—a young bear I should say, of uncommon promise.

"My first distinct recollection is of my brother Tom, who was born nearly at the same time with myself—both my parents having died in my infancy. Often would that excellent and moral brother inculcate into my youthful mind the principles of rectitude and honesty, and though he acknowledged the necessity of levying contribution on the alien race of man, he always lamented

that necessity. Alas! I lost him early, my dear children,"—here Mr. Bear took out his handkerchief and blew his large nose,—“Alas! I was not long to enjoy my dear brother's teachings.

“Near us there dwelt a handsome young bear called the ‘Major,’ who endeavored in every way to provoke and thwart my brother, whose unconquerable spirit was the admiration of the neighborhood. But my brother was not as strong as the Major, and one day they had a desperate encounter, which I arrived just in time to behold. Before I could run up, however, my dear brother had been throttled by his antagonist, and his dying lips gave forth their last sigh. Alas! he was dead, and I threw myself on his corpse and burst into a flood of tears!”

Here Mr. Bear wiped his eyes, as though overcome with deep emotion, and paused some moments.

“But after my grief,” he continued, “came the desire of revenge. Dropping the body of my poor brother, I rushed with fury on the Major, who was slinking off, and catching him up, for I was much stronger than he, dashed him violently to the ground.

“‘Now villain!’ I exclaimed in the Bear language, ‘thou shalt reap the reward of thy blood-thirsty crime. Wretch, I will throttle thee—death for death!’

“And my hand tightened upon his throat, and nearly suffocated this wretched criminal. But suddenly I paused. This was not because I was moved with pity by his broken sobs and petitions for mercy, but because I remembered the words my dear brother had uttered in his lifetime:—

‘Forgive your enemies, brother, and never revenge for revenge’s sake. Rather let the culprit depart in peace.’

“Therefore I loosed my hold upon his throat and hurling him from me:

“‘Go wretch!’ I exclaimed, ‘take from my sight your abhorred image, which holds nothing but the basest stuff, unworthy of my anger; go in peace and repent.’

“And turning from him I threw myself again upon my poor dead brother, strained him in my arms, and shed upon his lifeless bosom a flood of bitter tears.”

Again Mr. Bear paused, overcome. But soon resuming his cheerful tone:

“After this melancholy passage of my life,” said he, “I became cheerful again, and soon, my dear children, found myself carried away by that tender and watchful sentiment which mankind call *love*.”

Here Mr. Bear glanced with a smile at cousin Helen, who suddenly stooped down to arrange a log of the fire, which had fallen.

“I became fond of moonlight nights,” con-

tinued Mr. Bear, smiling, “I often found myself unconsciously rhyming, (in the Bear language, my dear children, of course,) and these rhymes, which were tender and complimentary, I would repeat to Miss Wilhelmina Bear, who smiled kindly on my suit. Once, however, I found her in a very bad humor, and her pink eyes, at sight of me, took an expression of aversion.

“I questioned her as to the meaning of this unhappy change, and after much trouble ascertained that Mistress Molly Hare, a mutual acquaintance, had informed her that I had most disrespectfully spoken of her. On the next day I met Mistress Hare, and catching her in my hand—hem!—paw I should say—I reproved her harshly, and would certainly have crushed her with one squeeze had not my brother's words occurred to me.

“‘No,’ said I, ‘no, I will not harm thee, poor thing; thou art garrulous; and talk without meaning harm. It is my right to punish thee, but I will not. There.’

“And I set her carefully down on the grass. She disappeared, with three bounds, from my eyes and I returned home.

“I do not know whether to bless or lament that night, for near morning I was attacked by three hunters, and, after a desperate resistance, captured, with the loss, however, of my unfortunate tail. It was considered an uncommonly handsome tail, and my feelings under this affliction may be better imagined than described.

“On the same day I was sold for a dozen bottles of brandy to the keeper of a menagerie then in that region; and I passed away from my early life, as the sun, which rises clear and fair, goes forward into the clouds of a stormy noon—ahem!”

CHAPTER IV.

MR. BEAR REAPS THE REWARD OF HIS GOOD DEEDS AND OBTAINS ENTRANCE INTO HUMAN SOCIETY.

“Now comes the most interesting portion of my life, my dear children, and most excellent Mistress, and Mr. Jollyson,” continued Mr. Bear, “the period when first I began to speak the human tongue, wear human costume, and mingle with society.

“The faculty of speech,” continued Mr. Bear, raising his tone, looking round him pompously and sawing the air with his hand, while his shaggy cheeks settled themselves in his large shirt collar, “the faculty of speech is one of those wonderful things, which arising in the earliest and most obscure ages of the world, even in the time of Adam, and stretching through all the following ages of the old classic world, to the

bright and refulgent days which throw their shadow on the dial of the hour in which—but no! most respected Matron, and ex-member Jollyson, and especially *no*, to you, my dear children, I will not digress from the plain narrative of my life. I am not now delivering a lecture; I will continue my adventures.

"Thrown into collision with tens of thousands of people in my wanderings through America, I unconsciously began to listen to the words they were ever uttering, and often endeavored to repeat them. At first I found much difficulty, and to tell you the truth, the first language I acquired was Low Dutch, which came to me more easily, from its guttural tones, than those languages, English, French, Italian, Spanish and German, which I have since acquired in my travels.

"By dint of hammering away, however, at the consonants and vowels, and by constant practice, I attained, in five years, quite a commendable knowledge of our—hum, *your* language. I spoke too without much motion of the jaws or countenance, and one day, (to try my proficiency,) while my keeper was praising my sagacity, I said aloud,

"Friend, your bear is not so wonderful a bear—though I admit his countenance is intellectual."

"I was much pleased with the effect of this speech, for my master looking into the crowd, asked angrily who spoke, at the same time repeating my words. I was never suspected, owing to the very great command I had over my features, and my contempt of the habit of blushing. With my hand on my waistcoat—heart, my dear children, I should say, I can say I have seldom blushed.

"Having thus discovered my attainments to be considerable, I resolved to take the first convenient opportunity to escape, as my detention I regarded in no other light than unlawful. I accordingly embraced the first occasion, and owing to my great sagacity and the excellence of my sight and hearing, made good my flight, but without money, or anything whatsoever to eat. The caravan was in the part of the country I have mentioned as my birthplace—in fact, was exhibiting in Winchester, and I betook myself to the woods wherein my childhood had been passed.

"When daylight broke I found myself in a wide forest without food and no habitation near. But if there had been, how could I have offered myself in my then costume? I was not a man but a bear! Suddenly while pondering where I should betake myself, I heard the baying of hounds on my track, coming from Winchester. What was I to do? My legs, cramped by long inactivity, were but poor aids, and I must soon

be overtaken; nevertheless, I fled, and arriving at the top of a hill looked back and saw my Master pursuing me with half a dozen hounds. I fled faster, but the baying sounded closer, and all at once a living object jumped up in my path. It was Mistress Hare, who, without saying a word, flirted by me with a wag of the tail, and flew toward the dogs. In ten minutes they were off my track and pursuing Mistress Hare, who had thus generously thrown herself into danger, from affection for me, on account of my kind conduct to her formerly.

"I could not stop to think of her fate, but fled still onward. Soon, however, I heard the hounds again on my track, drawing nearer and nearer. I gave myself up for lost, and was about to drop down from weariness, when a hoarse growl attracted my attention, and my old enemy the Major, who had slain my brother, rushed up to me and questioned me as to my fright. I raised my paw and told him in the bear language to listen.

"After you?" said he.

"Yes," said I.

The Major growled savagely.

"Who?" said he.

"The Menagerie keeper."

At this the Major growled furiously and turned toward the sound which was close upon us.

"Where are you going?" said I.

"To tear him in pieces," said he.

"Why?"

"He is after you—eh?"

"Well."

"Well, you spared my life when it was your right to take it; and I ought to have lost it. If any body is taken, it shall be me."

I turned back by his side, shaking my head.

"Where are you going?" said he.

"With you."

"No,—then both will meet death,—try to escape like me."

And he rushed into the forest. I again fled, but soon I heard a great growling, behind me, and coming to the top of a second hill, which overlooked the spot where I had encountered the Major, I perceived my Master following close on his dogs who had grappled with the Major himself. That unfortunate and irascible, but brave and good-hearted animal contended like a hero. I could not bear to see him thus surrounded, and with a bound was rushing to his rescue when he fell dead, pierced by the knife of my Keeper, who also fell upon the ground crushed by the Major's hug.

"All, I knew, was over with the Major, whose brave heart thus carried him to his death, in requital of my former forgiveness. He was, taken altogether, a rude and violent character—was the

Major—and this led him into mortal combat very often, but he had his better traits and magnanimously he preserved my life at the expense of his own. Honor to his heart!

"Faint and weary I reached, late at night, a farm house—where I hoped to find refreshment and a refuge. I was not disappointed, and Mr. Vinci no sooner heard my story than he most kindly offered me an asylum and introduced me the same evening to his wife and only son, who formed the entire household.

"I cannot, my dear children, dwell upon this portion of my life, and can only say that I here acquired the art of reading and writing, and would also have learned the Latin language, which was taught here by a private tutor, had not Charles Vinci, a fretful youth of sixteen, thrown every obstacle in my way. He ridiculed my unfortunate accent, scoffed at the idea of a *learned bear*, and so disgusted me with the tongue that I only applied myself again to its mysteries many years after. At last Charles' persecutions became so intolerable, that one morning, with much sorrow, I was forced to leave the home of my kind protector, and again seek my fortune.

CHAPTER V.

MR. BEAR BECOMES AN AUTHOR.

"I turned over in my aching head," continued Mr. Bear, "many schemes to follow, and could determine on nothing for a long time. But at last one day, while smoking my pipe in the thick branches of a large oak to which I had betaken myself for meditation, I suddenly bethought myself of the circumstances of my early life, and made up my mind to turn them to account.

"So descending from my tree, and knocking the ashes out of my pipe I stopped at the first road-side inn, and calling for a quire of paper, pens and ink I sat down in a quiet retired chamber and commenced the work which I believe you, my dear children, and especially you, honorable ex-member Jollyson have often heard of—I refer to the volume entitled "*Habits and Feelings of the Bear Species*, by Johannes Ursulius, Esq."

"I had no sooner finished this work than I wrapped up the MS., and setting off for the North, betook myself to the task of finding a publisher.

"This I found uncommonly difficult, my dear children, for so many bad books, or worthless books are written for one useful book like my own, that the honorable, the publishers, must use discrimination. At last, however, I found a gentleman who willingly undertook the publication, and even solicited a portrait of myself, to place opposite the title page. I believe you have

seen the picture in question of the humble individual who now addresses you, most magnanimous ex-member Jollyson—large beard, high collar, gold spectacles—"

"Yes sir—oh yes sir," nodded grandpa Jollyson.

"And," continued Mr. Bear, "it was 'very like' I was told. Well, my work met with great success, and another edition was called for. '*The Independent Puff Journal*' assured the public that 'a work so remarkable, and evidencing such finished scholarship united to the broadest erudition and the most extraordinary learning, had not appeared since the year 1800, it might even be said from the beginning of the century.'" (You will pardon my egotism.) The '*National*' said it was 'valuable and striking.' The '*Stylus*' characterized it as 'uncommonly uncommon.'

"When these criticisms were published I knew my fortune was made; and indeed money soon flowed in upon me in a stream. I was happy—for though only eighteen and a bear, my dear children, I was already a celebrated author: now you know it is almost impossible for celebrated authors to be bears. Still there were two things in which I was deficient and these were a graceful carriage of the person, and a knowledge of the exact sciences. To acquire these I knew a seminary or college was the best place, and so ere long I had made up my mind where I would go."

Here Mr. Bear paused, and bowing low rose from his seat and offered his arm to grandma Jollyson. The reason was that the supper-bell had just rung and Mr. Bear showed thus his great politeness.

The supper be sure was full and excellent and many jests and witticisms were passed from side to side. The way Mr. Bear eat his bread and drank his coffee was the strangest in the world, and his singular manner of lapping the rich beverage from his saucer and chewing his food with a loud obstreperous sound much amused the little children.

But their mirth changed into grief when Mr. Bear having finished his supper thanked grandpa Jollyson for his hospitality, and in spite of every entreaty took his leave. He promised, however, to return on the next (Christmas) evening and all were obliged to be satisfied. Only little Charles was heard to say anything, and he only said "What a pity Uncle John is out on a visit."

CHAPTER VI.

MR. BEAR GOES TO THE MILITARY INSTITUTE AT ——— FOR HIS MENTAL AND PHYSICAL IMPROVEMENT: AND WHAT HAPPENED TO HIM THERE.

On the next evening the children were gather-

ed as before round the blaze while the snow pattered at the windows; and all wished that Mr. Bear would come and finish his story. A large pipe was got ready for him, as he had mentioned his love for smoking, and every one was on tip-toe to hear the end of his adventures: only one of the party seemed to feel no anxiety, and that was Uncle John, a young gentleman of "twenty and more," as he was accustomed to say when his age was asked. "As to staying to hear all that folly of Mr. Bear's," he said "he wouldn't and that was just it, give him a candle and he would go to his room, and write a business letter to go soon in the morning. Mr. Bear! folly!" And so Uncle John took his candle and retired.

Precisely at seven o'clock a loud knocking was heard, and grandpa Jollyson going to the door. Mr. Bear soon appeared shaking from his shoulders the snow which had began to fall and dusting carefully his bushy whiskers and mustache.

"Most commendable madam, and you, honorable ex-Jollyson; I should say—hem!—ex-member of Congress Jollyson, I hope I have the honor of seeing you well and in the best possible spirits," said the stout gentleman bowing.

"Very well, Mr Bear," replied grandpa Jollyson, "and you come just in time for supper. After supper we hope to hear the rest of your interesting adventures."

"Oh yes, Mr. Bear," cried little Charley;—and then stopped suddenly abashed at his own vehemence.

"Madam," said Mr. Bear, just as the supper-bell rang, "I see before me the most excellent and charming of matrons," and (going into the dining-room with the rest) "and also," continued Mr. Bear, "the most excellent and charming of suppers."

All sat down and Mr. Bear eat and drank as funnily as ever to the great merriment of the children, who could hardly retain their laughter.

Supper was soon over, and then subsiding quietly into their seats, the children evidently expected the conclusion of Mr. Bear's adventures. Therefore a full pipe was handed to him and after the logs were arranged and the blaze had shot up cheerfully, Mr. Bear, puffing thoughtfully at his pipe, thus continued his narrative:

"I told you, my dear children, that I had realized much money from my work on the 'Habits of the Bear Species,' and had determined to still further perfect myself in human sciences. Therefore I determined to enter myself at the Military School at —."

"I arrived there on a fine morning in July, and immediately entered myself as a cadet.

"You may imagine, my dear children, that my figure which though highly elegant as I have been told, is yet also a *little* queer, did not escape

unremarked. They are a wicked set, these young gentlemen, and they determined that I should not be exempt from the usual torments. I laughed, however, at their hints of what was going to take place, and had made up my mind, as in all situations I endeavor to do, quickly. Unless these trials were painful or outrageous I should submit; otherwise I should rebel.... The night came at last, and being removed from my bed in (I say it without delicacy) a state of nature, I was bound under the arms with a rope and dragged hither and thither through the waters of a neighboring pond. I made no resistance, for I was rather pleased than otherwise with this nocturnal bath, the weather being warm.

"I soon found, however, that my tame and unsoldiery submission had much lowered me in the opinion of my fellow-cadets. They called me behind my back, mean-spirited and so things went on till one morning I was surprised to see arrive no less a person than my former acquaintance Charles Vinci. He was very green, was Charley Vinci, my dear children," said Mr. Bear, "and it was soon understood that his trial and probation would be more than usually severe.

"Accordingly I was waked up late in the night from my small mattress, whereon we slept, my children, with a pillow under the back to make us straight, elegant and imposing in carriage;" here Mr. Bear straightened himself unconsciously, "I was waked by a loud shouting outside my door. I rose, hastened out and found Charles Vinci who was very delicate, in the hands of some dozen young gentlemen who, without pity for the chill which the night-air, in his half-unclothed condition had given him, or fear of his furious struggling, were putting him through a discipline to which an ordinary 'beating' would have been nothing. Meantime another youth stood by with a large pail of cold water ready to throw it on the child—for I may almost call him such. Now I knew this would cause him an illness, so I interfered. I was insulted and told to mind my own business.

"You know, my dear children, I am not irascible, but on the present occasion I was right. So catching in my two strong arms—hem—fore legs, the youth who was about to discharge on Charles the shower of water;—

"Unhappy young man!" I exclaimed, "what would you do? This is a mere child and frail. Would you kill him?"

"I was assaulted immediately by all:—I have often regretted the effects of my violence on that night, my dear little ones, and I carefully tended the youths with bruises and broken arms—the result of my great rage. It was wrong, my dear children, but Charles was thus, possibly, preserved

from death—and it had the further good effect of leaving us both unmolested in future.

"Charles and myself grew to love each other much—but alas! No—no—not yet!" And Mr. Bear sorrowfully sighed.

CHAPTER VII.

MR. BEAR GOES TO THE ——— UNIVERSITY TO PERFECT HIS MENTAL TRAINING; AND WHAT HAPPENED TO HIM THERE.

"After those hard but happy days at the Military School," continued Mr. Bear, "I passed on to that celebrated institution, the ——— University. I was informed that the gentlemen who were turned out from that college were all, more or less, Jeffersons or Madisons in intellect and very remarkable for their high morality and devotion. I was somewhat mistaken, I am sorry to say, my dear children.

"I found many remiss in their duties of attending lectures, etc.—and the tendency to dissipation I observed to be very great throughout the whole establishment. This, however, I imagine is a consequence of all large assemblages of young men, and I do not from this draw the conclusion that the ——— University is greatly objectionable.

"Still there were a class of young gentlemen there who were a drawback and injury to all the rest. They came from one State, (nearly all,) and were ever arousing some evil passion or prompting to some folly the other and better students. From these I cautioned Charles (who had left the ——— Institute at the same time with myself and for the same destination, the University) to keep himself apart: and in the warmth of discourse and advice on several occasions, I was led to use somewhat harsh expressions concerning these youths.

"It seems they heard of my 'abuse of them,' as they called it—for one night I was awakened by a terrible clatter just at my door, which seemed to me a mixture of thunder, rattling and singing. I dressed and went out when I saw a crowd of the gentlemen I have mentioned armed with tin-pans, old fenders, a cracked drum and other instruments still more uncouth, on which they kept up a hideous beating and blowing. No sooner had I opened the door than I was at once assailed with a profusion of most opprobrious epithets; and here let me pause a moment to say, my dear children, that worthless or timid characters almost always choose this mode of showing their hostility; and though many of my opponents on this occasion were neither, they much disgraced themselves by their unworthy conduct.

"I had no sooner stepped outside my door, as I said, when this flood of insults and reproaches began to be poured on my devoted head. I was calm and unagitated, and scarcely felt anything but pity for these violent youths who thus persecuted me for expressing privately an opinion of them much above their deserts. As I stepped forward, however, I felt a hand on my shoulder and turning round saw Charles, who was pale with agitation and rage.

"Come Charles," said I, and I was going on, when a young man stepped forward and reeling with drunkenness, presented a pistol to my breast and fired. The ball passed through my arm, and felt to me like a red-hot iron. At that moment, my dear children, the spirit, or rather demon of revenge and hatred, seized upon me. I hurled the young man beneath me, and would certainly have put an end to his life, but that my brother Tom's words occurred to me. 'No,' I said, 'I will not,' and then addressing the youth,

"Go home, young man," I said solemnly; 'go, and thank God that you have just escaped committing a great crime.'

"No sooner had I uttered these words than I fainted in Charles' arms. The students, I afterwards heard, at once dispersed, and in two weeks I was again going about. We were no longer molested.

CHAPTER VIII.

MR. BEAR IS EXAMINED FOR HIS DEGREE; WHY IT WAS REFUSED HIM; AND THE LOSS HE SUFFERED.

"Charles Vinci, on the occasion to which I have just alluded, my dear children, showed himself a kind and excellent friend, though once he had been the torment of my life. My forbearance from revenge on the young man who had wounded me, still further increased Charles' love for me—for he was naturally a true-hearted boy; and I also became very popular with the students. It is true they often laughed at my somewhat uncouth movements, and the guttural nature of my pronunciation, but as I had now acquired perfectly most of the ancient and modern languages, and often rendered assistance to my companions, when they would have suffered pain without it, I was not much disturbed or teased. It was wrong, I know, to give this assistance, but my natural amiability led me to aid my less studious young friends.

"I spent thus two years at this institution, and determined to stay another year and take the degree of Master of Arts. I accordingly continued my studies, and by the end of the third year, considered myself sufficiently prepared to undergo an examination.

"A great crowd on the appointed day assembled, and I was glad to see, Miss Helen," continued Mr. Bear gallantly, "a large number of that sex from whom all our—hum!—all *human* happiness proceeds. There they were—the fairest of the fair,—one mass of colors and outlines, the most beautiful imaginable; and I prepared to acquit myself to the best of my ability.

"I went through the examination with great eclat, and was about to receive the degree of A. M., when the young gentleman who had wounded me on that unhappy night, stepped forward and 'protested against an animal such as myself being decorated with the highest degree in the gift of the — University.' At this speech all eyes were turned upon me, and my head sunk down upon my breast. I felt, my dear children, that false shame which the most worthy are sometimes not exempt from. You have heard that the most excellent characters often feel ashamed of their humble origin, forgetting that 'honor and shame from no condition rise,' and that you have only to act honestly to have the whole world on your side:—and like those celebrated men, I felt contempt for my lowly origin, among that unenlightened species—the Bears. To the great joy of my enemy, therefore, my spirit seemed broken.

"An animal, sir!" said the Professor frowning.

"Yes, sir—I assert that Mr. Ursulinus is neither more nor less than a bear!"

"At this, a great uproar arose, and a din of voices echoed through the hall. All eyes were turned on my face, or on the pale countenance of my opponent, who trembled with hatred and excitement.

"Mr. Ursulinus," said the Professor, "I request you at once to repel this calumny which has been so—"

"It is useless, sir," I interrupted, raising my unhappy and aching head, which seemed at that moment as though it would split, 'it is useless to make the attempt. I cannot, unfortunate individual that I am! repel it, for it is no calumny. The humble individual who now addresses you is—a bear! The boots whose elegance he has so often been complimented on, with many inquiries as to the maker of so 'fine a fit,' are not human-boots, but the natural covering of the feet of the unhappy and persecuted race of bears! the gloves which many thought him eccentric in never removing are the usual and habitual appendages, I should rather say integuments of the ursine paw!—the ears with which he often brushed away the flies which settled on his Greek Lexicon, or his Horatius, are not deformities as many imagine, but real well formed bearish auriculars, most excellent and respected Professor!

"Born in the woods and early snatched by an

inhuman menagerie-keeper from my native, un-aspiring life, I have sought to enter human society, and make of myself something more than what nature intended me for—an honorable, peaceful and respectable bear! This hope has been defeated by the rancor of the young man who, to-day, has exposed my humble origin—a rancor so great that although he has once wounded me severely, he could not rest content until I was sent ignominiously back to that low station from whence I thought it no impropriety to attempt to rise.

"Nevertheless, he is right most respectable and friendly Professor, and his end will be accomplished without harm to himself, since I will not revenge the wrong he has done me. It would not do for this august Institution to pronounce an unfortunate bear Master of Arts of the — University. I do not ask it now, I do not even desire it. Farewell."

"And, with a heavy heart, I left the hall. But, alas! my dear children, this mere disappointment was nothing to the heart-rending grief which affected me next day. Charles Vinci, burning with rage, challenged the young man who had exposed me, and both fell mortally wounded. He was dead!—my dear, my noble-hearted Charles: dead! I should never see him more! He died as he lived, my noble, my only friend! I shall never recover his loss!"

Here two large tears rolled down the cheeks of Mr. Bear.

CHAPTER IX.

MR. BEAR COMMENCES THE PRACTICE OF LAW IN KENNAQUHAIR, AND RUNS AGAINST MR. LEONIDAS DINGY FOR CONGRESS.

"After the loss of my dear and excellent Charles," continued Mr. Bear, sighing deeply while he wiped away his tears with a blue silk pocket-handkerchief, "I was almost alone in the world. Charles was dead—my stay, my consolation, the friend of my unhappy heart:—dead! that is to say, I was never to see him more, never to press his hand again, never to rejoice at the exhibition of his rare and wonderful genius! Henceforth I knew I was alone, and ambition only could fill the void his death had left in my heart.

"I went far, studied much;—and finally commenced the practice of the law in the charming town of Kennaquhair. You know all about Kennaquhair, my dear children—that fine old town whose streets are so straight or crooked; whose houses are so fair or lead-colored; from whence you look up to see the mountains, and whose beautiful stream flows from the uplands to the more level country below. I regret that

I cannot dwell upon this portion of my life and tell you of the many interesting causes which were committed to the care of your humble servant "Johannes Bruinus, Counsellor at Law, practising in the Superior and Inferior Courts of the Kennaquhair district." (You see I had been compelled to change my name.) These details would only weary you, and but one case is closely connected with my life at this period. A spectator in one of the exhibitions of a travelling menagerie, had in a fit of rage at the close resemblance which one of the bears bore to himself, struck the poor animal so violently as nearly to destroy his reason. The effect on his brain, too, was such that he was thrown into low spirits, and at last became so sad and melancholy that his master, fearing he would die, brought an action for "damages." *Damages*, my dear children, means a sum of money paid to a person for any loss sustained at the hands of another; as when a young lady claims damages from a gentleman who has promised to marry her, and then failed. In such a case she should have the exact sum the gentleman would sell for, were he put up to the highest bidder.—But then legal matters cannot interest you.

"The menagerie-keeper came to me to defend his cause, and what was my surprise to find in him my old Keeper. I felt an emotion of disquiet at first, but finding he had not recognized me, I accepted his case; and the next day came on the trial. My opponent was the celebrated Leonidas Dingy, Esq., and we had a violent contest. Nevertheless, so great was my excitement and eloquence in defence of one of my own species, and so deep my indignation at the cruel treatment the unoffending animal had received, that my speech carried all before it, and a round of applause followed my winding up. I would accept nothing from my old Master who gained his cause,—but I was also much the gainer by the case, and so great was my reputation after the effort, that ere long I was nominated for Congress; and had the honor to be opposed to Mr. Leonidas Dingy. That gentleman attacked me personally on many occasions, having nothing to say to my "political course" heretofore, and I am sorry to say was guilty of many unworthy manoeuvres to defeat me and secure his own election. He characterized me as "an upstart," "a Dutchman," (when, as you know my dear children, I was neither *Dutch* nor a *man*), and stated that my election would seal the fate of the district; whose honor, dignity and happiness could indeed only be secured, he said, by the choice of a sound, unterrified, no-humbbug man, who "knew their rights, and knowing, dared maintain;"—by which my dear children, many thought that he referred to himself.

"The election came on, and though I had not attacked my adversary and had used no unworthy means, I was elected, and represented the Kennaquhair district. How I represented it, honorable ex-member Jollyson, you know; as the "*National Intelligencer*" has reported in full the "Remarks of Mr. Bruinus on the Encroachments of the Russian Bear."

Here Mr. Bear raised his head with dignity.

CHAPTER X.

MR. BEAR FINISHES HIS HISTORY, AND WHAT ENSUED.

"I now draw near the end of my life, up to this time most friendly Jollyson," continued Mr. Bear, stroking his beard and crossing one leg over the other. "After serving my time in Congress, I set out on my travels, and spent three years in Europe, perfecting my education and forming acquaintances. I did not neglect my own species and now correspond regularly (in the Bear language of course) with those public-spirited and republican bears of Italy, "Iron-Muzzle" and "Ronzi;" the Hungarian bears "Dinsky," "Koth," and "Reckzil;" and the English bears, "Bruin," "Rough Coat" and others. They are all more or less American, and republican in their ideas, I am happy to say, and though "Rough Coat" once supported Sir Robert Peel, I have reason to think he is now of the Opposition.

"All this time, my dear children, I had never really felt the tender sentiment, which raises man so much above his lowly humble sphere—ahem! I mean the passion of love. I was soon, however to experience that feeling, and in travelling to the metropolis of our State, last fall, I was taken captive by a young lady's mental and personal worth, so completely, that since then I have been wandering about in a state of utter and overwhelming stupor. We met on the banks of the James and often elsewhere, and on one occasion I threw myself in the way of a horse which was running away with—"

"Why, that's cousin Helen!" said sister Fanny, clapping her hands, "I saw her, I was with her!"

Cousin Helen was blushing very deeply, as indeed she had been during the concluding portion of Mr. Bear's history, throughout.

"Yes, yes!" said Mr. Bear, clasping his hands and sobbing while his knees trembled, and his eyes filled with tears, "yes it was that charming young lady herself, and I here reiterate the assertion of my love!—the love of an unfortunate bear!"

Cousin Helen blushed and smiled, and finally, said laughing, "that she would not marry—a bear! No! never—never—never!"

At these words, the children fixed their eyes

on her countenance and running to her cried, "No! no! cousin Helen—please don't marry Mr. Bear!"

"Take me then, cousin Helen," said a clear, pleasant, laughing voice behind them, and turning round, the children saw uncle John, with his youthful face and bright eyes, looking at them.

"Why, where's Mr. Bear?" they cried.

"Good Mr. Bear!"

"Poor, Mr. Bear!"

"Kind-hearted, dear Mr. Bear!"

"Sorrowful, sad Mr. Bear!"

"Pitiful, good-looking Mr. Bear."

Uncle John laid his hand on his heart, and bowed low.

"And you, cousin Helen?" said he.

"Oh, hopeful, sensible Mr. Bear!" cried cousin Helen, laughing:—and uncle John catching her in his arms, waltzed her round the room,—while a large Christmas Box was dragged from under the table, (the covering of which was lowered again quickly)—and sister Fauny ran to the piano, and struck up a waltz, from which she diverged into "A Bear he would a wooing go"—and the children clapped their hands—and the snow and wind without, looking in on the blazing fire, said as plainly as snow and wind could say "A merry Christmas to you, my dear little children and a happy New Year!"

K—, Va., Dec. 1851.

SONG.

BY WILLIAM PEMBROKE MULCHINOCK.

1.

The days are gone, the days are gone,
When my young heart went Maying;
I sit alone to sigh and moan
O'er my life's spring decaying;
A weary time from chime to chime,
A weary time is mine, love,
While with the gay in mirth and play,
A blissful lot is thine, love.

2.

A mocking gleam, an idle dream,
As brief as summer lightning,
Thy love for me, in radiance
A fleeting moment brightening,
To sink in gloom, and ne'er resume
The light it once has given
To this sad breast it lull'd to rest
With melodies from heaven.

3.

I look afar, but no bright star
Illumes the unknown distance,
With promise bright of coming light
To cheer my lone existence;
The darksome day without a ray
Of hope to cheer, is mine, love;
The sunny beam, the happy dream,
The life of bliss is thine, love.

THE REVENGE.

A TALE FROM THE GERMAN OF ALOYS SCHREIBER.

I.

In the old feudal times of Germany, Conrad—familiarily called Curd—of Dachau, was spending the autumn at a monastery, the abbot of which was his uncle. His father and his two elder brothers had perished in a military expedition, led by the emperor, and he was the only remnant of the family. His uncle, the abbot, therefore pressed him frequently to seek for himself a wife among the daughters of Speiergau, or district of Spire, in which his castle stood; an enterprise by no means difficult, for besides the nobility of his birth and the extent of his possessions, he was commendable as a wooer by the agreeableness of his person and manners, and, since the death of his father and brothers, by that sober seriousness of countenance which makes a young man generally more acceptable to the fair sex.

The heart of the baron appeared to be in no wise insensible to the beauty and grace of woman; but whenever his eye rested on some attractive person of the amiable sex, and the star of his love seemed to be rising propitiously, then a sad foreboding would start up in his soul, as if some demon had interposed to obstruct the accomplishment of his newly awakened hope that he had found a suitable partner for life.

The monastery in which he had spent some weeks, was beautifully situated in a meadow-dale, on the one side of which was a line of hills clothed with vineyards, and on the other side a range of heights overgrown with oaks and hedges of beech. Curd was accustomed to wander about the vicinity, lost in dreams of the future. One day he followed a path through a forest which he had never penetrated before. He had walked on for the space of an hour, and now thought of returning, when he heard the murmur of a brook in the woods. He was attracted by the sound and followed the brook into a valley, where he found a forest-stream of considerable breadth, which, at this place, made a large horse-shoe curve among the gently sloping hills. At some distance on the opposite side stood a small, handsome, newly-built castle. He was contemplating this pleasant sight when his attention was attracted by the appearance of a young woman, who emerged from the thicket of bushes that surrounded the clear space about the house. She came to the river bank, stepped into a small boat that lay there, unfastened it, and laid hold on the oar, which seemed to be rather heavy for her feeble hands, so that she

had some difficulty in pushing the boat from the shore and getting it under way. She turned up the stream and gradually neared the right bank, on which the baron stood. The guidance of the boat kept her so busy that she had not time to look about; she therefore did not see Card. But when the maid came near him he hid himself behind a thornbush, that he might not frighten her and turn her out of her course. The beautiful young girl, blooming like a fresh-blown rose, was now but a few steps from him. As he looked, heaven and earth faded from his view, so completely was he fascinated by this lovely apparition. So gentle, so graceful a specimen of young maidenhood had never before met his eyes; and in her look was an expression of cheerfulness and peace, which, as it seemed, no storm of misfortune could ever disturb.

A few yards from the knight the stream had hollowed out a small sandy bay. Into this the maiden turned her boat that she might rest a little from her labor. Leaning on her oar, she now stood like a heavenly vision, and looked upon the objects around her. Then she sang the following song in a manner both sweet and artless:

A boy sits by the smooth green sea
In joyful mood;
He sees the sheep beneath the flood,
That pasture on the mountain lea.

The boy a little rose breaks off
In sportive glee;
He casts it on the smooth green sea,
And drives it from him with his staff.

Then looks from out the water there
A little monster maid,
Fair as the snow, her head arrayed
With wreaths of coral in her hair.

"This white rose givest thou me," said she,
"My pretty boy!
Come down with me and share my joy,
The earth blooms also 'neath the sea.

"Thou wilt escape much bitter woe
Down in the deep,
Where thou wilt ever peaceful sleep."
—The boy cannot refuse to go.

He to the sea-maid plunges in;
Yet from the deep,
Sees on the mountain tops the sheep,—
Sees on the shore the meadows green.

The notes of the song swept away with the breeze through the leaves of the oaks; but in the soul of the young knight they still resounded whilst the little boat glided down the stream again, and the lovely form of the songstress threatened to vanish, "like a dream when one awaketh."

He stepped out from his covert to the shore, that

he might still hold her in view with all his power of vision: but by the aid of the current, she soon reached the landing-place, sprang out of the boat and disappeared in the thicket on the other side.

First love is often like a fire kindled by lighting. It was so with the young baron; his breast was suddenly inflamed as by a flash from heaven. Long did he continue to stand by the forest stream, looking one while at the boat and another while at the castle on the height beyond. The sun had sunk behind the mountains, before he remembered that he could not stay there, and turned his slow lagging steps towards the monastery. He looked around on all sides as he went for some person who might give him information about this white castle in the woods, where doubtless this fair young stranger was at home. When he arrived at the monastery, he made inquiry of some of the servants. "That," said one, "is the White Castle: it is so called because it is painted white: and in the castle lives the dumb lady. She lost the use of speech from fright at the sudden death of her lord." This is all that the servant knew of the matter, and the baron avoided touching on the point about which he most particularly desired to be informed.

II.

Early on the following morning, Conrad was already on the bank of the forest stream, looking over intently upon the White Castle. People went in, and people went out; but the sweet vision of yesterday did not bless his eyes. Hour after hour did the knight linger and look in vain, sadly disappointed, but hoping still; but when it was midday and the star of his hopes had not risen yet, he despaired and returned disconsolately to the monastery. But there he could not rest. In the afternoon he found himself again on the same spot. This time fortune changed her frown into a smile, for the young lady came as on yesterday, launched the boat and steered up stream to the place where the knight stood. He hid himself behind a cluster of bushes, but he opened a passage for his eyes through the branches and watched every movement of the beloved object. The maid again turned the boat into the little bay, and after looking timidly around, she stepped out upon the land. Just then came a gipsy woman out of the forest, leading a pretty girl about six years old by the hand, and carrying a smaller one on her back. The young girl could not help being afraid; but still she plucked up courage, when she observed

that it was only a mother with her children, who seemed to be objects of charity.

"Pretty young lady," said the gipsy, "if you will allow me to sit in your boat and cross the river with you, I will tell you your fortune. Let me see your hand."

The nymph was somewhat embarrassed by this singular request for a sight of her hand; but whilst she hesitated to offer it, she permitted it to be taken by the gipsy, who merely glanced at the palm, and then said with a smile, "The marks are good; first thorns, then roses; one star rises, another sets; but they will finally meet again. Doubt not, fair maid, this is a lucky day for you: perhaps he will meet you this very day."

"Who?" asked the girl, with some curiosity.

"Oh I cannot say who he is," answered the gipsy, "but I can tell you to a certainty that he is no longer in his cradle, and that he already wears a sword."

The young girl blushed. In her modest confusion she took a piece of money out of her purse and put it into the gipsy's hand.

"God bless you," said the old woman, "I owe you the ferriage, yet you pay me a fee besides."

Now the young girl looked at her boat. "My good woman," said she, after a little silent reflection, "I would gladly ferry you over, but the boat will be too heavy for me to manage, as I am not skilful with the oar."

The gipsy thought that no serious accident could happen, as the water was not deep.

"At the worst," said she, "I can wade over."

"No, no," said the girl, "there are deep places on the other side where you cannot wade."

Now the knight could hold back no longer. He came out from behind the bushes, saluted the young girl in a friendly manner, but with a beating heart, and said:

"Noble young lady, permit me to take the oar, I have some knowledge of the art of rowing; there is little difficulty in it; with my stout arm I can easily manage the boat."

The sudden appearance of the young knight threw the young girl into confusion. She spoke some unintelligible words in a scarcely audible voice and cast her eyes upon the ground.

"You may trust me, fair lady," resumed the knight, "I am of the family of Dachau, and the abbot of the neighboring monastery is my uncle."

During this short dialogue the gipsy took a good look at the knight, and then drew some mysterious figures in the sand.

"Children," she exclaimed with a solemn voice, "you must not think meanly of the like of me, because we have no home, since our people had to leave the graves of their ancestors. They penetrated into the secrets of the spirit world; therefore their children wander without

a home, and must continue to wander until their race becomes extinct. But take my word for it, this is a propitious day for both of you."

"To me it certainly is," cried Curd in the overflowing of his heart, while his eyes met those of the beautiful maid, who blushed scarlet, and stood there hanging down her head like a rose that has been bent by a shower of rain.

"If you will be so good, baron Dachau," said she, and cast a look upon the boat. Conrad offered her his hand to assist her in getting into the boat; but she sprang in quickly by herself; the gipsy followed, and Conrad soon brought the craft to the other side. The young lady thanked him very kindly.

"Grant me only one request," said Conrad; "since I have your picture in my mind, I would fain know what name to write under it."

"I am called Irmengard," said she with downcast eyes; then bowing to him politely, she walked slowly up the hill. Conrad looked after her until she entered the castle. Now he reflected that he could not ferry himself over the river again without leaving the boat on the other side. He was just going to wade over, although the water was rather inconveniently deep, when a servant man came running from the castle, almost out of breath. Thoughtful Irmengard had sent him in haste to set the stranger knight over the river. This attention on her part was very grateful to the feelings of Conrad, and his loving heart construed it to his advantage.

Some dark rainy days followed and constrained the knight to stay in the abbey, though sorely against his inclination. He wished himself winged like his thoughts, which flew over forest and river to the White Castle, where dwelt the fair maid whose image excited continual longings in his heart. Late in the evening of the third day, the sky began to brighten with the promise of fair weather. "The weather changes at the right time," said the abbot at supper.

"What mean you by that, dear uncle," said Conrad.

"To-morrow we celebrate in the church the anniversary day of the deceased Wolf Von Thurm, and his widow of the White Castle is wont to come over and attend the mass for the repose of his soul," replied the abbot.

"To Conrad this was a joyful announcement on two accounts. He might hope to see the beautiful Irmengard on this occasion, and besides, it afforded him a good opportunity to make some inquiries.

"That must be the dumb lady," said he, "who lost her speech from fright at her husband's death."

"What, have you also heard that story?" said the abbot. "No, she did not lose the power of

speech, but at the death of her lord, she made a vow never more to utter a word."

"And why?" asked Conrad.

"Because," continued the abbot, "her husband, the deceased knight Von Thurm, being somewhat given to drink, she used to grieve him with her reproachful speeches; and she did so on the very day of his death. With this exception she was a very prudent and honorable lady."

"Has she children?" asked Conrad, with a face glowing like a coal of fire.

"No, the marriage was unfruitful, and hence arose alienation in the family. Between man and wife there is no stronger bond of union than children."

This answer did not determine the point at which Conrad was aiming, for it did not inform him of Irmengard's parentage and relations. He could only conjecture that she must be a niece of the lady Von Thurm, since she resided at the castle.

The next morning he waited impatiently for day to break and the hour of divine service to arrive. When about nine o'clock the bell sounded the first signal for the dead-mass, he stepped to a window that overlooked the road leading from the White Castle. When presently the bell tolled a second time, he saw a procession coming up the valley: two ladies in deep mourning led the way, and a number of servants followed them. They dismounted in the court-yard of the cloister and repaired immediately to the church. The knight of Dachau recognized immediately the beautiful Irmengard, on whose shoulder the noble lady leaned as they came in. He also hastened into the church and took a seat from which he could conveniently see Irmengard, without being observed by her. After high-mass was over, and the requiem was sung, the abbot came down and had the vault opened in which the body lay. The mourning lady and Irmengard rose from the stools on which they kneeled at prayer and descended into the vault. Before them went an old monk-priest clothed in a surplice and stole, with some other monks who carried lighted candles, a censer and holy water. An anxious foreboding prompted the young knight to follow the lady. He stopped however on the lowest step in descending to the vault, whilst the rest proceeded to the recess hewn out of a rock at the farther end of the vault, where the knight's dead body was deposited. The monk sprinkled holy water, burnt incense, and repeated the form of prayer for the eternal peace of the dead. Just then the mourning lady fell with a cry and swooned away; Irmengard staggered, as pale as a corpse, upon her, and seemed scarcely able to sustain herself any longer. Conrad, without a moment's hesitation, sprang to the

grave, caught the sinking girl in his arms, and carried her out of the vault into the church, where she soon opened her eyes again. She looked with wonder at the knight, considered a little what the matter might be, and then came fully to her recollection of what had occurred.

"Where is my aunt?" she asked. "Alas," said she again, "the horrible death-scent in the vault, and the sad remembrances of the occasion, have had a worse effect on her than on me."

"The lady of Thurm is in good hands," answered the knight. "Father Bruno and the brethren have certainly brought her to herself. Permit me, lady Irmengard, to take you now into the open air, in which you will sooner recover than you can here."

Irmengard went, supported by the young man's arm, into the beautiful court-yard, where two fountains of fresh mountain water gushed forth. Irmengard went to one of these and washed her face and temples, which refreshed her in some degree. Still she looked pale and languid; but the knight thought her only the more charming on this account. His look was that of a modest sympathizing lover. When the young lady observed this, her heart was penetrated and a lovely red diffused itself over her cheeks. Conrad took her hand and pressed it to his lips. She drew it softly back. Now the abbot came and had the lady of Thurm carried to a guest-chamber, where she gave a sign that she desired the presence of Irmengard. The young lady was still so weak, and so agitated with her feelings, that in going up stairs she had to hold by Conrad's arm.

—

III.

The abbot observed what an impression the young lady had made upon his nephew; and when after some hours the two ladies had set off on their return, he thus addressed him:—

"Conrad, tell me candidly, what do you think of the young lady?"

Conrad was a good deal agitated by this question, but as he was not accustomed to practice evasion, he answered candidly, as he was requested to do.

"My worthy uncle, if I could have my wish, that young lady should be my wife."

"And I," said the abbot, would cheerfully give my blessing thereto; but there is a heavy stone to be put out of the way before you can have your wish."

This suggestion made Conrad very uneasy, and he looked inquiringly for an explanation.

"The case is this," said the abbot, "you are not acquainted with the facts, because you were

quite young when your father died; and as I had brought you up, and you afterwards went to the court of your liege lord, the baron Von Sponheim, you know little of what occurred in your father's house during his life-time. Your father and old Fust of Hoheneck were long at enmity, and for some years made war upon each other. The strife was at last brought to a close; but their reconciliation was not a hearty one, for nothing is more frail than a patched-up friendship between old enemies. Once while they were sitting at wine, the old grudge broke out afresh; they quarreled, and your father deeply wounded his adversary with sharp words. The consequence was a challenge to fight a duel, which was to take place in eight days. But on the sixth day your father died from a sudden attack of illness, and Hoheneck cannot forgive him even in his grave, for having left the world without giving him satisfaction. Now I fear that his hatred may transfer itself from the father to the son."

"But perhaps he may be softened," said Conrad, "if I sue for the hand of his daughter."

The abbot shook his head. "Ah," said he, "I know there are some men whose hatred is a burden to them, and they are glad to cast it off; but then there are other men who cannot cease from hating, for the reason that they are incapable of loving."

The knight did not fully comprehend these words; but as the abbot did not take away all hope and promised him his aid, he did not consider this to be an insurmountable difficulty. The main point, he thought, was Irmengard's affection; could he be assured of this, the removal of hindrances from other quarters would in his estimation be mere child's play.

Full of the desire and hope which love inspired, he hastened the same afternoon to the bank of the forest-stream. He had not been there long before he saw the beautiful Irmengard coming down the hill from the castle. When she drew near to the bank she stopped and cast her eyes first over the river and then upon the boat, and seemed to hesitate whether or not she should take her usual pleasure excursion upon the water. She could not see the knight, hidden as he was behind the bushes; but she seemed to have an instinctive suspicion that he was not far off. After a while, however, she stepped into the boat and rowed a little way up and down without going far from the shore. Conrad stood anxiously waiting for her to cross the river as usual. But she soon landed again, and stepping up the bank she cast searching looks around,—but whether from the fear or from the hope of discovering some one's approach, is a point which could not be determined from her behaviour,—unless some-

thing might be inferred from the fact that she did not this time, when she moved away from the bank, take the direct path up the hill towards the castle,—which path, by the by, led through a thicket of bushes, but turning to the left, she ascended the hill by a circuitous route over ground that was bare of trees and shrubs and therefore allowed her to look around as she slowly walked away.

Now the knight stepped out from his hiding place in a sad and discontented mood. Ah! had she but seen me, sighed he to himself. The next moment the lovely girl paused, and turned her face, half shaded by her locks of blond hair, towards the river. Her searching glance no doubt revealed the presence of Conrad; for instead of resuming her walk, she turned about and betook herself to gathering some of the wild flowers that grew around her; and as if allured by these late children of the autumn, she gradually drew towards the river again. The knight saluted her across the water by a motion of his hand. For a moment or two she seemed not to have observed him, but then she returned the salutation and moved slowly up the hill towards the castle.

So matters went on for some days. The lovers saw one another from the opposite banks; but Irmengard no more navigated the forest stream, and Conrad came at last to think that a small river betwixt him and Irmengard was almost equivalent to an ocean. Hope had already lent her wings to his love, and therefore his spirit rose, and he resolved to surprise the young lady upon the other side. At a quarter of an hour's distance up stream was a mill belonging to the abbey. The miller had a boat in which Conrad crossed the river several afternoons in succession. He had already seen the young lady with no river to separate them; but the nigher he approached her, the more dilatory were his steps. She observed him, and felt a shrinking timidity. She wished to retire, but could not leave the spot. The knight approached her respectfully; but when he saw how confused she was, he was seized with a feeling of pain. "Gentle lady," said he, in a penitential tone of voice, "give me only the assurance that you are not offended at my boldness, and I will immediately withdraw."

"How can I be offended?" answered she, with downcast eyes.

Conrad eagerly took her hand, and with his habitual seriousness exclaimed,—*"Irmengard, there is no truer heart than the one which beats in my breast for you."*

With these words he pressed her hand to his breast; then turning away, he slowly retraced his steps.

IV.

Between the convent of St. Martin and its advowee, (or the lord of the manor to which the abbey was attached,) there arose a violent feud. The knight of Dachau did not hesitate a moment to draw his sword in favor of the house of God, whose chief officer was his uncle. He called out his vassals, armed his servants, and had in a short time a considerable force ready for action. But he could not possibly leave the neighborhood, where all the good fortune of his life was blooming, without seeing her to whom his heart clove with an inexpressible attachment. He took the way towards the mill, with the view of crossing the river at that place. In the forest the path was already covered with the sere leaves that had fallen from the oaks and the beech trees. Here and there a solitary bird was singing a melancholy adieu to the joys of the year. A deep sadness overcame the knight. Almost incapable of thought, and busied only with his sorrow and his love, he reached the farther bank of the river; but seeing no person where he so anxiously desired to see one, he loitered heedlessly and abstractedly along the way that led towards the castle. A short distance from the castle stood by an old lime tree an image of the Virgin Mary. Irmengard was standing before the image with her hands piously folded as he neared the spot. She noticed him first because the fallen leaves rustled under his tread, and he was looking fixedly before him. This time she appeared not to be confused at the sight of him, and was the first to speak.

"So deep in thought, my lord of Dachau?" said she with a sad smile, for she had already heard the news of his intended expedition.

"Noble lady," answered Conrad, "hereafter think of me also when you pay your devotions here; for I am going to meet many dangers and I am come to bid you adieu."

Irmengard turned pale. "Is it certain then?" she asked, with a trembling voice.

"It is certain," said he: "we march to-morrow."

"Then will I pray for you every day, at this hour, before this sacred image,"—whispered the maiden, and her beautiful head bent down before her breast, as the lily bends when the rain storm has broken its frail stem.

"Now shall I go in comfort," cried Conrad—"for if I should even fall in battle, I shall not be quite forgotten. Is it not true, Irmengard, that you pray also for the dead?"

The young lady grew paler than before. She could no longer restrain her tears, and she held out her right hand to the knight, while with the left she dried her eyes.

"I hope that you will return again," said she, and suffered the knight to retain her hand, whilst he kissed it and shed his tears upon it.

"Irmengard," he cried, with deep emotion—"Irmengard, this hand!"—

"Shall be kept for you," said she, under a sudden impulse and with a firm tone of voice, and retreated towards the castle with hasty steps.

The knight returned to the monastery with the happiness of accepted love in his heart. Full of exhilarating anticipations himself, his animation was communicated to his comrades. They marched with cheerfulness and fought valiantly under their young leader. Two bloody battles broke the strength of the enemy and decided the contest. The lord of the manor was completely vanquished and some of his people were taken prisoners, whilst the remainder were scattered in wild disorder, and he himself, with a mere handful of followers, was driven for refuge within the strong walls of his castle. But alas! the knight of Dachau, pursuing the fugitives too closely and too far ahead of his men, was surrounded and forced to enter with them into the impregnable castle of Felsenburg, where he was confined a close prisoner in one of the lofty towers.

—

V.

A gloomy winter of storm and snow-showers now passed tediously away. Irmengard secretly mourned the sad misfortune of her captive lover. The knight on his part complained and fretted every day about his adverse fate, which deprived him of more than his liberty in separating him from her who was now dearer to his heart than all the world besides. His uncle, the abbot of St. Martin's cloister, used every means in his power to obtain his release. But the lord of the manor made all sorts of difficulties; until at length the Baron Von Sponheim succeeded in mediating a reconciliation between the parties.

It was in the last days of April that Conrad left his prison and hastened back to the monastery. Already soft vernal breezes blew; the clear soft green of the beech tree leaves looked out from among the brown trunks and dusky foliage of the fir trees; and here and there on sunny declivities the orchards shone with the full beauty of their vernal bloom. An eager and impatient longing filled the breast of the young man. He could not fix his thoughts upon any particular object. When at last some well known faces and the towers of the abbey met his view, he began to feel himself at home again, and now the image of his beloved began to rise distinctly to his fancy's eye. The abbot received him as a son, and he felt the pleasure of being a free man among

his friends. But still he could not rest contented even for half a day in the abbey. The impulse of his feelings soon drove him forth to the sweet banks of the forest river on his way to the White Castle. He crossed the stream by the mill as formerly, and wandered in great emotion down the valley towards the castle. A shriek startled him out of his dreamy abstractions. Irmengard stood before him. Involuntarily she stretched out her arms to meet him, but with a maidenly blush she suddenly dropped them again.

"Irmengard!" he exclaimed, and offering her his right hand, he gently drew her to his bosom with the other. Both were almost speechless with emotion; they looked one another in the eyes, and all the sorrowful past was banished from their memories. The evening shades gathered around them before they were aware of it. Reluctantly they parted, but with the promise of seeing each other again on the morrow.

Several weeks passed away with the lovers like a pleasant dream, and no thought of a change disturbed the joy of their souls. But their meetings did not escape the notice of prying eyes, and rumors began to circulate privately through the neighborhood. Among others the lord of St. Martin's manor heard of the affair; and as he hated the abbot and his nephew, so he gave private notice to the Baron Fust of Hoheneck of what the people were whispering about his daughter and the Baron Dachau. In Hoheneck the old hatred still burnt as fiercely as ever. He hastened to the White Castle with dark thoughts of vengeance in his heart. But on his arrival he gave no sign of his dark feelings and intentions. He said that he had come on a visit of a few days, desiring to see his beloved daughter once more. But in spite of his dissimulation, his bitter grudge broke now and then through the hypocritical covering of friendliness, and Irmengard began to feel uneasy.

Among the attendants of the knight was an old servant, blunt, honest, and an enemy of all deceit. He warned the young lady of some evil design; for he had conceived a strong suspicion from the inquiries which his master made of the watchmen of the castle. Irmengard was filled with inexpressible anxiety. She *must* speak with the knight of Dachau;—she *must* warn him of his danger. With this view she sent the gardener of the castle, on whose fidelity she could rely, as messenger to the convent, and appointed a meeting with Dachau at midnight, on the bank of the river where the boat lay. Tremblingly she awaited the messenger's return, and as he brought the answer that Dachau would meet her according to appointment, she could but feebly conceal the emotions that agitated her.

The night came—the clock struck eleven, and in the castle every thing seemed to be buried in profound sleep. Irmengard's chamber joined a hall in which were sundry clothes-presses. In one of these was kept a suit of boy's clothes which had been worn by a relation of the Lady Von Thurm, who died at fourteen years of age, and the suit fitted as if it had been made for Irmengard. That she might not be recognized on going out, she put on this suit of clothes and slipped out of the castle through the garden and went to the place of meeting. Dachau was already there, waiting for her, and filled with vague and gloomy apprehensions. She imparted to him what she knew and what she feared. Conrad fell into despair, when he heard of the hatred and the probable design of Irmengard's father; but Irmengard consoled him in some degree with words of encouragement and grounds of hope that all might yet be well.

"Up yonder," said she, pointing to the skies, "are the fates of men ordained; if heaven has destined us for each other, no human power can long part us."

In such a strain she continued to address him on this trying occasion, until she again kindled in his breast some light of hope. But now they must separate for the present. The young lady promised that on the next day she would again send him a message through the gardener. He accompanied her to the outside of the thicket in which they had met, and there he stood looking after her as she approached the garden wall. She had almost reached it, when he heard the whizzing of an arrow through the air, and Irmengard fell with a cry to the ground. Curd sprang up to her and found her lying insensible, with the blood gushing from her wound.

"Oh, Irmengard! Irmengard!" he exclaimed, with the voice of despair, "you are murdered!"

"Who? Who?" cried a fearful voice, and a dark, tall form issued from the shadow of the neighboring trees and came to the fallen body.

Curd recognized the Baron Hoheneck. "What, is it you?" he exclaimed. "Have you shed the blood of your own child?"

"Man!" muttered the old knight, "say not again this is my daughter."

"But I do say that this is Irmengard of Hoheneck," answered Conrad in a tone of bitterness.

"Woe! woe! woe is me! I have murdered my own child," cried Hoheneck, and rushed down the hill as if the avenger of blood were pursuing him.

Conrad's call for help soon brought the gardener and some other people to the spot from the castle. Torches were brought, and the bystanders shuddered at the sight which now presented

itself to their eyes. The young lady was lying on the ground, pale as a sheet and perfectly motionless. The arrow had struck her right shoulder, and the blood was still gushing forth. After a while she again opened her eyes and uttered a cry of pain.

"God be praised, she lives!" exclaimed Curd, and kneeling down he took her cold hand in his.

Now they prepared to carry her into the castle. The young man never quit her side, until the chaplain of the castle, who also exercised the healing art, had drawn the arrow from the wound, and declared that no mortal injury had been done. Hardly yet, however, could Conrad be persuaded to return to the convent, though they could not well refuse to invite him to come daily to the castle, that he might inquire after the young lady's condition.

No one thought of the Baron Hoheneck, until Irmengard, the next day, having recovered her vital powers, inquired for her father. She seemed to have no suspicion that the deadly arrow came from his hand, and her heart yearned for his forgiveness. Conrad came over at an early hour and inquired for Irmengard. The chaplain gave him a favorable report of her condition. Then the young knight suggested, that he might well consider her as murdered by his hand, and he might, in a paroxysm of despair, have committed some violence on himself.

Servants were sent out immediately in search of him, and Curd devoted himself to the same object. But all their efforts to find the old knight were fruitless. They all returned, one after another, with the report that they could not find a trace of him. Now the conjecture was that he had either plunged into some river, or buried himself in a monastery. Before Irmengard, however, not a word was said of the matter. They quieted her mind by accounting for her father's absence in a way that would not alarm her for his safety. Her wound soon began to heal, and in a few weeks she was able to walk about in her room. Curd received the intelligence of her recovery with inexpressible delight. Never had he experienced a purer joy. Yet from this time he had not the heart to visit the castle; for he felt that the uncertainty which hung over the fate of Irmengard's father, must interpose itself like some threatening ghost between his wishes and his hopes.

About this time there came to the abbey of St. Martin a monk from Lorraine, who was by his prior's order making a journey to the Danube. He gave an account, among other things, of a strange sort of man who had lately sought a refuge in their monastery; and although apparently of noble birth, had applied for the office of herdsman to the monastery. The abbot and

Conrad had their attention roused by this story. They inquired about the personal appearance of this man, his age, and the time of his appearance in Lorraine. All that the travelling monk told them in answer to these inquiries, seemed to point out the Baron Hoheneck; and Conrad resolved immediately to undertake a journey to Lorraine.

VI.

After a laborious journey of several days, Curd reached the neighborhood of the monastery, where he hoped to find Irmengard's father. Already he beheld the two towers of the elegant church rising behind a wood of oaks, and had a mind to turn into a footpath that led from the highway through the wood, when he observed at the entrance of an old chapel a meanly dressed man who appeared to be devoutly engaged in prayer. Curd instantly recognized in him the Baron Von Hoheneck. He quickly dismounted, gave his horse's bridle reins to his servant, and waited until Fust, who would not be disturbed by the sound of his arrival, had ended his devotions. When after awhile he rose to his feet and reached for his staff, which lay on the ground, Curd walked up to him. The old man started at the sight of him, as if he were an accusing spirit.

"Be not alarmed," said Conrad, "I bring you glad tidings: your daughter Irmengard lives, and has recovered from her wound."

At this annunciation a crushing burden seemed to be taken from the knight's soul. He stood for a few moments without moving: then he fell upon his knees, and lifted his trembling hands towards heaven. Curd expected that now the old man would gladly return home with him: but Hoheneck adhered firmly to his purpose of spending the remainder of his days in solitude. "Why," said he, "why should I again take up a burden that I had not strength to bear? Happiness on earth I renounce as unattainable, and peace I shall find only here, where I have learned to direct all my hopes and wishes to the other side of the grave. Here, Knight of Dachau, take my seal-ring as a sure token that you have found me, and that I acknowledge you as my son-in-law. Be true and affectionate to my Irmengard, and my prayers will bring down blessings upon your union."

In vain did Conrad employ all his art of persuasion to change Hoheneck's purpose: with this view he staid day after day in the monastery; but all in vain; he had at last to return alone to the castle of Hoheneck.

Irmengard was sorely grieved at the intelligence that she was never to see her father again.

"Then I must mourn for him as for the dead," she exclaimed; and she put on mourning weeds and wore them a whole year. Then at the expiration of this period she gave her hand to the Knight of Dachau. As they stood before the altar, and the priest was pronouncing the blessing upon their union, Irmenegard thought that she saw the form of her father by the priest's side, looking kindly upon her and waving his hand in token of approbation. She was so agitated by this vision, that she could scarcely avoid crying out and disturbing the marriage ceremony. When the newly married pair left the chapel and returned to the castle, there came a messenger from Lorraine with intelligence of Baron Von Hohe-neck's decease. He had a peaceful end, and his last words were a blessing upon his children.

I love them, for they come on pinions strong
Fresh from thy presence—morn and night I long
 That with their freedom I might fly to thee,
 And round thy form forever lingering be
In life and death.

PLACE DE LA CONCORDE.

In the chances of the little travel that I have made, I have never seen a spot which to me seemed more remarkable than the *Place de la Concorde*. When I first saw it, my mind had been thrown into a somewhat excited state, and possibly, therefore, the impression made upon me was more vivid than otherwise it would have been. We crossed from London to Paris in one day. The distance is considerable for one day's travel, well nigh three hundred miles, and the excitement was to me out of proportion to the distance.

It was not without emotion that I left old London, after a brief visit of some weeks, though I purposed to return—the ride through the luxuriant hop-grounds of Kent was as delightful as it was new, and the white cliffs of Dover awakened historical associations enough to have afforded material for many days' thinking and feeling. But we tarried not at Dover. What a time we had of it crossing the Channel? It diverts me even now to think of the appearance of the deck of the dirty little steamer, strewed with fine gentlemen and ladies, lying about, here and there, amid the debris of sea-sickness, some on rough overcoats and blankets, and some without anything to defend their fine garments from the defilement of the deck. It is strange how reckless are the sufferers by sea-sickness, and it is not unworthy of note, that those who do not suffer, have a most unmannerly propensity to laugh at those that do. And then across to Calais, the geographical opposite and the historical pendant, to Dover. It is an exciting thing, however familiar one may be with book French, to be for the first time in a country, where men, women and children talk French in an easy, unconscious way, as if it was nothing to them. And what wonderful French it is that they talk at the Custom House? Very different from that of Fenelon, or Voltaire, or Racine, or even of Le Sage. I flatter myself that I can speak French passably, and my stock, such as it was, served my purposes very well for some months afterwards, but at Calais I was more than content to pay a franc or two, to a most active, gallant, effective, *savoir-faire* sort of a commissionaire, who spoke a little English and a vast deal of French, and who took charge of us and our trunks, and put us most skilfully and

POETRY OF THE WINDS.

BY CAROLINE HOWARD.

Some love the stars, that peer, like angels' eyes
 Through the blue veil of curtained Paradise;
 Some love the flowers, and watch each opening hue,
 With beating hearts and worship pure and true,—
I love the winds.

Some love the trees, the tall and verdant trees,
 That rock like cradled sylphids in the breeze,
 Or greet the clouds and whisper loving things,
 While on their boughs the wild dove echoing sings.
I love the winds.

Some love the day, the bright, bold, busy day,
 That wakes the dreamer with its sun-touched ray;
 Or greet the moon that, as its glories rise,
 Shows the sweet light in tender lovers' eyes—
I love the winds.

Not with the cold, calm worship of the soul
 Love I the changeful winds, but with the whole
 Wild and impassioned fervour of my heart,
 That of my very being forms a part.
I love the winds!

Bright clouds in western skies are tinged with gold,
 And rock-lined caves their countless wealth unfold,
 Unconquered waves in grandeur meet the gale,
 And beauty lies on mount, and plain and vale.
Why love the winds?

Why does the zephyr's pure and trembling kiss
 Bring to my heart a feeling fraught with bliss?
 Why do my lips half meet its dear caress?
 Why does my voice its magic power confess?
Why love the winds?

Why do the winds for others bring alarms?
 For me a thousand never-ending charms?
 While poets sing the flowers, the sun, the trees,
 Why do I sing the wild Æolian breeze,
Why love the winds?

even artistically, through the bars and barriers, forms and fees of the douane, (giving us a dinner by the way,) and landed us all safe in the cars. Ah, excellent commissionaire! I shall not soon forget you, though at this moment your name has escaped my memory. Away then we sped to Paris, through scenery altogether different from that which we had seen on the other side of the Channel, and into Paris! Paris! really into Paris! Did any one ever enter Paris for the first time without emotion? We arrived about midnight, yet not too late to form the opinion that the Rue Rivoli was one of the handsomest streets we had ever seen. The Hotel Meurice is a very good Hotel to those who have never been at the Astor House, the Irving House, *et idem* genus of first rate comforts in the United States, and the beds were unexceptionable; but if I have conveyed to my readers any tolerable idea of the nervous stimulation I had experienced during the day, they will not be surprised that I slept little and rose the next morning with a fever upon me. The Hotel Meurice is separated just by a street, and the tall, slim, iron railing, with gilt spear-heads, on the other side of the street, from the Tuilleries. The trees of the Tuilleries are planted so thick that their branches interlock, and their shade is so impervious to the sun that not a blade of grass grows beneath them. It was a hot day in the last of June, and my fevered blood was parching my skin. Should I send for a physician? How alarming, even to a stout-hearted man, the prospect of being sick away from home! I looked out of my window. The trees waved so refreshingly—the earth, dark and cool with the shade, looked so tempting, that I felt like baring my breast, and throwing myself upon the ground. It seemed to me that nature was saying, trust me! And I resolved to trust her, and instead of sending for a leech, I put on my hat, walked across the street, and entering the Tuilleries, paid my two sous for a chair, and took my seat to cool off my fever there. It was a complete success, and I shall never forget how delicious were my sensations, as the balm of the fragrant shade entered my veins, and expelled gradually, but entirely that pestiferous heat. It was too early in the day for the appearance of the diurnal crowd that throngs this place of delight, but a great number of children had come to take their morning romp there, and many nurses were sitting about with infants in their arms or asleep upon their knees, in the open air. A species of wood-pigeon twice as large as any in this country, frequents the grove, and mingled its notes with the French child's talk and laugh, that was ringing around me. A tranquil lassitude took the place of the excitement I had felt before, and I sat for some hours, now dreaming,

and now attending faintly to what was going on around me, and feeling as one does sometimes at the climax of enjoyment in a warm bath. It seems strange to me now, that I could exercise such control over myself, as to sit down thus in the midst of that grove, with the palace of the Tuilleries just before me, parted, not separated, from the grove, by a frontage of ground occupied by parterres, jets d'eau, and quite a quantity of statuary of much pretension—the Seine, that I had never seen, flowing by so near that I could almost hear its gentle dash against the masonry that confines its current—the Vendôme column within two minutes' walk, and, in short, Paris, with its glories and its mysteries all around me, and this my first morning there—and yet for hours I sat cooling off my fever, and actually dozing.

Presently, however, I roused myself and began to take in the scene before me, and I opened a Guide book, to gather up the historical associations of the place. Being in some perplexity to identify certain localities mentioned in the book, I approached an old soldier, (one of the pensioners of the Hotel des Invalides as he afterwards informed me,) who was enjoying the morning upon a seat near by, and begged him to aid me. Having obtained this courtesy from him, in order to engage him in conversation, I said, "I suppose, Monsieur, that you have yourself witnessed some of the revolutions which have had part of their movement about that palace there?"

"Assurément, Monsieur—assurément." And after mentioning the massacre there of the Swiss guards in 1792, and the attack of the people upon it in 1830, he proceeded to give me a minute and graphic account of the revolution of 1848, as connected with the palace of the Tuilleries, and the escape from it of Louis Philippe. "What born narrators," said I to myself, "if not real orators, these French are." My old soldier having finished his account of 1848, and having found out that I was not an Englishman, as he had at first supposed, but an American, began to speak most eloquently about revolutions, and the necessity for them, adding with that sort of fatalism which seems to cling to a people after they have discarded every other form of religion, "Revolutions, Monsieur, are not of man, but from God. Man thinks he achieves them and so he does, but it is because he cannot help it. God has something to be done, and he calls upon a man or a nation to do it,—they hear and they obey. Sometimes the man feels, or the nation feels, that they are doing God's work—oftener they do not, but what matter? Whether or not they must obey. Now God wills revolutions, because nations need them, and cannot be re-

generated without them, and to work these revolutions, not so much for themselves as for the world. he has chosen the French, because," tapping his forehead with his forefinger, "*they have ideas!* Yes, Monsieur, without doubt, other nations are great—the Spaniards, the Italians, the Germans, and also the English have their excellences, and above all, America, your country, is a very great country, *mais*," (and here the gesture was one which belongs exclusively to the French as the city of Paris does—the forefinger laid along the whole length of the nose,) "*mais, Monsieur, c'est les Français, qu'ont des idées.*" The old soldier was right in his metaphysics at least, if wrong in his theology. The French certainly have more ideas than other people. Ever thinking, talking, scheming, and acting too, yet never accomplishing any thing except in the sciences, and in these successful only because in them there is no opportunity for practical folly to negative the results of intellectual ability—the French are the admiration, the laughing stock, and the puzzle of the world. My old soldier turned readily from the past to the present, and in significant, though mysterious phrases, assured me that another revolution was advancing, and that its fiery disk was even now just beneath the horizon, and might momentarily be expected to burst up into view, and that all preceding revolutions would be cast into forgetfulness by the magnitude and terribleness of this one. "And Monsieur," (the finger again on the nose,) "the man who is to accomplish all this, *is now in Paris!*" I knew that Monsieur Cabet, a notorious socialist, who had crossed the ocean with us, had arrived but the evening before in Paris, and thinking that he might possibly be the expected regenerator, I mentioned his name. The old soldier spoke of his doctrines approvingly, and of himself in a patronizing tone, but shrugged his shoulders contemptuously at the idea that Mons. Cabet could be the hero of a revolution, such as he was foreshadowing. After much declamation, which was not the less impressive because my ear had not become sufficiently familiar with the French accent to prevent me from losing enough of his discourse, to give it that fragmentary tone which heightens so much the sublimity of Ossian, he paused, and in the most dramatic manner, asked me what day of the month it was. I replied, that according to my best chronology, it was the 25th of June, and he then pointed to a large clock on the front of the palace, and with equal emphasis, demanded the hour of the day, which I announced as one o'clock less fifteen minutes. "Remember then, Monsieur, that in the Tuilleries, June 25, at a quarter to one o'clock, I, a soldier of the Grand Army, foretold to you the approach of the most terrific revolution that the world has ever seen.

When it comes, Monsieur, remember—when it comes, I say, for you will live to see it, remember what I have this morning said, and then"—(the egotism of the French is certainly equal to their talents,) "remember me." I assured him that I would not forget him, and saluting him respectfully, took my leave. I will not say that I was affected by this conspirator-like harangue, but if I was, I could plead as my apology, that my nerves were still twitching from the effects of fever, and surely the conversation was a singular one to greet me on my arrival in Paris. However this may be, as I walked slowly along the terrace, to the farther end of the Tuilleries, my mind ran over the principal events of the various revolutions that had so rapidly succeeded each other in Paris, and the scenes of unparalleled ferocity that had marked some of them, and I felt that Voltaire had not miscalled his countrymen, when he said that they were half monkey and half tiger. And so when I came to the Place de la Concorde, that wonderful *place*, the finest, perhaps in Europe, with surroundings of unparalleled magnificence, profusely adorned with works of art, and signalized by its historical associations, one thought possessed me almost to the exclusion of all others—that there had been erected the guillotine, by which had perished the unfortunate Louis XVI., and Marie Antoinette, and Elizabeth, the king's sister, and Charlotte Corday, with many of the purest and noblest spirits then in France—there too suffered justly, many monsters of crime, as Danton and Robespierre and Clootz, and the *infleta inhumataque turba*, that history takes no note of. The precise spot is indicated where the guillotine stood, and I could not withdraw my eyes from it:—by a kind of fascination I gazed on it till I could almost fancy that I could see on the asphaltum pavement, the blood-stain which the two large fountains playing there in vain essayed to efface. My fever, the talk of the old soldier, and my realising sense of the horrors of the first revolution as I stood here in the focus of its fury, all forced my rushing thoughts into one channel from which it was in vain to attempt to divert them, and I left the Place de la Concorde that morning with but one idea about it. But I returned to it often enough to learn that its being the spot upon which the guillotine was erected, is only one of the many things that make it one of the most note-worthy places in the world. I visited it again and again, sometimes in the early morn, sometimes just at nightfall, and often just before I was retiring to bed at midnight, and never without emotion, and as I was leaving Paris, it was one of the spots of which I took a mental adieu with the most regret.

I will briefly describe it, though I know full

well that I cannot by words convey any tolerable idea of its beauty. I have attempted this again and again in conversation, but have never succeeded in kindling the admiration that I expected, and I have seen others fail in the same way, while never yet have I mentioned its name to one who had seen it, without perceiving that it had made itself felt.

The Place de la Concorde, is between the Tuilleries and the Champs Elysées, but instead of interrupting the continuity of the two, it seems to make it more obvious. It is at the intersection of two vistas—one extending from the palace of the Tuilleries, down through its forest, and the whole length of the Champs Elysées to the Arc de Triomphe, a distance of nearly two miles—the other, shorter and like the transverse of a cross, is the Rue de la Concorde, terminated at the North by the Madeleine, and at the South across the Seine, by the palace of the Legislative Assembly, behind which is seen towering the dome of the Invalides. The buildings in view are chiefly public edifices, and nothing trivial, or even common-place meets the eye of the entranced spectator. In the centre of the Place are situated two large fountains, dedicated the one to Maritime and the other to Fluvial Navigation. They consist each of a circular basin fifty feet in diameter, out of which rise two other smaller basins. These fountains are amply upheld and professedly surrounded by a multitude of figures, some of them colossal, representing Tritons, and Nereids, and the genii of astronomy, commerce and navigation—also the genii of agriculture, manufactures, flowers and fruits, not forgetting the *genii of the common and the pearl fisheries!* All this allegorical intent I took upon the faith of Galignani's Guide Book, which I found remarkably trustworthy upon subjects that I could understand, and I was willing to trust it in matters to me incomprehensible. Allegorical paintings are for the most part unintelligible, but when these riddles are cut out of solid stone, they seemed ridiculous in the extreme. As ornaments, however, they are graceful and appropriate enough, and altogether the fountains merit the praise always bestowed upon them. Surmounting the pavilions of the Octagon, are other allegorical figures representing the principal provincial cities, Strasburg, Bordeaux, Marseilles, Lyons, and some others. These allegories are a little more substantial than those that shadow forth Maritime and Fluvial Navigation, and please the eye, even if they are lost upon the understanding. On lofty pedestals next the Champs Elysées are two excellent groups in marble, each representing a reative horse checked by his attendant. In mentioning the decorations of the Place, must not be forgotten twenty handsome

rostral columns bearing lamps, and surmounted by gilt globes, and forty ornamental lamp-posts bordering the carriage roads. But I have purposely postponed until the last, the mention of the most prominent and attractive ornament of the Place—the Luxor Obelisk. This is a monolith or single stone, 72 feet high and weighing 500,000 pounds. It is raised 27 feet by a plinth and pedestal, the pedestal being a single block of grey granite, 15 feet high by 9 square, and weighing 240,000 pounds. The obelisk is of the finest red syenite, and covered on each face with three lines of hieroglyphics commemorative of Sesostrius. This magnificent relic of ancient Egypt, is one of two obelisks that stood in front of the great temple of Thebes, the modern Luxor, where they were erected, it is supposed 1550 years before Christ, by Rhamses III. of the 18th Egyptian dynasty, better known in history as the great Sesostrius. These two monoliths, together with Cleopatra's needle near Alexandria, were given by Mehemet Ali, Viceroy of Egypt, to the French government, in consideration of the advantages conferred by France on Egypt in aiding to form the modern arsenal and naval establishment of Alexandria. The difficulty of conveying such a mass was exceedingly great. A road to the Nile had to be made, the obelisk to be encased in wood, carefully lowered, and drawn to the river by Arabs amidst the ravages of the cholera, with scanty means of transport, and under a scorching sun. These operations occupied 800 men for three months. When the vessel was reached it was necessary to saw off a portion of it, that it might receive the stone. With great difficulty it was brought to Paris. An inclined plane was built of solid masonry to a level with the top of the pedestal, and the obelisk was drawn up on this, and then by means of very powerful and ingenious machinery skilfully managed, it was gradually made to assume its perpendicular position. The entire cost of removing the obelisk from Thebes and erecting it where it now stands, was about two millions of francs.

I have mentioned the principal things that belong to the Place de la Concorde, but I am too well aware of the insufficiency of description in general, and the special feebleness of my own in particular, to entertain the hope that I have conveyed any tolerable idea of the spot to those of my readers who have never seen it. But the historical suggestions of the Place are more easily apprehended. You look for a mile and a quarter along the vista of the famous Champs Elysées and your eye rests upon the Arc de Triomphe, the grandest and most costly memorial arch in Europe, commenced in 1806 by Napoleon, in honor of the great army, and finished thirty years

after by Louis Philippe, and consecrated to the glory of the French arms. How stirring it is to be brought into immediate contact, as you are every where in Paris and indeed every where in France, with the realities of the life of Bonaparte! We need to tread the ground he trod, to see the structures he built, the streets he named, the Champs de Mars where he reviewed his troops, and here and there the survivors of those troops, to dispossess us of our idea that he was a half mythic personage, and to make us feel that though "a fierce comet of tremendous size," he was likewise engaged in doing a great many other things beside gaining such victories as no man ever gained before.

In the opposite direction you see, nearly half a mile distant, through the grove of the Tuilleries, the palace which has been connected with the regal history of France from the time of Louis Quatorze to the flight of Louis Philippe. And then those noble grounds the Champs Elysées and the Tuilleries, they have in history, and that serious history too, a place as real as that which belongs to any of the monarchs that ever trod them. The Madeleine brings to our mind the image of the Parthenon and the palace of the Legislative Assembly, at the opposite extremity has its historical associations harmonizing well with those belonging to the Hotel des Invalides, whose dome raises itself in the distance behind. To the blood-stained remembrances that cover the spot where stood the Guillotine from 1793 to 1795, I have already alluded. And then the obelisk again! How have I sat at its base, in the shadow made by the intercepting of the rays of a bright moon, and as a ceaseless tide of hurrying feet swept by me, endeavored, now by complete abstraction, and now by the contrast of what surrounded me, to get my thoughts into that distant past, of the existence of which, this tall symmetrical stone, covered with solemn looking hieroglyphics, was the indubitable evidence. Built by Sesostris! 1550 years before Christ!—of all that my eye rested upon there was nothing that 1500 years ago was the same as now, save that tall column, and that bright moon shining on it. The Louises, the Napoleons, the actors of the revolution, long since mouldered into dust—nay even the heroes of ancient Greece, whose memories are connected with the thought of the Parthenon, what are they? How modern and how transient they seem! How perishable all things seem when one thinks of them, sitting in the shadow of a stone that cast its shadow more than 1500 years before the Saviour appeared on earth! When I first visited the Place de la Concorde, by a sort of fascination, I was forced to allow my mind to dwell on the Guillotine scenes once enacted

there; but in the last visits I paid to it I found myself always seated at the base of the obelisk, and my thoughts ascending the old Nile and wandering among the ruins of buried Luxor, or the glories of living Thebes. How different the reality of that column as a memorial work of Sesostris, from its seeming as an ornament, set up here in the centre of Christendom? And how different is the reality from the seeming of all the principal objects that signalize this remarkable place? The Arc de Triomphe away yonder—whose triumph does it celebrate? Bonaparte in pride laid its foundations, and before the Arch had reached its spring, he was a rock-bound captive, and it was used for his entrance into Paris but once—when his mouldering remains were transported from St. Helena to the Hotel des Invalides. And that spacious palace at the other end, shaded by the trees of the Tuilleries, built for the delight of kings—there it stands, a sharp satire now upon royalty, as it calls to mind the beheading of Louis XVI., the deposition of Charles X., and the flight of Louis Philippe! And the Madeleine, the beautiful copy of the matchless Parthenon. It is dedicated to the service of the true God, and yet a stranger may go into it, as I did, and see a multitude of priests and others performing their ceremonies, and he shall not, as I did not, hear one word from Priest, or see one ceremony which would certainly inform him that he was in a church of Jesus Christ, and not in a temple of Minerva. And there stands fronting us at the other end of the transverse vista, the legislative assembly of a republic, and it is guarded by a heavy corps of soldiery, and from its halls issue edicts against the liberty of the press and the liberty of the people, and within its walls are men who inwardly laugh to scorn the doctrine of the capability of the people to govern themselves. And this name, Place de la Concorde, how peaceful and innocent it is? And these two magnificent fountains, whence clear water gushes profusely, what emblems of purity they are? And yet whose ear is so dull as not to hear the voice of blood crying up from that spot? Have those playing fountains washed away, or can they ever wash away the dark stain? That asphaltum pavement, does it conceal from any eye the ground upon which fell quivering so many human heads? Every thing here,—Obelisk, Temple, Hall, Fountains, name and all, is in antithesis to what it once was, or was intended to be, or ought to be, and we took our last adieu of the Place de la Concorde, equally impressed with its wonderful Beauty, its wonderful History, and its wonderful Deceit.

A CATARACT.

BY PAUL H. HAYNE.

My senses are one echoing thunder-peak!
 It seemeth this Titanic war of waves,
 The sound, and symbol of eternal wail,
 Rolls from some vein of mighty Nature's heart.
 The vein outburst in the gigantic shock
 Of earthquake tumult, when the world convulsed,
 Shook to its centre 'neath the frown of God,
 And from her thousand pores, the universe
 Bled, till she sunk within the whirlpool depths—
 The weaker fountains, and mild cataracts
 Lessened their flow, the green worlds bloomed again,
 But unrestrained this ocean of wild tides,
 With awful organ symphony, and power,
 Speaks to us of what *hath been*, and *may be*—

And ever, with malignant, bitter strife,
 Dark as the passionate throes of human guilt,
 (Engendering hate, and wo, and wrath to come)
 The raging, ruthless waters roll and rave.

From the fierce Hell of curling, struggling foam,
 An incense riseth to the Heaven of Heavens,
 And the great sun drinks up the ethereal notes,
 That mount, like ransomed souls, to Paradise,
 Scorning the black, tumultuous gulf of sin,
 And lost in everlasting lights of love.

Lo! the fair moon! a hush like sleep is thrown,
 Soft as an angel's mantle o'er the earth—
 The deathless oratorio slumbereth not!
 And yet methinks the impetuous surge sounds meek,
 Awed by the effluence of the rainbow span,
 That forms the Imperial Thunderer's diadem.

The heavenly beams, so eloquently still,
 Shine on the frenzied, maddening mass beneath,
 Like the eternal beauty of our Lord,
 When from the Ruler's Porch he sadly looked
 On the blaspheming crew that cursed his love
 In the thronged streets of doomed Jerusalem.

Scenes Beyond the Western Border.

WRITTEN ON THE PRAIRIE.

BY A CAPTAIN OF U. S. DRAGOONS.

October 7.—If I can write with gloves, here goes!—for the sun has risen only high enough to illumine the crystals of frost with which the grass is studded, and here and there a glassy pool.

Yesterday I left the road—which we will not strike for several days—to follow more closely the bend of the river: I had to leave the “bottom” but once; when, with a direct course of several miles over the hills, I struck it again at the extremity of a beautiful, level and smooth savannah three miles by two in extent; the hills forming the chord of a graceful sweep of the

river,—its whole course marked by its sky-reflecting waters, or an irregular fringe of cotton-woods; what a glorious spot, we exclaimed, for a chase! And we *had* one, worthy of the scene.

Far in the bend of the river, we soon saw a large herd of Elks. Several officers made a wide detour to get between them and the water: I had just run my horse over broken ground in the hills after four does, which seemed to glide away from me like spectres, encumbered as I was with great-coat and sabre; but the previous night—singularly enough—I had read in the Spirit of the Times an account of the habits and peculiarities, and best manner of chasing the immense herds of these animals, found far to the North;—so, I saved my horse, edging down quietly, expecting a part of them at least, in their confusion, to run toward me.

The noble creatures, with a whole forest of antlers, taking the alarm, first began to trot round loftily with heads tossed high in air—the men swore they were wild horses; now we see the officers, putting spurs, suddenly dash among them; we see two, three, four little blue puffs of smoke, and hear the explosions, but no elk falls! Now there is a rush for the river,—they have turned again!—*some* are in the water;—see! a hunter is following there that immense buck, the patriarch of the herd! Bravo! I was not deceived; the herd dispersed in confusion;—one gang has taken the wind, and quarters on our coast;—one hunter follows at a goodly distance!—he is firing into their rear, but does not appear to gain on them; these elks, without much show of motion, scud along at a telling rate, and keep a long while at it. Now, I tighten my belt, and lightly costumed, brace myself in high excitement; yet cool enough still to manœuvre on their flank at a sweeping trot:—*Now, to work!*—And somewhat late; for I soon find myself in their rear. Exquisite the excitement of race-horse speed and the near approach to these grand animals, straining every muscle,—in *powerful* motion, their cloven hoofs sharply rattling!—and for the first time! What novelty of sensation!—what astonished curiosity!—my horse snorts, and shares my joy! Thunder we on! now, my noble Brown, take the spur. Wildly excited he dashes into the herd, and I am rushing in ecstasy in their very midst, their large eyes flashing fire, their antlers sweeping the air above my head. But Brown reminds me he brought me not there for fun alone; and so I fire my pistol into the nearest buck, and take a pull on the willing horse. My elk—poor fellow—seconds my intent, and soon we are motionless on a profoundly silent plain.

Now, my fierce excitement subsides. I observe curiously—almost timidly—a magnificent

animal, large as my horse, but of a loftier crest. Ah! what beauty, and what suffering! With majesty in all his bearing, he violently grits his teeth in pain or defiance; but in his beautiful eyes I imagine that rage is yielding to a mournful reproach.

And now, I suffer a reaction. We are alone with death, which my hand has summoned to this peaceful solitude. The still erect but dying animal faces me at six feet and painfully heaves. I stare dreamily into those fascinating eyes: his dignity of suffering seems to demand of me an explanation, or, a conclusion to the fatal scene.

At length, with a sigh, I finish my work; and with another ball end his pains forever!

After supper.—The Hunter in the mouth of his tent reclines, with a pipe, upon a glossy bear-skin;—before him, a desert expanse of grass and river;—his attention is apparently divided between the moon, suspended over the western hills; the flickering blaze of a small fire, and the curling smoke which he deliberately exhales. His friend stirs a toddy, reading with difficulty a crabbed manuscript. *Loquitur.* "When I saw you yesterday, beside your usual duties, acting as guide, surgeon,—(for you have effectually cured the snake-bitten horse)—as hunter, or as butcher"—

"Say commissary!"

"I conceived hopes of you, that the poetic spirit was *laid*; and when at supper to-night you ate so heartily of the elk-steak, I little thought you had been indulging again in such pathetic"—

"Pshaw! it serves for a gilding to Life's bitter pill! The delicious supper should have mended your humour: for I stake my reputation on it—as 'guide, surgeon and hunter'"—

Imaginary Friend. "And butcher"—

"—That the flesh, cooked, as it was, with a little pork, cannot be distinguished from that of the fattest buffalo cow that ever surrendered tongue and marrow-bones to hungry hunter.

I. F. Bravo! I have hopes of you! Kill your meat with a good conscience, and daily labour and excitement over, solid indeed is the hunter's comfort! With grass and bear-skin bed, his toddy, and his soothing pipe—the musical ripple of the river sparkling in the moonbeams—I mean"—

"Fairly caught! I little thought when I heard you abuse my pathos over the noble beast that had yielded his life to my sport, that mere creature comforts would thus inspire you! Dear critic, and lover of bathos! hast thou found poetry in a full stomach?"

I. F. "The devil's in the moon.—And there goes another wolf 'concert'"—

"With the thorough bass of a thousand bulls."

I. F.—"All as thoroughly musical as the donkey braying in the caravan camps. I wish you a very good evening, 'and a little better taste.'"

The hunter, gazing apparently upon his ascending smoke—as if of incense—indulges in soliloquy.

"My Friend leaves me to the silent Night—and solitude as profound as when 'the Spirit of God moved upon the face of the waters.'"

"Incomprehensible scheme! Oh! thou beautiful and wonderful Nature!—mother and moulder of the forms, and minds as well, of our wayward race. Now, she smiles in brilliant moonbeams on the grassy meadows, which wave with answering gladness to the whispering air. And the strong river flows as gently as an infant playing on the young mother's breast;—its murmurs as softly musical as that infant's voice! The air, methinks, is fanned by seraphic spirits on their winged errands of Peace! My heart swells in adoration, and beats in harmony with the holy eloquence of the hour.

"—But strike another chord.

"Lo! Floods burst their bonds with cruel wreck,—Darkness appals, and Storm howls o'er its victims! Passion, vengeance and black crime rear their crests—Dismay and Chaos rule the hour."

Oct. 7.—Mark this day with a white stone! After travelling 60 or 70 miles off the road—encamping each night on the river in comparatively good grass, and with drift-wood fuel too, I this morning, as guide, took a course for the crossing of the Pawnee Fork, and struck it to a degree! Then, in the beaten dry road, the mules were much relieved. As we passed over the hills we saw to our left countless buffaloes:—last night we heard them crossing the river incessantly, in single file—which indicates their migration; with a constant utterance of their very peculiar sounds which may not be better described, than as something between the grunt of a great hog and the low bellowing of a bull. This afternoon, as we approached a beautiful camp-ground, on Ash creek, a large herd came rushing by our front. Five of us dashed after, and each killed a cow, or young bull; and all within a mile, and as near to our camp ground! Mine, I shot with a pistol at six paces, at full speed:—it fell as if struck by lightning, and never moved. *Very rarely does that happen!* Glorious sport it is! To rush along in the very midst of herds that blacken the earth with numbers, and shake it with momentum, and richly

too, it rewards the skilful hunter's hungry toil!

This has been a true October day—delightful and magnificent October!—and with but little of the high wind, which here so generally prevails. But this was all too sweet, and must have its bitter. A luckless wretch of the guard allowed his horse to escape—"all accounted as he was," and he has not been recovered, or traced.

Diamond Spring, Oct. 17, '43.—Ours is a true retreat!—a retreat from frost and starvation,—the starvation of horses and mules. Water has frozen a half-inch thick almost every night; and sometimes there was no fuel:—horses have begun to drop by the roadside.

At Cow Creek I made my last buffalo chase, which had a singular incident. Just as I was closing on eight large bulls, on the level bottom, they utterly disappeared, without my seeing or conceiving whither! Nothing could equal my astonishment whilst I ran twenty yards;—then my horse, by a powerful effort, which very nearly precipitated me over his head, stopped on the square brink of a deep slough, where my phantoms re-appeared,—and in great bodily power, were making desperate struggles to clear the mire, and the opposite bank, equally vertical, and set to the edge with tall grass. This narrow chasm could not be seen till right over it; and the bulls had pitched in, whilst—I suppose, without knowing it—my eyes were for an instant averted.

We encamped on the Little Arkaneas, in a high wind: the grass was tall; and I gave a very special warning to all to beware of fire. Nevertheless, about the time we were fairly settled, I heard a sharp alarm! All rushed to the spot with blankets and whatever they could lay hands upon; a hundred men fought it desperately—exposing themselves without stint—for provisions, baggage, every thing depended on success; but it was a doubtful struggle, until happily, a barrel was found, to roll over it. And this fire had not spread thirty yards! Such is our sole forage.

I. F.—"Very interesting, this dry grass and frost! Has the idea of home banished me from your thoughts?"

—"Ah, no! I am a bit of a philosopher; and take this October marching very kindly—particularly, after thawing of a morning and riding ahead, I kill a grouse occasionally with my pistol."

I. F.—"What would you give to see a late paper?"

—"You have me there! I have a weakness for a damp newspaper;—let me see—it is now eight weeks since we have had news. But I discovered a copy of James' False Heir with my baggage; that, in my mental famine, has been quite a feast."

I. F.—"Do you like it?"

—"I think he has exhausted his best powers: the plot turns solely on a worn out incident; the real or pretended substitution of infants. James has at last committed the folly, which, first or last, all the British authors seem to fall into—I mean a sneer, or slander, on us Americans. Strange, indeed, that a writer who has made friends of the readers of a great nation, should without any good object turn their finer feelings into contempt or anger, by a few motions of his pen. Ah! deliver us from the temptation of a sneer! But *this* is coolly and deliberately done."

I. F.—"And what is it?"

—"I say *Americanism* advisedly; for republicanism is a very different thing, and does not imply a rejection of refinement in the higher classes of society."

I. F.—"He pins his faith then upon the mercenary class of tourists; for he has never visited us. Did you ever remark that his valets are often the most intelligent and quickwitted of his characters?"

—"It is the case in this very work. The hero is a lad of seventeen; old enough to fall in love, and but little else. St. Medard is a mere abstraction, De Langy a cypher, Artonne a riddle, Monsieur L—, a man in a mask who puts himself in the way sufficiently to give some interesting trouble and help out the plot. In the most common-place manner, he has thrown the hero and favorite characters into difficulties for the transparent object of a final triumph; he disinherits the hero, shipwrecks his best friend, St. Medard; confines Artonne in prison for murder, and last, not least, sends his best drawn character, Mairois, to the galleys!"

I. F.—"James has an extraordinary habit of making his spokesmen repeat the first sentence of their speeches, thus—'I don't know, sir; I don't know, sir,'—'That's a pity—that's a pity!' Since I have noticed it, it always makes me nervous!"

—"One of the last announcements I read before I left home, was, that he had engaged to write a 'serial' for the Dublin University Magazine; sorry I am, but such is the accustomed drivel of exhausted minds."

I. F.—"After all, James has been a most effective moralist; and we owe him much."

—"It is excessively cold! And if I sleep to-night, I shall say 'blessed be the man that invented'—wool!"

"110 *Mile Creek.*"—Welcome as palm groves to the desert traveller,—as the bearer of glad tidings to the anxious soul,—welcome as home to the troubled and weary spirit,—so welcome thy forest, thy waters and grassy glades, oh! "Hundred-and-ten!"

Thus far safely, over the desolate and bleak prairies; but with what pains! How pleasant to regain, one by one, the summer camps, homeward bound! But how mournful the blackened plains, and the freezing winds to which the solitary trees bend with shrill complaint.

I have risen after midnight where there were none—and with a few broken barrel staves kindled a little fire in a hole, where some one had managed to heat a coffee-pot; and with a blanket over all sought a renewal of vital heat!

With what extreme care have we nursed our horses and mules! sharing our blankets with them and giving them flour mixed with the dead grass chopped with our knives. At the hospitable shelter of Council Grove, a few of the most broken down horses and teams were left to rest and await the succor I had long written for; the first of which—a wagon load of corn—we have met here—45 miles on.

Leaving the Grove, as we passed over the lofty prairie hills, all the world seemed a-fire! The unresisted winds seemed to riot with fire, which they drove to madness! Black clouds and columns of smoke were wildly tossed in the tempestuous air; whilst the flames, now darted with lightning speed and glare—now flickered with baleful illumination and stifling effect over our hurried path. Thus desperately, I pushed on for two days—regarding nothing—with a will fixed upon this haven of shelter and relief.

And now, our horses browse at will throughout the forest; our log fires crackle under the noble arches of boughs and foliage; we read our letters and news; our repose is home-like; and as we gaze at our forest-roofs so cheerfully illumined, we indulge in extravagant anticipations of winter enjoyment at Fort L.

Two nights and a day were thus spent; and when, almost unwillingly, we ventured forth again from the pleasant forest, the scene and the actors were changed! Autumn—so long our tyrant—pursuing us with frosty breath on wings of flame,—in the last act had met a master; and shrieking over the desert, had fled—like a blusterer—to the South. Stern winter had come with his pure winding sheet of snow, to cover the blackened scars of the conquered and dead year.

In three days we reached our homes, and our air-castles have sobered down to highly appreciated comforts.

But dear "Hundred-and-ten!" we shall never forget thy hospitable oasis;—there was little more poetry in it, than in thy singular name; (and thus both were highly satisfactory to my matter-of-fact Friend, with whom I there parted, with hopes of a future meeting.) But—with charred deserts behind,—and forgotten; and new storms

before, but unforeseen,—we embalm in memory thy friendly shelter, and the calm repose of thy homely forest!

DE CAUSIS NON BIBENDI.

A Parody on an "Imitation," which appeared in the Messenger for Dec., under the signature of E. W. J.

There are according to my thinking,
Five causes which forbid one's drinking;
First, that your guest does best without it;
Next, that your natural taste doth scout it.
For present thirst pure water doth suffice;
No sweeter element can man devise.
For all the thirst that's yet to come,
Of all the dearest ones at home,
For every temperate, reasonable guest,
Of all known drinks—this one's the best.
Hence, fourth, 'tis plain that drink you should
PURE WATER;—'tis so very good;
Fifthly, 'tis *always* out of season,
To guzzle wine without good reason.

J. N. D.

GLIMPSES OF THE ROUTE

From Alexandria to the Blue Ridge.

A Fragment from the Note-Book of a Home-Traveller.

One is not enlivened by being aroused at the hour of half past three in the morning, by the rattle of the stage coach, especially when he is not at liberty to lie comfortably in bed, but must rise and dress in a cold room, and, descending, commence his untimely travel in the above-mentioned vehicle. Once the present Vagabundus did not regard the inconvenience resulting from such early rising and travelling, and he would sit on the "box" abreast of that worthy and excellent traveller's friend, William Whaley, in the coldest mornings which ever fell like an icicle from the frozen beard of January. Alas! Whaley has "left the line;"—which indeed he held in fee simple in those days;—and his place no longer knoweth him. Still again alas! the warm blood of youth not now courses so carelessly and boldly in the writer's veins as in those far dim times.

The horses (sorrel with rosettes upon the ear) stand pawing the ground and trying to make you believe that Whaley's old six-in-hand are not cut down to four. It was the pride of that high-spirited driver to rattle into Alexandria with his six

bays, all moving like clock work, and playing with their five thousand pounds, (more or less,) of luggage:—He drives them no longer; but suddenly, while casting a glance in thought upon those times, who should stand there laughing and unconcerned, but Whaley himself, looming out as of old against the blood red moon (about to set)—holding the lamp for us to see, and puffing vigorously at his fiery cigar. Not more astonished was the Rambler who encountered Waring in Trieste Bay in the *Speronare* which running under the brig's bow showed him the face of his former companion.* Who will, after this, refuse to write me a treatise on habit?

The door closes, the whip cracks, the paving stones crash under the hoofs of the horses and the heavy wheels, and the *Vagabundus* is *en route*.

It is long before you come to the very first village on the road, since that indifferent inn and its shakily surroundings, which is called Fairfax Court-House, is none. You must leave the low country, stretching its level woods along a level horizon, and travelling until past noon, cross Little River and ascend the Kittoctan Mountain. From this you swoop on the little village of Aldie, which rambles along as if it had never been able to make up its mind as to the precise spot whereon it should finally "locate" itself. Aldie is not a favorable specimen of our Virginia villages—it is even a remarkably *unfavorable* specimen. The houses, in every stage of decline, seem to lead a sleepy or lifeless existence, so to speak, and the angler or tourist, who takes up his quarters for the moment in its ancient-looking inn, feels much astonishment, I imagine, at the rattle of stage-wheels in the quiet borough: any noise betokening life and energetic movement seeming so much out of place. They talk there gravely of the Little River and Kittoctan Mountain—which two things are purely myths. What is the "river" but a small, shallow, exceedingly lazy brook, which so demeans itself as to debouch into *Goose Creek*? What the "mountain," but a rolling eminence which the stage-horses ascend at sweeping gallop? There are but two things to attract any body's attention in Aldie—the sign-board on the inn, and the name of the town itself. The board in question, presents the very singular appearance of a "sign," intended for a community in which the inhabitants, too indolent to hold themselves erect, suffer their heads to decline upon their shoulders:—in other words, it is affixed by iron staples to the branch of a wide-spreading tree, which branch extends at an angle of something less than forty-five degrees. The second object of rational curiosity, as I have stated, is the name of the village. Was Aldie an Egyptian,

Grecian or Roman town; resuscitated, as has been Babylon, Palmyra, Athens and Rome, in this our uninventive and prosaic century? Possibly, however, the original founder was a bibliopolist, whose pride and delight was in his small and beautiful editions of the Venetian Aldus:—who, thinking the village fair and comely in spite of its smallness, straight called it Aldie: possibly the founder wished to express, in its name, a great undisputed truth: possibly, and I confess this seems most probable to me, it is simply the name of some old worthy of the neighbourhood, celebrated in the past. I leave you to draw your own conclusions, and decide between these conflicting hypotheses; and leaving Aldie—the leaders playing in the superb sunshine—we next come to Middleburg.

—The *Vagabundus* must decline his assent to the proposition, that Middleburg is a *burg*:—that it is in the *middle* of a country, which is growing richer as it slopes upward toward the Ridge, is undeniable. It should be called the "village of magnificent distances," and there is an implied (courteous) necessity to so describe it, as the "distances" are all that are in the least magnificent about it. The houses wander about in painful uncertainty. They have lost something apparently, and are scattered in general search for it. The present chronicler has nothing to say of Middleburg, except that the cigars which he there chanced to purchase, were very tolerable and cheap.

—Upperville next demands its share of attention—Upperville situate on that little brook which winds across the main (indeed the only) street and takes boldly to itself the savage name of Panther Skin. I have endeavored, as becomes a conscientious historian, to clear up the doubt which rests on the origin of the names which have already arrested our attention. I therefore proceed to say that relatively to Middleburg, Aldie, and other villages, Upperville is undoubtedly *upper*: but that neither relatively, comparatively, or positively, is there any trace of any *village*. It is simply a post town, where one stops only long enough to remark to his fellow-passengers that it is cold or warm, to witness the leisurely interchange of mail-bags, or to stretch his legs after the manner of Mr. Wackford Squeers. Leaving Upperville you already begin to divine the mountains;—those peaks to the South are Brushy, Rocky, and Buck Mountains, where *Goose Creek*—the "*Goose Run*" of our old maps—commences its pilgrimage to the Potomac.

—Last of the cis-montane towns is Paris, which nestles under the pine-clad wings of the mountain, or rather boldly perches on its shaggy side, looking around on its five-mile principality,

* *Vide* Browning's "*Waring*."

which—as capital—it rules as perfectly as its namesake does the half of Europe. Paris in the Blue Ridge!—not a place where they have July and February revolutions, (though on the 4th day of the former and the 22nd of the latter much uproar is created by patriotic youths there,) nor yet a place of any very great “Mysteries,” political, religious or romantic; but simply a little town where horses are changed by the Alexandria and Winchester stage coach, and the Vagabundus, (after chill and glimmery travelling with doubtful sunrise,) gets a comfortable breakfast. Here, as elsewhere, you find at every turn, hotels! hotels! hotels! Certainly does my memory now recall the “Union Hotel” and the “Paris —;” I was about to write *hotel* here also, but the envious or scornful storm-spirit of the mountains has blotted out with his rainy finger the word from the sign-board, and even made encroachments on “Paris” itself. These two “hotels” there certainly are in Paris, whose population *may* be three hundred, is probably two hundred: how many houses of private entertainment there are, the Vagabundus knows not.

—Still this chronicler does not detract from the just fame of the village. He has often been pleased at sight of the battered sign-board, and even at the present moment the cheerful warmth of the hickory log fire as it blazed up the chimney, and communicated a pleasant *circulation* to his cold feet, dwells gratefully in his remembrance.

—Now standing on the mountain, and embracing in thought, if not with the eye, the whole country through which we have passed from the rise to the set of sun, let us endeavor to recall some of the impressions which it has produced.

And first of Fairfax county, which so long lamented the loss of her old city, and stands telling her sorrows in every murmur of the never-still Potomac. Fairfax, old and worn-out, has lately felt in her aged veins an elixir of life, which has infused into her new vigor and force. To the dilapidated wooden houses, have succeeded edifices new and commodious;—to the timber-covered old fields, smiling meadows—to the depression of penury and thoughtlessness, the vivacity of a healthy prosperity. It is because to the Virginian, profuse and careless in expenditure, has succeeded the Northerner, who is seldom profuse, never careless. You cannot mistake this: it stares you in the eyes:—the very stage lines which pass through the county, have lately been purchased by Northerners. Here more than in any other Virginia county, the present is forgetting the past; and plainly it does not wish to recall that bygone time when thistles and pine bushes grew where now the “waves of shadow go over the wheat.” Ancient Fairfax, like a man waxing wealthy, does not wish to see her-

self other than she now is—Northern. Then, as elsewhere, and at other times, the question suggests itself—Shall the Northern immigrant become Virginian, or the Virginian assimilate to the Northerner? To this Vagabundus the question is not difficult of solution.

—Loudoun county differs from poor old Fairfax. She has many water courses: Fairfax has next to none at all. She has rich, fine, low grounds, and red land which produces noble crops. Alas! where are the garden spots of Fairfax; *has* she such? To the left yonder, (we stand at Paris,) the long valley of rich red land, stretches at the foot of the mountain, past Vestal's Gap, from which you look upon the little village of Hillsborough; the whole hemmed in by the Short Hills;—across the “Piedmont” toward Leesburg, Goose Creek swallows her twenty little water-courses, which merrily turn the wheels of numerous mills, and running through a region dotted with ancient stone houses redolent of our Revolutionary antiquity, goes like a brawling child to the bosom of the Potomac.

—Thus much of Fairfax and Loudoun.

Suddenly while gazing upon the landscape, or at other points in the latter part of his journey, flashed upon the Vagabundus the thought that near this road, over which so carelessly he had passed, gazing at the revolving wheels, the prancing horses, or the stone-fenced fields;—in the immediate vicinity of—some place, (where, exactly, he knew not,) was the residence of a former and celebrated President. Vainly now does he lament his thoughtlessness—Time, and above all, the despotic determination in the stage driver to be “up to time” in his mail delivery, bends to no man. Where there was an historical mansion, I have spoken of Aldie and Middleburg—where there was a President in question, I have spoken of friend Whaley. The omission can only be regretted—not remedied.

—From Paris one takes to the mountains, and with their red, and orange, and yellow drapery, and their towering outlines, the lowland no longer dwells in his memory. The Vagabundus got his last look of the Eastern land from Ashby's Gap, and with swift revolving wheels, and prancing horses, on whose rosettes the rich sunshine sparkled, passed on into the great valley.

EOTHEN.

EPIGRAM.

“A sleigh-ride, we'll join in a sleigh-ride to-day,
Oh what fun,” cries the charming young Sally,
“We'll gallantly dash o'er the hills and away
Where crisp lies the snow in the valley;”
“Not so fast,” replies Tom, “the thermometer tells
‘Tis too terribly cold for such playing.
Let's remain within doors, with a string of our belles,
And we shall have plenty of slaying.” X. Y. Z.

VERNON---A PILGRIMAGE.

BY E. KENNEDY.

In these days of steamboats and rail roads every body visits Mount Vernon. They go thither in crowds, and they throng the old halls in troops, and long processions, and they—see everything.

Now to a thoughtful mind, there is not so much to see at Mount Vernon as to think about.

"If thou would'st see fair Melrose aright,
Go visit it by the pale moon light."

And why? Because the silence and dimness of night are favorable to meditation, and because the loneliness of the hour gives one possession over himself,—a thing rather difficult to arrive at, we opine, when a "train attendant" comes in for a share of the romance.

So with ourselves, when we would go to Mount Vernon, we were either selfish enough or judicious enough to go thither alone. The distance was not great—some half dozen miles or so from where, it so happened, we were spending the winter, a twelvemonth ago: and possessing some confidence in our own powers and properties of locomotion, we set out one bright, cool, pleasant morning in December upon our pilgrimage.

A pilgrimage!

Not precisely, in the strict sense of that term, kind reader, but yet in some such sense nevertheless. Of course there is a religious sense in which, in ages past, men have been accustomed to use this expression, and perhaps to misuse it also, and this is not our meaning as will be plainly perceived. "Men go," says the author of *Raselas*, "every day to view the fields where great actions have been performed, and return with stronger impressions of the event." The graves of the departed, the last resting-places of the great ones of the earth, have, and according to the construction of the nature of man, ever will have, some attraction to draw people to them: and in such sense as of veneration for the heroic dead, our visit to Mount Vernon was a pilgrimage.

"Such graves as these are pilgrims' shrines—
Shrines to no code nor creed confined;
The Delphian Vales, the Palestines—
The Meccas of the mind."

Our road, however, led us not to the tomb of the Arabian prophet; not to Jerusalem, nor even to Rome; but to the burial-place of Washington! From our earliest dawning of intelligence, that name had been uppermost in all our fondest recollections and associations. Some how or other, perhaps it was "distance lent enchantment to the view," but we early came to associate some

of the purest and best feelings of our nature with the character and conduct of this our great countryman. History had made us acquainted with many of the mighty names of past ages, but some foul and ugly blot ever appeared upon the broad surface of their character, so that affection refused to cling around their memories, however much they won upon our admiration and regard. But in the sage of Mount Vernon—he who was indeed "first in war, first in peace, and first in the hearts of his countrymen," there was a completeness of the entire man which took possession of our heart, and led us to indulge for him an esteem and veneration such as no other mortal man had ever awakened in us before. And now, staff in hand, we were upon the road which led to the domain of the departed chieftain—we should visit the house where he had lived, tread the walks that he had himself frequented, and stand, with uncovered head, as was the fact, beside the tomb where his remains reposed: and was not this a pilgrimage?

Whilst upon the way we turned about oftentimes to enjoy the beautiful scenery. Having ascended the hill in our progress, we saw the placid waters of the Potomac lying below us, and stretching far onwards to join the broad bosom of the Chesapeake; that same quiet, ever-rolling Potomac that Washington himself had loved so well, to which he so often alludes in his letters, and upon the banks of which he chose, "life's duties o'er," to retire in dignified simplicity, there to spend the balance of his days, and there to die. Far to the northward we saw the rising dome of that capitol, where the National Legislature of this great Empire sits: a structure whose foundation was laid by Washington, in a city to which he had given his own name. As we went onward, our feelings, after the true spirit of a pilgrim, were in harmony with the place, and the occasion, and the object of our visit. Like Ossian, we "thought of the days of the past," and our sympathies were alive to every reminiscence of an historical nature with which these scenes and these localities were, in years gone by, connected. Half a century ago the grave and dignified form of the nation's well-beloved hero was oftentimes seen upon this very road; the same sky was over his head as now stretched above us; the same outline of landscape as even now greets the eye, was then visible, but else all is changed: life and its activities are all over with him; he lived his allotted time; filled his allotted sphere, and ah! how well! and now the *pater patriæ* sleeps the long sleep of death. Of the departed, how truly may it be said, that "the places which knew them once know them no more!" A new generation has sprung up: they fill the seats, and they tread the paths of those

who formerly were here: we may go and see the place where the "dead are laid," but we may not know of them, for they have "passed away!"

The Mount Vernon estate was, as is well known, a very large one; and the visitor enters upon the lands belonging thereto sometime before he comes in sight of the time-honored residence itself. We saw a few ancient tenements, farmhouses, to appearance, and built perhaps in the days of the revolution, for the hipped roofs seemed to betoken a style of structure not common in our time. Passing through a strip of woodland we came suddenly upon the long looked for object of our "pilgrimage" and visit; the mansion itself lay before us at a distance of half a mile, rising above the stunted cedars that cover the hill upon which it stands. A venerated structure it is, surmounted with a modest steeple, as was in accordance with the style of building usual in the early days of Virginia.

We had seen the "portrait" of this edifice an hundred times or more: we had seen it in rude prints upon the walls of village bar rooms, in the far distant valley of the Mississippi; we had noticed it often as a 'frontispiece' upon the 'clocks' of New England manufacture, such as find their way multitudinously over the broad regions of the American domain; we had had it in our observation in many forms and varieties of pencilling, but here it was now, the thing itself, standing palpably before our eyes: need we say, we recognized it at once? We sat upon the stile for sometime wrapped in contemplation, meanwhile gazing upon the premises, and not caring to advance a single step nearer: not that it was the mere house; or even that it had been the residence of one of

"—the foremost men of all our times;"

but that so much of thrilling interest in American history was connected with the spot on which it stands. Washington had lived there: Lafayette had spent days and nights there; the men of the Revolution had congregated there; the voices of the "sons of liberty," a Patrick Henry, and a Richard Henry Lee, had been heard in familiar discourse there, and plans had been there laid, and schemes originated, whose results are now made evident in this

"Land of the free and home of the brave!"

The spot was a celebrated one, a

"Mecca of the mind,"

as we have already denominated it; and men the world over, who talk of freedom, know some-

thing of Washington and Mount Vernon; and here now was Mount Vernon before our eyes, and by yonder hill side was the sepulchre where the body lay.

There is one thing about Mount Vernon which must commend itself to every person of good taste, namely, that the residence, and indeed the entire premises have been permitted to remain substantially as they were half a century ago. The house itself, a frame structure, built long since in the days of the Colonies, has undergone no change whatever, and is a fine old edifice, in excellent preservation. The proprietors in years past seem to have been gentlemen of correct ideas, and the country is indebted to them inasmuch as they have allowed things to remain pretty much as they were when the good General died.

We did not bring a square and compass with us, nor a tape-string to measure with: the business of our visit being not so much with the material edifice, as with the associations therewith connected. We rambled about, however, and made our observations, seating ourselves at last beneath the well-known portico, fronting upon the river, whose pavement is of tessellated stone, and was no doubt put there when the house was built, for it looks time-worn. There is hardly a more interesting spot about the premises, save only that where the departed hero lies; and the chamber where he breathed his last, than this same lofty portico. Here the feet of Lafayette have trod—here every stone has been familiar to the footfall of Washington! His meditative mind was no doubt oft burdened, as he here paced to and fro, with a sense of the weighty future—of the coming destiny of that Republic which he himself was so mainly instrumental in setting forward upon her career of greatness. His foreseeing sagacity foreshadowed, perhaps, a semblance of that wonderful destiny which has already begun to be fulfilled. But how imperfect all such anticipations must have been, we may in some measure conceive of, when we remember that at the period the illustrious occupant of this mansion breathed his last, there were no steamboats on any river upon the globe; there was not a railroad in existence; the empire of the great West was, comparatively speaking, unknown, and John Jay, the American plenipotentiary, had just negotiated a treaty with Great Britain, ceding the right of navigation of the Mississippi river for a period of thirty years; the States of this Union numbered only some fourteen, with an aggregate population of only five millions: as a people we were scarcely known among the nations of the earth; we had no manu-

factures, neither had our great staple of cotton as yet any place in the list of exports. Telegraphic wires linking together the distant portions of the wide-spread continent, had not, of course, been dreamed of even in the reveries of the wildest and most imaginative. One almost wonders, as he treads these grounds, whether the departed spirit of its noble occupant is permitted to revisit "the glimpses of the moon" in these our days, and to be cognizant of the greatness and the unprecedented prosperity of the land, which in the days of his earthly sojourning, he served so faithfully and loved so well!

Crossing the threshold, one finds himself within the ample hall of this old mansion, which is wainscotted from floor to ceiling in a style of architecture quite ancient: ancient, we mean, in a relative sense, having a day and a date of some one hundred years ago for its completion. On this side of the Atlantic, we account such to be an ancient edifice, which will carry our recollections back even so far as the days of George II., and into the era of our colonial history. Mt. Vernon does this, and therefore, according to our logic, it is, in a limited sense, venerable for its antiquity. We almost involuntarily looked about us, to see the broad-skirted habiliments of the Revolutionary worthies, or perchance some well hooped dame of the days of '76, to come bowing or "courtesying" from out of one of those neat little parlors, four in number, which open into this, the central passage way of the building. Our fancy, however, was at variance with fact, and no such apparitions were visible; albeit the time was when the forms of other men have darkened these doorways, and the sound of the voices of a different race has echoed within these apartments—voices that have been lifted up amid the din of battle. Some people say that "stone walls have ears"—a proposition which we are not prepared to accede to, in terms, although figuratively the thing may be true enough; and we did fancy that this ancient edifice, the home of the great commander himself, had listened, in such sort as the walls of a house may be supposed to listen, to the old familiar tale of the Revolution, oftentimes rehearsed. Not rehearsed either, as we rehearse such things, by hearsay and at second-hand, but by those who were themselves actors in the stirring events referred to. There was the tale of Brandywine, and of Germantown; sad tales too they were to tell: and doubtless the "Crossing of the Delaware," upon that cold, wintry night of Christmas '76, has afforded a topic for many an evening's reminiscence; as well as the bustle of that hurried retreat from Long Island; the heats of that burning summer's day at Monmouth, or perchance the closing triumph of the Revolution—

any struggle, that "crowning mercy" at Yorktown. Some of these scenes and stirring events in our nation's history are pictured upon the glowing canvases; the "tradition of men" has also treasured up many of the details, but these wainscotted walls have heard the chronicle from the lips of men who themselves moved in the events, and were a part of the enterprises they discoursed of. It may be that "walls have ears," but they have no tongue to speak. We lingered within the portals where Washington dwelt, and where the patriots of the olden time have gathered, but we heard no sound. Memory alone served to aid our thoughts, which were of the men of the past, and of the deeds of the past, and of the thronging recollections of bygone years, so intimately associated with the residence of Washington—

"halls

Trod by the Percys of old fame;
And traced upon the castle walls
Each high, heroic name."

From the outset of the Revolution until long after its close, Washington was, however, only an occasional visitor to his own house. In a letter bearing date of 1798, he says: "Twenty-five years have passed nearly away since I have considered myself a permanent resident beneath my own roof at Mt. Vernon." His years and his energies were not his own—they were called for by the exigencies of the times which demanded a personal sacrifice,—a sacrifice which he was so willing to make, and which his country was so fortunate as to receive. And when at length, after a life of activity and toil, he retired to this same hearth-stone of his upon the banks of the placid Potomac, whither doubtless in the dark periods of our history, his affections had oftentimes turned with longing desire, how short was that stay,—how brief was that sojourning under his own "vine and fig tree," as he himself so frequently expressed it!

There is a flight of stone steps at the rear-front of the dwelling, which show the marks of age, and the wear and tear of many winters. Seated upon them, we could not but recall in fancy a certain bright morning in January, 1759, when a chariot of ample dimensions, with servants in livery, drove up this same circular carriage-way, and sat down its gaily attired burden upon these identical stone steps. It was Col. Washington and his newly married bride, the fair Widow Custis, of whom tradition tells so many interesting details of her personal charms and attractions. Upon the table before us, as we write, there lies a relic of that same gala-day—nearly one hundred years gone by. It is a bit of the costly brocade dress, woven in threads

of silver and gold, worn by the bride upon the auspicious occasion of the "home-bringing," or "in-fair," as the old-fashioned phrase is in Virginia.

From the date of Washington's marriage, in the year 1759, until the day, some forty years afterwards, when the funeral procession which bore those venerated remains to the tomb, moved slowly off from the door of this mansion, how many items of momentous interest could be enumerated! We forbear even a brief recital of the events of this teeming period, because it includes the historical rise of republican America, beginning with the inception of the idea of a free and independent confederacy—embracing the agitation and the discussion of the weighty question itself—the outbreak and the call to arms—the seven years struggle, and the successful close of it; the machinery of a new government set in motion; and ending with the enrollment of the United States of America among the nations of the earth: in all which, this same august personage, whose familiar haunts these were, who lived here and who died here, bore so prominent and so active a part.

* * *

Our visit so far, as the reader will have perceived, was highly satisfactory, both to our taste and to the reverential impulses of the heart. But feelings of quite another sort were awakened, when we sought out the "tomb" of the departed patriot. As we lingered about the old mansion, there was the charm of antiquity to interest us, together with the multitude of clustering associations, such as necessarily attach themselves to the decaying premises; but when we came to seek out the "tomb," we were indeed most sadly disappointed. The fact is, the "Tomb of Washington" is so at variance with every idea or perception of a "tomb," such as we ourselves had hitherto indulged, that we might almost defy fancy to sketch a last resting-place for the dead, less in accordance with the demands of good taste and good judgment.

When we contemplate the place of repose of the mighty dead, we naturally associate something grand and imposing in the idea. Whether it be in a monumental pile pointing to heaven, or in the

"Dim religious light,"

of some sculptured cloister, or even in the grass-covered mound of some retired grave-yard, there is, in all of these, ample verge and room for the mind to picture out her own imaginings. There is a reasonable and an appropriate solemnity in them all. One of the charms of Westminster Abbey, lies in the fact of its being the abode of

the venerated dead. Those lofty arches and resounding aisles, are in excellent keeping with the general idea of a sepulchre. There is the attendant stillness and silence; there is the dimness of light; there is hoary antiquity and the stateliness of architectural embellishment:—and all these force *grandness of idea* upon the mind. But at Mount Vernon there is nothing, positively nothing to elevate one's conception of a sepulchre; indeed there is much to derogate and to detract from such preconceptions as one might have formed.

Some twenty years ago, the body of Washington was taken from out of the old tomb, where it had been first deposited, and where for thirty years it had reposed, and was conveyed into a curious brick and mortar sort of an enclosure; half vault, half cart-house, as one might denominate it from its appearance. This outer, house-like enclosure, is arched over, and plastered, and ingress is secured by an iron gate with locks. The remains, so removed, were placed within what purports to be a "marble sarcophagus," which lying upon the surface of the ground, is exposed to the view of the visitor. This "sarcophagus" or marble chest, of mean and narrow dimensions, bears upon its extremity, in full view, an inscription, or in fact an "advertisement" of a certain individual named "Strothers," a stone-cutter of Philadelphia. Hoping, perhaps, to link his name to immortality—vain hope! he planned, and, for aught we know, executed this removal; and has detailed, at large, the circumstances in this same inscription. And there, in the full blaze of sunlight, and a common spectacle for man and beast, the august body has lain for some twenty years and more, shocking the good taste of every person who comes, as we did, with pious feelings, to pay his respects to the memory of one so every way worthy of a noble sepulchre. And to add to the homeliness of the whole affair, there is a snug little rail-road now constructed from the wharf below, a distance of a quarter of a mile or so, up to the gate of this tomb, which thence winds off to the front of the mansion, a few hundred yards further on. We say a rail-road, not exactly a rail-road either, for in "grading" the way, they have not quite cut down the hill to a "level," but they have approximated to it; and a remarkably nice (cheap) plank way has been laid down, extending, as we have said, from the river's edge up to the sacred precincts of the tomb; and thence winding off, enables the "company" to visit the scarcely less sacred premises of the old mansion, "dry-shod."

All this has been done through philanthropic motives, we presume, so that ladies and other delicate people, who come to see the place, may

have their feet kept dry, for their better security against coughs, and colds, and rheumatic affections: and for this praiseworthy object, the silence of the abode of the venerated dead has been intruded upon. We might also add that hand-bills are printed, and newspaper advertisements are circulated, giving notice of all these extensive "accommodations," and also that a Steamboat will make "tri-weekly trips," and this "during the season," from the Federal City and towns adjacent, upon the Potomac; for the very moderate price of "one dollar!"

In the outset of our sketch we stated that we chose to come alone to Mount Vernon; not caring to cast in our sympathies, upon the occasion of such a visit, with the common stock of a considerable crowd of sight-seeing citizens. We saw no reason to regret having done so, when we became observant of the "accommodations for visitors," which we have described.

These remarks are appended with no unkindness towards the getters up of all this "speculation." It is natural that people should desire to visit the tomb of the great Washington, as well as to tread the scenes of his once beloved abode; but we do contend for a decent fitness of things; all of which, we hesitate not to declare, is sadly lost sight of in the present arrangement. Neither does blame attach to the present proprietor of Mount Vernon. He has done the best he could. People will throng thither as visitors, and such preparations as limited means will afford, must needs be made for them. The blame lies properly at the door of this government which permits such things to go on at the old homestead of the "father of his country." The property, we say, should be bought by government, and put into such a state of repair and dignified arrangement as would not cause a foreigner to visit the place with ill-disguised disgust, and would not bring a blush upon the cheek of every American of good taste, who sees how things are conducted.

There are certain dignities and proprieties to be maintained in a matter of such grave moment as requires that men should speak out their sentiments. The home of Washington, as well as his "tomb" belong, or should belong to the country. The associations, historical and otherwise, of such a man, should be made common property. His is one of the

— "few immortal names
That were not born to die;"

and we think we speak the sentiments of every American citizen of proper feelings and correct taste, when we say that this estate of Mount Vernon should pass into the ownership of the Government, at whatever cost; and that it should

be put into suitable repair. We would have the mansion itself a "Museum," so to speak, where all the relics of the illustrious occupant should be collected and piously preserved. A tomb should be erected fitting the character of the man; and above all, those revered remains, whilst they should be honored with something like a worthy sepulture, should never be removed from the time-honored precincts of Mount Vernon.

Men love to look upon the scenes hallowed by the memory of departed greatness: this has ever been the case, and ever will so continue to be, because there is a sentiment in the human breast; a weakness, if some choose so to call it; responsive to such things. Foreigners coming to America, desire to tread the grounds, and to fill their minds with the localities, and the numerous personal reminiscences of so great a man as Washington; and if such a scheme as this we suggest could be carried out, then might we pride ourselves on possessing one spot at least, where good taste and sound patriotism might unite in a common object of high interest and attraction.

MY EARLY DREAM.

BY MRS. DR. HICKS.

Come back! come once again, my early dream,
I would yet linger in thy glowing light,
And idly bask, amid thy gorgeous gleam,
And rain-bow hues, now paling in my sight.

Come back! enwrap me in thy rosy dyes,
Go not—oh! vision, like the winter day,
Neath sullen pall-like clouds, and leaden skies,
Oh! go not thus, my early dream, away!

Come back to me! as once thou wert, oh dream!
I cannot see thee, spectre-like, depart.
Come back with flaunting light, and golden beam,
As thou did'st shine in beauty o'er my heart.

My dream! thou all of beauty I have known!
Fair as the veiled Indian—summer day,
Hast thou, in love-light, o'er my pathway shone,
And I have lived, enfolded in thy ray.

And one there was, who tinted thy broad beam,
With fairy hand; who made thee what thou art.
Light of my life—light of the dawn—oh, dream!
Thou all of earth, and e'en of Heaven, a part.

Come back—yes, once again, light of the dawn,
And then, like all things lovely, pass away.
Shine, oh! my dream, as in the blushing morn,
Thou did'st arise, with promise of the day.

Come back—let not the clouds thy rays empall,
And my young day, be overcast; oh! dream.
Come back—my yearning heart, once more enthral,
And pierce the darkness with thy quenchless beam.

Imagination wove thee in her prime,
Of gaudy sun-set hues of Wonderland
And thou wert formed, dear dream, for more than time,
And now thou fallest neath his ruthless hand!

A rain-bow shattered, ere its bow was bent,
A purple morn in tears—a starless night—
Are images, with thee, most strangely blent.
Oh! gorgeous dream—now faded from my sight!

Oct. 30, 1851.

LETTERS FROM NEW YORK.

NEW YORK, Dec. 19, 1851.

You cannot suppose that any "son of York," during these days of jubilant enthusiasm will have either eye or heart for aught else than the one bright focus of excitement which is now enchanting every imagination. "The winter of our discontent," which, without something to divert our attention from its merciless severity, would be bitter indeed, is turned into a good deal more than "glorious summer," by the magnificent Oriental Avatar, which has found its way to our bleak shores. Never was the enthusiasm of our mercurial people, which is always ebullient at a very slight increase of temperature, so universally or so intensely inflamed, as on occasion of the coming of the "mighty Magyar." I doubt if the chosen people, in the amplest fulfilment of their hopes, could have hailed the appearance of the Messiah with a more hearty burst of acclamation, than that which went up from pavement to roof-tree, upon the triumphant entrance of Kossuth to the city.

I assure you that I attach little importance to this fact in any point of view. It does not show any intelligent comprehension either of the history, the character, or the purposes of Kossuth; but only the passion of our population for pageant and spectacle. It was a repetition of the furor, which attended the steps of Jenny Lind, under the management of her consummate showman, and which merely indicated the popular love of excitement, but was no proof whatever of appreciation of her rare and beautiful character, or of her wonderful gifts as a musical artist. If this were all that Kossuth could anticipate from the heart of the American people, he would long have to suffer the pang of "hope deferred" for his poor Hungary.

But I will not be tempted to descant on a trait

of our national, or rather, I should say, our municipal character, when I ought to be talking of the hero, for whom all this enthusiasm is awakened. Not that I mean to burden you with a repetition of scenes, which are described in such rose-colored language in all our newspapers; or to read you a political homily on the sacred duty of free and independent republicans to do battle for liberty to the remotest ends of the earth. What private, personal enthusiasms, or antipathies I may have on the subject is of "no consequence" to your friendly readers; and I will merely recall, for their edification, some of the impressions which have not quite faded from my memory, of the reception in New York of the "illustrious exile."

For a few days previous to his arrival, a breathless feeling of curiosity and suspense pervaded the city. Every one was inquiring, if the Humboldt had been heard of. The Hungarians in the streets, with their low plumed hats, and their fierce, moustachioed lips, were watched with keener interest. Every unusual noise at a distance was said to be the signal gun of the steamer. Meantime the City Fathers were on the alert in completing the preparations for his reception. Extrasessions of committees were incessant, and great were the fatigues of our patriotic aldermen. The quantity of boned-turkey and champagne by which their onerous labors were alleviated, is frightful to think of. Many citizens could not restrain their impatience, and hovered, like a swarm of bees, around the landing at Staten Island. There was constant motion to and fro. People actually turned pale with excitement at the approach of the coming man. It was a great era in the life of my excellent friend, Dr. Doane, the health officer at the Quarantine. That worthy disciple of Esculapius was to be the first to welcome the great Magyar to the American shore. I must do him the justice to say, that he bore his high honors with infinite meekness. He made the most judicious arrangements for the comfort and happiness of his expected guests, without using them as stepping-stones to walk into public notoriety himself. Every thing that he possessed he placed at the disposal of those whom he wished to honor. Kossuth could not have fallen into better hands.

At length the long-wished-for moment arrived. The vessel's guns were heard in the offing. Signals were at once given to every accessible part of the island. Quiet sleepers were aroused from their beds. Staten Island was up in arms; the poultry yards were disturbed of their propriety; myriads of the canine race were excited to an unwonted ardor of emotion; and amid a general magnificent crowing of cocks, and barking of dogs, the health-officer of the quarantine started in

his boat, adorned with the flags of many nations, on his midnight mission.

I pass over his welcome to Kossuth on the deck of the steamer, which was all that could be expected from a patriotic physician, intent on such an exciting errand, and hasten to describe his reception on shore. But every thing in that great scene is forgotten, in the military eclat of Major Hagedorn, the Commander-in-Chief of the Staten Island forces, whose first duty was to assure Kossuth that the strong arm of the United States was made bare to draw the sword in the Hungarian cause, and the next to offer the weary exile a guard of honor for the night, composed of the elite of the military which he commanded on Staten Island. Major Hagedorn is a sublime man, or rather he made himself quite intimate with a sublime man, forgetting that from the sublime to the ridiculous there is but a step. He will long be held in due remembrance. This will gratify his vaulting ambition, to its full extent. He laps up notoriety, like the "cat in the adage," and will live to a good old age at least on the thought of having once had such a chance to play the great man. How far Kossuth took encouragement from the pledge of the Major with regard to the United States militia, I am unable, after the most diligent inquiry, to learn in a satisfactory manner. Major Hagedorn, let me privately inform you, is as good a man any day as John Gilpin; a sleek and dapper little individual; a citizen of famous Staten Island; "a train-band Major eke is he of credit and renown;" and when not engaged in the discharge of his duties as defender of his fellow-citizens, is an exemplary vender of writing paper, wafers, and other stationery in a small way, and the proprietor of a one-horse express.

The next day was the grand reception at Castle Garden. On some accounts, this ceremony was premature. There was not sufficient time to mature the necessary preparations, especially on the part of the military. The consequence was, that the pageant suffered from imperfect arrangements; the decorations of the streets bore the marks of hurried profusion; with a lavish display of ornament, there was little taste or harmony; and the disorder at Castle Garden was so great as to prevent the guest of the city from replying to the welcome of the Mayor. Still the scene was one of the most imposing, that I have ever witnessed in New York. The enthusiasm was more vociferous, more tumultuously expressed in every way, at the time of Mr. Clay's public reception in 1847; but on the present occasion, there was a deep, suppressed feeling, not vented in shouts, but depicted on the countenance, and now and then almost rising to a painful solemnity. Never was there a more

perfect day for the exhibition of a grand civic pageant. Such delicious weather could not have been anticipated amid the gloom of our early Northern winter. It took every one by surprise, and contributed in no small degree to the keen exhilaration of the scene. Under the soft, balmy influences of a pure atmosphere, and a sky of resplendent brightness, the multitudes drank in a genial life, and were tuned in spirit to the harmonies of the day. It is rarely that one sees a nobler display of our city population. The streets were closely wedged in, with the thronging myriads, who had left their houses; but such a love of order pervaded the masses, that the task of the police was by no means onerous.

As the procession, after much delay, left Castle Garden, and the person of the hero became visible to the spectators, he was welcomed on every side, by loud plaudits, while the ladies in the balconies waved him their greetings, and every window and every house-top seemed alive with sympathy. Kossuth looked the personification of tranquillity. Apparently the least excited of the vast multitude around him, he received their congratulations with a graceful dignity, but with no expression of emotion. This was far more impressive than any melo-dramatic arts, which an inferior man might have deemed called for by the occasion. His face looked worn, showing traces of recent suffering, and with an expression of deep thoughtfulness, belonging more to a prophet than to a statesman. Such was my first impression of his appearance, and it has been confirmed by subsequent observation.

Among the various public demonstrations that have since been made in honor of Kossuth, the Banquet given by the Press was one of the most peculiar, and interesting. Indeed, the occasion was decidedly unique, the Press in this city, comprising a motley collection of persons, with every variety of accomplishment and taste, for the most part, I imagine, personally strangers to each other, and little likely to come together on an occasion of common interest. Certainly, never before were so many of them seen together in the same banquetting-hall, and it will doubtless be years before a similar reunion takes place again.

The banquet was admirably arranged in all its appointments. The gastronomic portion of it was elegant, *recherché*, generous, (which I hardly need say to one who is acquainted with the good cheer of our hosts of the Astor House,) and every thing went off with the quiet of a family-party.

The entrance of Kossuth into the hall was welcomed with the usual honors. He received them with the graceful seriousness which I have already alluded to. I was deeply impressed with

his calm, intellectual look, as he rose to bow in acknowledgement to the company. You cannot watch his face and suspect him of being a demagogue or a fanatic. There is no doubt of his profound earnestness of conviction, or the crystal purity of his purposes. His whole air and bearing have that unmistakeable stamp of sincerity, which wins your sympathy with his character, though you may have no interest in his political designs. In person he is not above the middle height; his frame is slight and delicate, though not attenuated; he stands in an erect position, and his movements have an indescribable air of dignity and refinement, without being in the least degree, formal. His brow is expanded, not too lofty: his head is not large in proportion to his body; he wears his hair turned smooth on one side, leaving a white, beautiful forehead, which seems more formed for contemplation than for action; his eye is soft, winning, and singularly deep, not kindled by strong passion, but betraying the hidden fire which ever flashed forth in those volcanic bursts of eloquence, which have startled nations. The general expression of his face is that of reflection, but reflection softened by feelings inward, rather than outward; like that of a man absorbed in self-communion, or under the inspiration of a sublime idea; reposing on a basis of thought too deep to be influenced by ephemeral passion; and thought, not of calculation, not of arid abstractions, not of curious speculation, but thought, which "wanders through eternity," in the contemplation of holy and immortal principles. You would never take him for a man of affairs; you would say he is not of this world; though without the dreamy, vacant look of the religious enthusiast; still less would you deem him a warrior, a man to be at the head of battles, or to wield the destiny of nations. I cannot compare him with Napoleon or Wellington; indeed, he reminds me more of a man of the Middle Ages, uniting the noblest elements of the Baron and the Monk, without the fierceness of the one, or the cunning superstition of the other. In the marble composure of his brow, the religious elevation of his features, and the profound, humane, and spiritual expression of his eye, the admirers of Dr. Channing might find a resemblance, or at least a reminiscence of that single-hearted man, of whom, I am told, Kossuth himself is a warm, though discriminating admirer.

The speech of Kossuth on this occasion gave no idea of the impassioned, fiery, oriental eloquence, which has been supposed to characterize his style of oratory. It was as calm as his serene, introspective face, thoroughly didactic in its character, dealing closely with fact and argument, and making no appeal to the sympathy

or imagination of the hearer. As a dissertation on some of the most important points of the Hungarian question, it was eminently instructive, and certainly adapted to produce a favorable impression of the justice of his cause. He spoke with but little gesture, or variety of intonation; you saw in him nothing of the declaimer; scarcely anything of elaborate, or even effective elocution. You would have thought that he felt so deeply the power of truth, was so fully persuaded that the right was on his side, that he trusted to the simplest statement of his ideas, disdaining all the artifices of rhetoric. He expresses himself in English with fluency, but not with the idiomatic propriety which you would judge from the newspaper reports of his speeches. It requires close attention to follow him, though his enunciation is not rapid. Still his mastery of our rugged, obstinate, unmanageable tongue is wonderful, especially when we remember that his speaking is a constant process of translation, as he has not yet learned to think in any language but his native Magyar. It shows the miraculous influence of a high intellectual inspiration, in melting away the difficulties of speech, and suggesting adequate forms of expression, even when the materials are quite unfamiliar and intractable.

His power of adaptation shows a singular nimbleness and alacrity of mind. In the reception of the various delegations which have waited on him, he never loses sight of an effective point, in their locality or other relations. His allusions to historical facts betray a great familiarity with American affairs, and an uncommon readiness in calling up the right thing at the right time. An instance of this was his mention of the 14th of December, as the anniversary of Washington's death, a date which is seldom referred to, but which he made use of with striking effect in his reply to one of the addresses of a public committee. Not less happy was his allusion to the celebrated potency of Kentucky rifles, when a native of Kentucky was introduced to him as one of the delegation from the students of Yale College. In like manner, at the Press Banquet, his statistical statements in regard to American journalism, and his comparison of the press in this country and Great Britain, made a profound impression on the audience, not only by their appositeness to the occasion, but by the ingenious tact with which he made them bear on the great purposes of his mission.

In introducing Kossuth to the assembly, Mr. Bryant made quite an elaborate speech, remarkable for the terseness and energy of its language, the felicitous selection of its topics, and its chaste and impressive delivery. Among the other addresses, the most note-worthy was that of Mr.

Charles King, President of Columbia College, who spoke at considerable length, in a style of manly, dignified oratory. For the most part, the speeches on the occasion were certainly above the ordinary level of after-dinner eloquence, showing what was perhaps hardly to have been expected in the members of the press—as great a power of execution with the tongue as with the pen. Rev. Mr. Beecher gave a thundering, bellicose exhortation, in the genuine Boanerges style, unfolding the destructive warlike elements of Christianity in a manner which would have astounded the peaceful disciples of an earlier, old-fashioned day. But I will not attempt to bottle up the spirit of the festival, which however pungent and exhilarating at the time, becomes as vapid as the uncorked Champagne of which such copious libations were offered for the success of liberty in general, and Hungarian liberty in particular.

Among the interesting persons in the suite of Kossuth, besides his heroic, long-suffering wife, are Mr. and Mrs. Pulszky, and several officers of the late Hungarian army. Madame Kossuth has the appearance of a broken-hearted woman. She seems to dwell on the past, with its mournful reminiscences, without indulging in the sanguine hopes which fire the heart of Kossuth himself. You would take her for a person in some deep affliction; she has scarcely been seen to smile; and even when participating in public demonstrations of exciting interest, her face wears the expression of habitual grief.

Madamé Pulszky is of a different temperament. She too has passed through great sacrifices, but preserves a vivacity and hopefulness of feeling, and a gayety of manner, which make her a decided favorite in the social circles to which she has been introduced. An Austrian by birth, the daughter of a Viennese banker, making a love-match with her husband before the breaking out of the revolution, while he lived in patriarchal liberality on his ample estates in Hungary, flying for her life in utter desolation after the ruin of the cause, separated from her children with scarce a hope of meeting them again—she has experienced all manner of vicissitudes, enough to crush the stoutest masculine heart; but with a sunny brightness of disposition, she throws aside every despairing thought, lives in the present without recalling the bitterness of the past, and devotes her various accomplishments, and beautiful gifts of nature to the realization of all noble hopes for her adopted country.

Pulszky is a man of unmistakeable talent, of literary tastes and cultivation, and of very quiet gentlemanly manners. Devoted to the fortunes of Kossuth and of Hungary, he sustains his position with admirable grace and propriety.

But I must bring my letter to a close before I exhaust your space, and the patience of your readers, if indeed the latter be not past surgery. The town is just now full of interesting topics, on which I might gossip with you till after Christmas, to say nothing of the swarm of new books, rich in their shining holiday costume, with which our busy presses are teeming, as usual in this season of gifts and greetings. But all these fascinations I must postpone till I write you again.

RAFFAEL.

"Life is short, but Art is long,"

Was the master-spirit's thought,
Dreaming o'er the living throng,
By his magic pencil wrought :

"Nature more eternal still—

Art of God—eternal whole :—
From the ripple of the rill,
To the roar that stirs the soul.

"Stately mountains ; rolling floods ;

Glens with tend'rst flowers besprung ;
Sunset glories bathing woods ;
When day's golden strength is spent :

"Noble words!—all symphonies

Of the ever-ranging breeze ;
Every sound that soars or dies,
In the boughs of verdurous trees :—

"Ye are ever-living ; Art

Lives forever ! life is nought !"
And it fled, that master-heart,
Crushed before its master-thought :

Notices of New Works.

THE GOLDEN LEGEND. By HENRY WADSWORTH LONGFELLOW. Boston : Ticknor, Reed & Fields. 1851.

We are indebted to Mr. Longfellow for two hours of dreamy satisfaction experienced in the perusal of the "Golden Legend." The volume came most opportunely to beguile the tedium of a dreary afternoon, and we felt a sense of gratitude, upon laying it down, such as ought always to arise in the heart of one who has been the recipient of a real kindness. We more than half suspect that under the influence of this grateful feeling, we shall prove but an indifferent critic of the poem : nevertheless, we shall endeavor to state freely our impressions of it, as the longest and, perhaps, most ambitious production of its distinguished author.

Our readers already know, from the repeated occasions on which we have expressed our sentiments touching Mr. Longfellow's proper rank as a poet, that he has not a more ardent admirer anywhere than ourselves. We like the genial and kindly tone which uniformly pervades his

stories, both in prose and verse. We heartily approve the moral he has so often and so earnestly enforced, that life has its stern and definite purpose, which each man must work out for himself. We are glad to render the meed of our applause to the purity of writings, throughout the whole of which we can, at this time, point out to the author

Not one immoral, one corrupted thought,
One line which, dying, he could wish to blot.

Very especially do we admire that rare artistic skill with which he so cunningly elaborates some of his efforts, that they present to us the exquisite finish of Gerard Douw.

With such prepossessions for Mr. Longfellow, did we cut, one after another, the smooth, fair leaves of the "Golden Legend" and pursue the thread of the romance from the musical poem of the Bells of Strasburg Cathedral to the accustomed *dénouement* of a honey moon. The time was pleasantly spent, as we have already said, and yet, as regards the expectations we had indulged of the "Golden Legend,"—*we were disappointed*. It is not the work upon which Mr. Longfellow should be willing to rest his fame. It overflows with fancy and sparkles with beautiful conceits, but is not of "imagination all compact." It gives us sentiment, but not passion. It presents us with the tenderest manifestations of love and pity, of sorrow that softens, yet kills not, and of woe that is more luxurious than bitter; but it makes no revelations of the strifes and storms that agitate the immense profounds of the human heart. In a word, it was written too much in the library, and not enough in the walks and ways of men, or even by those "bosky bourns" where the sacred sisters abide. Perfect in finish to the last touch of punctuation, it challenges our wonder, but never deeply moves our feelings. If we may be allowed to borrow an illustration from sculpture, we should say that Mr. Longfellow has imitated those workers in marble, who devote themselves to the delicate chiselling of a mantle or the careful perfecting of armour, rather than to bringing out the emotions which should speak in the features of a goddess, or the dying agony that should corrugate the brow of the Laocoon.

A very learned and sagacious critic remarked to us, not long since, that when the "Golden Legend" should appear, it would be determined whether or not Mr. Longfellow deserved a place in the front rank of the poets of his age. We have not heard as yet what impression has been made upon our friend by the poem as published—the journal which is the vehicle of his criticisms not yet having spoken out concerning its merits, but we demur to making the "Golden Legend," the test of our favorite's capabilities. We might even undertake to show that before the "Golden Legend" ever passed into the hands of that most courteous and charming of publishers, Mr. Fields, the reputation of Mr. Longfellow had been fully established as one of the first of those poets who now record their inspiration in the English idiom. But waiving this, we have no hesitation in declaring that the previous writings of our author abundantly justify the expectation of a great work from his pen, at some future day, when he shall come forth as an interpreter of man's nature and address himself to the loftiest instincts with which we have been endowed. He is able to write such a work. And when written, it will be enshrined among the great classics. Our children will recognise in it something beyond the mere grace of art, and it shall stand like the finest efforts of the Grecian chisel, equally marvelled at and studied, while the "Golden Legend," kept as a master-piece indeed, will be regarded with that sort

of admiration which attaches to the carvings of Benvenuto Cellini.

But our readers may like some outline of the romance. We therefore turn to the volume to give it, as well as to cull from the blooming parterres into which the (book) garden has been divided, some of those lovely flowers which have found root in the fancy of the author. "The Golden Legend" is a poem of three hundred pages, containing a gallant knight of the middle ages, several cathedrals, a monastery, a minnesinger, an angel, a devil and a Castle on the Rhine. The plan of the work has been evidently modelled after Faust, with a half-dramatic introduction of the characters and stage directions in parenthesis. Henry of Hohenek, the Knight abovementioned, in the opening of the poem, is represented in his chamber, under the incubus of some vague but settled melancholy. Lucifer appears to him and administers a potion which imparts to him a temporary elasticity of spirit, but he soon afterwards learns from the worthy Italian doctors of Salerno, that his only hope of ultimate recovery is in finding some maiden whose disinterested attachment will lead her to die for him. As good luck will have it, such a maiden "turns up," one of the peasantry of Rhineland, and spite of all the machinations of Lucifer, who pops in every now and then, but is a much more amiable devil than Mephistopheles, the knight and his saviour pass on safely to Italy where the oblation is to be performed. On their way they visit quaint old towns and inspect magnificent buildings, linger in the gloom of forest and of cloister, and witness priestly ceremonies of rare pomp and splendor. After arriving at Salerno, as the reader will readily anticipate, Elsie, the maiden, instead of dying for the Prince, is permitted to live for him, and suddenly they are whisked off to the hereditary Castle of Hohenek on the Rhine, where they are supposed to pass the remainder of their days in matrimonial felicity. There is an episode of religious theatricals, the celebration at Strasburg of the Mystery of the Nativity, revived and placed before us, as only a most accomplished scholar could do it. Indeed the "Golden Legend" must be highly valued as giving us a faithful picture of German life and manners many centuries ago.

The versification of the "Golden Legend" is peculiar, being for the most part a sort of singsong, but it is uniformly melodious and pleasing. As an instance of the dexterity with which the strain just avoids the commonplace, we quote the Easter sermon of Friar Cuthbert which is expressed in a homely way enough, quite in keeping with the customs of the age.

FRIAR CUTHBERT, *gesticulating and cracking a postilion's whip.*

What ho! good people! do you not hear!

Dashing along at the top of his speed,

Booted and spurred, on his jaded steed,

A courier comes with words of cheer.

Courier! what is the news I pray?

"Christ is arisen!" Whence come you? "From court."

Then I do not believe it; you say it in sport.

Cracks his whip again.

Ah, here comes another, riding this way;

We soon shall know what he has to say.

Courier! what are the tidings to day?

"Christ is arisen!" Whence come you? "From town."

Then I do not believe it; away with you, clown.

Cracks his whip more violently.

And here comes a third, who is spurring amain;
What news do you bring, with your loose-hanging rein,

Your spurs wet with blood, and your bridle with foam?
"Christ is arisen." Whence come you?

"From Rome."

Ah, now I believe. He is risen, indeed.

Ride on with the news, at the top of your speed.

Great applause among the crowd.

"A ROAD SIDE MORALITY" is felicitous in metre and diction—

ELSIE.

Onward and onward the highway runs to the distant city, impatiently bearing
Tidings of human joy and disaster, of love and of hate, of doing and daring!

PRINCE HENRY.

This life of ours is a wild æolian harp of many a joyous strain,
But under them all there runs a loud perpetual wail, as of souls in pain.

ELSIE.

All the bridges are white with dust, and the great dog under the creaking wain
Hangs his head in the lazy heat, while onward the horses toil and strain.

PRINCE HENRY.

Now they stop at the way-side inn, and the waggoner laughs with the landlord's daughter,
While out of the dripping trough the horses distend their leathern sides with water.

ELSIE.

All through life there are way-side inns, where man may refresh his soul with love;
Even the lowest may quench his thirst at rivulets fed by springs from above.

From another dialogue between the prince and the peasant girl, we take the following striking thought most happily expressed in phraseology well-nigh Shakspearian.

The life which is, and that which is to come,
Suspended hang in such nice equipoise
A breath disturbs the balance; and that scale
In which we throw our hearts preponderates,
And the other, like an empty one, flies up
And is accounted vanity and air!
To me the thought of death is terrible,
Having such hold on life; to thee it is not
So much even as the lifting of a latch,
Only a step into the open air
Out of a tent already luminous
With light that shines through its transparent walls!

The following play upon the word Pontifex is, in the highest degree, successful,—

God's blessing on the architects who build
The bridges over swift rivers and abysses,
Before impassable to human feet,
No less than on the builders of cathedrals,
Whose massive walls are bridges thrown across
The dark and terrible abyss of Death.
Well has the name of Pontifex been given
Unto the church's head, as the chief builder
And architect of the invisible bridge
That leads from earth to heaven.

We wish we could give the whole of the passage which follows in the volume, wherein the Dance of Death is so

beautifully introduced, but our limits forbid. Here is a single picture—

PRINCE HENRY.

— here the heart of the new-wedded wife,
Coming from church with her beloved lord,
He startles with the rattle of his drum.

ELSIE.

Ah, that is sad! And yet perhaps 'tis best
That she should die, with all the sunshine on her,
And all the benedictions of the morning,
Before this affluence of golden light
Shall fade into a cold and clouded grey,
Then into darkness!

How exquisite a stanza is this, of the rising moon—

See yonder fire! It is the moon
Slow rising o'er the eastern hill,
It glimmers on the forest tips,
And through the dewy foliage drips
In little rivulets of light,
And makes the heart in love with night.

In another part of the book is a rare wine-cellar soliloquy of Friar Claus, who recounts the excellent qualities of the casks around him with a fervor that shows Total Abstinence to have found little observance among "the monks of old." He concludes thus—

And now a flagon for such as may ask
A draught from the noble Bacharach cask
And I will be gone, though I know full well
The cellar's a cheerfuller place than the cell.
Behold where he stands, all sound and good,
Brown and old in his oaken hood;
Silent he seems externally
As any Carthusian monk may be.

Sets it running.

See! how its currents gleam and shine,
As if they had caught the purple hues
Of autumn sunsets on the Rhine,
Descending and mingling with the dews:
Or as if the grapes were stained with the blood
Of the innocent boy, who, some years back,
Was taken and crucified by the Jews,
In that ancient town of Bacharach;
Perdition upon those infidel Jews,
In that ancient town of Bacharach!
The beautiful town, that gives us wine
With the fragrant odor of Muscadine!

But we must desist. If we should attempt to give all the beautiful and effective passages of the "Golden Legend," it would involve a violation of Mr. Longfellow's copyright, for we should have to print the entire poem.

Morris has the book for sale.

THE LIFE OF JOHN STERLING. By Thomas Carlyle.
Boston: Phillips, Sampson & Co. 1851.

Carlyle is a most entertaining writer, and though his reader is often tempted to indulge in a yawn over some wild, run-mad, delirious raving about "falseness of the era," "general rottenness," "no earnestness," he soon finds on emerging from the terrible sea of words, a thought, a picture or a pithy humorous scoff, which consoles him for all the wearisome nonsense through which he has been wading. It seems utterly impossible that Mr. Carlyle

can put pen to paper on any subject whatever without lugging in by the ears, this eternal, never changing stereotyped philippic against the disgraceful conduct of the men of our age. We might have supposed that in a volume of this nature, seeking as it does to delineate the "life and adventures" of a bright-minded, pure-hearted man, in no very lofty position in society, Carlyle would for once abstain from rant and give us agreeable biography, amusing *ana*, personal details of the man, John Sterling, as he lived, and not a ferocious sermon on our wicked ways in general. It is true there is such biography here, but there is also fustian, and the fustian is extremely out of place.

The "Life of John Sterling," is the loving work of a loving friend, who will not have the lineaments of the man he knew so well, pass away from human memory. Sterling was not a prominent man, only a graceful, elegant writer, connected with the *Athenaeum* and *Times*, and no way renowned. This is the criticism which the volume has every where been met with. Certainly it is a drawback on the interest of any biography, that its subject was not one of the renowned moulders of great human events, since the lives of such men, are most entertaining by whomsoever written—but, as indeed Mr. Carlyle has somewhere told us, a true picture of any man is interesting, and we may add,—what the author has *not* told us,—above all interesting when the writer is Thomas Carlyle.

For pleasant descriptions of scenery, private details, where the author's quiet, odd humor irradiates every inch of the canvass, and for a clear, masterly delineation of a fine, bold nature, we may look far before we find anything superior to this life of Sterling. How Mr. Carlyle holds on to his slippery, specious theory of the "universal rottenness," etc., etc., when this "great human heart" went with him "for a time on his earthly pilgrimage," we cannot explain. We had marked a passage in the volume where the great Philosopher most triumphantly refutes his own false doctrines on these subjects, but for want of space must omit it.

The "Life of Sterling" is a model of typography and neatness, and is for sale in Richmond by J. W. Randolph.

THE CAPTAINS OF THE OLD WORLD, AS COMPARED WITH THE GREAT MODERN STRATEGISTS; With their Campaigns, Characters and Conduct from the Persian to the Punic wars. By Henry William Herbert. New York: Charles Scribner, 145 Nassau street. 1851.

We beg leave to suggest to Mr. Herbert, on the threshold of our brief remarks, a slight change in this volume, should it reach (as we hope it will) another edition. The change we refer to relates to the proper names of his personages. The world has, century after century, learned to speak of certain characters of antiquity, as *Themistocles*, *Cyrus* and Alexander of *Macedon*; and we have no reason to think, notwithstanding the unmistakable fact of the Greek Kappa and the usage of historians, that the world will recognize these worthies under any other form of appellation. Mr. Herbert, however, thinks differently: and no sooner has he determined to give us his views of these and other celebrated men, than he also resolves courteously to set us right as to their real names. Now we protest against *Themistokles* and Alexander of *Makedon* as a "reckless innovation" upon long established usage, and though Mr. Grote, in his history of Greece, has pointed the way to Frank Forester, we beg leave to say that we dissent *à toto* from the taste of both these gentlemen.

We have taken the pains to glean from the table of contents a few of these names; and here they are, as restored to the old Greek by Mr. Herbert. *Themistokles*, *Thermopylai*, *Mardonios*, *Kyros*, *Artoxerxes*, *Kadmeia*, *Kithairon*, *Agessilaos*, *Leuktra*, *Mantineia*, *Chaironeia*, *Peloponnesos*, *Granikos*, *Halikarnassos*, *Issos*, *Darios*, *Makedon*:—(by which Mr. Herbert means *Macedon*.) These and a few other unwarrantable affectations aside, we take pleasure in commending Mr. Herbert's volume to every lover of antiquity. The profound classical learning of the author of "The Roman Traitor" is well known to the reading world, and we need not say that these short biographies are remarkably full, detailed, and deeply imbued with the writer's love for the old classic times. The style strikes us as every way superior to Mr. Herbert's wont, and though we might point out here and there some flowers of rhetoric which do not harmonize with the picture he delineates, the work as a whole is both plain and in good taste. This latter remark applies more particularly to the preface, which, we confess we did not look for from Mr. Herbert's pen: it is pointed, and concise, and admirably displays the author's design.

The "Captains of the Old World" we should add are *Miltiades*, *Themistocles*, *Pausanias*, *Xenophon*, *Epaminondas*, *Alexander* and *Hannibal*. The typography and binding of the volume are in excellent taste.

REVERIES OF A BACHELOR: or a Book of the Heart. Illustrated Edition. By LK. MARVEL. New York: Charles Scribner. 1852.

Our readers want no comment from us upon the contents of this volume, as well for the reason that the first two of the "Reveries" were originally written for, and published in, this magazine, as that we have already had occasion to pay our respects to it in book form. The success of the volume has been quite marvellous, and if any reader detects a pun in this expression, he must himself be responsible for the offence. We congratulate our gifted friend Marvel on the good fortune of seeing his lucubrations in such elegant form as Mr. Scribner has given them. There is the most exquisite taste discernible in the whole affair, from the gilded hedge which runs around the cover, to the spirited wood-cuts which set off the interior. The volume is admirably well adapted for Christmas-gift service, and will doubtless meet with many purchasers during the holidays.

A. Morris has it for sale.

Out of the immense mass of Orations and Speeches with which we have been recently favored by their authors, we have laid aside two as especially worthy of mention. One of these is the Anniversary Address delivered before the Society of Alumni of the University of Virginia, at their last meeting, by John Randolph Tucker, Esq., of Winchester. The subject discussed by Mr. Tucker, is the right of Secession, which he seeks to prove is clear and indisputable. The arguments on his side of the question are collated and arranged with great skill, and no one can read the address without being convinced that the author is a man of uncommon intellectual vigour. The other Address is one that was delivered before the Literary Societies of Erskine College, S. C., by William C. Richards, A. M., Editor of the Southern Literary Gazette. Mr. Richards employed his hour upon the rostrum in enforcing the "Claims of Science," and contrived to enwreath an eminently practical subject with the choicest garlands of classic poetry. We trust the pamphlet has been widely circulated in the Southern States.

Notes and Commentaries, on a Voyage to China.

CHAPTER I.

Sail from New York; Cold weather on board ship; sea sickness; Arrive at Norfolk; Description of ship; Advantages of a light spar-deck; Classes of ship defined; Ordinary reception of an officer on board; front and back doors; Ship's cousins; Hammocks mistaken for ballast; Gun-deck; Inspection of coppers; Berth-deck; A use of the Bible; the hold; Missionaries for China; Religious toleration.

I was among the passengers in the last boat which left the shore for the ship at anchor off the Battery. A keen easterly wind, the thermometer at 20° F., drew each man's attention closely to his personal comfort; there was no capacity, imagination or memory for the regrets of parting with friends, home or country. The fountains of poetic feeling and sentiment were chilled. We shivered as we sat watching the "dipping oars" glassed in ice, while the boat was steered a devious route through openings in an extensive field of drifting ice-cakes. The seamen, almost benumbed in spite of pea-jackets and sturdy "nor-wester" caps, plied their oars steadily. At last we climbed the ship's side; but so cheerful fire blazed for our reception. A shelter from the cutting wind was a comfort, and to this we were cordially welcomed by our companions.

The thermometer on board stood at 18° F. There were no other body-warming means than candles and coats. Fancy the transition from a capacious room gratefully warm, lighted by solar-lamp or gas-flame, carpetted and furnished: fancy the transition from this to a mere closet six feet by four, seen by the flame of a candle burning under a curfew law, known to be the only means to warm, enlighten or cheer, and then you may appreciate the commencement of a cruise in a ship-of-war from a northern latitude in midwinter, while the sounds of the steady tramping of the watch on deck reaches below through the still cold air.

How can one dwell upon the parting hour as a sentimental traveller should, while fighting with the cold at such odds, in a ship at anchor off Staten island, amidst driving ice? This dis-

comfort perhaps draws the heart strongly towards one's hearth-stone and magnifies attachment for home; luxurious ease and the excitement of novelty may abate the feeling, and yet the traveller's diary exhibit a glowing description of it.

Sunday. The day dawned bright and cold: Thermometer 16° F. About ten o'clock, A. M., a measured tramp about the capstan announced to us below that the hour of departure had come. The Narrows were soon passed and threading through "Gedney's channel," we were soon upon the bosom of the Atlantic. The ship was "hove to" to discharge the pilot, who quickly reached his own little vessel, bearing with him the "cape letters." This parting from the pilot is a sort of second farewell, and is slightly depressing to the spirits; but the rapidly succeeding orders of the officer of the watch, the swinging of yards, the tramp of feet on the decks, and creaking of blocks, as the ship is placed upon her course, at once give a new direction to the thoughts. A clear blue sky, a keenly, cold north-west wind, the white crests of the waves like moving snow-wreaths in sunshine; but it is too piercing to remain on deck for the mere pleasure of watching the channel buoys sheeted in ice, or the shores of New Jersey fading away in the distance.

The commander has designated the ship's course; the decks are cleared up; those of the watch, enveloped in pea-coats and comfortables seek the least bleak positions, making a lee of the weather bulwarks, while those whose duties will permit, retire to the depths of their quarters, and give as free scope to the exercise of imagination as animal inconvenience will allow.

Monday. Thermometer has risen to 45° F., but now the wind is adverse. The barometer has fallen, the sea is getting up, the sky looks greasy, and there are several indications of a storm.

By twelve o'clock a change was manifest in our little world. The ship rolled deeply, but easily, and, in opinion of youngsters, the bows rose and fell to a fearful extent. Some of our brave young companions looked pale; stomachs ceased to be constant; a desolating languor seized upon body and mind; the brain was compressed, as if a cord bound the temples: the morning meal was wasted; none of it subserved the purposes of nutrition as was designed, for many cast it, no matter how unwillingly, into the realms of old father Neptune. Many brave-

ly resisted, but few succeeded in their resistance. No courage can hold up against the prostrating power of this condition, which brings upon its victims the jibes and jeers of all who do not feel, or who have never felt it. Most of the marines, poor souls, lay about like so many suits of regimentals stuffed with plastic masses without angles, exhibiting no more of the fire of the soldier than a sick damsel. Stewards and servants sank pliant and resigned about deck, and in snug corners; they heeded no man's bidding; they could not control themselves, and needed not the control of others. One little middy exclaimed in most piteous tones, "Can I take a drink of water and not die! ugh,—oh,—ugh!" Kreosote and chloroform were resorted to as remedies, and they seemed to be beneficial.

Tuesday. The day dawned brightly; the wind was fair. The surface of the sea was smoother. Those who had been overcome by the motion of the ship appeared on deck, looking cheerful but rather pale; their stomachs had become constant and promised to be tolerant of dinner.

On the 18th February, 1848, the ship reached the Navy Yard, Norfolk, Va., where she had been sent because the use of a dry-dock was necessary to ascertain the condition of the copper on her bottom which was suspected to be unsound.

In a few days the ship had been docked and was anchored off the naval hospital.

This is a "sweet craft" to look upon as she rides at her moorings. She has a light spar-deck which raises her hammock rail high above water. Her appearance is that of a miniature frigate, and in fact she has many of the advantages of that form of ship, which is admitted to be the most comfortable that sails the ocean. She was originally moulded and built to be a single decked ship or sloop of war; the light spar-deck was an addition not contemplated by the naval architect. Though it may detract something from the sailing, this is compensated for, in a degree, in peaceful times at least, by adding other qualities, of considerable importance especially within tropical regions. This light spar-deck affords shelter to the battery from sunshine and rain; it leaves the guns free from the rigging and ropes of the vessel, and thus facilitates the movement of them; during battle it protects them from falling spars, and gives a free space for "working ship," that is, changing the position of spars and sails as circumstances may require. But above all it increases the capacity of the vessel to carry air for the consumption of the inmates while sleeping; a most important consideration, because all men live upon air, that is, if men can be said to live upon that without which they cannot possibly exist.

When we speak of a single-decked man-of-war ship, we mean a ship which carries a battery on one deck only, upon which the sails as well as the guns are manœuvred. A ship thus constructed is termed a sloop-of-war or corvette. A frigate has two decks upon which the battery is arranged. A ship-of-the-line has three or four decks upon which guns are carried; or, in other words, a sloop-of-war is a floating battery of one story, frigate of two, and a ship-of-the-line of three or four stories. The upper deck, whether it has guns upon it or not, is the spar-deck, and the others are called gun-decks. With this explanation it may be understood how adding a light deck to a vessel, armed and equipped as a sloop of war, increases the space for berthing the crew at night, and in a word converts her into a frigate with the number of men and guns of a sloop.

There she is—her straight spars tapering to points—sails neatly furled and rigging tight, or, as sailors say, "*taught as a fiddle*;" yards bowing upwards; all presenting to the eye on shore the beautiful machine in repose. Not a moving being is seen, but accompany a lieutenant in uniform along side, and scarcely does the bowman lay in his oar, before the shrill pipe of a boatswain's mate announces that your approach has been perceived and your reception prepared for. The sides'-boys leap out to their stations at the head of the "accommodation ladder," which you ascend to the deck, and are met at the gangway by the lieutenant of the watch. As your companion enters the vessel he touches his hat, and the sentry on post "*carries arms*"; at the same moment the boatswain's mate "*pipes in*" and the sides'-boys return on board, and you walk aft on the spotless deck. The starboard side of the quarter deck, all that part of the deck abaft the main mast, that is, the centre one of the three, is occupied by the lieutenant of the watch, while the larboard side is promenaded by "*school-boy midshipmen*" ever ready to repeat the orders of the "*officer of the deck*," being in fact peripatetic speaking trumpets. As we are preparing for sea, there is to you perhaps an appearance of confusion; provisions and stores are hoisting on board to the sound of the merry fife; a boatswain's mate is piping "*haul*" or "*belay*," and this is mixed up with the noise of hammers of carpenters and adzes of coopers. Still the quarter-master saunters about the quarter-deck in a most *insouciant* manner, spy-glass in hand, which he occasionally lifts to his eye and sweeps round to inform himself of all boats that may be approaching the ship. If there be any, he at once reports to the officer of the deck, the grade of those in the boat, which is clearly recognized at a distance by the

uniform dress of the navy, that they may be received with the conventional forms of respect due their rank.

The right side of a ship is called the starboard, and being that of distinction or preference in our navy, is fitted with an "accommodation ladder," or steps leading from the upper deck to the water. The ropes which extend from iron stanchions at its foot to the ship's side above, answer the purpose of bannisters and are technically called "man-ropes," from the French, *mais*, hand. The left side is termed the larboard or port, and is supplied with pending man-ropes, and, instead of an accommodation ladder, "kleeps" or strips of wood are nailed at convenient distances against the side, as aids in climbing the almost perpendicular ascent. By this gangway, which is, as it were, the back door of the ship, are received all warrant officers, as well as provisions, stores, &c., and by the starboard gangway, or front door, all commissioned officers and others whose temporary appointments entitle them to live in the ward-room, come into and go out of the vessel. Those persons who fill the temporary situations of commodore's secretary, clerks, and formerly professors of mathematics, are called "ship's cousins," from the fact that they were, in by-gone times, regarded as drones, said to be "in every one's mess but in nobody's watch." Our "cousins," however, are comparatively an active set of gentlemen.

This conventional distinction between the two sides of a ship, a few years ago, was a source of considerable annoyance to assistant surgeons, who, though commissioned officers, were quartered among the midshipmen in the steerage. And, because they messed with midshipmen, some martinets would not permit them to pass in and out of the ship by the starboard gangway or front door. The instant this point was insisted upon, they felt it was a degradation to which, in their opinion, they ought not to be exposed. After a great deal of argument and persistence the difficulty was removed by a general order from the Secretary of the Navy, under authority of which they became members of the ward-room mess, and since that time the freedom and ceremonies of the starboard gangway have not been denied to them. But in frigates they were made to suffer, by being transferred to the ward-room from the cock-pit, in which the assistant surgeons customarily formed a separate mess, and had separate cabins, or state-rooms. It was in some way ascertained that, if assistant surgeons were entitled to mess in the ward-room, they had no title to apartments in the cock-pit; and as all the cabins were appropriated in the ward-room, none were substituted for those of which they were deprived to the advantage of

passed-midshipmen or others. But the argument, sophistical as it must be, is a respectful apology for the exercise of a questioned and questionable power.

You cast your eyes about. The neatly laced hammocks are snugly stowed all around in a sort of trough or top of the bulwarks, called "the nettings." A hammock is an oblong piece of canvass upon which a sailor's bed is suspended beneath the deck at night; it serves in the day to envelope the whole in a neat roll to be packed in the hammock netting.

More than a quarter of a century since I was attached to a frigate fitting for sea at New York. In those days the grade of passed-midshipmen was not known. The older midshipmen presided among midshipmen on watch, and were termed the master's mates of the watch. The post of master's mate, in the eyes of the steerage, was one of distinction, and therefore desirable. All were anxious to know the names of the midshipmen ordered to the vessel, that they might calculate their chances of becoming master's mates. Every newly arrived midshipman was scrutinized, very closely, the moment he set foot on deck, to gather from his appearance, if possible, how far he was likely to interfere with those who hoped none older would arrive, to exclude them from the post of honor in the watch.

One day, while the steerage messes were dining, down leaped a youngster, almost breathless, and drew a camp-stool up to the table. His countenance was marked by the possession of important intelligence.

"Boys," said he, "I am cut out at any rate. There's an oldster just reported on deck, nearly six feet in his stockings, black whiskers, and devilishly well-dressed. He looks about, too, as if he had always been in a frigate. But we shall hear more soon; our Davy has got him in tow."

Presently down thundered Davy looking like an impersonated laugh.

"What's the fun, Davy?" inquired more than one in the mess.

"Fun enough; that new reofer is all over green, from the backwoods of Kentucky."

"Fine ship, sir," said he to me, carelessly looking aloft, "very taunt and neatly rigged?"

"Very fine ship," said I; "do you admire her aloft?"

"Oh, vastly; seen nothing like it since I left Kentucky?" He was sent for into the cabin; and I came to the conclusion he would turn out to be the best midshipman aboard and out-rank us all. When he emerged from the cabin we began to talk again.

"Is not the ballast of this ship stowed in an unusual place," he asked.

"Ballast," said I, "no, I believe not; I never

heard that our ballast is not in the usual place—under the tanks.”

“Why, sir,” said he, stopping short in our walk, and pointing with a dandy little cane, “why sir, are not all those white bags of sand, so snugly packed all around the top of the sides, intended for ballast?”

“No sir; they are purser’s slops stowed there to catch grape shot,” said I, and bolted.

It is not necessary to add that this exhibition of “greenness” was received with roars of laughter. No one imagined that the hammocks could be mistaken for sand-ballast. However, the new reef became a favorite, and finally died a lieutenant of high professional standing; but he was often asked, during the cruise, “I say, Bill, where do you carry your ballast?”

The bright brass rails around the hatches on the quarter-deck, the belaying-pins, (iron rods about an inch in diameter and two feet long, fixed firmly against the bulwarks) to which the “running rigging” or ropes which change the point of attachment are made fast, always attract the eye. You descend a ladder or flight of steps, made of white-ash, to the gun-deck. The first view of the battery, “the well-reefed guns,” of a well-kept ship inspires respect, because one begins almost unconsciously to estimate the destructive capabilities of the implements present and adopt a vague notion of the dormant power of the ship. A closer inspection reveals the priming wires in appropriate racks; rammers and tools for loading, bright cutlasses at hand, and tackling for each gun neatly folded over its breach. Near each piece is a square box of white-ash, filled with cannister and grape-shot; and a battle lantern is suspended between every two guns to illumine the deck when the fighting takes place at night. The invention of percussion-caps has caused the disappearance of the match-tubes and match-staves which always formed part of the accessories of a man-of-war’s battery fifteen years ago.

You walk forward and look at the “galley,” and wonder how so small a space can afford the means of cooking for so many men. It is the fashion to ascertain the perfect cleanness of the iron boilers, called “coppers,” in which the meats of the crew are boiled, by rubbing them inside with a piece of white paper; if it should be soiled, the cooks and scullions find their performances *encored*. This inspection of the “coppers,” in the days when these boilers were of copper, was included among the duties of medical officers; but in modern times it has been ascertained that no more science is required to inspect “the coppers” than to determine the condition of cleanness of either stewpan or tea-kettle, and therefore those culinary utensils have ceased to

be honored by peculiar medical attention and treatment. In those old quaint times in which Von Tromp won distinction on the seas, the cleanness of the pot was of more scientific importance than the nature and quality of the meats cooked in it; military legislators paid a queer compliment to medical science by requiring its votaries to inspect the coppers while they regarded food beneath their notice or judgment.

The cabin is on the after part of the gun-deck. Though comfortably fitted, you perhaps observe that the drawing room of the captain wears the livery of war; there are two guns in it.

We again descend to the berth-deck, which is below the level of the water on the outside of the ship. The large apartment extending beneath the Captain’s cabin, to the “sternmost” part of the ship, and into which the state-rooms or cabins of the commissioned officers open, is the ward-room. Next “forward” to it are two apartments, the private quarters of the midshipmen, called the starboard, and the port steerages. And now walking forward—stoop a little, or you will hit your head against the beams above—we find on the starboard hand the apartments of the “forward officers,” namely, the gunner, boatswain, carpenter and sail-maker; and next adjoining, the dispensary or miniature apothecary shop, in which each bottle has a peculiar rack to secure it against the effects of rolling and pitching of the ship when at sea. In a corresponding position on the port side, are the captain’s and the purser’s store-rooms. The remainder of the deck is an open space for the accommodation of the crew. Heavy chests, termed “mess-chests,” are ranged on either side; sometimes each is surmounted with a pyramid formed of a kid, (a small wooden tub,) and a wooden can, the apex being crowned with a bible. These bibles are generally preserved through the cruise “as good as new.” Sometimes they are covered with duck, and white-washed whenever the berth deck undergoes that cleansing process. A senior lieutenant was wont to say, “I like to see the mess-bibles displayed on the berth-deck; it gives the ship such a religious air in the eyes of visitors.” I remember a master’s mate who was very precise in the arrangements of the berth-deck. One day, just as he was finishing the preparation of the deck for the captain’s inspection, he addressed a cook, in an excited tone, “D—n your eyes; hav’nt I told you to show no more than one bible on each chest, and be sure that is a clean one.”

At the very bows is the store-room, filled with small arms, carpenter’s tools, reels of cordage, and indeed every thing that accident on deck might be conjectured to require. All these are arranged in the most convenient manner and with as much regard to taste as the nature of

the articles will permit. This room is in charge of a petty officer called a yeoman, whose duty is to issue the articles under orders of the proper officers and keep a record of the expenditure. Living always by candle-light, and rarely in the open air, stamps a peculiar paleness upon this official which distinguishes him from the rest of the crew.

The space next to each side of the ship, called the "wings," is occupied by a rack for the clothes-bags of the men. Each man has one; it serves all the purposes of trunk or bureau, and contains, besides his clothing, "a ditty bag," which is a small store of thread, tape, buttons, needles, &c., and is not a magazine of sea songs: every thoroughly accomplished sailor is always his own tailor and hatter, and not unfrequently his own shoemaker. The *dillitantie* of Broadway, or Chestnut street, are not more precise in their estimate of the cut and set of garments than true sons of the ocean.

The berth deck receives daylight through the hatches and bull's eye lenses about six inches broad, set in the covers of the air-pots. At sea, when the air-ports are necessarily closed, air is brought down the hatches through long canvas tubes about two feet in diameter, called "wind sails;" but they are not always efficient in ventilating either the berth deck, or hold.

Beneath the berth deck, commencing at the bows, are the paint-room, the sail-room, the boat-swain's store-room, the coal-hole, the fore-hold, the main-hold, in which provisions are stowed in barrels, and water in iron tanks, each containing from three to six hundred gallons. The chain lockers for the iron cables and shot lockers are in the main hold; next to it aft are the spirit-room, bread-rooms, a purser's store-room, powder magazine and light room, the last three being under the ward-room and only accessible from it. The light room contains the lamp which gives light to the magazine through a thick glass lens or bull's eye fixed in a partition between the two apartments.

Such is an epitome of the ship-world. It has the professions, law, medicine and divinity represented and some of the mechanic arts, but no part of it was ever contemplated for the accommodation of women and children.

March. On the application of their friends, the Secretary of the Navy consented that two missionaries for China, sent out by the Methodist Board of Foreign Missions, should be passengers in the ship, provided her commander was willing and able to accommodate them on board. This permission was granted under an impression that only space for two individuals would be required; but including wives and children, the party mustered nine persons, without atten-

dants or servants. All were disappointed to ascertain that they could not be accommodated without altering the internal arrangements of the ship; it would be necessary to dismount two guns, and thus far deduct, for the time, from her military power. The Secretary assented even to this, with the concurrence of the commander, who manifested a cheerful willingness to oblige. The missionaries themselves found on examination of the premises that all parts of the vessel were so fully occupied, that it was impracticable to provide for so many passengers of their class without ejecting the officers of the ship from their proper quarters, and therefore abandoned the idea of embarking in her, though not without regret. Indeed, one of those gentlemen declared, that he was ready to forego the advantages of going to China in a public ship, rather than accept a passage in the Plymouth, if it were to be unpleasant to any officer on board, or if it were likely to form a precedent which might possibly embarrass the action of the Navy Department at some future day.

Simple as this event appears, it is worth a little consideration. My impressions are derived from conversations with the missionaries and their friends; I do not think, I have mistaken their views; I certainly have no wish to misrepresent them.

A passage in the Plymouth was not sought, because it would be free. Expense was not feared. But it was presumed that being fellow passengers in a vessel of war with the Hon. —, U. S. Commissioner to China, the missionaries would appear before the Chinese as individuals under the special protection of the government, and that their being so regarded would facilitate the path of their religious labors. Besides, a passage in a public armed ship being granted by the Navy Department, would impart to the Methodist missionaries a sort of pre-eminence over those of other Christian sects, and mark them as enjoying specially the favor of the government of the United States. It is only fair to conjecture that the gentlemen who entertained these views did not perceive that they are chargeable with a certain degree of moral obliquity. They did not perceive that to so contrive or arrange circumstances, true in themselves, as to convey false impressions to men, is inconsistent with Christian honesty and frankness. But I leave the moral to look at the political aspect of the subject.

Religious toleration is among the most admirable of our political institutions. Any act which tends to invade this principle, even in the remotest degree, deserves the serious attention of every American.

Our political Constitution provides that "no

religious test shall ever be required as a qualification to any office or public trust under the United States;" and that "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." In these clear declarations, is included the idea that no officer or branch of the federal government can, consistently with the spirit of the Constitution, do any act which, directly or indirectly, either favors or discourages the religious views of any sect whatever. As the national legislature, under the constitution, can make no law to establish or prohibit the observance of religious opinions or ceremonies, the Executive branch of the government cannot permit, without violating the spirit of the organic law, the followers of one or even of all sects, to make use of our national ships, or other national means, to aid them in the propagation of their respective religious creeds. If the Executive were to permit, or to enjoin upon, the commanders of our public ships to convey religious missionaries of the Methodist, or any other Christian sect, to the field of their labors, the permission or order would be not only without the sanction of law, but contrary to the spirit of the Constitution, which would be thus far set at defiance, by the assumption of a power forbidden to be exercised. As Congress can make no law respecting the establishment of religion, it follows that the Executive should do no act which is designed wholly, or in part, to assist in the establishment or propagation of religious tenets.

Until the constitution be altered in this respect, it will be safer for us all, and more patriotic in the members of every Christian sect, Roman Catholic as well as Protestant, to refrain from asking anything from the government which can possibly be construed, to signify special protection or favor, for the sect which may obtain it. Let the principle of religious toleration be jealously guarded from invasion, by each, and by all sects: favors granted to one may be, perchance, at the expense of others, and ultimately become the means of establishing a religious creed for the government, and even a religious test for the officers of the government.

CHAPTER II.

Sail from Norfolk—Ship-of-the-line Columbus—Letter-bag of the pilot—Uncomfortable night—Sunday on board of a Man-of-war—Chaplains—Military men—Rotundity of the earth—Man-of-war auction—Lucky-bag—Taking of Tobasco—Life at sea—Ventilation of ships; its importance—Want of light—Water—Drilling

men to endure thirst—Naval ration—Advantages of commuting rations.

March 8th, 1848. All our preparations for sea have been completed. About three o'clock, P. M., the Plymouth was got underway; and a few minutes before sunset passed the ship-of-the-line Columbus, bearing the broad pendant of Commodore Biddle, lying at anchor in Hampton Roads. This vessel had just returned from a voyage of circumnavigation after an absence of three years. The commodore's pendant was saluted with thirteen guns; and as we swept rapidly past, a few friendly words were interchanged. Almost immediately the crews of the two vessels ascended the shrouds and "cheered ship," thus mingling in a mighty shout a welcome, a farewell and a God-speed.

Very soon a change of wind required our ship to be anchored about a mile from the Columbus. In the evening, a party of us visited our friends on board of her, and congratulated them on the termination of an arduous cruise. It is the experienced only who can fully appreciate the joyousness of feeling, which glows in the heart on reaching home after a three years' absence, when all hopes and fears are satisfactorily ended.

That night thought and affection were active in our ship. There is some intelligence under tarpaulin hats, and kind feelings beneath blue jackets: what else could have filled a portly little letter bag, which the pilot carried ashore the next day? What if the superscriptions of some of the folded papers were in crabbed hands, straggling irregularly and almost illegibly down their backs; hearts whose owners exhibit greater knowledge of scholar-craft and calligraphy, could not beat more kindly than did those of the authors of these said cramped looking documents, while their stiff fingers hauled the pen instead of a capstan bar. If all contained in that little bag were revealed, no one would deny that deep affection sometimes wells up from the sturdy hearts of weather-beaten mariners.

March 9th. The pilot took leave of us about three o'clock, P. M. The setting sun left us far out of sight of land, steering to the eastward with a fair wind.

March 10th. Sea very rough, breeze fresh and fair, the motion of the ship very considerable, although easy. The neophytes are prostrate with sea-sickness; the decks are wet, and the vessel presents scenes of distress from stern to stern. The condition of the ship was more disagreeable at night. The rudder-coat, a piece of canvas which closes the space around the rudder where it passes through a hole in the stern, had been omitted. Whenever the bows were tossed upwards, the stern settled or squatted,

and lifted barrels of water through the rudder-hole into the ward-room, deluging every thing. Barrels, boxes, and bags of stores not yet secured in place, broke adrift and were flying from side to side, amid the swash of water, the crash of crockery and glass. Men were employed all night baling and swabbing and making things snug. To those who were sea-sick, the night seemed perilous, and was passed wretchedly no doubt. But the ship, obedient to direction, was flying before the wind, and plunging across the Gulf Stream towards the east.

The next day our condition was somewhat improved, but there was no change upon the surface of the ocean; the wind had not varied.

Sunday, March 12th. The weather has moderated; the sea is smoother. The sea-sick have stomachs more tolerant, and now begin to believe in the propriety of breakfast.

A Maryland negro servant, almost blanched from sea-sickness, was lounging over the breach of a gun, wearing the aspect of entire despondence. An old tar observed him, and thus expressed his commiseration—"It's no use, my boy; you should have staid at home; you could do better hoeing corn than going to sea: but you are in for't now, and must make the best on it; so take yourself off that gun, and get ready for prayers." There is some intelligence, as I said before, under tarpaulin hats.

A ship of war is a world within itself; and though it is very little, it claims to be, under our flag, a Christian world. Sunday is observed as a day of rest, as far as practicable, and all are cleanly dressed in token of its observance. Immediately after breakfast, if the weather is fine, men make their toilet, which is as much controlled at sea by the tyrant fashion as on shore; the cut of trowsers, set of the duck frock, the tie of the neckerchief, and neatness of the pump, are as much objects of fashionable consideration among sailors, as various parts of costume are among our city beaux and belles. Vanity of personal appearance is not much injured by exposure to sea air, though differently manifested. The toilet complete, the lieutenants assemble the companies, or "divisions," under their respective command for inspection; and about ten o'clock A. M., the crew is mustered on the quarter-deck, and those who may be absent, through illness, or special employment, are accounted for. When there is a chaplain on board, the Episcopal service is generally read and a sermon preached. On these occasions, the capstan, covered by a flag, becomes a desk or pulpit, and a shot-box serves to elevate the preacher above the level of his auditors. They stand around him when not accommodated with seats, and are, seemingly if

not really, profoundly attentive. Religious ceremonies on the deck of a man-of-war are quite imposing, partaking somewhat of the military tone or spirit which pervades the community. There is perhaps a stern precision in the formality of religious observance here, which does not find place in our churches. When the weather is moderate, there is something more than ordinarily impressive in the assemblage of officers and crew of an armed cruiser, standing uncovered on the quarter deck engaged in religious worship. The perfect stillness which prevails is made palpable by the gentle, rippling sounds caused by the motion of the ship through the water, or by the dashing of spray from the bows. There is rarely noise enough to distract attention from the object of the meeting. All the circumstances are favorable to the powers of eloquence in moving the heart. But unfortunately eloquence is rarely present to avail of the circumstances; naval chaplains are not generally distinguished as pulpit orators or profound theologians: their piety and zealous devotion to their duties are not to be questioned.

There was no clergyman attached to our ship. But the commander's clerk, a gentleman of exemplary piety, officiated and read the church service.

Here from amidst preparations for violence and deeds of blood; from amidst glittering bayonets, girded swords and sullen looking cannon, are heard exhortations to mildness, meekness, justice and mercy, and the command "Thou shalt do no murder." How striking is the contrast between the teachings of the Saviour and these unmistakeable preparations. Yet upon them we are taught, in military communities, to invoke God's blessing, and through it, to crown our arms with victory without regard to the cause of war. But the time has not yet come when the sword can be converted into a pruning hook; until the whole earth is obedient to Christian principles, no nation can safely dispense with military establishments. Even the ministers of the gospel included in military organizations are clothed in military badges and are imbued with military spirit.* They are members of commu-

* Navy Uniform Regulations :—" Chaplain's coat. To be of dark *blue* cloth, with rolling collar of black velvet; in other respects like the undress coats of the lieutenants."

" Chaplains shall wear a *black* coat, with black velvet collar, with the navy button now in use. (They need not, however, provide themselves with new coats, until those they now have are worn out.) While performing religious services on the Sabbath, or on other occasions, on board vessels of war, or at yards and shore stations, they shall wear the black silk gown usually worn by clergymen." January 20, 1844.

"The Regulation of the 20th January, 1844, prescri-

religions that shall ever be required as a qualification to any office or public trust under the United States; and that Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." In these clear declarations, is included the idea that no officers or branches of the federal government can, consistently with the spirit of the Constitution, do any act which, directly or indirectly, either favors or discourages the religious views of any sect whatever. As the national legislature, under the constitution, can make no law to establish or prohibit the observance of religious opinions or ceremonies, the Executive branch of the government cannot permit, without violating the spirit of the organic law, the followers of one or even of all sects, to make use of our national ships, or other national means, to aid them in the propagation of their respective religious creeds. If the Executive were to permit, or to enjoin upon, the commanders of our public ships to convey religious missionaries of the Methodist, or any other Christian sect, to the field of their labors, the permission or order would be not only without the sanction of law, but contrary to the spirit of the Constitution, which would be thus far set at defiance, by the assumption of a power forbidden to be exercised. As Congress can make no law respecting the establishment of religion, it follows that the Executive should do no act which is designed wholly, or in part, to assist in the establishment or propagation of religious tenets.

Until the constitution be altered in this respect, it will be safer for us all, and more patriotic in the members of every Christian sect, Roman Catholic as well as Protestant, to refrain from asking anything from the government which can possibly be construed, to signify special protection or favor, for the sect which may obtain it. Let the principle of religious toleration be jealously guarded from invasion, by each, and by all sects: favors granted to one may be, perchance, at the expense of others, and ultimately become the means of establishing a religious creed for the government, and even a religious test for the officers of the government.

CHAPTER II.

Sail from Norfolk—Ship-of-the-line Columbus—Letter-bag of the pilot—Uncomfortable night—Sunday on board of a Man-of-war—Chaplains—Military men—Rotundity of the earth—Man-of-war auction—Lucky-bag—Taking of Tobacco—Life at sea—Ventilation of ships; its importance—Want of light—Water—Drilling

men to endure thirst—Naval ration—Advantages of commencing rations.

March 8th, 1843. All our preparations for sea have been completed. At 1 P. M., the 1st of the line Commodore R. B. Meade, a voyage of three years, saluted with rapidly passing clouds.

Two vessels, "the ship," thus come, a far to be anchored in the evening on board the terminus experienced joyousness on reaching when all be

That night in our ship, peninsular hats, etc.: what a letter bag, day? With the folded, gling irregular backs; he knowledge not beat the thors of the while their of a capeti bag were affection hearts of

March 9 three o'clock out of sight with a fair

March 1 and fair, t ble, althou, with sea-vessel present. The agreeable canvas wonder where had been tossed up

nities which observe peculiar customs; and not to wear such habiliments as are common to their daily associates, would mark them as singularly as the clergyman in civil life who should depart entirely from the customs and costume of his fellow-citizens.

8 o'clock, P. M. The night is beautiful; the ocean is lighted by moon and stars. The motion of the vessel is easy, and the sea-sick are reviving and looking up with hope; but the wind has hauled against us, and to avoid the islands of Bermuda, distant sixty miles by our reckoning, we have tacked ship, and are now standing towards the north under easy sail. The unlucky fate of the U. S. ship *Boston* on the rocks or island of Eleuthera should be a warning to all navigators.

Monday, March 13th. A clear sky, a pleasant breeze and smooth sea. The carpenters are at work. A few of the officers are seated on the gun deck reading. There are several vessels in sight, but no one of them near enough to afford us data for conjecturing her destination. Among them we hope one may be the bearer of news from us to our friends. The scene brings up the memory of our school days and of our geographical studies, for we have before us a proof of the rotundity of the earth; the loftiest sails of the vessels around us are distinctly visible, but their hulls are sunk below our horizon.

The morning was enlivened by an auction at the gangway, which is always a source of amusement and interest to a majority on board. Man-of-war auctions are the means of disposing of the clothes, &c., of the dead men and deserters, and take place whenever they accumulate to a certain quantity. The contents of the "lucky bag" are also exposed upon these occasions. Stray jackets, hats, and articles of any description, left about the decks or in forbidden corners, are picked up and absorbed by the "lucky bag," which is in immediate charge of the master-at-arms. When articles find their entrance to this public receptacle, they cannot be recovered until the day of general exposition; therefore the lucky-bag is a terror to the heedless, and thus becomes one of the instruments for promoting neatness about a ship's lower decks. When the lucky-bag is opened, the attention of all who

bing a uniform for chaplains in the Navy, is so modified, that, in performing divine service, the chaplain may, in his discretion, wear a black gown, a plain black coat, or the uniform coat prescribed by that regulation." April 23, 1844.

"All commissioned officers in the Navy may wear a double-breasted blue frock coat with rolling collar, nine buttons on each side, and the usual number of buttons on the cuffs and folds and shoulder straps, according to their respective grades."

Some chaplains avail themselves of this permission.

have lost any thing during the preceding few weeks is strongly attracted; and if the owner claims his property, when held up to view by the master-at-arms, he is sure to be greeted by shouts and jests from the bystanders. Those who cannot bear a joke, sometimes bid for their own goods rather than submit to it.

These auctions differ from the same institution on shore, although they may be adduced as proof that a man-of-war is a community within itself. On shore an auction is the goal or forlorn hope of the unsuccessful and unfortunate in trade, who give their property to the highest bidder, to raise money at short notice. People are attracted to them for the sake of gain, to procure property at a rate below its current value. An auction is an evidence of civilization and a populous neighborhood. But on ship-board an auction is instituted to relieve the pursuer from the care of dead men's and deserter's clothes, which are thus converted into cash, or what is the same thing here, into accounts.

In the evening we sat long round the tea-table. The naval operations against Mexico furnished a theme of conversation. One of our mess was at the taking of Tobacco; and he related his adventures and observations. Substantially his story was as follows:

"The weather was oppressively hot. I landed with the party through the surf, armed with a cutlass, a brace of pistols, a rifle, three days' provisions and a bottle of cold coffee. A man's ability to fight depends on the strength of his stomach, and if that is empty he makes a poor show. I have no opinion of grog on these occasions; those fared the worst who had the most of it in their canteens. Give me water or coffee.

"After marching about two miles over a rough road under a hot sun, pretty well loaded with arms and provisions, I was ordered back to hunt for ammunition, which, it was supposed, our own troops had thrown into the bushes to lighten the march. I returned to the bivouac without obtaining any thing. Water was in great demand. My bottle of coffee did me good service; and to make it hold out, I filled it from time to time with muddy water. The army again took up the line of march under an order to shoot the first man who should leave the ranks. But on coming in sight of a stream, eleven hundred men broke and plunged into it like mad; nature set discipline at defiance, and who could find it in his heart to shoot men because they were thirsty on piping hot tramp? Some twenty or thirty, overcome by heat and fatigue, sank down by the road side and gave up. It was fun to see the difficulty the doctors had to turn these poor fellows face up. Each soldier had a musket strapped over his back, and when he gave up

from exhaustion, he laid down on his face, and the musket prevented him from turning over.

"On approaching Tobasco, firing was heard from our vessels in the river. Its sudden cessation announced to the invading land force that she place was taken. In order to keep as cool as possible, I landed in a pair of linen drawers and a linen coat, which had not improved in appearance by the dirt and rips and tears acquired on the road; you may imagine I did not feel perfectly satisfied with my toilet on marching into the town now occupied almost exclusively by women; the men had run away and left them to their fate. It began to rain hard. To get under cover we fired a six pound shot into the door of the palace and entered it. This was a signal for a general rush, and the doors of all the houses on the square were broken in.

"In our first attack on this place I was in the maintop of the brig. The Tobasco is a deep, tranquil stream, winding between high banks, and as the vessels ascended, we expected to be fired upon at every turn of the river. From my position in the top I overlooked the whole country, which seemed to be deserted; not a Mexican could I see far or near. But as the fleet was turning an angle of the stream, two shots were fired from the shore. One of them took effect on a seaman's ankle, and the other closely grazed the life of a midshipman, the ball carrying a bunch of oakum before it into his pantaloons. He refused to unbutton his breeches, because he believed the shot had given escape to his intestines, and he did not wish to spill them. But in fact he was more frightened than hurt. Instantaneously on the report of the Mexican guns, we opened our fire in all directions. The shot flew so thickly about the brig's top, that I thought they surely came from the hands of the enemy; I hope never to have shot flying about my ears in that manner again. However, when the smoke cleared off a little, I discovered that all the firing was on our side, and the country was as clear of Mexicans as ever. In one of the boats there was a piece of artillery. The officer in command of it, fearing it might not do sufficient execution, added to the previous round shot and stand of grape, a bag of a hundred musket balls. It was fired with tremendous results, for it drove the gun through the bottom of the craft, and set the crew to swimming and scrambling to get into the nearest boats.

"After the place was taken, there was something done on a small scale in the way of plunder. As the expedition descended the river, parties frequently landed and brought off poultry, bullocks, &c., which they seized upon wherever found. Our caterer was particularly successful

in catching turkeys, and furnished the mess with an abundant supply.

"I thought it all fine fun, and often regretted we had not had a fair opportunity for a fight. But, nevertheless, on reaching home, I found myself a hero in the newspapers; of course I never insinuate that I have not killed many a Mexican fighting hand to hand."

The Mexican war afforded the Navy no opportunity for brilliant achievement; but it rendered important services, which were irksome and fatiguing, and of a kind to tire the patience and break down men, to a greater extent than fierce engagements on the sea. The Navy, however, gathered few laurels in this war; but if all those won in past years have somewhat faded from our memories, a gentle touch by a truly artistic hand could make them as fresh and green as ever.

March 14th. At noon the latitude was $34^{\circ} 25'$ north, and the longitude $61^{\circ} 28'$ west. Last evening at nine o'clock the breeze was pleasant, a light scud from the southward hung upon the horizon. The barometer stood at 30.43 inches. This morning at nine o'clock, (twelve hours later,) the barometer had fallen to 29.40 inches. From that hour the wind gradually increased and the sea rose, so that at two o'clock P. M., the sails of the ship were reduced to close-reefed topsails and reefed foresail. Although easy, the motions of the ship were extensive. The gale continued during the afternoon and evening, varied by heavy gusts of wind and torrents of rain. By six o'clock P. M., the barometer had risen to 30. inches and the wind had hauled to the southward and westward. All parts of the ship were flooded; in the ward-room a watch was kept to bale-up the water which entered through the rudder coat.

Laudsmen who have never been afloat do not appreciate the privations and discomforts of life at sea, either in men-of-war or merchantmen. They cannot acquire an adequate notion of the exposure, risk, and labor of reefing a heavy topsail, of a dark night in the midst of a pelting storm of wind and rain. In cold regions where the sails and ropes are rigid from ice and sleet, men are not unfrequently more than an hour hanging over the yard, and toiling to get a single sail properly reefed. Any contrivance which will enable men to reef sails without going aloft, will add greatly to their comfort and remove one of the risks of life at sea.*

Vessels of war are so constructed that officers, (except while on watch,) live almost entirely by

* Mr. H. D. P. Cunningham, R. N., has patented a plan of reefing a ship's sails from the deck; the apparatus is said to be of moderate cost, and to perform the work very rapidly and satisfactorily. April, 1851.

candle-light, in an atmosphere contaminated by exhalations from the hold, the spirit-room, and the various kinds of food included under the term "provisions and stores." Every thing is damp. The decks are almost constantly wet, and every thing is in motion. In rainy weather, when the hatches are closed, wind-sails cannot be used for ventilating the interior of the vessel. There is no change or renewal of the air. The atmosphere, from the respiration of many persons below, and the combustion of lamps and candles, loses so much of its oxygen, that lights burn dimly after a short time. In warm climates especially, exhalations from human bodies contaminate the vapor which is diffused through the sleeping-berths of the ship. The idea of it alone is disgusting. But the disgust and discomfort are really trifling compared to the positive injury ships suffer in health and efficiency from this cause. Few of us on shore are aware that it is a luxurious blessing to dine in day light, surrounded by a pure atmosphere: still fewer of us estimate the effects of habitually breathing a scanty or deteriorated air. Men generally do not even suspect that health, and the duration of life, are influenced by the quality and quantity of material supplied for respiration.

Like all other animals, birds, beasts, and fishes, as well as plants and every organic being in the universe, we depend for existence on the air; to its influence over animals all nourishment is secondary. There can be no life without it. The warmth of our bodies, the activity of our senses, our ability to receive and communicate knowledge, depend upon supplies of air adequate in quantity to supply the consumption involved in the maintenance of healthy vital action. Air once breathed is not fit to be breathed again; in the process of respiration it is changed, consumed; its residuum, after passing through the lungs, is no more suited to be used again in the maintenance of life, than are the ashes and cinders of a furnace for maintaining the action of a steam engine.

There is no one thing of the whole creation that does not excite the astonishment of man by the wisdom and simplicity of its adaptation to the purposes for which it was created. Among all created things there is nothing more worthy of study and admiration than the atmospheric air in its relations both to organized beings and inorganic brute matter. The laws which have been laid down for its government, in its motions, as the gentle zephyr or all-destroying typhoon, in its sources of supply to compensate for deterioration through the respiration of animals of the land and sea, and of plants, are not yet understood. But we know that without air the human voice would be hushed; there would be no sound,

no harmony, no music: flowers would cease to impart their fragrance, and odours would be exhaled no longer to annoy or to warn us. Take away the air and all organic functions must cease; both the animal and vegetable worlds would be blotted out, our fires would be extinguished and even the process of decay would be arrested, for putrefaction and decomposition in animal and vegetable substances cannot go on *in vacuo*—that is, without the presence of atmospheric air or one of its constituents, called oxygen. Nevertheless, in men-of-war this precious air, free and pure as it is on the bosom of the ocean, comes to us often limited in quantity or impure in quality, and freighted with "villainous smells." The means of thoroughly ventilating ships, under all circumstances, has not been ascertained; its importance to health, and economy, and comfort, has not been fully estimated by naval architects.

"Breathe not the chaos of eternal smoke
And volatile corruption from the dead,
The dying, sick'ning, and the living world
Exhal'd to sully heaven's transparent dome
With dim mortality. It is not Air
That from a thousand lungs reeks back to thine,
Sated with exhalations rank and fell,
The spoil of dunghills, and the putrid thaw
Of nature; when from shape and texture she
Relapses into fighting elements:
It is not Air, but floats a nauseous mass
Of all obscene, corrupt, offensive things."

It was found by measurement that the birth-deck or sleeping apartment of the crew of this ship can contain at one time 12,154 cubic feet of atmosphere, which supply is for the breathing of about a hundred sleepers, and to maintain the combustion of the galley fire and several lamps which are necessarily burned constantly. It is estimated that every man consumes ten cubic feet of atmospheric air per minute; and 350 cubic feet of atmosphere, ten of which should be changed or renewed every minute, are necessary for healthy existence. On this basis it will be perceived that this berth deck affords atmosphere for about thirty persons, provided that it can be changed at the rate of at least 300 cubic feet per minute. These data are sufficient to show how much the subject of ventilation has been overlooked by naval architects, whose attention is directed chiefly to providing space for storing provisions, &c., in combination with fleetness. The quantity of respirable air a ship should carry has not entered into the calculation, although it is an essential element of health, and therefore of efficiency. I hope this note may be a means of directing attention to the subject.

* Armstrong. The Art of Preserving Health.

Among the privations to which officers are subject on board men-of-war is want of light. A lamp swings constantly over the mess-table, and it is rare that candles can be dispensed with in the cabins or state-rooms either day or night. It is not agreeable to be obliged to resort to artificial illumination whenever one reads, writes, dresses or eats, during three years.

Next to air and light, water may be regarded among the articles of essential interest. Water cannot be always as good in quality and abundant in quantity, as is often desired on board ships. But in the past thirty years so much improvement has taken place in the internal accommodations or arrangements of our ships, that there is very much less suffering from want of water than in former times, when wooden casks only were used to contain it. Now we have iron tanks fashioned to fit the shape of the vessel's hold, so that a larger quantity can be carried. If water is quite pure when obtained, it keeps well; but sometimes the tanks become foul by deposits from muddy water, and sometimes too, the laquer or glaze spread upon their internal surface to protect it from oxidation, is destroyed by the action of sea-water, which is occasionally pumped into them for the sake of preserving the trim of the ship. This should never be done without urgent reasons; it may be necessary in gales to preserve the ship, or to increase her speed in chasing or running from an enemy.

Pure, tasteless water cannot always be procured. As a general rule, fresh rivers furnish the best water for keeping on board ship. After depositing the mud and matters of fermentation, or putrefaction, which result from the animal and vegetable substances commonly mingled in it, river water becomes colorless and free from taste and odour. It does not generally contain much lime or other mineral substances in solution. But this is not always the case. Water from some rivers put into casks assumes the hue and consistence of a strong infusion of flax seed, becomes "fopy," and so offensive in odour, that it is necessary to hold the nose to enable one to swallow it. Water obtained from springs near the sea shore undergoes a similar change. The water of the Canton river is supposed to induce nephritic complaints; the Chinese prefer not to use it except in form of tea. To correct the taste and odour of water on board ship, charcoal or alum, in small quantity, is sometimes thrown into it. The latter article is almost in universal use about Canton to correct the bad qualities of the river water. Drinking water taken up from along side vessels at anchor in fresh water rivers within the tropics, is considered a prolific cause

of fatal diseases of the bowels.* The influence of water on health is acknowledged by almost every traveller.

The propriety of using good water at discretion is never questioned on land, except in certain desert, dry regions. Prolonged thirst becomes agony. A scant supply of water for a considerable period exercises a prejudicial influence on health; it is reckoned among the powerfully predisposing causes of scurvy among seamen. Nevertheless, it is asserted, there are gallant captains and commanders who seriously believe that drinking water beyond a very small measure is an idle habit which sailors should be taught to avoid. They urge that men on board ship can be disciplined to endure thirst, by restricting them always to a very small quantity of water. As a general rule, the estimated measure for each man on board, is one gallon daily for all purposes, to which fresh or sweet water is applied, (except those of the laundry,) and it is usually found to be sufficient at sea as an average allowance. It is not enough when the temperature ranges above 80° F., or unusual labor and exercise induce free perspiration. Animal fluids lost through the skin, must be replaced by supply through the medium of the stomach. Yet there is one captain who acts on the opinion that a half gallon is always enough. Even while lying in the port of Havana he restricted the daily allowance to that quantity for each officer and man; he ordered positively that no more should be brought on board, or furnished at private expense. Under his command water was sold and cheerfully bought at fifty cents the bottle. He argued that men must be drilled to privations, or they would never learn to bear them. It is only justice to add, he did not except himself from the rule, or allot to himself a larger quantity of water than to any other person; but he preferred as a common beverage the light wines of France and Germany. Carrying his absurd theory into practice has caused both

* "In ordinary times, it is known that troops who have drank water polluted with animal or vegetable matter in a state of decomposition are peculiarly subjected to dysentery."—*Report by the Board of Health on the supply of water to the Metropolis. London, 1850.*

"The first fatal case of Cholera that I met with was that of a master of a vessel at Gravesend. He was a fine man, in the prime of life, and in perfect health when he left London. He was going to the Baltic; he drank rather freely overnight parting with his owners and others, and he got up in the morning and drank heartily from one of the water-casks, which had just been filled with Thames' water; he was soon after attacked with purging and vomiting. I went down post and found him just dead. I asked particulars, and I found that the death was so sudden, that it almost appeared as if he had taken poison in the water."—*Testimony of Surgeon Challice. Idem.*

officers and men to execrate him. It should not be doubted that rational beings will submit to privations, when they understand the necessity or cause which imposes them, while unusual restrictions, the object of which is not clearly perceived, might provoke the same persons to murmur, if not to actual mutiny. There is a moral in that passage of the facetious Joe Miller's works which relates the history of a horse whose life was sacrificed in acquiring, for his master's interests, the economical habit of eating no more than a single straw as his entire food for the day.

In the year 1800, the French government despatched an expedition to examine the southern regions of the Indian Seas, under the command of Captain Nicholas Baudin, who appears to have been an ignorant, self-sufficient martinet.

Mr. George Ord, in his Memoir of Charles Alexander Lesueur, one of the naturalists of the expedition, says,—“There was one part of Captain Baudin's deportment which is inexplicable, and that was his total disregard of those sanitary instructions which had been prepared for him by order of the French government, especially in reference to means of preventing that dreadful disease, the scurvy. The conduct of Captain Flinders on this head, affords a striking contrast. Both were engaged in similar explorations in the same seas; both put into Port Jackson for supplies the same season; the crew of one reduced to the extremity of misery by sickness and want, that of the other in such a state of health—every man doing duty upon deck—that their vigor was the subject of general observation.” “There was not a single individual on board who was not upon deck working ship into the harbor; and it may be averred that the officers and crew were, generally speaking, in better health than on the day we sailed from Spithead, and not in less good spirits.”*

In this connection the following observations, in Surgeon White's Journal of a Voyage to New South Wales, are worthy of attention: they are quoted here from Mr. Ord's excellent Memoir of Lesueur.

“Were it by any means possible, people subject to long voyages should never be put on a short allowance of water; for I am satisfied a liberal use of it, (where freed from the foul air, and made sweet by a machine now in use on board of his majesty's navy,) will tend to prevent a scorbutic habit, as much, if not more, than any thing we are acquainted with. My own experience in the navy has convinced me, that when scorbutic patients are restrained in the use of water, (which I believe is never the case but through absolute necessity,) and they have nothing to live on but the ship's provision, all

the antiseptics and anti-scorbutics we know of will avail very little in a disease so much to be guarded against, and dreaded by seamen. In one of his Majesty's ships, I was liberally supplied with that powerful anti-scorbutic, essence of malt; we had also, sour-kroot; and besides these, every remedy that could be compressed in the small compass of a medicine-chest; yet, when necessity forced us to a short allowance of water, although, aware of the consequences, I freely administered the essence, &c., as a preservative, the scurvy made its appearance with such hasty and rapid strides, that all attempts to check it proved fruitless, until good fortune threw a ship in our way, who spared us a sufficient quantity of water to serve the sick with as much as they could use, and to increase the ship's allowance to the seamen. This fortunate and very seasonable supply, added to the free use of the essence of malt, &c., which I had before strictly adhered to, made in a few days so sudden a change for the better in the poor fellows, who had been covered with ulcers and livid blotches, that every person on board was surprised at it; and in a fortnight after, when we put into port, there was not a man in the ship, though, at the time we received the water, the gums of some of them were formed into such a fungus as nearly to overlap the teeth, but what had every appearance of health.”*

The notion that it is necessary to drill men to suffer is not confined to exercising them on a short allowance of water. Some few commanders, in cultivation of the martyr-spirit, prohibit live stock, fresh vegetables or meats on board, even for the officers' messes, on the pretence that those articles interfere with the perfect tidiness of the ship. The health of officers and men is sometimes risked, and their comfort sacrificed for superfluous polish of wood and iron in sight on deck. Cleanliness is essential, and should extend to the darkest and least frequented parts of the vessel; but when one is deprived of dinner, to avoid soiling the plates, the virtue of cleanliness runs to excess, and thus becomes converted into a vice.

Suffering unnecessarily from thirst and for the want of fresh vegetable and animal food afloat cannot be advantageous to the government's interests. Those ships in which water is given at discretion, and live stock, fresh vegetables and fruit are permitted, are usually more efficient than those in which all are drilled to privations. At any rate the crews are happier, and commanders and officers are regarded with more affection and respect. A captain cannot advance his own interests, nor benefit the general government by depriving men under his command of

* A Voyage to Terra Australia, vol. 1, p. 226.

* White's Journal, p. 34. London, 1790, 4to.

such reasonable comforts, and even luxuries, as they may procure at their own cost.

The naval ration is established by law, and its composition prescribed in detail. It constitutes a part of the sailor's compensation; and, according to the spirit of the law, he is entitled to all its parts, for the law provides that when necessity compels a commander to withhold any part of it, the sailor shall be paid for such part at an established rate.* It sometimes happens on foreign stations that all the articles which constitute the legal ration cannot be procured. In such cases the law provides that one article may be substituted for the other in quantities regulated by the established scale of prices. Under this law the spirit part of the ration may be commuted for money. Officers always commute the entire ration at twenty cents. It has been ascertained that ten rations, economically used, furnish enough food for twelve men. On this account it is a common practice for a mess of twelve or fifteen to commute two rations and receive money for them at the end of the month. In this way a mess may obtain a revenue of twelve dollars monthly to be expended for such articles, as fruit, fresh vegetables, &c., when in port, as are not included in the ration. This practice is advantageous both to the men and the government.

Most persons find a uniform diet, continued for any considerable period, very irksome; and, in time, that change becomes absolutely necessary for the preservation of appetite and health. It is easy to imagine then that a supply of green vegetables and fresh fruits is extremely grateful to seamen who have fed for six or eight weeks at sea chiefly on salted meats. The luxury of such change in diet is somewhat enhanced by a free discretion in its selection, which results from the practice of commuting rations. It needs no argument to show that, under judicious regulation,

a mess may obtain many comforts and even luxuries from the proceeds of commuted rations with advantage to health and cheerfulness.

Superiority among ships of war, which are equal in all other respects, belongs to that one whose capacity for carrying provisions is greatest. This quality enables her to keep at sea, which is particularly necessary when employed in blockade, or when lying in wait for the enemy. Vessels of small capacity might be forced to abandon their position for want of provisions and water, perhaps at the very moment when their continued presence was most important to success; or, if the stay should be prolonged through a very much reduced allowance, the crews would become enfeebled, sickly and disabled, and become an easy conquest of the less skilful but better fed seamen of the enemy. It must not be overlooked that battles are won by intelligence, muscular strength and endurance, and these qualities can be preserved in the highest possible condition only by a perfect digestion of an ample supply of proper food. The steam engine works with a force, all things being equal, proportioned to the capacity of the furnace to consume fuel; and so the power of mind and body depends upon the capacity of the stomach to digest. Food is the fuel which keeps the human machine in operation, and, under equal circumstances, he is the best soldier who has the strongest powers of digestion and nutrition. Hence the success of an army depends as much upon the state of the commissariat as upon the condition of the powder magazine and ordnance.*

When the supply of provisions and water is exhausted on board ship it must be replenished. The vessel must go into some foreign port or return home to be filled up. To avoid the latter alternative, store-ships are employed, and depôts are established on foreign stations from which our vessels procure whatever they require. The expenses of these store-vessels, or freight, and of agencies, store-house rent, losses by leakage, breakage and decay are additional to the cost of provisions at home. It may be safely estimated that rations furnished on foreign stations, whether purchased in the foreign market or transported thither, cost the treasury on an average of from twenty to twenty-five per cent more than in the United States.

A ship with a crew of 200 men requires 12,000 rations to keep the sea during sixty days, when a ration is issued for each man; but if two rations be commuted in every mess of twelve men the same quantity of provisions will enable her to remain out of port 71 days. Practically the commutation of rations increases the capacity of

* An act to establish and regulate the navy ration, Approved August 29, 1842, provides "That the navy ration shall consist of the following daily allowance of provisions for each person: One pound of salted pork, with a half pint of peas or beans; or one pound of salted beef, with a half pound of flour, and a quarter of a pound of raisins, dried apples or other fruits; or one pound of salted beef, with a half pound of rice, two ounces of butter, and two ounces of cheese, together with fourteen ounces of biscuit, one quarter of an ounce of tea, or one ounce of coffee, or one ounce of cocoa; two ounces of sugar and one gill of spirits; and of a weekly allowance of half a pound of pickles or cranberries, half a pint of molasses and a half pint of vinegar.

"Fresh meats may be substituted for salt beef or pork, and vegetables or sour crout for the other articles usually issued with the salted meats, allowing one and a quarter pounds of fresh meat for one pound of salted beef or pork, and regulating the quantity of vegetables or sour crout, so as to equal the value of those articles for which they may be substituted."

* *La Destinée des nations depend de la manière dont elles se nourrissent.*—*Brillat.*

the vessel to carry provisions, and consequently diminishes the quantity, required to be placed in depôt abroad, about fifteen per cent. It is doubtful whether the weight of the ration could be reduced without inconvenience, because in the small messes of four or five it would not satisfy the demand. For the reasons alluded to, it seems judicious to preserve the ration, and to encourage commutation.

WAITING FOR THE FERRY.

BY MRS. M. E. HEWITT.

Slowly downward, with the midnight laden,
Rolls the river underneath the stars;
Through the rift the moon looks, like a maiden,
Timid, glancing through her lattice bars.

High on yonder shore a taper beaming
From a lofty casement, through the night,
With a bright and steady radiance gleaming,
Like a guiding beacon, pours its light.

"Ferry! Ho!" a voice impatient crieth
Far across the water's sluggish sweep—
"Ay!" the drowsy ferryman replieth,
Muttering, turning slow again to sleep.

And again the voice impetuous ringing,
"Ferry!" through the darkness pealeth out;
While the bell beside the margin swinging,
Clanging, mingles with the lonely shout.

Through the darkness now the heavens veiling,
All night long the love-lit beacon gleams;
All night long the bell tolls on unfailing,
While the boatman mutters "Ay!" and dreams—

Dreams, unmindful, while the night declineth,
How each laggard hour slow departs—
How a fair bride for her true love pineth,
While the river flows between their hearts.

Oh, ye years! roll down beneath your sorrow!
Though, the while, the sluggard Present sleep,
Love and trust, still waiting for the morrow,
Hopeful through the gloom their vigil keep.

SHADOWS OF THE MOUNTAIN-PINE.

THE BLUE RIDGE.

Sunnyslope, 10 Dec., 1851.

In the short sketch which recently appeared in your pages, styled "Shadows of the Pine Forest," it was my endeavor to catch and localize some of the fleeting impressions which the low-country of Virginia furnished to an eye wearied for the moment of town-monotony. To-day it is my purpose to throw upon paper some "glimpses" of another region different in nearly all things from the lowland: in its landscape-scenery, modes of life and channels of thought. Yet if in attempting to delineate the lowland scenery, "vain (as the song says,) was my weak endeavor," how shall I succeed in conveying to you any idea, however inadequate, of the silent beauty, the variegated and many-sided picturesqueness, the calm grandeur, of the mountains?

The eye travels from peak to peak, from outline to outline in the long range, and knows not which to fix upon; swimming as are all in the rosy vapor of evening, or veiled with those fine river-mists which the flush of morning turns into golden dust, soon to be blown upon and scattered by the fresh, strong breeze, across the valleys, and over the blue mountain line which rims the horizon. The blue line! This is all that language can do for the most calmly beautiful sight in nature;—yet to an imaginative mind, that azure sea, surging its blue billows against the crimson of sunset, or shattering into foam with its petrified curves the clouds which hang above it, is not a *blue line* merely. Rather a framework for every caprice of the wandering fancy—every revery which, abandoning the present, dives into the future—every day-dream which one, under the influence of winds, and rustling leaves, and floating clouds, suffers to beguile his existence of its shadows, or frame for him a purer and brighter world. Is it not even itself a dream!—of doubtful reality, wavering in the mist, not truly of earth, certain to vanish upon a nearer approach!

Nearer, the mountains are more real and life-like: as those great men which loom up through the mists of a far-stretching antiquity, in such grand proportion to modern eyes, were to their cotemporaries much less above the ordinary stature of humanity. Looking up from the valley, at the mountain's base, you discern the features of this grand countenance, so to speak, more plainly; its shaggy beard of pines, its mouth a gloomy cavern, its brow of rugged granite, around which the shrubs and the mists blend together and waver like the locks of a horseman who, at

full speed, breasts the wind. Often the rounded summit is cleared, and farm-houses have boldly perched themselves there like eagles' nests; looking down from their proud elevation on river and meadow and hill, over which all day long the cloud-shadows chase each other—a herd of frightened deer flying before a giant huntsman with hounds unleashed. The broad farms scarcely show as large as gardens, and the tall pines which bound the "clearings," are like stunted shrubbery, wherever they clothe the outline against the sky.

Often again the whole mountain from base to summit is clothed in a dense verdure of pines, oaks, dogwood, and that beautiful flower-tree, the tulip, which scatters blossoms upon every wind that plays with its scented bloom. The dogwood at present has shed its leaves wholly, but its red, clustering, oblong berries burn upon its boughs; the oaks retain but a few dry leaves, which mournfully rustle in the wind; the pines—differing from the lowland tree, which shoots up a clear shaft, on the summit of which the broad plane is flattened like a column of smoke struck by a falling breeze—stretch out continuous boughs toward the South, that is, away from the driving snow and the threatening north wind, towards the warmth and sunshine of the lower lands.

The uplands would seem to be the only region in which the over-imaginative could find pleasure. The mountain-top is isolation from the world in a great degree; as far as in a thickly-peopled region it can exist—deep solitude. But it is solitude with the grandest of companions. There one is alone with nature—nature in all her moods of sunshine and storm, light and shadow, beauty and grandeur. Far below, the rich lands smiling with golden crops, over which the shadows run like waves, stretch on before you; from green forests appear at intervals the white-walled homes of happy families, from which rise delicate smoke-wreaths clear against the foliage; and beautiful streams sparkle like the scales of a silvery serpent, or roll their molten gold in the flood of sunset. Give but the rein to your imagination, and you have before you in one grand scene the theatre of innumerable tragedies and comedies. Yonder an Indian tribe—the Delawares, the Senecos, or the Tuscaroras—had their "hunting grounds;" that spot on the river's bank was the scene of a desperate conflict with the "Long Knife," which old men still tell of while they show upon their breasts the scars of the encounter; all those old mansions rising so calmly from their wooded knolls, could their walls speak, might relate some history in which you would find food for wonder, for laughter or for tears.

One circumstance, more than all others, gives to our mountains a deep interest. They were

long the refuge of a race of men, whose annals afford more of the raw material for speculation, than any other in existence—the Indian race. Hunted by their bitter enemies from the Tidewater; from the Piedmont; finally from the Valley itself, they long had their abodes upon these rugged summits, among these old dense forests. The bear, deer, and elk, equally exiles with themselves, followed them; and now we have everywhere the traces of Indian towns and burial-places, in the valleys and on the mountain sides. These old crumbling memorials of an extinct people are inevitable provocatives to thought. They are the voice of the past speaking to the present; and it is out of our power to close our ears.

—Standing on the mountain, you may read the never-flagging chronicle of that old past, with the localities whereon were enacted those wild dramas before you, at your feet, there in the lowlands. The brief chronicle alone remains. The dramas with the actors have gone into the bosom of eternity.

—
LOOKING ON THE VALLEY: THE HOME OF GENERAL DANIEL MORGAN.

Sunnyslope, 12 Dec.

From the mountain-spur where I write you these disconnected sentences, a noble landscape presents itself to the eye, mingling in equal portions the beauty of the lowland and the grandeur of the mountain-land. To the right is the Great Valley, that fine and fertile region which has been called the garden of Virginia, as Touraine is the garden of France; which stretches its fair fields from the old ever-murmuring Potomac to the far south; whose rivers and mid-valley mountains and ancient towns glow in the light of historical memories, and traditions which yet linger for the patiently-inquiring tourist. On the left runs the Blue Ridge, gradually melting into the azure sky; at its base the Shenandoah, mirroring the boughs of overhanging trees, complains forever.

Do you recall that passage in the third volume of Messire Jehan Froissart's Chronicles, wherein he describes his journey from Carcassone to Ortaise with the worthy knight Sir Espaign de Lion, the pleasant gossip of the travellers, the encounter of the Pass of Larre, and the knight's pointing out to Froissart, the towers, the rivers, and the innumerable castles of brave chevaliers below them, while journeying on to Tarbes? Well, had we a Virginia Froissart, (which, alas! we have not,) here would be the road which he should follow, the spot where he should pause to gaze upon the landscape! For from this hill no

less than a dozen residences rise distinctly to the eye, and the Shenandoah lies below like a steel mirror, and the little town of Millwood peers up from its oak-trees and elms. There our hypothetical Virginian chronicler might have "inscribed in his fair chronicle" at least two names of spots in the landscape; Millwood, (whose "historical event" I shall endeavor to record,) and Saratoga, the former residence of that thunderbolt in war, General Daniel Morgan.

Morgan was the type of a large class of men in those days of iron, the days of the Revolution; a class namely who scarcely knew whence they came, knew not at all whither they were going. Born, if wandering report say true, in New Jersey, he early found himself, how or why nobody has ever informed us, in Virginia, where his occupation was that of a wagoner or some other equally humble employment. First we hear of him dealing hearty blows upon the savages who attacked Edwards' Fort on the Caca-phon, whither he had wandered on a hunting or other excursion; then he is memorable for receiving from a British officer, in Braddock's expedition, a most unmerciful lashing, which he related with amusing comments throughout his life; then, after long silence and deep obscurity as to his where-or-whatabouts, comes the rumor of the Cowpens, and the tale of a rude soldier kneeling in prayer behind a fallen tree, from which he issued to drive the enemy before him like chaff.

After storm the sunshine; and Morgan, with compulsory labor from his Hessian prisoners, builds himself, near Millwood, a local habitation, to which he proudly gives the name of "Saratoga." Here he lives long, but not quietly—rather most unquietly, since the fame of his desperate encounters lives to this day in the name of Battletown, which rightly is Berryville. Then sent to Congress he does the State some service;—then again returns to his homestead.

In 1781 he again appears upon the public arena. The British arms seem triumphant in Virginia; English troops are about to scour the Great Valley; and many malcontents on Lost River and elsewhere in that mountain region determine to rise, and do really rise, to march and join the enemy. Winchester, which has ever been the heart of the West, feeling every-attack upon the extremities, sending thither and pouring out her life blood—is immediately in commotion. Patriotic youths quickly form themselves into a company, and their ranks are further swollen by these veterans who had already shed their blood upon northern and southern battle fields. But one difficulty suggests itself: who is to command the raid upon these Tories of Lost River? And then, as at all times the same thing happens

public acclamation selects a name not unknown, rather known above all others for great military capacity—the name of Daniel Morgan, who is on his "Saratoga" estate near Millwood.

How Morgan consented readily to take the command—how he fell upon the enemy like a thunderbolt—how Brake's party was suppressed and the German's fat larder confiscated to support the patriotic troops—how Claypole, the Scotchman, was arrested and carried off prisoner with that other ringleader, Mace, and the whole "rising" turned at once into an ignominious cloudy "setting;" all this is related in Kercheval's "History of the Valley," with those amusing and entertaining details which gives so much interest to the chronicle. After this Morgan retires again into private life, and we see him no more, until stretched on his death-bed in Winchester, he utters those strange, religious revelations, of the spirit in which he accomplished his wild successes.

—And now, standing upon this lofty hill, I discern, with a little difficulty, through the thick wood, the spot where this singular man sojourned for so long a period in the latter days of his pilgrimage through life. An old house built of stone, which you approach by a rough road winding through rolling fields, and across a tinkling rivulet. Entering the mansion, you have on the left a small apartment which still shows traces of the far past; on the right hand a long spacious banquetting hall, which, without much effort, the imagination peoples with wild and noisy revelers. Their shouts have died away forever, and the walls, like the graves in which the gay company crumble and moulder away, can tell us nothing of those rugged natures, born and reared in storm, scarcely beholding the sunshine of peace upon the sky which darkened before their dying eyes. Like their host they are gone; but though the actors have fled, the stage remains, and the future historian of the region will not pass by this old revolutionary edifice without repeating to himself, "Here lived General Morgan!"

MILLWOODIANA.

Sunnyslope, 13 Dec.

The little village of Millwood lies but a step from the base of the Blue Ridge; to whose tall ramparts the Shenandoah is the moat; but is oblivious of the mountain heights, aloof from the rippling current of the river. Thrown, like a bird's nest carelessly from the hand of a child, it lit accidentally beside a clear brook, (which steals through old forests, and over meadows bright with flowers and matted grass-blades,) and there has ever since remained contented,

beneath the shadow of the woodland which steeped it in obscurity at dawn and eve, beside its little stream which throws up, in the pleasant sunshine, waves of light upon the white walls of its quiet mansions; though not upon the little church which crowns the grassy hill, or the parsonage which nestles in the forest glade beyond.

Like a philosopher, who abandons the bustling world for rural quiet and seclusion, Millwood has retired from the sight of its kind. Beyond a few visitors from the neighborhood, who occasionally awake its winding street with the music of hoofs, a few careless negro boys seeking its merrily-turning mills, to return with bags full of flour or meal, you would imagine that no sound ever disturbs the morning, eve, or quiet noon-day. Except the shadow of the crow who flaps his wings high up above the forest and the houses, you would say no shadow floated over its streets.

Yet you would be mistaken; for every day the street of the hamlet is aroused—waked up for the day, or stirred pleasantly at evening,—by the rattle of the stage, which gaily rumbles and clatters up its street. At five in the morning it has already brought the Winchester news of the day before, thanks to its habit of early rising, (which is indeed as early as two or three hours after midnight;) at six or seven in the evening its rosetted and spirited horses have already traversed the whole of the east, and the mail-budget is distributed in time for after-supper reading. But the present of Millwood, (as with other towns,) is not so interesting as the past, and I hasten to record such traces of its history as have been communicated to me by an aged (African) patriarch of this region.

To the period when *nothing* stood upon the present site of the town, (produced I mean by the art of our species,) the memory of man runneth not. The oldest men speak of Millwood as always *old*, even in *their* earliest youth. All around, it is true was forest, forest, forest; and no wandering stage-horn music stirred the trees; but there was unmistakeably the town. At evening, in those days, the inhabitants were accustomed to house their sheep and poultry with the utmost care, fearful of the innumerable foxes, the host of tawny wolves. They would often hear the dog-like cry of those quadrupedal vultures, (more especially on dark and rainy nights,) echoing from the wooded hills; and owing to the fact, that after howling from one spot the wolves would gallop like the wind to another hill-top and repeat their far-sounding owl-like cry, the stranger was often startled at the apparent myriad of them. Indians in those days still lingered wistfully on their old, fast-clearing hunting grounds; but soon they melted away, and finally, if they appeared at all, offering with slow-moving

copper lips, and dull sparkle of the languid eye, to shoot at small silver coins—their property when struck by their arrows—they dared not apply at the hospitable mansions of the town for lodging, but sorrowfully passed on into the well-known forest, and (as my historian expresses it,) “*kemp’d out!*” The ancestor of the well-dressed gentleman, who threw the small coin carelessly to the Indian, had perhaps fallen dead on this very spot under the tomahawk of that very Indian’s great-grandfather; *now* the great-grandson of the “brave” was camping out!

I need not record that Millwood often saw the tall form of Morgan riding to his mill, at the lower end of the village; nor need I describe the various country-side gala-days which Millwood, like other towns in the Old Dominion saw (and sees) at stated periods. I am afraid, upon reflection, that her history, even *ab urbe condita*, contains nothing as curious as Livy relates of the Eternal City; and therefore I, the more willingly, close my rambling epistle—promising, however, to fill the vacuum, as far as that may be, with a MS. relating to the Millwoodian past.

Further, I promise that this dramatic fragment of the village annals, shall be so reliable, that no future Neibuhr shall be able to discredit its relation.

—
“DRAMATIC FRAGMENT” TOUCHING THE HISTORY
OF THE HAMLET.

Sunnyslope, 13 Dec.

The following MS. procured from an excellent and reliable friend, will speak for itself. Though thrown into the shape of a “dramatic fragment,” it is, I am assured, strictly and historically true in its main particulars, and if it serves to amuse the indulgent reader who runs hastily over these rambling letters, the writer’s purpose, I am authorized to say, will have been fully answered. Without further introduction here is the MS.

“At the close of a fine day in July, 1813, Mr. Boniface, sole proprietor of the ‘Mill Tavern’ in Millwood, while smoking his corn-cob pipe like an honest citizen, on the porch of his mansion, was suddenly startled by an enormous shouting which, issuing from the forest on the side of Winchester, came to his ears like the roaring of a stream which has burst asunder the dam which obstructed its waters. At first he imagined that a band of wolves, of which there were at that time immense numbers in the neighborhood, had been driven by extreme hunger to attack Millwood and the inhabitants of the borough in open day. Next he thought that the British, then upon our shores, had penetrated to

the Valley, and were about to make a descent upon the village, and of course incidentally on the 'Mill Tavern.' These fears, however, soon disappeared, when he reflected, first on the known cowardice of the wolves, secondly on the fact that the British, if coming from any quarter, would appear upon the eastern side of the town. The last remnants of anxiety were finally removed from Mr. Boniface's mind by the apparition of an armed force of good and trusty Virginians coming from Winchester, many of whom he at once recognized as acquaintances.

"They galloped up to the door in fine order, and the order to 'halt and dismount' being given, they immediately threw themselves from their horses; and then commenced the full symphony, to which the original uproar was merely the introduction. The burden of this chaos of voices was 'Supper! supper! supper!'—for the troop in their ardor to reach the seaboard, where an attack was expected daily from the enemy, had scarcely taken time to swallow a hasty dinner.

"Mine host, with much courtesy, showed the way into his establishment, and immediately the quiet village was in an uproar; the servants of the inn were seen flying in every direction to levy supplies; the inhabitants gathered around the broad door, upon the portico, and in the dining-room, to 'get the news;' and finally, numbers of country gentlemen made their appearance to greet their Winchester friends, to bid them God speed, some indeed to join the troop. This historian feels himself incapable of describing with anything like tolerable fidelity the noise and uproar, which the arrival of the troop of horsemen caused in the quiet town: the incessant clatter, the hum of voices, the rattling of sabres; and that clinking of cups, to which your soldier in all ages of the world has taken very kindly. To the hastily prepared supper was done royal honor, and a mellow moon rising above the Blue Ridge, and a cool wind coming from the mountains, the members of the company and their friends from the neighborhood scattered themselves on the long porch, and beguiled the remaining hour or two before bed-time, or rather (as will be seen,) sleep-time, with animated interchange of opinion. They were completely under the influence of the 'war fever'—they positively thirsted for the encounter, and to no man there could anything more congenial have been ordered, than an instant attack on the enemy. It may then be easily understood that war was the principle theme, and so completely were the troopers absorbed in this one thought, that the officers alone foresaw that arrangements must be made along the route for so large a company.

"To accomplish these arrangements, couriers must be sent on, and accordingly two of the

troop were even at that late hour, ordered to mount and put themselves en route. They made the military salute, emptied a cup, and mounting their freshened horses, were soon swallowed by the woodland stretching to the Ford, which now we know as 'Berry's Ferry.'

"After supper, conversation; after conversation, sleep. But the *how* was much the most important consideration. Mine host's establishment was large, it is true, but not large enough to contain so great a number of sleepers; his beds were numerous, but not sufficiently so to furnish one half of the troop. They might have lain upon the benches, or gone to the private houses of the town—but a cool wind which the mountain's caprice sent into the valley, made the former disagreeable, and the 'private houses' of Millwood at that time were almost entirely in the vocative.

"The only means then of spending a night at all comfortably, was to spread straw upon the floor of the inn, and, each man wrapping himself in his cloak with sword and valise beneath his head, so make up their minds to spend that bad night which the proverb tells us does not last forever. Now among the troop was a gentleman, whose presence was invaluable to his companions, from the great natural talent he possessed of being gay under all circumstances, and of persuading others to follow his example. Major Loftie, in a word, was one of those excellent companions, whose spirits never flag, and his many amiable and praiseworthy traits endeared him to all. He had, however, a single failing—when once he had 'retired,' there was in the nature of things an almost utter impossibility of arousing him; or if aroused, it was in no very good humor. Now the Major had ridden from Winchester rapidly and over a bad road; which two circumstances—added to a third, that his horse, a fine and spirited animal, required much exertion of the arms—had predisposed him to take a good and sound night's rest.

"Major Loftie had calculated on finding a good bed, but when he betook himself to making his arrangements, he found them all occupied.

"'No beds!' he exclaimed, much irate, 'not a single bed! However, straw is plentiful, it seems, and I saw just now a good large bundle spread down in the room below. A soldier must be content.'

"And the Major sought the apartment which the bundle in question had entered. He found there a large number of his companions symmetrically arranged upon the floor with soft straw beds, and already subsiding into sleep. One circumstance, however, almost caused a cold perspiration to break out on the Major's brow.

They were lying close together, and not an inch of straw projected on either side.

"By Jove!" he exclaimed—it was his favorite oath—"no straw either! This is too bad; and I dropping down with fatigue. Hallo! Some one make room for me!"

"He was answered by a melodious symphony of snores, which drove him almost mad.

"Hallo!" he repeated, 'will no one make room for me!'

"At this address, louder than the first, one of the heads was raised.

"Who's there?" asked the head.

"Me: can't you make room?"

"Not a foot, Major; no, not an inch. All the straw is used up, and none can be had within two miles."

"The Major trembled.

"There's a chance for you, however," said the head, subsiding again with a nod upon its valise. "Sergeant has got the last. Good night."

"The Major turned round, and just in time to find a large bundle of straw, apparently self-moving, strike against his breast. On looking a second time he perceived below, a pair of horseman's boots, and above, a face lit up by two bright eyes and an amiable smile.

"Hurrah!" cried the Major, delighted beyond measure, 'here's Sergeant, my favorite Sergeant, and he comes just in time. Come! share your straw.'

"Impossible, Major," replied his favorite friend, 'this is the last, and scarcely suffices for myself.'

"The Major groaned. Mr. Sergeant burst into a hearty laugh, which showed the spirit in which he was carrying on the scene. This laugh chilled the Major's blood.

"All?" asked the Major, 'and you can't spare any—none, not just a little?'

"Not a straw, but I have just lost my spurs in groping about; now give me your spurs, and I'll try and make room for you."

"My spurs? Never!"

"Well—good night."

"And Mr. Sergeant, arranging his bed comfortably on the floor with his naked sword, and valise at its head, was about to lie down.

"The Major looked on in despair.

"Will nothing but my spurs content you?" said he.

"Nothing—good night."

"Stop! you may have them. Don Quixote never would have surrendered his badges of knighthood; but I am not Don Quixote. Here, take them."

"And kneeling down, the Major, with many groans, slowly detached his spurs and gave them to his 'favorite friend.'

"That is well, and it is not a bad joke for Ma-

jor Loftie to sell his spurs!" said his companion. 'Now here is a part of my bed; nevertheless, it would have been better for you to spend the night watching. You will not be up in the morning betimes.'

"You think so, Sergeant, do you?" said the Major, now in high good humor. 'A wager that I cross the Shenandoah before you do!'

"Before me on my magnificent Cawmill?"

"On your Cawmill, yes. He is handsome, but paw! his swimming is not to be compared to my Ralph's."

"What say you to a bet, Major?"

"Well, a bet then."

"What shall it be?" said his companion.

"A sword—cost, fifty dollars. I see, my friend, you have lost your scabbard," said the Major.

"Very well, a sword be it—that you cross the Shenandoah before me."

"With no reservation."

"Not even if I steal a march on you?"

"All is fair, my friend, in love and war. There is no reservation. If you beat me in early rising, why I lose."

"Excellent—so be it."

"Good-night!" and the infatuated Major sunk to sleep, to the sound of a deep diapason of snoring."

"At four in the morning, a messenger came from the Captain to say that some one—the first the messenger met—should immediately arouse himself, mount and gallop after the couriers who had gone on the preceding night to make arrangements on the route. These arrangements were unnecessary, as the troop would take a different road.

"Now the first sleeper the messenger encountered, was Major Loftie, snoring near the door. He aroused him with a loud voice and a heavy shake—which also waked his friend.

"What!" exclaimed the Major, horrified at the message, 'start at this hour of the night, just after supper! By Jove! tell the Captain it is impossible!'

"That would be disobedience of orders, Major," said his friend Sergeant; 'you must go.'

"At this hour? Never!"

"Needs must when—you know the proverb."

"The Major yawned with an exertion of strength which nearly broke his jaws, but did not succeed in arousing himself.

"Tell the Captain you're ready, sir?" asked the messenger.

"Tell the devil—hum! oh!! is there no means of having my nap out!"

"Yes," said his friend with a twinkle of the eye. 'Suppose I go myself. Nothing delights me like a morning ride, and I have an hour's business in Paris just over the Ridge.'

"Sargent!" cried the Major, almost embracing his companion, 'you fill me with profound admiration for your magnanimity! Not for a moment, my friend, would I hear of such a proposition on a stormy morning; but I perceive that day is beginning to break clear and beautiful, and the ride will be a pleasure. Here is my flask—prime Jamaica; you have my spurs, my poor spurs! already. Go, my friend, and success attend you!"

"After making this liberal and generous speech, the Major, having settled matters to his perfect satisfaction, turned over, and subsided into a profound sleep, at the moment when his friend, having shaken off the straw which adhered to his clothes, betook himself, sword and valise in hand, to the room of the Captain.

"In ten minutes he was mounted on that magnificent steed he had spoken of—milk white, gazelle-eyed, netted with glossy veins—and ere long breasted the morning light filtrated upon the murmuring waves of the Shenandoah, which his beautiful steed dashed into foam before his prow-like chest.

"At seven in the morning Major Loftie was aroused by the shakings of his companions, and the brass-throated jarring of the trumpet sounding reveillé.

"Jove!" he exclaimed, 'I've had a splendid night, and am as hearty as a buck! Ah!' and the Major yawned and stretched himself luxuriously. 'What infatuation in Sargent to be going off in that way. Ha! ha! ha! an excellent joke! What powers of eloquence too I must have displayed—though now I remember scarcely anything but as in a dream. Decidedly, friend Sargent, you have shown yourself a greenhorn.'

"Suddenly, however, the Major started at a single recollection.

"Our wager" he exclaimed, in a tone that would have melted tigers, 'a fifty dollar sword that I would cross the Shenandoah first! and my own words, 'no reservation: everything is fair in love and war!' Oh, sold! sold!"

"And the Major struck his forehead after the most approved fashion, and groaned in agony of spirit.

"Millwood again was quiet, but her inhabitants had an event of some interest to discuss for many months."

Here ends the MS.

THE ISLAND OF SHALOTT.

Sunnyslope —

The Shenandoah, flowing by stately mountains and spreading its murmuring waters upon fair meadow levels, and mirroring azure days and

starry nights, has—slighting all these beautiful objects—capriciously chosen for its pet a small grassy isle here in the neighborhood which it flows gently around, and tenderly embraces as a mother would her little child. It is an emerald tossed there in old Indian days by gigantic Wakondah, the Master of Life, or probably (and this is the most rational supposition) is a real island, and bore in times gone by the well-known name "Shalott."

The proofs of this latter assertion are numerous. In the distance is Winchester,* evidently, in former days, called "Camelot," and all along stretch the "fields of barley and of rye" which bold Sir Lancelot, as all well understand, traversed. The chevalier was possibly on his way to the fair domains of Shannondale "below," where they still hold tournaments regularly at the conclusion of every season, and the "uplands airy," whereon the reapers reaped among the barley are yonder scarcely a rifle-shot—a cross-bow bolt's range I should rather say—from the residence of the fair possessor of the island. The legend more accurately is that the lady looking toward the bank saw reflected in the mirror of the wave the knight's proud steed, and helm, and hauberk, lance and shield and all; and that as he passed a breath of wind ruffled and destroyed the mirror, while it wafted gently (for the allegorical "web") a branch of the tulip tree, laden with perfumed flowers, across her eyes down on the current where it floated out of sight. That she ever glided away on the waters I do not believe, for still on moonlit nights, through the silvery river-mist she is seen by wandering hunters, and her carol reëchoes from the fir-trunks of the mountain side.

Heavy barges pass now but are not "trailed by slow horses"—nor do long-haired pages ever pass, nor yet old abbots on their ambling pads; but the island of Shalott is ever there; and though forgotten like all beautiful things when time has dulled their novelty, still nestles underneath the pine-tree shadows and waves in the odorous wind its long green tassel-locks, and, mingling the sigh of winds in swaying grass with the murmur of the river over the mossy rocks, dreams of the old time and is well content.

And now before closing my rambling epistle, let me suggest to you that "the Lady of Shalott" appended in the form of a "note," would be no inappropriate addition to my descriptive sketch. Otherwise I fear it will be Hebrew or Chaldaic to all who have not perused that poetic allegory, or in the rout and bustle of existence have suffered it to die away from memory.

* The present city of Winchester, in England, was the Camelot of king Arthur's time.

(To be concluded in our next.)

O! Say not Friendship is a Name.

BY SIDNEY DYER.

I.

O! say not Friendship is a name
Used only for betraying,
That none e'er feel the sacred flame
When fortune is decaying;
No, there are hearts that never range
When once their truth is plighted,
But are the same when years of change
The fairest hopes have blighted!

II.

O! say not Friendship is a word
Forgotten when 'tis spoken,
A vow the ear has often heard—
No sooner made than broken;
Ah, no! it is a sacred thing
Still in the bosom cherished,
The fountain whence our pleasures spring,
When other joys have perished.

III.

O! call it not an idle dream
Of fancy's airy weaving,
Which shines with an illusive gleam—
When brightest still deceiving;
No, no! believe me, thou wilt find
Thy love and truth requited,
And in the heart their joys enshrined,
When other hopes are blighted!

A Pioneer Mother of the North West.

BY MRS. E. F. ELLET.

The history of the earliest settlers of the West, —never recorded as yet in any published work,—is full of romantic interest and adventure. The hardy training of the pioneers, their enterprise in penetrating the wilderness, their boldness in encountering the savage tribes, who resented the invasion of their ancient domain; their patient endurance of the utmost hardship, and the industry and perseverance by which they subdued the trackless forest, and established new homes for themselves and their children, compel the admiration of all who know any thing of their achievements or sufferings. A single sketch from a collection of authentic records gathered with care and labor from private sources,* will be illustrative of, and will interest all who are disposed to dwell on, this portion of our American history.

Mrs. CLARK, distinguished among the pioneers of the Western States, as one who passed through unusual perils, and encountered severe

difficulties, accompanies her husband, then commissary to the United States troops, to a military station on the west side of the Upper Mississippi, in November, 1819. Several persons went with them from Prairie du Chien, the voyage being made in keel-boats, the water so low that the men were frequently obliged to wade in the river and draw them through the sand. Six weeks were occupied in passing over the distance of three hundred miles, one week being spent at Lake Pepin. Having reached their destination, the company were compelled to live in the boats till pickets could be erected for their protection against the Indians, who, not understanding the object of this invasion of the wild, or the display of arms and ammunition, might fall upon them in some unguarded moment. Huts had then to be built, though of the rudest kind, to serve as a shelter during the winter from the rigors of a severe climate. After living with her family in the boat for a month, it was a highly appreciated luxury for Mrs. Clark to find herself at home in a log hut, plastered with clay, and "chinked" for her reception. It was December before they got into winter quarters, and the fierce winds of that exposed region, with terrific storms now and then, were enough to make them wish to keep within doors as much as possible. Once in a violent tempest, the roof of their dwelling was lifted by the wind and slid partially off; the inmates cowered together, and the baby in the cradle was pushed under the bed for safety. Notwithstanding these discomforts and dangers, however, with their isolated situation, and the inconveniences they had daily to encounter, the emigrants were not without their social enjoyments. They were nearly all young married persons, cheerful and fond of gaiety, and had their dancing assemblages once a fortnight. One instance of the kindness of an officer—Col. Leavenworth—deserves mention. One of the other officers having been attacked with symptoms of scurvy, and great alarm prevailing, he set off in a sleigh, accompanied by a few friends, on a journey through the country inhabited by Indians, not knowing what dangers he might meet from their hostility, or the perils of the way—for the purpose of procuring medicinal roots. These were used with excellent effect after the return of the adventurers. In the ensuing summer, when Col. Snelling had the command, Fort Snelling was built. It was not completed for several months after its erection. It is a compact structure of stone, and is perhaps the strongest and finest in the Northwest. St. Louis, distant nine hundred miles, was at that time the nearest town of any importance. "After the erection of Fort Snelling," says Mrs. Clark, "we made the first clearing at the Falls of St. Anthony,

* Mrs. Ellet's "*Pioneer Women of the West*," now in preparation, and to be published by Charles Scribner, New York.

and built a grist mill." The wife of Capt. Geo. Gooding, of the fifth regiment, was the first white woman who ever visited those beautiful falls. She afterwards married Col. Johnson, and went to reside in St. Louis. The daughter of Mrs. Clark, now Mrs. Van Cleve, of Ann Arbor, Michigan, was born while the troops were stationed at Prairie du Chien. At that time there was great suffering for want of wholesome provisions, and several of the men perished with scurvy. The Indians, (Sioux,) in the vicinity, and the whites, were mutually suspicious of each other, so that no game could be bought; nor was there a prospect of matters being mended till more amicable relations could be established. The prices of such fresh edibles as could be obtained at Prairie du Chien, were enormous; a small and lean chicken procured for a sick lady cost a dollar; beets as large as the finger one dollar a dozen, and onions were ten dollars a bushel. The cold is described as so intense, that the soldiers called out merely while they could answer to the roll, often had their faces frostbitten; the thermometer at noon in the morning being known to stand 35° below zero.

Mrs. Clark remained at Fort Snelling, with the exception of about a year, till 1827. The only young lady in the company was married, when about fifteen years of age, to a Mr. Dennis, also of the army. The wedding took place in the winter, and the bridal party was obliged to descend the river, three hundred miles, on the ice, to Prairie du Chien, to have the ceremony performed. The monotony of their life was varied by continued alarms and excitements from the encounters of the hostile tribes of Sioux and Chippewas, who came frequently into their close neighborhood, and were not scrupulous as to deeds of violence and treachery towards each other. The incidents we shall mention, are illustrative of the experience of many individuals. Mrs. Clark's house, a substantial stone building, stood without the walls of the fort, a few rods distant, on the military lands adjoining; the quarters within being rather crowded. At one time the Chippewas had pitched their camp at the foot of a hill not far from the house. About nine o'clock in the evening, the family was alarmed by an unusual noise in that direction, and by the discharge of firearms. A gentleman who was at that time a guest of Mr. Clark, entered in haste and some trepidation, saying that a bullet had just whistled past his head, and that there must be some difficulty "below." The seclusion of the dwelling was thought of with terror whenever there was any alarm at night, though the sight of the fort close at hand gave courage to all in the daytime. Protection and aid, however, were promptly invoked, and the troops aroused.

It appeared that some of the Sioux had been making a visit to the Chippewas professing friendship, and entering into an amicable treaty; and that after having sat in their wigwams, smoked the pipe of peace, and bid good night to their unsuspecting allies, they had deliberately turned about and fired upon them. The confusion that ensued may be imagined; the Chippewas flew to arms of course, and the treacherous Sioux made off in the best way they could. The commandant of the garrison had the wounded taken to the hospital and attended to as well as the circumstances permitted. Among them was the aged chief of the Chippewas and his little daughter, only ten years of age, in whom the ladies were deeply interested. She was badly injured, and survived but a short time. The Indians called upon the commandant, as the representative of their "great Father," to compel the Sioux to render satisfaction for this cruel outrage; and in pursuance of the instructions of government to commanders on the outposts, to maintain peace as far as possible between the hostile tribes without interfering in their affairs, the officer sent an order to the chiefs of the Sioux, requiring the surrender of the young men who had been guilty of the deed, or an equal number of prisoners for those killed. Not long after this a large party of Sioux was seen approaching the fort. "We could see them," said Mrs. Clark, "for a long way on the hills by which Fort Snelling is surrounded, and it was easy to perceive at once that they were disposed to resist the summons. The interpreter, who was a thorough fellow, and knew how important was an aspect of courage and determination in dealing with savages, went out to meet them, and informed them what would be the consequence of their refusal to comply with the just demand:—their Great Father, the President, would send into their country as many warriors as there were leaves on the trees, or blades of grass under their feet, and these would kill and burn until not a Sioux should be left. A hurried council was held by the chiefs, and at length it was decided that the criminals should be given up."—Six of them were accordingly delivered, and put in du-rance, to await the pleasure of the injured tribe. Meanwhile the old chief, who had been wounded and bereaved of his child, was rapidly sinking to the grave, and true to his warrior nature, desired to live long enough to see a just vengeance overtake the murderers. They were appointed to suffer the Indian punishment of running the gauntlet. An enclosed piece of ground was selected, not far from the fort, lined with men and women of both tribes—the soldiers of the garrison being spectators of the scene. The dying chief appeared, borne on the shoulders of his

young men, and all was soon ready. If the condemned could reach the further side of the fence, where their friends were stationed, their lives were safe. Again to quote Mrs. Clark—

Again, to quote Mrs. Clark: "A gentleman who chanced to be in company with several Chippewa braves who had just come from the fort, and were walking towards the ground, told me they were laughing and talking as if perfectly indifferent to what was going on, till they reached the place where the deadly work was about to commence. Then their countenances underwent the most fearful change almost instantaneously, expressing the darkest passion and the most unrelenting hate." The scene was one of intense and terrible interest. It lasted but a few moments, amid cheers from both sides, and yells that were absolutely deafening. The children of the white residents, who witnessed it, partook of the wild excitement. "My brother Malcolm," says Mrs. Clark's daughter, "a little fellow, throw up his cap and shouted with the rest. One young Indian—'young Six' he was called—had petted us frequently and was a great favorite; we were anxious he should escape, and watched his fearful race with breathless eagerness. He reached the fence and sprang upon it; a moment more and he would have been safe on the other side among his friends who were ready to receive and welcome him;—when suddenly he bounded high in air, and fell, pierced by a shower of bullets." The recital of the horrors that followed, might cause the boldest to shudder. Women and men together, rushed frantically upon the bodies of the fallen; the scalps were torn off while yet warm and quivering with life, and the corpses horribly mutilated with hatchets—the squaws even thrusting their fingers into the bullet holes, and licking the blood as it flowed! When the savage avengers supposed that they had done their duty to their lost friends—the scene was closed with their scalp dance—the fearful orgies being prolonged several hours. Probably, in the exposed and perilous situation of the garrison, the commandant could not venture to interfere with the execution of this savage outrage; for the mangled bodies of the slain were suffered to lie a long time unburied. The old chief, feeling now that his time was come for departure to the spirit land, caused himself to be painted according to Indian custom, and the six scalps to be hung around his neck; sang his own death song, and expired with the calmness of a hero or a philosopher. These facts would form an excellent ground work for a romance; some incidents of which might be furnished by tracing the fortunes of the boy whose enthusiasm was excited by the ardor of the crowd of spectators.

Malcolm Clark has, since his maturity, spent many years at a distance from civilization, among the aboriginal tribes, and is now a trader near Fort Benton in Oregon, married to a woman of the "Black Foot" Indians, highly respected by them, and called "Lesokin," or "four bears"—because he killed four of these animals one morning before breakfast. In 1850 he returned to "the settlements" on a visit to his family, bringing his two elder children to his sister to be educated at Ann Arbor. The girl, —Piota powaca—had been christened before her arrival by a Roman Catholic priest; but the boy, Nationa, was baptised in St. Andrew's church in that village—the grandmother herself leading him to the font, and appearing as the only sponsor. The father had a Spanish boy with him, bound to his service by a tie of gratitude; he having saved his life at the peril of his own; his duty was to attend the children. Mr. Clark wore his Indian dress,—the leggins ornamented with human hair—as far as St. Louis, and so much had his complexion changed, that his sisters would scarcely have recognized him in it. The mother had cheerfully consented to part with her children for their good, for she had a stout heart, and knew they ought to be taught many things. The boy, she said, would certainly return; for he was to be a great chief, as her father had been; and so, when the canoe was ready for the departure of her husband and children, she accompanied them to the river side and, as the boat pushed off, threw herself upon the ground, concealing her face in her dress. When, after rounding a point, they caught sight of her, she was still lying motionless absorbed in grief. When the father left his children to return to his distant home, the little girl, taught to subdue the expression of emotion, would not suffer herself to cry out, but clasped her throat with her hands to choke down her feelings. One day, while Mr. Clark and his young attendant were at the house of Mr. Van Cleve, who lived on a farm, it chanced that the men were killing hogs. The Spanish boy made a pudding of the blood for himself and the children which they ate without salt. One incident in Clark's early life is characteristic. When a mere lad, the men at the fort where they lived had trapped a wolf, and were debating how they could manage to muzzle him before taking him out. Malcolm passing by, inquired what they were about, and immediately offered to hold the animal. Suiting the action to the word, he clapped his hands on either side the creature's jaws and held them forcibly together, while the soldiers slipped on the cords. Clark was at West Point when the Texan difficulties with Mexico broke out, and departed to join that service in which

so many enthusiastic volunteers were engaged ; working his way afterwards to his present home, where the traders have established a garrison of their own, for protection against the hostile Indians. Nearly all of them have married Indian women, who, proud of the alliance, have become the "exclusives" of the country, refusing to hold intercourse with other squaws. The boy aforementioned, was the son of a Spaniard by an Indian wife, and had been captured by a party of Indians who had come unexpectedly upon the garrison, seized him while others escaped, and were about to satisfy their revenge by torturing him. Watching his opportunity with wonderful address, Clark rushed out of the gate of the fort in the midst of the savages, caught the boy, and was safe within the walls, before the Indians had recovered from their surprise. The poor boy was severely wounded by the hatchets that had been thrown at him ; the scars of which he still bears. So attached is he to his deliverer, that he cannot be induced at any time to separate from him.

Hezekiah Geer, one of the most enterprising among the pioneers of Illinois, now resides at Galena, where he is one of the largest land dealers in that region. He removed with his family to the southern part of Illinois about 1820, when the portions of country now covered with smiling villages, and thriving farms, were a wilderness untrodden except by the roving hunter, the surveyor, or the savages who receded before the footsteps of civilization. During the Black Hawk war, a large part of Michigan and the neighboring territories suffered much from apprehensions by the Indians, kept up by floating rumors that the savages were intent on depredations, and were incited to attack the whites by the occurrences that had taken place in Illinois. Mr. Geer and his family had then been living at Galena some years. The inhabitants of the place and neighborhood, in a state of excitement from continual alarms, were prepared to take refuge in the fort in case of the appearance of the dreaded enemy. It was an object with the commander, to assure himself that he might depend on the promptitude and energy of his troops, and the citizen volunteers in case of sudden attack, and he adopted a singular method of testing their qualities. One dark, stormy night, he caused a select number of men to march silently to a hill not far distant, where they raised the war whoop of the savages. The ruse was but too successful in creating a general panic ; the soldiers of the garrison, and men of the village were instantly on the alert and ready for action ; but the terror and confusion that prevailed among those of the inhabitants who were unable to fight, and the

helpless women and children, were beyond the power of language to describe. Mrs. Geer was at that time the mother of a young infant, with twins not more than two years old, dependant on her care. Springing out of bed, and hastily throwing on a few articles of clothing, she caught in her arms her babe and one of the twins, and followed by the other children, rushed forth, hurrying to the shelter of the fort. Mr. Geer was at that time holding a command, having been on duty since the outbreak of the war. The effects of this cruel experiment, was fatal to some of the children who were carried into the cold night air and storm, by their terrified mothers. Both those Mrs. Geer carried in her arms, died not long afterwards. Yet in the midst of the general consternation at the time, some of the women were able to laugh ; one man in his fear, having hid himself in a corner of the room where they were gathered in the fort, and being discovered by some of them and driven out with a flourish of broomsticks.

Mrs. Clark said, that whilst her husband was stationed at Fort Winnebago, it was no uncommon thing to test the courage of the soldiers by getting up a false alarm. The lead mines were then attracting considerable attention, and desertions to them were so common in the winter of 1819, that orders were often given to beat the long roll at dead of night, that it might be ascertained who was missing. The officer, just before the signal sounded, would go round to the beds of those soldiers in whose fidelity he had confidence, to notify them of the object of the alarm. But the women, even of his family, though warned, could not bear the dismal note of the drum without a thrill of terror. It may be supposed that experiments of this kind could not be frequently repeated with the intended effect.

Song, For One who will Understand it.

Come Lady, step into the boat,
Our pennon flutters free,
And, with the sunset, we shall float
Upon the swelling sea.

Before the light of day grows dim,
Our love-vows shall be told,
Where yon small speck on ocean's rim
Peeps o'er the crests of gold.

Thy sweet discourse my ear shall fill,
Thy glance my soul subdue,
As, like the unprisoned bird, at will,
We shoot across the blue.

And when upon that distant strand
Our loves shall be confest,
'T will be to me the "Happy Land,"
"The Island of the Blest."

MICHAEL BONHAM:

OR, THE FALL OF BEXAR.

A TALE OF TEXAS. IN FIVE PARTS.

BY A SOUTHERN.

The tale which follows, was originally prepared with a view to performance. Subsequently, however, I have persuaded myself that it would read better as a story. The reader will find that I have taken some liberties with the historical facts in the leaguer and taking of the town and castle of San Antonio de Bexar; but the history will suffer little from my freedoms, while, I believe, the story gains by them.

DRAMATIS PERSONÆ.

Texians.

COL. MILAM, *Chief of the Texians.*
MICHAEL BONHAM, *Second in Command.*
DAVID CROCKETT, *Ex-Member of American Congress.*
ALABAMA DAVIS, *Orderly.*
RICHARD HARRIS, *A Moody Hunter.*
SPARROW, *A Huge Feeder and Wit.*
KENNEDY: *Sings a good Song.*
TEXAN SOLDIERS, &c.
ELLEN HARRIS, *Wife to Richard Harris, but in disguise as Billy Harris.*

Mexicans.

DON ESTEBAN DE MONTENEGROS, *Governor of Bexar.*
DON PEDRO DE ZAVALO, *Suitor to his Daughter.*
GOVERNOR'S SECRETARY.
BRAVO.
MEXICAN SOLDIERS.
MASQUERA, &c.
DONNA OLIVIA DE MONTENEGROS, *Governor's Daughter.*
DONNA MARIA DE PACHECO, *her Cousin.*
DURRIN OF OLIVIA.
JACINTHA, *Attendant on Maria.*
CHARACTERS IN BAL MASQUE.

PART I.—SCENE I.

Time, Afternoon. Texian Bisouack among the hills—a wild, mountainous country in the back ground. Fires scattered about as in an Encampment of Hunters. Groups of Texians seen disposed in picturesque situations, and in wild and various costume—chiefly the hunting shirt—but some of them clothed in buffalo and deer skins, all armed with bowie-knife and rifle. Songs and laughter, at intervals and from a distance. Sentries disposed in the distance. Enter a group upon the foreground.

Sparrow. No sign of supper yet! My nose brings me no intelligence. Mere smoke, common smoke all, (*snuffs the breeze,*) as if there were any need of the fire before the butcher has dressed the meat.

Davis. What, old fellow, still growling? That stomach of yours keeps you very unhappy.

Sparrow. 'Tis I that keep my stomach unhappy! That I should deliberately put myself in a situation where so excellent a member may never be pacified! Here, too, where I offer so prominent a mark for a Mexican bullet, But, didn't somebody say something about supper?

Davis. No one but yourself; we spoke of fighting, or skulking—anything but supper.

Sparrow. Not a word of fighting until I am fed. I won't fight on an empty stomach. The Yankee may do that, not I. I'm of the genuine John Bull breed, though I never saw the island—which I suppose furnishes the best grazing country in the world. I may never see it,—but I shall live and die with the pious conviction that it's the only part of the world in which they have any proper idea of what's due to a human stomach.

Davis. Well, certainly, Sparrow, you show the blood if any man; but what was that you said of Yankee fighting? Now, when I'm out of the States, I acknowledge the Yankee myself. When I'm at home, it's quite another thing.

Sparrow. Something I heard a hundred years ago in a sort of comparison 'twixt Bull and Jonathan.

Davis. Let's have it.

Sparrow. It's short, my lad, as your mother's blessing. Bull, then, you must know, won't fight till he's had his belly full, while Jonathan will never fight after. Give Bull his breakfast, and he will use his bayonet with as much certainty of victory, as the Mussulmans have of Paradise when going into battle. But beware how you give Jonathan a bite. You must only show him his dinner—let him only smell the smokes from the cook-pot and see the enemy at the same moment, keen of appetite as forty Indians, making after it. Your Yankee will then prove himself an ugly customer. He will fight worse than any Turk.

Davis. Very good, and that was a say—

Sparrow. A hundred years ago, more or less. You remember it was to save *their stores* that they fought at Concord.

Davis. But Lexington?

Sparrow. Well, then it was to save *their bacon*! But, look you, Davis, as you regard my happiness in this life, tell me, hasn't Crockett gone out after game?

Davis. Will he find it? He don't know the country.

Sparrow. Pahaw! I've fed well in the States. Have I lost my nose for roast or boiled, now that I'm in Texas? The good hunter no more loses his sense for hunting on strange ground, than I do for eating. The same instinct is at the bottom of both faculties. You must show that the animal and the appetite change as well as the country: and that we know from sacred writ is out of the question. *Calum non animum mutant qui trans mare currunt.*

Davis. What's that?

Sparrow. Camanche, if not Latin. It means that even when a man's half seas over, his nature undergoes no change. He still feeds, and fights, and frolics, as he did before. Hark! what's that? [*Horn sounds.*]

Davis. A horn! It sounds like Crockett's.

Sparrow. Now bless the babe! I have an instinct that he brings in something of better flavor than himself. My nose is monstrous keen. My appetite is a marvellous faculty.

Richard Harris, [coming forward and putting his hand on Sparrow's shoulder.] Old man, enough of this!

Wait like a man.

Be patient. Don't be howling like a beast,

When meat is scarce in the forest.

Sparrow.

Like a beast!

Why, true, I have a wolfish appetite.

But, beast! Old fellow: hark you, don't you eat?

R. Harris. I must suppose I do : I live.

Sparrow. Art never hungry ?

R. Harris. Never!

Sparrow. What ! Never hungry ?

R. Harris. Never, that I know.

Sparrow. Heaven save me from this man ! Keep us asunder !

Send us apart. See to it, Orderly,

Put me at right or left, the wing or centre,

But never where he goes. He has no bowels,

Is never hungry, or he never knows it.

Can such a man be human ? He is surely

A *lusus*—what's the name—a something Latin,

Meaning a monster.

R. Harris. You're right. I am a monster ;

I feel like one—a very savage monster,

The hair growing inward.

Sparrow. I believe it all. I can believe any thing of a person who is never conscious of the delights of hunger—the keen provocation, the sharp instigation of the bowels, to kill and eat—an inspiration, I verily believe, that comes only from the soul. The soul is, indeed, the true source of human appetite. It is the immortal giving counsel to the mortal nature how to take care of itself. A man who never receives any such divine intimations—do you hear me, Harris ?

R. Harris, [fiercely.] Did you speak ?

Sparrow. Did I speak ! Decidedly wolfish. Yes, I spoke. I said—to think that all my good things have been thrown away upon him. Yes. I say that the man who never receives any divine intimations of appetite, cannot possibly have a soul at all. Chew upon that, old Lupus.

R. Harris. Would it were so. Methinks it must be so.

Sparrow. It is so. Never doubt it. Never hungry ! To talk after such a fashion when there's not a man in the mess not ready to eat up his grandmother, as the wolf ate up Little Red Ridinghood, bones and all. Why—

Davis, [whispers.] No more. The fit is on him.

Sparrow. What fit ? Eh, well. But I have my fit too, and just now the symptoms are very earnest about the diaphragm. I must have something to excite one—something. Ah, lad, come forward, [*to W. Harris.*] A pretty little fellow truly, and modest. Hark ye, child, was it not you who regaled my supperless senses last night with a song—a sort of ballad ; a most woful, sweet affair, very lovelorn and comforting.

W. Harris, [coming forward timidly.] I didn't mean to disturb your sleep, sir. I—

Sparrow. And who tells you that you did ? No, no ! You didn't disturb me. You did me a service. Positively. your song made me half forget my hunger, though I had been dreaming, only a minute before, of canvas back ducks at the Balize. You shall sing for me again. Your name's—eh !

W. Harris. Harris : William Harris, sir.

R. Harris, [curiously.] How ! Harris ! That your name ?

W. Harris, [timidly.] It is, sir.

R. Harris. Where from ? What family ?

W. Harris. From Tennessee. I have no family.

R. Harris. My name, before I left the States, was Harris, too. Now, it is nothing.

Sparrow. Nothing, indeed ! You're a whole State yourself. You represent yours of Mississippi most admirably. An empty stomach in a man is not much unlike an empty treasury in a State, and he who never feels hunger may certainly pass for a most incorrigible repudiator. But sing for us, my boy, sing, though you can find nothing more appropriate to the occasion than

'The cat ran away with the pudding-bag string.'

W. Harris. I'm out of voice. I'm hungry like the rest.

Davis. Truth, lad, you look it. You are both hungry and suffering. Now, that I look at you particularly, I wonder what could have brought you here to Texas.

Sparrow. Why wonder ! What brought me, I wonder. The lad heard no doubt of the famous buffalo tongues. Wasn't it the buffalo tongues that brought you, boy ? If you have the gift of tongue at all, you must answer as I wish.

R. Harris, [curiously.] You're but a child yet, boy—a very weak one.

You'll scarcely do for fighting. With that face, (It has the favor of some one I have known,) It would not seem you loved it.

W. Harris, [drooping.] I've never fought.

R. Harris. 'Tis easy, once begun. But wait your time.

It is not hard to die. That truth, once known, And you will chide the death-shot that goes by, Seeking all hearts but yours. The danger then Comes like your sleep or supper.

Sparrow. Not a word

Of either, I beg of you, till Davy comes.

The song, the song. Sing for me little Willy,

You have a singing face, most like a woman's.

And that reminds me of my cousin Sally,

The cleverest creature at an oyster party—

How the soul treasures its first principles—

That ever sung to sauce it. You shall sing me.

W. Harris. I cannot, sir. I do not feel like singing.

R. Harris. Yet, last night I heard you, When no one asked, and no one seem'd to listen, Piping as wofully as a woman might Over her buried lover.

W. Harris. Did you hear me ?

R. Harris. I did ;

And curse me, but the silly thing you sang,

A something in the language or the music,

Brought back to me a long sad history,

With many a gush of water to the springs

I had thought drained forever. [*He buries his face in*

W. Harris. Did you then weep ! *his hands.*

Davis, [aside to S.] He may well ask him that. It's a bad sign when such a man weeps, or is melancholy before going into battle. He's a marked man, I tell you. He'll get his despatches, among the first, from some Mexican bullet. Such a change ! From a rough, quarrelsome fellow, to a sort of good-natured melancholy.

Sparrow. Pshaw ! It's hunger ; only he don't know it. A good supper will bring all things right. Hunger shows itself differently in different persons. Some it makes particularly civil ; others particularly savage : some it makes mad, while it makes a different class only sentimental and poetical.

Davis. How does it affect you ?

Sparrow. Can't you see ? It makes me contemplative and philosophical.

Davis, [aside.] Observe them.

R. Harris. 'Tis very strange, perhaps, that I should weep,

But, were all known—

W. Harris. What all ? If what were known ?

R. Harris. Ha ! wherefore do you gaze into one thus ? What art thou, boy ; what can it be to thee, This knowledge ? Do you question me ?

W. Harris. No, no ;

No question. I but heard you say—

R. Harris. Is't strange, do you think, that a grown man should feel
That he has been a monster in his day,
And would be sorry for it.

W. Harris, [eagerly.] Oh, are you sorry?

R. Harris. What's that to you, or any man on earth?
What's it to any here? [*Looking round fiercely.*]

Sparrow. He'd pipe awhile,
Would any one but dance.

R. Harris. What if I dance,
Or laugh, or sing, or weep, or play the fool,
In any form, with any fool among ye—
Who says me nay upon it!

Sparrow. His dander's up.

R. Harris. There's one it might concern, but she,
thank Heaven!
Sees nothing of my madness. She has seen
Enough to cause her own.

W. Harris, [aside.] 'Tis well; you do not see.

Davis. So, ho, friend Dick, and runs the story thus;
You left a sweetheart then in Mississippi!

R. Harris. In the whole world, as I'm a living man,
I never left but one, and, of the world,
She had none left but me.

W. Harris, [affected.] Ah!

Sparrow. What ails the boy?

W. Harris. Oh, nothing. I but thought—

Sparrow. How long 'twould be to supper—eh?

W. Harris. No. Of a song,
Might suit a case like his. I had a ditty,
If I could gather up the words, of one,
Who left the woman he had loved the most,
Suspecting her of little love for him,
Even when she swore the fondest. He grew false,
From falsely doubting her; and in his wrath,
Meeting his friend—

R. Harris. Don't sing it for your life!
Such were the broken fragments of the song
You smote me with last night. I've had enough
Of tears for one short season. Can't you sing,
Some fierce war ballad?

Sparrow. Something funny, lad.

R. Harris. No. Nought of that! Give us a burst
of war,
Of battle and confusion. Give us a storm,
I' the way of ballad music. Please me, boy,
And when the real storm comes,—I mean the battle,—
I'll see you through all dangers. 'Tis my notion,
You'll need some guardian then.

W. Harris. I'll sing for you.

R. Harris. None of your dolefuls. A tempestuous
strain,
To hush up other tempests.

W. Harris. An old song
Was taught me by my mother.

Davis. Give me old songs;
I like them better than newfangled ditties:
They seem to have been made when women had hearts,
And honest men could find them.

W. Harris. So they might now,
If they would only value what they win,
And knew the way to keep as well as conquer.

R. Harris. What can you know about it? Where's
your beard?

Sing what your mother taught you.

W. Harris. [*Sings.*]

Hark! the trumpet's voice through all our valleys,
Red the plains are weeping with the strife;
The song and dance have fled our peaceful alleys,

And the young warrior leaves the drooping wife;
But will she—

R. Harris. I will not hear to songs about a wife!
Vex me no more. Do I not tell thee, boy,
I will not weep again? Sing me another,
And have no woman in it.

W. Harris. I have no other.

R. Harris. Then sing no more for me.

Sparrow. Now, that's what I call monstrous unrea-
sonable. The song was a good song, and had a certain
turn in it, a sort of quivering trepidation, that touched my
fancy. I could listen to such a song with pleasure at the
table—supper being about half over, and the first—the
sharper pains of appetite being somewhat mollified.
What say you, Davis? Don't you consider that a song
to satisfy any man, not absolutely on an empty stomach?

Davis. Yes, indeed, but just now, I fancy, we are to
have much better music. [*Horn sounds.*] Crockett is
here at hand. His horn, blown three times, means that
he has got something for supper.

Sparrow. Supper! Don't quiz me Davis. If you do
I'll make it personal. I can bear being quizz'd
About my wife and children—not having any;
My lands, my goods, my gold, my merchandizes,
But not on matters purely spiritual,
Dinner and drink, the meats that Providence sends us,
The cook that dresses them, the hand that carves—
These are all sacred subjects: upon such
It will not do to trifle. [*Horn again sounds.*]

Davis. 'Tis Crockett's horn.

Sparrow. Art sure of it?

Davis. My life on't.

Sparrow. Hurrah! then—let's hurrah!
My gratitude cries out to Providence
With hundred tongues, from bottom of my heart!

Davis. Heart! Say you, Sparrow?

Sparrow. What! You would say too high
By some five inches. Know, good Orderly,
That in the case of the Bull family,
There is but one grand passage to the heart,
And that is through the stomach. Do you hear,
Of meetings for a public charity?
'Tis with your hecatomb of roasted oxen,
Spread forth on dinner table. Is the purpose
Science or art, or strange philosophies,—
A public work—a personal compliment—
The tribute of a people to the warrior,
Who wins their battles,—or the patriot statesman,
Who makes successful treaties with the stranger,
In which, by license of the Levitical law,
He drives usurious bargain for their welfare?
All these acknowledgments still find expression
Only o'er groaning tables. Here speak the virtues,
The public gratitude, and men's affections,—
The sentiments, the sensibilities—
They find their voices all in the abdomen;
Derive their eloquence thence, and in its solace,
Find all their rights secure, their wrongs appeased,
Their duties well performed, their morals active;
In short, their slumbers for the night made certain,
With a clear conscience—thus they realize,
The good—*mens sana in corpore sano*,
Which is the all that human hope can look for
Of human happiness,—so draw the curtain.

Davis. Good! good! and now the song. Another
song.

Sparrow. Dence take the song. 'Twill do when
supper's over.

I'll have a quarrel with the first that whistles,
Or makes pretence of music.

Davis, [to R. Harris.] Whither go you?

R. Harris. Into some starving corner. You will have
A flock of Sparrows soon. [Exit R. Harris.]

W. Harris, [aside and following.] There's hope of
him! There's hope of him. He weeps!

Sparrow. Ay, let him go. The man that knows no
hunger,

That never dreams of dinners of rare dishes,
That has no hope of delicate supper joys,
And lives and festers in the sun, unmoved
By pulses of particular appetite,
Be far from me and heaven! Harken me, Davis,
Beware of such a man. He's like the serpent,
That poisons his own food. [Horn again.]

Davis. The third blast blown.

Sparrow. Heaven bless that fellow, Crockett. He has
bowels
That stir the love in mine.

Texians, [without.] Hurrah for Crockett.

Davis. He's comes. He's here.

Enter Crockett with a Bear on his shoulders.

Crockett. Well, lads, how goes it!

Sparrow. How goes it? As the wheel goes when
there's no oil for the machinery : as the watch goes when
the main spring's broken : as the team goes when the man-
ger's empty. It's no go at all, Davy, or at best a slow-go.
Welcome my old cock of Tennessee. Your coming is
the only go that's worth the mention. You set all wheels
in motion. You bring the true grease for the machinery.
The wheels of time had stopped without your assistance.
Thrice welcome to you and your companion. All your
friends of the forest are welcome at the close of dinnerless
days like this. He is your friend, Sir Oleaginous Bruin,
therefore I welcome him. I take him by his fist,—rough
but hearty; unclean, perhaps, but honest. He will find
a thousand friends among us. We will honor him duly
with proper dressing. We will take him and you both to
our bosoms. [Embraces Crockett and the bear alter-
nately.]

Crockett. You're a most loving
Sparrow, by the Powers.

Sparrow. It is the virtue of our tribe. The warmth
of the Sparrow is proverbial. It is an emblem of love in
some countries, and might be in all. The dove is a poor
emblem. Its fidelity lacks catholicism. It is clearly sel-
fish. But the sparrow's love is universal. It is one of
the few birds that keeps a harem. Do not question my
love, Crockett, because I share it between you and Sir
Bruin.

Crockett. I reckon you don't mean to serve me with
the same sauce as the B'ar.

Sparrow. No fear: My love discriminates according
to the deserts of the object. Indeed, I may say that while
I love him, I honor you. You both appeal to my affec-
tions, though in a different fashion.

Crockett. You always put your butcher in your pray-
ers.

Davis. 'Twould be as easy to put him in his belly.

Sparrow. Avaunt thee, for a cannibal!

Crockett. Ha, Davis—that you? Well, here we are
at last; me and my friend, as Sparrow calls him. He
gave me as close a hug as Sparrow did, and thought just
as much of his bowels all the time.

Sparrow, [inspecting the Bear.] What a delicate mor-
sel. What a brisket he carries, and five good fingers of
mortal fat upon his ribs.

Crockett. Ay, indeed. Brown jacket has all of that.
A fatter varmint never sucked his own paws, or cramped
up mine. Tough enough in the fight, you'll find him quite
tender, now it's over. He gin me more work than I ever
had on a Congress Committee. I freed him some three

hours ago, creased him without killing him, and brought
him down a little more lively than when he went up. I
put in, thinking he was about to kick his last, and found
myself in his arms. He hugged mighty close, I tell you,
much agin the will of one of the parties, and that warn't
him. He's made my ribs ache for it, but thanks to Jim
Bowie, I riddled my way into his. And now, Sparrow,
the sooner we try his fat, the sooner your trials will be
over.

Sparrow. *Verbum sap!* Spoken like an oracle. You
have but one fault, Davy; you waste words. You learned
that foolish practice in Congress at eight dollars *per diem*,
to say nothing of mileage. Waste! waste! waste!

Crockett. And you!—why you're waist itself,—all
waist, nothing but waist.

Sparrow. Well put, Dave. Your studies in Joe Mil-
ler were your making in Washington. You do not forget
his lessons. A shot like that takes a fellow about the
middle. That I have some extra extents of territory is
very true; but of this be certain, that unlike the majority
of great manor holders, none of my grounds are lying out,
none at naked fallow. All's under fence, and in a high
state of improvement. Ho, there! Halloo within! Hal-
loo! Hear you that, boys? My intestines, you see, do
no hurt to my lungs. [Enter Texians, who take charge of
the bear.]

Texian. He's heavy, by the Powers!

Sparrow. Carry him gingerly, and with proper meek-
ness,

He's worth a host of such as ye; will keep
A host of you, when salt would fail to save ye.
Be off! I'll follow and attend his dressing,
And see that in the shape of cook, no devil
Spoils the good gifts of Providence. Begone!
But three men—hear to this philosophy,—
Are needful to an army: He who takes
The prey—and he who dresses it—and he
Who does the dressing justice.

[Exit Sparrow, tucking up his sleeves.]

Crockett. Where is Bonham?

Davis. Not yet back.

Crockett. He'll get his death, that fellow.

Davis. Why more than you or me?

We're all i' the way of such accident,
Travelling the road to Bexar.

Crockett. But for him,
The danger's something greater, for he travels
More roads than ours. Where, think you, that I left him?

Davis. Lassoing some mustang.

Crockett. A trick worth two of it.
If you'll believe me, he's this very minute
Within the walls of Bexar.

Davis. A prisoner!

Crockett. Prisoner, indeed. Would I be standing here
Sucking my fingers like a Congress ninny,
If he, I call my friend, were in such trouble?

No, no, Bonham's no prisoner, nor like to be one, if he's
the man I think him. He's only playing Major André
among the Mexicans; looking behind their curtains in
disguise.

Davis. They'll Major André him. They'll hang him.

Crockett. Yes, perhaps, if they catch him napping,
but that they're not likely to do. He's playing priest for
them, and looks for all the world like the genuine critter.
I was most o'-mind to drop down on my marrow bones
and ax his blessing myself.

Davis. You saw him enter San Antonio?

Crockett. With my own eyes. How would you like,
says he to me, to visit Bexar? Thank you for nothing,
says I: my neck's not yet ready for a Spanish cravat,
which, they tell me, is made of iron. No danger, says,

he; I'm going. So up he walked to the sentries. I lay snug in a hollow, with a great bunch of chaparral before me. I watched him all the time, and, sure enough, in he went along with the soddgers.

Davis. Their prisoner?

Crockett. Not he. He carries his toothpick under the priest's garment, and a couple of Colt's time-pieces. Hush! do you hear nothing?

Davis. Nothing!

Crockett. You're no hunter. Jest you part your legs a little, and an old buck would walk between 'em, and nobody the wiser. To your tree. [*They shelter themselves.*] Do you hear?

Davis. I hear.

Crockett. A Mexican, by the Powers! Stand where you are, stranger, and give 's the word, or I'll blow it into you with a bullet.

Voice, without. Washington.

Crockett. Talk of the devil and you see his picture. 'Tis Bonham's self!

Enter Bonham.

Bonham. Oh! you have precious eyes: Not know your friends!

Crockett. And precious little like a friend do you look now, Major, with these fery fine Mexican breeches on. Why, Major, you're as fond of change as a young female waman of fifteen. Where's the padre's skin?

Bonham. Without. I kept it over the door till this moment, then cast it to show you how famously I look when walking the streets of San Antonio.

Crockett. Famous! Are there many more, Major, where they came from?

Bonham. Yes. When you have driven out a regiment or two of these Mexican blackguards.

Davis. What chance of that?

Bonham. Enough to make us busy! It is ours, That brave old Spanish keep, with all its treasure, If we but battle as becomes a people, Sprung from the Old Thirteen!

Davis. You've been in Bexar?

Bonham. Ay, have I—in the castle and the city; Trod the great Plaza, rambled through the highways, Survey'd the walls, the gates, the guns, the soldiers, And said, they shall be ours.

Crockett. Hurrah for that! I believe it all, Major, as good as if I had read it in the Globe newspaper. Look you; when next you put on the skin of the priesthood, I'll go with you as a Bishop or Cardinal. I've a great fancy for fine dresses and other matters, and as Bexar's to be ours, I've a notion to go beforehand, and put the ear-mark on every thing I desire for myself.

Bonham. Were you but master of the lingo, Davy?

Crockett. What! Do you talk it?

Bonham. Almost like a native. I have travell'd much Beyond the Anahuac; know the tongue, The people, and a thousand other matters, That makes it easy to perform the part That I would play in. Here, I am a Don Fit for a bridal. At the dawn you saw me, The priest to mutter o'er the ceremony, And take the first fee from the maiden's lips.

Crockett. Smack!

Bonham. To-morrow I may sell in Bexar's streets, The *Aguardiente* which enflames their passions; By night you'll see me as a muleteer, Dancing fandangos with the duskiest damsels That ever roll'd tortillas, or drew water.

Crockett. You're too much for me, Major. You're a huckleberry above my persimmon. I can hunt and fight, I reckon, as well as any man. I can shake as clever a

leg at a Virginny reel, when I'm a little up in sarp, as any native this side of the eternal ridge: and, though I say it myself, I have put up as decent a prayer as I ever heard from any parson in all this nation of Texas, but that was when I was most mightily scared, as I never expect to be scared again. But I can't do the many fine things you're up to. Yet if there's any thing that I *kin* do, say the word, and let me go with you. I can promise you to keep the secret, speak the truth, and stand by you with knife and rifle to the last beat of a big heart.

Bonham. You shall have your wish, comrade.

Crockett. Shall I now, Major?

Bonham. I shall return this night to Bexar's walls, Shall need a man to be at my command, To watch, or pray, or fight, as I think proper, Still ready when I call and always faithful.

Crockett. That's me—that's Davy Crockett.

Bonham. Be ready when I call.

Crockett. 'Ready' and 'Go-ahead' are just the names They made for me in Congress.

Bonham. Enough. And now for Milam.

Milam, [entering.] He is here, Bonham.

You are safe, I see, and I am satisfied.

What tidings bring you?

Bonham, [to Crockett and Davis.] Leave us, comrades. Remember, Davy, at midnight. [*Ex. Davis and Crockett.*]

Milam. Goes he with you, then?

Bonham. He begged the favor. He has sense and shrewdness.

Not less than strength and courage. 'Twill but need That I should put a curb upon his tongue, Or he'll convict himself of Tennessee At the first syllable.

Milam. Your eye upon him: I read his blunders.

Bonham. He will play a part, Whose duties keep him silent. He's the Mute While he remains in Bexar.

Milam. Yet I fear him: His tongue will wag. The humors of the woodman Will still have way. He'll choke else.

Bonham. I'll school him: And, for the rest—methinks the gates already Fly wide to give us welcome.

Milam. How stands the count Touching their numbers?

Bonham. One full regiment.

Milam. Eight hundred men, perhaps; and we but three.

They in their keep, behind their fortress wall, With best artillery and engineers.

Bonham. But a mean, spiritless race, ill officer'd; While ours are men, with appetites for conquest, Shall make each man a hero. Be you ready, And Bexar is our own.

Milam. I fear for you.

Bonham. For me!

Milam. The dangers you incur.

Bonham. In seeming only;

They walk no other pulses in my breast, Than such as joy in danger. I am sure— Know well the game—the people that I visit, And grasp with ready arm, and iron will, The weapons that protect me:

Milam. Bonham, the truth!—

There is some secret treasure in yon walls, More dear than wealth or glory, that you covet.

Bonham. There is!

Milam. A woman?

Bonham. Ay, by my troth, a woman— A Spanish maiden, lovely as the dawn,

And precious as the sunlight to the flower,
To Michael Bonham.

Milam. Who is the maid?

Bonham. The daughter of Don Esteban.

Milam. The Governor?

Bonham. The same!

Milam. You rob him doubly then of child and lordship.

Bonham. But give him what should recompense his loss,

A son and nation.

Milam. How did you know her?

Bonham. By happiest chance, last season, on the route
To Santa Fé, I rescued her and cousin,
From the Camanches.

Milam. Is she grateful for it?

Bonham. I trust to find her so.

Milam. She knows you then?

Bonham. But as a gentleman of Mexico;
'Twas in the guise of one I did the service.

Milam. Did'st meet with her to-day?

Bonham. Ay, and I promised
To be with her to-morrow.

Milam. And you will?

Bonham. Ay, though I die for it.

Milam. God speed you, comrade!
You're a bold lover, and bring back awhile
The good old days of chivalry, when valor
Mix'd love and battle in such close communion,
One knew not which was sweetest. Yet, remember,
I urge not this upon you. You are free,
This moment, from your pledge. Better far,
We scale the walls of Bexar, all defying,
Than risk your neck upon them.

Bonham. Mine the peril!
I claim it of my fortune. To my soul,—
When I regard the prize that hangs upon it,—
The danger wears the aspect of a pleasure,
And woos me to embrace it. Be you ready,
When at the gates you hear my bugle's signal,
And all the hunt is ours,

Milam. We'll not fail you.

Bonham. Enough! Fear nothing, and farewell the while.

[*Exeunt different ways.*]

SCENE II.

Midnight. The moon about to rise among the mountains,
and looking down from another point on the Texian
bivouack. The fires nearly burnt out. Sentinels seen
at intervals among the sleeping groups. Enter Bonham
in priest's garments.

Bonham. 'Tis midnight, and the moon but palely shines,
To light me to my comrade, as if loth
That we should seek this venture. But the eyes,
That beckon me are warmer to my heart,
Than ever shone her smile; and I will seek them,
Though she should cloud her jealous glance for aye,
And smile for me no more! 'Tis here, methinks,
He laid him down to sleep. These goodly legs,
With yellow, well-stained moccasins, are such
As I have seen him carry, though the bulk
Above, is something portlier than his wont—
Ho! comrade! [*Pushes one of the sleepers.*]

Sparrow, [in his dream.] But eight dozen among seven
of us!

Bonham. Dreaming of oysters! [*Pushes Crockett.*]
Crockett, [in his dream.] Question! Isay! Question—
question!

Bonham. He dreams of Congress and the Lower
House—

The politician, not the hunter now!

Ho! Crockett! to your feet and drum up voters.

The question's on the Tariff—item, salt—

Kentucky's licks are threatened!

Crockett, [awaking.] Out you varmint!

To listen to my dream!

Bonham. Comrade, up!

Crockett. Major—you!

Bonham. Bestir you—get your weapons—
Put your camanche garment on your back,
And follow with dispatch. I'll wait for you,
Where the path opens on the Lesser Prairie.

[*Exit Bonham.*]

Crockett, [rising.] Confound the old Congress! that I
shouldn't lose myself a moment, but to get back to them
diggings, as if I loved them. Well, the people of Tennes-
see might have done worse when they sent me, and havn't
done better now they've left me at home.

[*Exit Crockett.*]

Richard Harris, [rising from the bushes.] There's
danger in this chance, it seems—this Michael Bonham
has as keen a scent after mischief as yon feeder, [*pointing
to Sparrow,*] has after meat. My appetite for danger is
keener than my scent, and I must use the help of other
hunters. I shall reach him before Crockett can.

[*Exit R. Harris.*]

Ellen Harris, [emerging.] Thus still he flies in search
of death! O! heart,—
When wilt thou sleep—how rest—and where find peace,
For I must follow him, as fondly now,
As he will follow danger. He is gone!

[*Exit after R. Harris.*]

Enter Crockett in Camanche habit.

Crockett. All's ready, but to take a buckle in,—
Tighten the girth, and feel the bullet down,
And then upon the trail. What a huge mountain
Old Sparrow makes in the moonlight! How he snores!
What says he in his sleep?

Sparrow, [dreaming.] Raw meat for the Camanches—
raw buffalo beef

Dipped in the gall of the animal! [*Snores.*]

Crockett. Ten pound of it, with just that sort of sauce,
Will he consume per diem. A true bill!

Sparrow, [dreaming.] The brains and liver spread
upon with fat,

And coated with— [*Snores.*]

Crockett. The gall! He knows the dish!
But I must leave him without hearing further,
Lest I grow sick of my Camanche habit!
That such a bird of prey should be a Sparrow.

[*Exit Crockett.*]

Scene closes.

SCENE III.

*The edge of the prairie. A dense wood on one side, while
all the rest of the scene, far as the eye can reach, is a
long dead level of tall grass, waving in the moonlight.
The moon at her full and high in heaven.*

Enter Bonham.

Bonham. How holy is this silence! What a sea

Is here, of green and waving meadow, in the moonlight,
 Glittering with thousand flowers of thousand hues
 That mock the rainbow's beauties. As the breeze
 Sweeps over the wide track, the gentle tops
 Heave into tiny billows that beseech,
 The billows of the gulf, when, roused from sleep
 By the soft zephyrs of the southern wastes,
 They yield themselves unmurmuring to the embrace
 Of wooers that they love. Oh! gentle night.
 Thus honored by the moon, that o'er this sea
 Burns with a sweet benignity, and soothes
 Its wildest forms to beauty, in my soul,
 Shines a like hallowing aspect. Love is there
 Above the forms of danger, like some angel
 That, through the cloud and tempest, still looks down
 Speaking good will to earth. A footstep,—Hark!
 Who comes?

Enter Richard Harris.

R. Harris.

A friend.

Bonham.

He has a name.

R. Harris.

'Tis Harris, Sir.

Bonham.

What would you wish me, Harris?

R. Harris.

Service, sir,

Provided that means peril, which they tell me
 You are in quest of.

Bonham.

I may meet with it.

R. Harris. Now danger flies from me! I cannot find it,
 Whether on sea or land. Most men fear death,
 But death fears me—hides from me—will not face me
 Though I implore him in the fatal passage,
 Where other hearts have yielded. By day and night,
 Hourly, I seek his shaft to stretch me out,
 Sightless in sight of heaven. In quest of this,
 I come to you, since it is thought your purpose
 Takes you in danger's jaws, the worst of danger
 Within the walls of Bexar.

Bonham.

This is madness!

Life is a precious privilege, too precious,
 A momentary weariness or trial,
 To be flung off with scorn.

R. Harris.

Look I like one

For such child weakness, to beseech my doom;
 It is not weariness that moves, or trials
 Such as compel the tear in other men,
 But the fixed purpose of a mood whose reason
 Lies deeper, is more hideous than the grave.
 Help me to human peril which may lose me
 The eternal one that haunts me.

Bonham. I would not know your secret; but if true
 The blessed faith that's taught us, Death himself
 But opens the door for other and worse fiends,
 Than those which haunt the sinner to repentance.
 Repent, my friend, and live. To share my danger,
 One must love life.—on such good terms with it,
 That he shall use all prudence to preserve it.
 You cannot go with me. Your very temper
 Might wholly mar our purpose.

R. Harris.

Cannot, sir!

Bonham.

Impossible!

R. Harris.

Then no more's to be said.

Bonham. Abide your time, my friend. Your quest for
 death,

Is sin not less than madness. Soon enough,
 Death seeks the very best of us—too soon,
 For many of the best. A word more, Harris
 Have better thoughts, my friend.

R. Harris.

I would I could!

In praying for death, I sometimes pray for them.

Bonham. Pray for them always! In another day
 Battle awaits us! Pray you to survive it.

It may, perchance, o'ercome the bravest spirit
 To meet its probable terrors. You may have
 Your criminal prayers vouchsafed you at a season,
 When all, the very humblest, could not save you
 From dreadfuller dooms than death. Comrade, hither!

Enter Crockett.

Crockett. I'm at your service, Major. Harris here?

Bonham. He goes not with us. To the camp, my
 friend!

You will not shrink from battle when it comes;

Will wait its coming with a patient courage

That makes all strifes successful. 'Tis my task

To strip it of its perils as I may!

Commend yourself to patience! Comrade, on!

[Exit Bonham and Crockett.]

R. Harris. Still baffled in my purpose! Should I wait
 On time, and chance, and opportunity.

When I can make them all? Here is the chance,

When human eye is none for scrutiny—

The time—what season half so meet for death,

As when the heart has will'd it for itself—

And opportunity is in the weapon here,

Which my own right hand clutches. Wherefore bear

This torture, day and night, that hourly wakes

Its hell within my heart, when with a stroke

I still the strife for aye! I see no ghost!

I strain these balls to see them! Here's the plain,

Ghastly beneath the moon. The midnight hour

Has thrown apart the great gates of the grave,

And they may walk if they will. They covet darkness,

I do not seek the light. Whither I go,

They come not, though I bid them to my sight,

With backward prayer and horrible invocation,

I summon them now,—I call them 'neath the moon:

Come ye fell spectres—wherefore do ye mock,

Mine ears with your reproaches? I would see

And dare ye face to face. I hear them still,

Voices that through the void go hurrying on,

Or lurk at hand to scare. Ha! how they mock,

They tell me that I dare not—though they see

My hand that does not tremble, with the weapon

Uplifted o'er the breast that does not shrink,

And know that as I summon them to see,

I strike with mortal sureness, thus—

E. Harris, [who enters from behind and arrests his blow.]

Mercy! mercy!

R. Harris, [turning fiercely.]

To thy knees.

E. Harris.

Spare me! be merciful.

R. Harris.

How durst thou on my steps?

E. Harris.

I came—

R. Harris.

Thou hauntest me like a shadow.

E. Harris.

Have mercy!

R. Harris, [sheathing the knife.] No! I'll not harm
 thee!—

I will not pluck, with innocent blood like thine,
 More curses on my head.

E. Harris.

Oh! spare me!

R. Harris. Have I not said I will not harm thee, boy?

E. Harris.

Oh! but thyself! thyself.

R. Harris.

And what am I to thee? What if I perish?

E. Harris.

You promised to protect me.

R. Harris.

'Was't for this

You follow'd on my footsteps? Foolish boy,
 With fears like thine, a heart so much a coward,
 What dost thou here in Texas? To the Camp—
 Thou should'st be with thy mother! While I can,
 I'll care for thee and save thee,—but no word
 Of what thou hast seen to-night.

E. Harris.

Thou wilt not—

R. Harris.

What!

E. Harris.

Do murder on thyself!

R. Harris. 'Twould seem to be in vain that I should
try—
The ocean yields me up! The gallows scorns me.
The shot strikes down my comrade in his track,
The hopeful slain, the hopeless left to life,
And my own weapon, sure for other breasts,
Fails when I threat my own. A fate is in it.
'Tis meant that life has yet some use for me
'Till then I may not perish. Be it so!
Come! Follow me in silence. Not a word,—
Dost hear,—on peril of thy life.

[*Exit R. Harris.*

E. Harris, [following.] I hear!
I follow thee! I thank thee heaven for this!
Oh! still be merciful! On both have mercy!

[*Exeunt.*

[END OF PART I.]

Mournful Musings On an Old School-Style.

"Old familiar faces!"—*Charles Lamb.*

Here I stand leaning on the old school-stile:—
Thinking of the past—dreaming of its splendor—
When a careless boy I rambled o'er the meadows
Playing with my bosom friends—old familiar faces!

How the years have flown, since beyond the woodland,
Free as yonder red-breast, calling from the elm,
Went my boyish heart, trustful, hopeful, glowing
Forth into the fairy land, past the sundown red!

Rosy were their cheeks; black, or sunny curls
Clustered over sunburnt brows; and rosy lips
Uttered gleeful shouts, and brow and eyelid flushed up
In the pleasant days of that old dead past.

How they pressed my hand—old true-hearted comrades!
Calling me to come and see the hidden nests,
Where the speckled eggs of the blackbird nestled
In the old tall apple-tree with its clustering leaves.

How they poured the soul of gay and joyous boyhood
Into roaring games of marbles, bat and base-ball!
Thinking that the world was only made to play in,—
Made for jolly boys, tossing, throwing balls!

Oh! how I loved them—rough and bold, or tender
With the bright, free glance of early school-time friend-
ship,—
How I loved the hearts, who promised not to alter
Though the world should strive to draw them from my
breast.

How I knew that all would play on there forever,
Rolling marbles gaily, slowly going in school
When the playtime over, rung the weary master's bell
From the antique belfry up amid the blue!

Could it be that this would ever glide away
Into a past thing—only dim-remembered?
Folly! it was fate, a happy, golden destiny
That we'd play thus ever—hand in hand forever!

—And the little maiden loved me oh! so dearly—
Prattled oh! so sweetly tripping with her satchel
Through the morning light which clung about her wimple,
Loth to lose the peep of her rippling hair—

Rippling hair that fell in a golden shower
On her white, small brow, whose eyes of limpid azure
Poured such light as stars shining from white cloudlets
Ran in quiet splendor on the brows of Earth.

Oh! I loved her dearly, playing, talking, conning
Lessons in the spelling-book, on whose cover rested,
Like a flake of snow on a bank of rude earth,
The little lily hand, so often clasped in mine.

And she loved me dearly—for her glances told it—
Sitting on the school-bench with her golden ringlets
Close to mine—and timidly her little hand stole down-
ward
And rested faint and trembling on the rough back of mine.

But they all are gone—those old familiar faces:—
Gone like the clouds that curl around the sun's disc
In the bright May morning; and the tender dew-drops
Freshening the soul, have fled before the heat,—

All, all are gone, the old familiar faces:—
Some are doctors, others merchants plodding dreary;
Some are lawyers wrangling loud in heated court-rooms
Having all forgot the golden-thoughted past.

Some are strong divines, pointing up to heaven—
Divines of the Old School, divines of the New School,
Buried in the life that glides or roars around them,
Having all forgot the golden-thoughted past.

Some are on the ocean, which they dreamt in boyhood
Held the life and glory of their spirits' yearning:
On the dreary seas they have not found their fairy land,
But have all forgot the golden-thoughted past.

And the little maiden passed away from school days—
When we met she smiled, remembering old acquaintance,
But the world was open and her heart was elsewhere,
Having all forgot the golden-thoughted past.

And now I stand alone, leaning on the old stile,
Musing, pondering, dreaming in the quiet twilight—
Dreaming that I hear the olden joyous shouting—
Dreaming that I see each old familiar face.

But they all have flown, passed away forever,
And my heart is sad—hear the elm-tree sighing!—
And my eyelids moisten and my still lips murmur
"Ah! they are all gone—those old familiar faces!"

HISTORY OF RICHMOND.

CHAPTER EIGHTH.

MUSEUM. FINE ARTS. UNTIL 1830.

The Legislature that met in 1815 granted to James Warrell the right to build a museum, and furnished part of the public square as ground for it. He erected a building on the south east part of the square, on the spot where the Court House now stands, and hoped to add to his museum an academy of fine arts; so that Richmond might not be destitute of these resources of elegant amusement and refined instruction.

This Legislature is to be praised as having been unanimously imbued with the spirit of diffusive liberality, and with zeal for the public good. They passed many acts for the promotion and general dissemination of learning and science; for the improvement of roads; for the alleviation of suffering humanity, and for many other objects of primary importance.

The scheme to introduce the fine arts, and to build up a museum in Richmond, failed completely. In fact, the fine arts have never flourished in Virginia. They require for their sustenance not only wealth and taste, but age, and a certain state of society that cannot precisely be called decayed or debilitated; yet is, at the same time, one where the vigor of the state is on the wane; and they are to the nation what the careful pains of the toilet, the delicately-tinted rouge, the niceties of conversation, and the elegancies of dress are to a beauty whose bloom has faded, and who attracts suitors more from her ornaments than from her charms. These arts do not flourish in an agricultural country like Virginia; they belong not to men, or to a community immersed in the cares of State, or employed in building up new commonwealths. They partake too of the indolence, the *ennui*, and the vices of large cities; they are sources of amusement to the elegant and the refined; and may be said rather to have had their origin in elegant vice, than in the higher grades of intellect. It would have been strange indeed, had the fine arts, so called, been cultivated in Virginia; as her existence has been so filled up with the affairs of federal politics, after she had borne her part in bringing the revolution to a close, and in settling Kentucky and other States with her sons, that like the active mother of a large family, she has had no time for painting, poetry and fancy work. The institution of slavery itself, by increasing domestic cares, very much prevented the time of amusement necessary for such cultivation. And the fact that there was not much intercourse di-

rectly with Europe, prevented those crowds of emigrants from pouring into her coasts, among whom come many cultivators of these arts.

Virginia, although she has not cultivated the fine arts, can say like Themistocles, when taunted with his ignorance of the flute, "I cannot play on the flute, but I can make a large city out of a small town."

She has not cultivated the fine arts, yet she has saved this country from ruin, by the wisdom and valor of her sons; she has ruled it by her policy, and she has freely given her own soil and her own children to form new States, and thus build up the empire. No poet has ever been born in her borders, whose work will live while language lasts; yet she has produced many statesmen. She boasts no painter, whose pencil could give life to the canvass on which the deeds of heroes are portrayed; she has only furnished heroes for the painter. She has no sculptor, by whose divine creative art the stone has life, and whose chisel brings forth more feeling, and excites more emotion, than even the poet or the painter; yet she has furnished the living men, whose deeds and influence give history to the sculptured stone. The pen of the historian has not been here; yet the tongue of the orator has gained her honour, and from her soil has gone forth a voice that set the world in motion. The song and the dance have not been carried from her shores to glut the ears and delight the lascivious eyes of other nations; she has no reputation among the sons of Euterpe and Terpsichore; yet her daughters are wise and fair and chaste; women, worthy to be wives, mothers, and daughters, of the men who achieved so much in their country's cause.

Virginia, like Rome in her heroic age, has no writers, or poets, or artists. Her heroic age is now past. Her twelve labors are accomplished; and now, full of years and honors, ornament and comfort become her age. It is time for her to cultivate the fine arts; and, as her youth was vigorous, she should now in her age learn to grow old gracefully. The fine arts of soul-persuading and mind-compelling eloquence, of far-seeing statesmanship, of self devotion in mind, in body and in purse, to the cause of the country—these she has cultivated to the fullest extent. Yet she is no longer a frontier State; nor does she now, by her position, occupy so important a station as when she connected one part of the country with the other; when her fiat could unite or divide; and when by her vast western positions she held within herself the limits of empire, and had condensed within her borders, intellect, energy and means to make that empire powerful and lasting. For the good of the nation, she has shorn herself of her strength, by yielding up her immense territories; her sons and her wealth have gone from

her, and she has given to the councils of the nation that wealth of mind which, if employed within her own borders, would have enriched herself. Now that her work is accomplished, it is time for her to look at home; and, like a veteran of an hundred battles, whose blood has been freely shed, and whose body is scarred with honorable wounds in his country's service, it is necessary for her to retire within herself and grow strong. If she employ the latent intellect and energy now within her, she will excel in the arts of peace and in the cultivation of the Muses, as she has already done in those of war and of statesmanship. Let the young men of Virginia believe that it is their part to adorn and illustrate what their fathers have done, and to render greater their deeds, by proclaiming them; let them think with Sallust, that "while to act well for the State is glorious, to write well for it, is not without its merit;" let them esteem some pleasure, and honor too, to exist in the creative talent of the artist, who makes a block of marble or a piece of canvass to speak in universal language to every age and people, the glories of meritorious deeds, and to excite by their dumb eloquence to the imitation of patriotic men. Let them know that the poet's page is as a leaf of immortality, and that fame of lasting character can be won by the pen as well as by the sword or the tongue.

Let them know and believe these things, and we shall soon see that we have among us the mind to execute, as we have the material to work up into histories and poems, and to be represented in marble and on canvass. The plough, the pen, and the pencil; the sculptor's chisel and the artist's lute, all have or may have full employment in enriching and in illustrating Virginia and her history.

It is much to be regretted that there is in Virginia so little attention paid to collecting libraries. The State Library, in the Capitol, numbers only 14,000 volumes; a small and even in significant one for the State, although it is compactly and carefully arranged and is under excellent supervision.

The Library of the City is one of the most insignificant ones that could be collected in any place as large and prosperous as Richmond; it may be classed among the curiosities of the city, as it scarcely deserves mention as any thing else. How easy would it be for Richmond to have a building devoted to the uses of a library, well furnished with books, and under the care of the present excellent librarian; affording a place where citizens and strangers might visit and find amusement and instruction in its well-filled shelves. The Apprentices' Library, in Philadelphia, plan-

ned and begun by Franklin, is a fit model for our imitation in this respect.

It would be considered a shame in any country, that its capital city should be without an extensive public library; and that shame now attaches to the capital of Virginia. Lord Bacon has well said that "Libraries are as the shrines where all the relics of the ancient saints, full of true virtue, and that without delusion or imposture, are preserved and reposed." May we soon see a large and well-attended shrine in the good city of Richmond. Dr. Johnson has said, and it passes for an axiom, that "the chief glory of every people arises from its authors." If so, then Virginia is lamentably deficient in glory. Her wealth of intellect is wasted in political strife, and she now struggles vainly for that importance which she formerly possessed. We wish to see her attain importance in another manner, and employ all her powers in becoming great by developing her own resources. Although her sons are just as capable now as their fathers were, they have not the same field for labour which they had; the country has outgrown her, and she no longer occupies, either really or comparatively, her former position or influence. Her sons have migrated to other states, and many have risen to honours, which it may fairly be asserted they would never have obtained at home. In the founding of new commonwealths, and in the exercise of political offices thence arising, they found a field of fame, and have risen with circumstances to renown. Yet although Virginia has in much degree lost her influence directly as a state, the influence of her people and her principles, sown broadcast throughout the South and West, will remain forever, and through her offspring she will make lasting impressions on our country. Hitherto she has had more power than any other State in the confederacy. The eldest born, her birthright has been to rule; and her sister States have bowed down to her in reverence, and looked up to her for direction. With the vast strides that our country is now making, and the rapidly increasing importance of the western part of the confederacy, she will be left behind, and be forgotten in the race of improvement, unless she now endeavours by renewed and varied effort to attain another supremacy. Her former power seems to be somewhat merged into that of her two children, Kentucky and Missouri;—these States she seems specially to have settled, for there is in them less admixture of the men of other States. In fact, Virginia, Kentucky and Missouri, from their position in the middle line of our Union, from their conservative tendencies, from their lying between abolitionism on the one hand, and ultra slavery sentiments on the other and partaking of neither;

and also from the pure-blooded race of men who settled them, form the Backbone of the Union. The glory of the mother State may be swallowed up in that of her offspring; from them will come forth, as from her have already arisen, the men moderate in sentiment, and strong and firm in mind and principle, under whose guidance this land will be successfully ruled.

In all Virginia there is no Museum. Many decry these collections of curiosities as of little value, serving only as amusements for children of a larger or smaller growth. It has ever seemed to us that filial reverence is one of the chief virtues; and the same feeling, that makes the children of an honored and much-loved parent preserve mementoes of that parent, would lead us to preserve the relics of our great men with filial and patriotic care. No man can object to a collection of those things that bring to mind the great and wise men of former days; and it is too much the case with us, that we neglect the graves, and preserve scarcely any memento of the existence of our greatest benefactors. Even if Museums contain only simple curiosities, and appear fit for the amusement of children alone, I would still advocate them, and urge their collection. Children make three-fifths of the human race, and eventually become the entire mass of men and women. Counting them, grown and ungrown, they form nine-tenths of mankind; and it is right and proper that these should be amused, even if nothing better result.

The value of a well-filled Museum is that it excites inquiry by stimulating curiosity; it is food for the mind; it gives rise to reflection, and causes comparisons to be made, calling up the past and exciting the imagination to supply the deficiencies of memory. It teaches morality and religion; by looking over the relics of the dead and gone, we are reminded of the uncertain tenure of life, and of our own departure. As sources of historical knowledge, the Museum takes high rank; it cannot lie as history is said to do; nor can it exaggerate beauties or defects, as do painting, poetry or sculpture. We learn more of the men and manners of the ancients from the curiosities collected in Pompeii, than from all their writings; and even now Layard is opening to us the history of the Assyrians, in his researches among the ruins of Nineveh. Museums would destroy much of the romance that now lingers around many periods of history, by bringing down to the standard of the present, all past ages. They would make the golden fleece to appear like ordinary lamb's wool; the club of Hercules would be a common quarter staff; and the sword-Balmung (that cleft men completely armed so nicely, that they never knew they were severed until on

moving they fell apart) a well-tempered Andrea Ferara.

The cast off shirt and toga of old Cato would teach us more of Roman dress than their books do; and the private letters and a file of *Acta Diurna*, (posted placards of news,) would give us a knowledge of the domestic manners and the home language of the men of old that we do not now possess. Museums would prevent, by correcting, the lies of chroniclers, and thus purify history.

In a state possessing so much material, and so proud of the past too, it is strange that no full and extensive Museum has been made, to carry to succeeding generations mementoes of our great men and their deeds, as well as of the manners and customs of former times.

For many years after this period, nothing of interest occurred in the city or in the government of the State to attract attention; it was the era of good feeling, quietness and prosperity pervaded the community, and there was nothing in such a time of happiness for the historian to record.

We now come to speak of some matters of domestic interest, that have been overlooked in this narrative; matters relating to the city in its bridges, docks, canals, &c. Mayo's Bridge had been built some years before this time, and is still kept up; it is a striking instance of the result of persevering effort, in the face of discouraging prognostics. The bridge was built by Col. Mayo, in spite of the advice of friends and the predictions of failure from enemies. It brought him revenue instead of ruin, and silenced completely the cavils of those who opposed its commencement.

It is a wooden bridge; its length about 930 yards; its platform some sixteen feet above water level; the piers are about 55 feet asunder, made of timber and filled in with stone. The toll-gate keeper's house is in the middle of the bridge, where, by means of a causeway it crosses an island, and looks like the houses of Holland, built upon piles and elevated above the water.

This bridge, although much needed at the time, is now a nuisance to the city, and should be abated; it is old, in bad repair, and the tolls upon it are too high. Richmond requires a free bridge to Manchester, and to the opposite counties, and one more handsome and substantial than this old and rickety tax-gatherer of a bridge.

The James River and Kanawha Canal has its termination in Richmond. It was begun in 1788, and is not yet completed. It is a noble state work, and when finished will pour through our state the rich commerce of the West, and at the same time develop the mineral and agricultural wealth of Virginia. This work is the first effort made in this country to connect the Eastern

and Western waters; and had it been completed early, it would have so added to the wealth and importance of the State, that she would have been the most populous and the richest commonwealth in the union.

The completion of the work, and the consequent prosperity of the State, lies in the unknown future; no man dare risk his reputation as a prophet by predicting its completion. It would have been far better to have considered it one of the fine arts, and devoted the whole effort of the State to excel in it. Such a work as this, extending throughout the entire State, cutting the layers of mineral formation, opening the agricultural districts, tapping its coal fields, and making a safe and easy passage-way to men and products from every part, would be to the State what the great artery is to the body, the current along which its life-blood passes. Any check or stoppage to such a current or channel, must induce ill health in the man; and any hindrance to the work, an undeveloped or impaired vitality in the State. The city termination of this canal is in the basin; it covers some five or six acres of ground, and is in some places fifty feet deep; many large mills are turned by the water passing through it; and locks are now being made which will connect it with the dock, and allow boats to pass up and down from the river to the basin. Lumber-yards, coal-yards, and places of business of every kind lie around it, and the commerce that passes through it is very valuable.

The Richmond Dock Company was chartered in 1816, for the purpose of opening the navigation of the river from Rocketts landing up to Mayo's Bridge; they were empowered to use locks, or any means which they judged expedient, and were required to keep in the upper basin, or dock, at all seasons of the year a depth of water of ten and a half feet. It was also required to have a boat navigation up to the mills, and to improve the navigation of Shockoe creek. This work has been completed, and vessels drawing eleven feet water, have since come up to the wharves of Richmond.

A singularly built bridge was thrown across the river in 1816 by Edwin Trent Esq., a popular and wealthy citizen. This bridge was made near where the Petersburg Rail Road Bridge now stands; and was built because the only one across the river was low down, and because the rate of toll was high. The platform did not rest on piers, but on sleepers, which were riveted into the rocks only a foot or two above water level; thus the river when it rose soon passed over the bridge, and by covering protected it. A hand-rail was placed on it that could be removed when necessary; and the floor was made to slope, so that the up-stream edge of the bridge

was some eight inches lower than the other; the result would be, that in a freshet the water would rise on this upper edge, and keep the whole structure firm. It was 1,654 feet long, and 18 feet wide; and when completed promised to last a long time; it was however finally destroyed by a strong and high freshet.

About this time the spirit of land speculation was rife in Richmond; the changes made by the war in manufactures and commerce, the uncertainties of European affairs, and the general depression made men afraid to invest money in many kinds of business, or in usual speculations. There was a general distrust of stocks, and it was believed that to lay out money in the purchase of land, was the only safe investment. It was expected also that Richmond would speedily become a large city; and accordingly, the price of lots went up rapidly, and men bought and sold in the fever of speculation, as if fortunes could be made by giving an imaginary and immense value to the poorest land around the city. It was amusing to witness the progress of the fever; a new town was laid off on paper above the city, called the town of Sydney; lands sold readily for one thousand dollars per acre that would not now bring one hundred; some, for which that price was refused, were afterwards disposed of for sixteen dollars. One wealthy citizen, who had made in one year's trade five hundred thousand dollars, invested it all in these valueless lots at these exalted prices. Another purchased for a large sum a lot, which was then, and is still, occupied by an immense ravine; a possession not likely to yield income to the purchaser! Another speculator laid off a town on Navy Hill; proposed to have erected a monument commemorating the exploits of our sailors in the war of 1812, and actually built up a log monument as a shadow of that which was to come, and as a recommendation and invitation to purchasers. His efforts availed not; the monument has not yet been built, nor the town which was to surround it!

CHAPTER NINTH.

CONVENTION OF '29—'30.

Richmond had seen no great debate since the trial of Aaron Burr had filled her courts with excitement. She was now, in common with the whole State, agitated by the elections for members of the Convention to reform the State Constitution, and became again a most interesting arena whereon was exhibited the reputation of great names, and the powers of some of the greatest minds in Virginia. In October, 1829, this able body of men met in Convention, in the Hall of the House of Delegates;

they were picked men; every district sent its best and favorite son, and certainly no legislative body, save only the Congress of 1776, excelled it in the imposing array of mighty names. Madison, Monroe and Marshall form a trio of intellects and reputations that no Congress or any other assembled body of men could exhibit; and besides these, there were Randolph, Giles, Upshur, Doddridge, Johnson, Leigh and others, equal to the intellects of any part of our country.

Complaints had been made for a long time, that the former constitution was unfair in many of its effects, and changes were desired and urgently called for. As under it the right of voting was restricted to those possessing free-holds, many, because of their poverty, were prevented from exercising that right, although otherwise well qualified. This was a subject of complaint both east and west. Another, and a sectional cause of complaint, was that the slaves of the east were estimated in apportioning the representation, and that thus the western part of the State, although excelling in white population, had fewer representatives in the Legislature. This was the chief reason why the Convention was called. From real and fancied grievances, from the restless desire of change peculiar to the American character, and from the hope of bettering the condition of the State, Virginia selected her mightiest men and sent them up to take counsel for her benefit. They met with the best wishes and with the highest expectations of the people of Virginia; they remained in session a long time; they examined the former constitution in all its parts, and carefully and thoroughly deliberated upon the business for which they were sent, yet it is universally acknowledged that the result of their labors was not satisfactory. So much disappointment was felt that it has justified the opinion of John Randolph when he called this Convention "The Slaughter-House of Reputations." Many a man entered it with reputation as a man of great talent and statesman-like ability; and came forth from it shorn of his honors, only to sink into obscurity. There were many men in it of made reputations, and who cared not to risk them in proposing or advocating changes, fearing lest their fame might be impaired; old men too, who are generally averse to change, esteeming the former times better than the present, and unwilling to advocate measures which they might not live to see carried out.

Others again, who were highly esteemed, in endeavoring to make changes, made such as pleased no party or section and thus lost reputation. The West was not satisfied, because it did not gain its object, and accepted grumblingly the extension of the right of suffrage; the free-

holders of the east were dissatisfied that the right was extended, and thus the Ultras on each side were disappointed and angered, and the only thing in which they were brought together was in a union of complaint and condemnation.

The Convention presented the appearance of an irresolute man, who has neither decision nor courage, and who in endeavoring to satisfy two contending parties, displeases both. In looking over a file of old newspapers, we are struck with the excitement existing throughout the State; during the long interval of quiet that had pervaded the community, men had become unaccustomed to such discussions; and, never having enjoyed the luxury of taking to pieces and putting together again the Constitution of the State, seized upon the opportunity afforded, as men to whom an unknown pleasure had been offered.

Changes of all kinds and of every degree were proposed by some, and busy canvassing was carried on throughout the State; until at length the Convention, like a huge hatching machine, was put in operation; and the brood that issued forth did not at all please the owners.

The Constitution that was to be thus dissected and repaired, was the work of George Mason, and was made during the Revolutionary times of 1776. ~~Jefferson~~ wrote the Bill of Rights for it, and the General Assembly of that day, containing our best and wisest men, amended and adopted it. Madison was the only member of the Convention, collected at this time to amend, who had sat in the Assembly that formed the Constitution. Marshall and Monroe had, with him, sat in the Ratifying Convention of 1788; when, with so much difficulty, the Constitution of the Union was adopted.

Fifty-five years had elapsed since James Madison had given his assent to the work of George Mason whom he had since pronounced the greatest statesman that this country ever saw. As the aged man sat in the Hall of the House of Delegates and thought over the times past, what singular sensations must have crowded on his mind. The half century of political life which he had lived, with its continual whirl of events and its great and lasting changes, had been equal to centuries of the usual still life of nations. That half century had changed entirely the whole political world; and the mind of man had been forced from its old sluggish channels, and urged with the force of a torrent into new courses, as if a river, acted on by earthquake power, had left its old bed and cut for itself a new and better channel, along which it rushed with irresistible force. In that half century had lived and acted Washington in this hemisphere and Bonaparte in the other; two men of mightier influence than any other two the world ever saw.

Edo. Fisher

In that half century thrones had been toppled down, the power of priestcraft over nations assaulted and impaired, and, better than all, the principles of republican government understood and carried out.

The human mind had been powerfully stimulated, and had made rapid advances in every branch of science and art. From the lightning rod of Franklin, depriving the storm-cloud of its danger, through the intricate mazes of chemistry and its kindred sciences, in the glorious art of war, in the revelations from the poet's page and the historian's pen, in all the walks of literature and science, even up to the discovery of Champollion, that rendered legible the obscure hieroglyphics of Egypt, the mind of man had exercised itself in conquering difficulties and in producing results for the instruction or amusement of the race.

In that half century the world had renewed its youth, and commenced an entirely fresh existence; new in the principles that were henceforth to govern it, and the measures of policy to be adopted; new in the class of men who were to take the lead among its civilized communities; and new in the effects and influences that were to result throughout the entire world. All these mighty changes had taken place since the time when a few men, assembled in the village capital of Virginia, had organized resistance, formed themselves into a State, and adopted the first written Constitution the world ever saw.

Now that feeble yet wise colony had become a great state, and, in the midst of a free and extensive country, her wisest men had assembled to alter and amend their constitution. James Madison was the Nestor of the convention. At his advanced age it was not expected that he would take upon himself any active part in the proceedings; nor did he; for his work was all finished, and he left to younger men the chief labors of the occasion. He is thus described by one who was present, "Mr. Madison sat on the left of the speaker. He spoke once for half an hour, but although a pin might have been heard to drop, so low was his tone that from the gallery I could distinguish only one word and that was Constitution. When he rose, a great part of the members left their seats and clustered around the aged statesman, thick as a swarm of bees. Mr. Madison was a small man, of ample forehead and some obliquity of vision, (I thought the effect probably of age,) his eyes appearing to be slightly introverted. His dress was plain; his overcoat a faded brown surtout." The opinion expressed in this speech was in favor of the federal number in forming a basis of representation; and he recommended it for its simplicity,

its stability, and its permanency. It was a sensible, lucid argument.

James Monroe, who had figured in the former convention, spoke but seldom. He is described as "very wrinkled and weatherbeaten; ungraceful in attitude and gesture, and his speeches only common-place." His mind was not of the first order; he was rather a practical man of great energy, than a man of genius or a philosophic statesman. Yet his mind was well qualified to work with that of his friends, Jefferson and Madison. No intellect was more philosophic, more clear or more far-reaching than Madison's; no better and more efficient party leader or sagacious politician ever lived than Monroe. He possessed the talent for business, and another equally important, that of conciliating; his rule as President was the era of good feeling.

He had filled every office that the State and his country could bestow; he had fought in her cause, had sat in her councils, had assisted in forming her constitution, had served her in foreign embassies, and in negotiating the acquisition of Louisiana; he had been Governor of our State and President of the United States; he had done much to fix the policy of this country; had acquired Florida; had acknowledged the independence of the South American colonies, and had proclaimed to the world our intention as a people to suffer no foreign nation to interfere with the affairs of states or nations on this continent. Lastly, he possessed so little false pride and knew so well the duties of a good citizen, that after passing through all these honors, he exercised the office of Justice of Peace in his own county. He proposed by way of compromise that of the two Houses, forming the Legislature, the party holding to the white basis should have their principle carried out in electing the House of Delegates; and that the combined basis should be that by which the Senate was chosen. Ill health compelled him to leave before the convention closed its session.

John Marshall had devoted himself to the law, as entirely as Monroe had to politics, and his fame will be a lasting one. That he was one of the finest, strongest, clearest minds in the country is acknowledged; for directness, power of condensation and effect in argument no man ever excelled him. "Whenever he spoke, which was seldom, and only for a short time, he attracted great attention. His appearance was revolutionary and patriarchal. Tall, in a long surtout of blue, with a face of genius and an eye of fire, his mind possessed the rare faculty of condensation; he distilled an argument down to its essence." His professional pursuits had engrossed him and allowed no time for politics; yet had his party been triumphant, it is probable that he

would have been called out. His efforts in the House of Delegates, in defending from censure Jay's treaty and other measures of Washington's administration, showed that in politics as in law he possessed the power to accomplish whatever he undertook. His services as envoy extraordinary to France, and the papers drawn up and addressed by him to Talleyrand, excited admiration from all, and gave promise of great political success. Had he devoted himself to obtaining political honors, he would have obtained them. Perhaps no man in his party could have taken up the mantle of power that Washington laid down, except John Marshall.

Although he took but a slight part in the debates, yet his *Life of Washington* shows him to have been well qualified for such discussion. The work is too much neglected now; its style is rather dry and the subject somewhat heavily treated; yet it is the weighty production of a mighty mind; and contains, beside covering the whole ground historically, an account of the science of government, with the principles regulating it, as then going on in the world. A *Life* of so great a man, written by another great man, containing a narrative of events the most interesting in the world's history, and with dissertations by so able and learned a jurist and constitution-maker, is surely one of the most valuable legacies that could be left to any people.

In his speeches he proposed a compromise; the West was in favour of the White Basis alone, and the East in favour of the Basis of population and taxation combined. Judge Marshall's opinion was this: "I think the soundest principles of republicanism do sanction some relation between representation and taxation. Certainly no opinion has received the sanction of wiser statesmen and patriots. I think this was the principle of the revolution; the ground on which the colonies were torn from the mother country and made independent states." He offered, however, a compromise between the two parties, and to obtain it proposed that the white population should be combined with Federal numbers and thus form the basis of representation. This would make the concessions mutual and equal.

Two parties had been very early formed; and indeed the question, on which they differed, had been raised and the parties formed out of the House, and brought into it. The East and the West were arrayed in hostile attitude on the question of representation, and the discussion was warm and long continued. The East possessing many slaves, subjects of taxation, was in favor of the representation allowed in Congress to the Southern States and sanctioned by long custom in Virginia; the West, with few slaves, and a large and increasing white popula-

tion, advocated representation according to numbers alone; rejecting the slaves as so much property.

On this question the Convention divided off; yet the lines were not geographically distinct, as some advocates of the White Basis were from the Eastern side of the Ridge, which, dividing the State, was supposed to divide the parties also; and General Taylor, one of its most prominent supporters, was from Norfolk.

The parties seem to have stood thus; for the combined Basis the chief men were Madison, Marshall, Randolph, Leigh, Upshur, Tazewell, Giles, Coalter, Bayly, Nicholas, Stanard, Gordon, Scott, Green, Samuel Taylor, Lucas P. Thompson and others; for the White Basis, Monroe, Mercer, Doddridge, Robert Taylor, Cooke, Johnson, Powell, Henderson, Baldwin, Summers and Campbell.

These were the chief men who took active part in the discussion; there were many others who had some share in it, men of ability too, yet who were not among the prominent men.

Benjamin Watkins Leigh was the leader of the Eastern or Lowland party in the House. He was then in the zenith of his powers, and always stood high in Virginia for his excellence of disposition, frankness of manner, integrity and capacity. "His diction is clear, correct, elegant, and might safely be committed to print just as spoken. Yet high as he stands, he is not perhaps in the highest rank of speakers. He never lightens, never thunders; he can charm, he can convince, but he can hardly overwhelm." This is the opinion of one who heard him in this Convention, yet it does but scanty justice to the powers of this eminent man. He was vehement in his defence of Eastern Virginia, and of the basis of representation, consisting of population and taxation combined. Although not powerfully eloquent, still his real ability, thorough training in debate, earnestness of manner and confidence in the justice of his cause made him a formidable opponent to the reformers in the House; while his zeal won for him the approbation of many friends and paved the way for future honors. His seat in the United States Senate may be traced to the services rendered to the State in this body; he here proved himself a sound and safe counsellor. Many of the other changes, proposed in the Convention by the reformers, were opposed by him, and he advocated and defended the old Constitution in most of its parts; it was mainly owing to his efforts that the county court system was not swept away. He spoke with sharpness of "the reformers, who were willing to make the experiment on the body politic, how large a dose of French rights of man it could bear without fever, frenzy, mad-

ness and death." And in his speech in favor of retaining the combined basis of population and taxation asserted, that "no government will be just, or wise, or safe for Virginia that places the property of the East in the power of the West." "The preservation of the commonwealth, in its integrity, is only the second wish of my heart; the first is that it may be preserved entire under a free, equal, regular, republican government, founded in the great interests that are common to us all, and on a just balance of those interests that are conflicting." Some went back to the formation of society, and deduced arguments therefrom in favor of the White Basis; on whom he sarcastically remarks that "it seems to be imagined that no government is a civilized one unless it be founded on the natural rights of man in a savage state."

He led the van of his party, and was decidedly the most prominent man in the House.

Abel P. Upshur spoke early in the debate, and his speech ranks him among philosophic statesmen. It showed not only ability to form opinions and elegance in expressing them (for it may be considered the most elegant speech delivered during the session) but it was also a philosophic essay on the science of government, emanating from a mind naturally strong and thoroughly informed on the subject. In discussing the principles of government, he reverted to those principles that govern man in the formation of society and of law; showing that there was no foundation in the law of nature for the dogma advanced by its advocates that a majority of numbers alone should rule; proving that numbers alone never made a state; and that the majority should consist of persons and property, which together constitute a state. The Constitution of Virginia was a pact made by all for the benefit of all, and as in it there was no such majority rule, it followed that neither according to the law of nature, nor the Constitution under which we lived was it recognized that a bare majority of persons alone should have entire rule. His argument was essentially, that as property was that which first brought men into a state, and caused them to make laws; moreover, as property could not defend itself, but was ever liable to aggression, it was right and proper that this, the most essential part of a state, should have fit representation to defend it. Judge Upshur served for some time on the bench; in 1841 was made Secretary of the Navy by President Tyler, and in 1844, being then Secretary of State, was killed, with his colleague Gilmer and others, by the explosion on board the Princeton. His appearance was that of a man of middle stature, stout in person, with light hair, blue eyes, and fair complexion; he was graceful and easy in manner

and gesture; his style of oratory possessed nothing impassioned or vehement; yet clear, calm and convincing, it transported its own ideas into the minds of his hearers with a power that made them appear to belong there. He had, in a very great degree the faculty of obtaining and keeping the sympathies of his audience. Indeed, as an orator he may be said to rank very high; his intellect was well trained, and his mind stored with knowledge, and highly accomplished; his style of speaking was unexceptionably good, his arguments forcible, and set forth in language remarkably terse and sententious; in it there appeared nothing superfluous, and nothing misplaced. He was also an able writer, contributing much to the periodical literature of the day; his pieces were good in manner, style and matter. Had not his life been prematurely cut off, he might have risen to even higher political honor, than he had already attained.

Philip Doddridge, of Brooke county, was the most powerful man in the House from the West, and was the acknowledged leader of his party. His reputation and his influence were very great in his own section of country, and, in point of eloquence, he was considered by his constituents a second Patrick Henry. Born of humble parentage, and with few opportunities of improvement, he possessed so much native vigor and brilliancy of mind and such ardor of application, that he obtained a good education, and became one of the leading men and most powerful speakers at the bar, or in the political arena of Western Virginia.

He came to the House the hero of many triumphs, with the avowed intention of changing the basis of representation; and much was expected from his known ability.

In person he was of medium stature, thick set and large, yet not ungraceful in carriage or figure; his face wore a frank manly expression, and his disposition well corresponded with its indications. Possessing a mind well-trained in classical lore, and with abundant knowledge of all kinds; acute, logical, argumentative, accustomed to debate at the bar, and familiar with parliamentary rule from long service in deliberative bodies; confident in the justice of his cause, and assured of its success; with the eyes of the whole West fixed in expectation on him as stimulant to his exertions, he came into Convention, a champion so well armed and appointed, so confident in himself and his cause, and so well sustained by his constituents, and supported by his colleagues, that few men could meet him without some misgivings. He was eloquent in his denunciations of the government as it existed; and bore down upon his adversaries with the impetuosity of a torrent. In denying the fact sta-

ted by Mr. Upshur, that our Constitution was a pact made by all for the benefit of all, he asserted, that it was made in a time of difficulty and danger by the old House of Burgesses, elected with a new name by freeholders, and that the mass of people had but little to do with its formation. And that in this Convention the people, for the first time, had a voice in organizing their own system of government. Although powerful and eloquent, he failed to accomplish his purpose; he was ably met in argument and in vehemence; far surpassed in the disposition to compromise and conciliate; overcome and outvoted.

Leigh and himself, though decided opponents, were still very much alike in disposition; jovial and free in manner, they were men who would enjoy life's pleasures, and take a momentary lead in politics or party. To each belonged similar faults and excellencies; sociable, lively and agreeable, their company was too much sought for their own good. Neither accomplished as much as was expected of him, or filled that place to which his powers seemed to call him.

General Robert Taylor of Norfolk, made some able speeches in favor of the White Basis, and opened the debate on this question. His constituents expressed dissatisfaction at a course so contrary to their interests, and he resigned his seat in consequence.

During the war with England he had commanded the militia on the coast and in Norfolk, and it was mainly owing to his diligence and skill that efficient resistance was offered to the British forces. He was famous for his colloquial powers; no man in Virginia equalled him in agreeable, fascinating and instructive conversation. His appearance was that of a large, portly, and fine looking man.

John R. Cooke of Frederick, and Chapman Johnson of Augusta, were both able lawyers, the latter resident in Richmond. They were elected and employed by their respective counties to represent them in the Convention, and to advocate the basis of the West.

Each made a powerful speech in favor of the views of his constituents, and took a very active part in the debate. They brought to the discussion minds well-trained in every description of debate, and argued their side of the question with the pertinacity and skill of lawyers engaged in an important suit.

The latter was one of the ablest men in Virginia, and might have obtained political honors, even the senatorship, had he desired them. He was, however, devoted to his profession; it suited his quiet studious disposition; and he remained in it, attaining high reputation, and excelling all rivals.

Alexander Campbell, the Baptist Reformer,

mingled in this debate, and contended stoutly for the Western plan of representation and for the spirit of reform generally. A stout, rugged looking man, a Scot by birth, yet brought up in the mountain region of Virginia, he possessed much vigor and originality of mind; he was learned too in many languages, and had his national shrewdness and keenness increased by the excitements of American culture, and improved by the workings of an intellect deeply exercised on religious subjects, and fully inspired with the great idea of reforming the church and the world. He presented that singular spectacle—a cool and cautious Scotchman, thoroughly imbued with, and active in carrying out, the most enthusiastic ideas. And this enthusiasm was accompanied by the firm decision of character, instinctive wisdom, honorable fairness of conduct, abiding sense of religious truth and persevering resolution which honorably distinguishes the Scottish people. It would be better for the world if a people so honest, firm, and wise had more enthusiasm; for we may be sure that it would be exerted in advancing the cause of religion and morals, and thus benefitting the race of man. Mr. Campbell was too much carried away by his love of reform; and his views, embracing every subject, made him, like most reformers, too much a citizen of the world to be a perfectly safe counsellor for Virginia.

He was evidently out of place in this body, and as he stood very much alone, as well in his religious opinions as in his political views, it might be said to him more truly than to a wiser man, who meddled not in politics, "Thou art beside thyself."

The clause in the old Constitution prohibiting clergymen from serving in the Legislature was continued in the present one after debate, and was evidently meant to exclude one who possessed such radical notions and was so anxious to enforce them.

Charles Fenton Mercer of Loudoun was one of the best informed men in the House, and advocated the Western side of the question with much force of reasoning, and a formidable array of facts and figures. He has the honor of having originated the scheme of colonizing the negro race in Africa; and of having labored zealously to carry out that philanthropic plan.

An enthusiast on all subjects, he was even more than usually enthusiastic on this, and made eloquent reference to the services rendered by Western Virginia to the East during the war of 1812, as well as many fervid appeals to both parties to lay aside prejudice and settle amicably their differences.

Henderson of Loudoun, and Powell of Frederick also made several able speeches on this side of the question.

There was one man in the Convention who wore a crutch, and suffered evidently from bodily indisposition; of middle size, and stoutly made, there was nothing in person or appearance to excite attention, except the finely formed head, heavy brows and bushy eyebrows with the dark, keen eyes underneath them. It was at once apparent when William B. Giles opened his mouth to speak, that if the body was crippled the powers of mind were in full activity, and that compensation had been made for impaired power in the one case by increased and peculiar abilities in the other. "His style of delivery was perfectly conversational, no gesture, no effort; but in ease, fluency and tact surely he had not there his equal; his words were like honey pouring from a eastern rock." He had mingled largely in the politics of Virginia and of the Union; and was esteemed, and justly too, one of our ablest men. As a debater in Congress he had no superior; and in knowledge of business, clearness of views, and ability to explain those views satisfactorily, he took the first rank. His influence in his own district, and throughout the State was very extensive. Although born of humble parentage, incapacitated by ill health, and hindered by natural disposition from being a seeker of popularity, honor and fame had sought him out; and as Representative in Congress, as Senator, as Delegate in the Legislature, as Governor of the State, and now as member of this Convention, he had served faithfully, and occupied a prominent place in the affairs of the State and Nation.

No man possessed better conversational talent, or was more willingly listened to; as his style of oratory was conversational, so his conversation was somewhat oratorical; he spoke as if he expected attention, and he was listened to uninterruptedly.

His chief fault was a certain narrowness of mind, the result of strong prejudices early acquired, and increased by the confinement of ill health and the absence of that expansion of intellect which travel, observation, and intercourse give. His intellect worked with tremendous power within a limited space; like a huge hammer swung on a pivot, within its sweep it crushed all opposition, and even the wind of the blow was felt at some distance, yet beyond this circle it had no effect. He is to be esteemed among the first of a class of minds often found in Virginia; strong, subtle, influential in native power and extensive acquirement, yet narrowed down by prejudice or indolence.

This class of minds attain their highest culture, and exercise their full powers only when transplanted. Had Governor Giles possessed bodily health, and had he emigrated early to the Mississippi Valley he would have acquired full

growth, and have possessed an influence unequalled by that of any man who left Virginia and rose to honor in the West. To this class of men we owe, in great measure, that spirit of intense nationality which possesses the Virginians; and makes them to esteem their own State, their own men, and their political principles better than all others; and which, by giving rise to emulation and effort, fosters state pride and tends to produce the effects it makes boast of. It is this very spirit that has led so many from our State into the highest offices: and has made us as a people to occupy so important a place in the affairs of our nation. Virginia owes much to William B. Giles; elevated to the highest offices she could bestow, with nothing save his own merit to recommend him, he loved her devotedly and served her faithfully. Laboring through life for her sake, by his talents rendering her respectable in the councils of the nation, defending her policy with his pen and his tongue, and inspiring with state pride all whom he could influence, he spent his last years in her highest chair of state, and in doing duty in her Convention.

Littleton W. Tazewell, formerly Senator and afterwards Governor, esteemed deservedly a man of reputation for statesmanlike ability, ease, grace, and power as an orator, sound judgment and integrity, also took part in this great debate. His graceful, persuasive oratory was well set off by his tall, fine, gentlemanly looking person, and a voice powerful and pleasant. He reviewed the constitutional history of Virginia, as exhibited in formation of counties and in extending the representation, showing that this extension was based on the protection of the mutual interests of all; and that the alterations made from time to time were made as different interests arose or declined.

He asserted that capital and labor are the two great elements of the prosperity of every state; for without labor capital is worthless, and without capital labor would be useless. Between these two a struggle had always existed, and to reconcile these jarring interests, and confine each within its proper sphere, is the business of good government.

Judge Coalter of Stafford was appointed in place of John Taliaferro, who resigned because of ill health. Having been born and bred in the West, and having lived in the East, he was well qualified to give an opinion in a question affecting both. Shrewd, sagacious, learned in the law, and accustomed to conflicts, his opinion was of value; decided and energetic, a Scotch Irishman as he called himself, he was likely to maintain firmly any opinion that his reason might dictate. His ability and candor as a judge are too well known to require comment or eulogy.

In the debate he took his position, and briefly and clearly made it known. His wish was to conciliate; yet, when he found that western men refused to come into the compromise offered by Marshall, and when Doddridge spoke of having planted his standard and refusing to give way, he spoke out thus, "Gentlemen have planted their standard—I now plant mine firmly in lower Virginia, I think she has law, justice and sound policy in her favor, and much of the spirit of conciliation." He was very deliberate and emphatic in his utterance; his words were all spoken in a sententious manner, and nothing discursive or diffusive appeared in his speech; it was an argument simmered down and delivered boiling hot. His remarks produced sensation.

The most remarkable man in the Convention was John Randolph. "He articulated excellently and gave the happiest effect to all he said. His person was frail and uncommon—his face pale and withered—but his eye radiant as a diamond. He owed perhaps more to his manner than his matter; and his mind was rather poetical than logical." It is not necessary to speak fully of the peculiarities, nor to describe the appearance of one so well known and so much talked of. Every day he could be seen dressed in a full suit of black, with crape upon his hat and arm; and when questioned, answered that he wore mourning for the old Constitution of Virginia, and that in this Convention he expected to witness its death and funeral.

As might be expected, he opposed violently every change proposed; defending the constitution as it stood, and esteeming every reform an innovation. Especially was the freehold qualification in a voter the object of his special affection; and he advocated its retention as if he thought it imperatively necessary for the safety of the State.

According to his usual custom, his eloquence was exerted in satire and invective; his shrill and pipe like voice, musical in its lower tones and like a clarion in its upper ones; his expressive use of the long bony finger, "that javelin of rhetoric;" his whole appearance, and the sarcastic bitter character of his speech, always commanded the attention of the House. One gentleman had spoken too long, and displeased Randolph by the tenor as well as the length of his remarks. "The gentleman told us the day before yesterday that in fifteen minutes of the succeeding day he would conclude all he had to say; and then kept us two hours, not by the Shrewsbury clock, but by as good a watch as can be made in the city of London. (Drawing out and opening his watch.) As fifteen minutes are to two hours—in the proportion of one to eight—such is the approximation to truth in the gentle-

man's calculations." In another speech he spoke of the effort made to attack some of the positions taken by Chief Justice Marshall, and asserted that to overturn those positions would be impossible, and the attack on them as abortive and puny as it would be to assault the Rock of Gibraltar with a pocket pistol.

In the close of the Convention, when the Constitution as amended was about to be submitted to the people, so much dissatisfied was Mr. Randolph, that he proposed that it should be submitted only to those qualified to vote under the old Constitution.

The extension of the right of suffrage, admitting those who were not freeholders to vote, would thus be prevented. The proposition was voted down.

He was one who in Federal and in State politics aimed more to prevent evils than to originate good. In this respect Giles and himself were alike; neither advocated that absurd system called the Progressive; they were constantly striving to check and control the efforts made by other politicians to introduce changes. Both possessed that peculiar nationality spoken of, and were admirable types of the conservative spirit of Virginia.

There were many other men of note in the Convention, of whom I have not spoken; it is difficult to do them all justice, and I have chosen but a few to represent the rest. James Monroe presided at first over its deliberations; being obliged however to resign and leave the Convention on account of ill health, Judge Barbour was appointed in his place and presided with dignity and ease.

This Convention met on the 5th of October, 1829, and adjourned on the 15th of January, 1830; it met at first in the Hall of the House of Delegates; and, when this was occupied by its proper assembly, continued its sessions in the old African Church on Broad street. In the Convention the Constitution passed by a majority of fifteen only; and in the State, out of 42,000 votes cast, a majority of 10,500 only made it to be received by the people. The western members in the House voted against its passage; and the western counties, by a majority in that section of the State of 7,300, voted against its ratification. The second Constitution of Virginia, like the first one, resulted from the efforts of eastern men in the House and eastern votes out of it. The west has never had any decided influence in the councils of Virginia. Thus ended the unsatisfactory labors of the Convention of '29-'30. In it there sat of men who had then, or afterwards, obtained office, three Presidents of the United States, four Governors of Virginia, seven Senators, eleven Judges, and fifteen Rep-

and conditions of poetry may be somewhat altered,) poetry itself will not be sacrificed, or impaired; but, on the contrary, refined and invigorated—exalted to new dignity, endowed with higher powers, and admitted to a nobler and wider dominion. But while we may not convince those, whose poetical faith has been formed so as to exclude every element of christian piety, yet we can state the grounds of our own belief, and show reasons to prove the delusion of those who cherish an unworthy prejudice.

There are two ways in which christianity may extend a propitious influence to poetry; by supplying new trains of thought, and opening a wide field of truth before its view. And again, by its direct influence on the heart, purifying, harmonizing, and elevating its tastes, affections, and aspirations. Both these influences, however, may be regarded as one. Both unite in moulding christian character. Truth transforms and sanctifies, when it is believed; and it is mainly by its moral effect on the tastes and sentiments of the soul, that the benigu influence of religion is extended to poetry.

1. *The spirituality of religion releases the mind from the dominion of the senses, and elevates the range of its faculties to a level with the higher regions of truth.* Man, possessing a two-fold nature, stands related to two worlds—the one material and visible; the other, comprehending this—as an island amid an encircling sea—immaterial and spiritual. Piety is the habit of the soul, holding communion with invisible and spiritual objects. Faith is a complex spiritual exercise, at once intellectual and emotional, by which the mind converses with that invisible sense, the existence and glory of which have been revealed by divine inspiration. It is not an exercise prompted by a vague impulse of curiosity, to explore the wonders of a region, remote from our sphere and disconnected with our interests. The objects and beings of that invisible world are associated with man in the most intimate moral relationship—bound to his heart and conscience by the strongest ties of obligation and interest. There is the glorious dwelling-place of the great Father of our spirits; the holy habitation of high orders of angelic intelligence and of beatified spirits of the just from earth ascended; there is the final home of all the pure and faithful from amongst men; where the raptures and glories of an immortal destiny shall be unfolded through eternity. Consequently the tastes, the sentiments and the aspirations of the pious heart are inseparably connected with the vision of faith, which surveys this invisible scene. The devout mind is habitually drawn thither by the strong fascination of love, desire, and hope. “Walk-

ing by faith and not by sight,” “looking not at things seen and temporal, but at things unseen and eternal,” the humble believer moves abroad on the earth in the light of a higher existence, and walks among his fellowmen, encompassed by a cloud of nobler witnesses from heaven. To this sublime and boundless theatre the kindling vision of faith habitually turns. It is not the dull and dreamy gaze of an empty mind, fixed on a region of vacancy and gloom. It is not the downcast scowling glance of a morose spirit, looking along a cold and narrow avenue, from which the light and love, the sights and sounds of the living universe are all excluded. Nor is it yet, the illusory vision of a poetic genius, exploring the Elysian fields of ancient mythology, conversing with the gods and heroes of a departed faith, or constructing in the air some floating fancy-realm, peopled with fairies, muses and genii—the transient sport of a capricious imagination. No. It is the intelligent, believing, devout apprehension of a scene of existence, the reality of which is amply attested; the beauties and wonders of which infinitely exceed the noblest creations of human fancy; inhabited by beings of surpassing intelligence and radiant loveliness; by swift-winged ministering spirits, angels, archangels, cherubim and seraphim, amid “thrones, principalities and powers;” where, “in light inaccessible and full of glory,” the great Eternal Spirit presides, veiled in the awful mystery of his infinite nature, crowned with the radiance of his own perfections, and dispensing light and love over a dependent universe.

It is true, every mind familiar with the disclosures of divine revelation, has some vague discernment of this invisible scene and these spiritual beings. But their existence and glory are not fully realized—they do not become permanent objects of affection, desire, and hope, until they have first become objects of enlightened christian faith. Now it is mainly through the medium of the affections that ideas and associations impress their image on the character. Society, natural scenery, and the events of personal experience stamp their impression on the mind, by means of a fusion, produced under the glowing emotions of the heart. The society must be that of endeared companionship. The scenery must lie around the home of our youth. The events of personal experience must be connected with our deepest emotions and fondest hopes. In a word, there must be fascination, as well as familiarity, in order to produce an assimilation of character. When we survey this infinite expanse of vision, with its sublime grandeurs and dazzling glories, with its lofty intelligences, and its incomprehensible Deity, what mighty conceptions exalt the mind and expand the heart! And

when we remember that, in the case of the devout christian, this scene is surveyed, not by occasional transient glances, such as a traveller in a foreign land might cast over the surrounding country; but with the prolonged, eager, loving gaze, with which one beholds the scenery of his native land; and that this prospect, in all its elevation and grandeur, is habitually within the range of his vision; so that his character is matured and moulded under its presiding influence! how can it be otherwise, than that a mental, as well as moral assimilation, should take place in his experience? How can it be otherwise, than that under this transporting prospect, there should be a progressive transformation of the mind and heart—when “beholding thus with open face, as in a glass, the glory of the Lord, we are changed into the same image from glory to glory?”

This course of reasoning is amply sustained by the testimony of facts. There may have been contracted and greivelling spirits, who under the mask of piety, have displayed the fruits of superstition, bigotry, and fanaticism; but the humblest and rudest capacity has never yet been quickened by the light, warmed by the love and animated by the hope of the gospel, without manifesting a visible mental enlargement. The mind may remain ignorant as to the details of human science, but there is a liberality of sentiment and a loftiness of conception on general subjects, which bear testimony to intellectual improvement. Indeed, religion as we conceive, forms the basis of true mental independence; and fosters the noblest growth of the intellect. The progress of the mind is shaped by the moral tastes and sentiments; and by a reference to these, we may distinguish the various grades of human intelligence. There is a *secular* turn of mind—with a proneness to seek its gratification in the region of politics, commerce or agriculture. This is shaped by a love of wealth; and all its exercise is subservient to accumulation. There is a *scientific* turn of mind—exploring the lifeless forms of matter, and spurning all spiritual inferences, as lying beyond its peculiar province. This is swayed by vanity—and collects its stores for the purpose of ostentation. There is again a *romantic* or *poetic* turn of mind—inconstant and vacillating, unless when joined in meet fellowship with piety; actuated by a love for the sublime and beautiful, but untaught, as to the sphere of their highest manifestation; seeking in vain its fruition amid present and visible things, and swayed perpetually from its aim, by the controlling spirit of worldliness. All these grades of intelligence fall short of the higher regions of truth. They are associated with no pure spiritual taste—sustained by no lofty desire or hope,

which would incline the thoughts to mount to such an elevation.

When any worldly interest is made the reliance and refuge of the soul, for the most part, the time and attention are engrossed in secular pursuits; and seasons of leisure are devoted to frivolity and dissipation—the false glitter of unseemly wit, or the gaudy fascinations of sensual pleasure; and when any intellectual exercise is attempted, beyond that which is directly subservient to physical necessities, (as in the case of those scientific explorers, who fail to discern God in their scrutiny of his works, and who disown the obligations of piety and the hopes of a future life, in their observations on man's nature and destiny.) what else can it be, but the blind exhibition of mere power—the false triumph of fruitless skill, converging in self, and terminating in vanity? The mind looking to the present scene alone as a source of satisfaction, encumbered by downward moral tendencies, is destitute of that high aspiration toward a congenial element—that fervent admiration and homage of the soul for truth, in its spiritual manifestations, which alone can properly invigorate its energies, and sustain their worthy and consistent exercise. Its movements are crippled and abortive. It either crawls sluggishly on the ground, or its flight is lowly and broken; like the ineffectual struggles of some mighty bird fettered to the earth, and free to rise only as far as the length of its chain will permit. Vain is the wide sweep of its wing! Vain the elastic energy that nerves its frame! Its strength is expended in futile and frantic volutions in a contracted circle. Its plumage is soiled by a ceaseless contact with the dust. It can take no continuous flight. It can rise to no becoming altitude. It cannot give full scope to its native capacities; nor inhabit that high element in which it was formed to move. The lofty summits of truth are unscaled. The ethereal regions of a higher life are unexplored! In the experience of the devout christian, the mind, released from the enthrallment of a worldly spirit, finds its congenial element in this exalted sphere; and is sustained in its sublime excursions by the higher habit of religious faith.

II. But not only does this spiritual scene, with its glorious beings, as contemplated by faith, extend an elevating and inspiring influence over the mind. *The scenery of nature, and the events of human life are, at the same time, invested with a spiritual atmosphere.* Some may be ready to ask—“will not religious devotion to unseen spiritual objects weaken the ties and affections that bind us to the present scene, and produce a frigid insensibility of soul to the endearments of nature and life?” By no means! Religion, it is true, breaks the bondage of a blind and sordid idola-

try to this world; and teaches the estimation of its true value; but at the same time exalts its objects to a nobler attitude, and endows them with a higher significance. It connects them with spiritual associations, and crowns them with the light of an immortal destiny. No! We degrade, when we idolize the present scene. We mar its beauty, we destroy its dignity, we dispel the charm of its high poetic interest when we look upon surrounding nature, as a moving mass of unconscious matter, isolated from all spiritual existence. Human life sinks to an inferior level of mere animal being, when disjoined from the prospect of immortality. Beauty and sublimity are not material qualities. They are the visible expressions, in the type of matter, of some veiled spiritual element, which assumes this mode of manifestation. They find their interpretation in those trains of association which lead the mind to moral qualities, or to the glorious attributes of God. Religion sanctifies and renders immortal the tenderest ties and best affections of our nature. They may be subject to earthly vicissitude. They may seem to terminate at death; but they will be restored and perpetuated on another scene of being. As some mountain streams flow for a short distance in their channels, then suddenly sink under the surface of the earth; and after holding a subterranean course rise again and flow along the landscape in deeper, stronger and brighter currents, so the affections which spring up in this life, if sanctified by faith, though they sink in the grave, will rise again and flow with greater depth and power over the fields of immortality.

What sublime associations surround the scenery of nature under the pervading presence of God, as a reconciled Father, "whose tender mercies are over all his works!" The earth with its vales and mountains, its caves and cliffs, its fields and forests, its rills and rivers, its lakes and oceans becomes radiant with His glory and vocal with His praise. "The spacious firmament on high," with sun, moon and "stars which are the poetry of heaven," beams with a brighter splendor, and peals forth the music of a nobler anthem. The events of human life, and the revolving train of the variegated seasons, spring, summer, autumn and winter, with infancy, youth, manhood and age, as they roll along under the guardianship of a merciful providence and bear the soul onward to an immortal paradise, all by their transporting testimony, prompt the exclamation from the pious heart—

"These as they change, Almighty Father! these
Are but the varied God, the rolling year
Is full of thee!"

How cold, dim, and cheerless, in comparison

with this glorious reality of faith, is that abstract creation of an undevout fancy, so languidly invoked and so listlessly adored by its poetic worshipers, under the title of NATURE! At best but a dreamy, superficial admiration of certain vague qualities, floating like shadows on the air; such as power, wisdom, goodness—the unconscious fragments of a God, disjoined from moral attributes; without the purity, without the majesty, without the personality and the prerogative of God! How meagre and frivolous the fabled beings of ancient song, as reproduced in modern poetry, in contrast with those "quick spirits of the universe," beings of spotless purity and towering intelligence, leagued in sympathy with man, which, in radiant ranks, bow and veil their faces with their wings before the throne above; or bend from Heaven to hail with joy the return of every prodigal; or encamp in watchful guard around the habitations of the just; or on missions of love and mercy to man, traverse the air with winged speed, or "walk the earth unseen, both when we wake and when we sleep." How free the access of the christian to the temple of nature—how close his approach to her shrine—how intimate his communion with her veiled mysteries! How legible to him her sacred lessons, as imprinted on the page of every landscape!

"He looks abroad into the varied field
Of Nature, and though poor perhaps compared
With those whose mansions glitter in his sight,
Calls the delightful scenery all his own.
His are the mountains, and the valleys his,
And the resplendent rivers, his to enjoy
With a propriety which none can feel,
But who, with filial confidence inspired,
Can lift to Heaven an unpresumptuous eye,
And smiling say—'My Father made them all!'"

* * * *

Acquaint thyself with God, if thou would'st taste
His works! Admitted once to His embrace,
Thou shalt perceive that thou wast blind before.
Thine eye shall be instructed, and thy heart
Made pure, shall relish with divine light
'Till then unfelt, what hands divine have wrought!"

III. Connected with the views already presented, there is another propitious influence springing from christian piety to foster the genius of the poet. *It preserves the sensibilities of the heart pure and fresh amid the perverting influences of life; and perpetuates the capacity of admiration amid the deadening encroachments of familiarity and experience.* Religion implies purity of heart. It corrects unworthy tastes, harmonizes discordant passions, and arrests evil propensities. It opens the fountains of right feeling, directs the affections to proper objects, and awakens lofty aspirations in the soul. The indulgence of corrupt dispositions hardens the heart,

blunts the sensibilities, and produces a state of premature torpor and decay. The same law applies to the moral as to the physical constitution. The regular healthy action of its powers promotes the tone and vigor of the system, while irregular diseased action gives place to succeeding languor and feebleness. Impure passions produce a subsequent apathy proportionate to the degree of their excitement. Their evil fires scathe and burn and desolate the soul, and the victim of licentious indulgence soon sighs over the ruin of a spirit, shrunk, shrivelled and blasted within him. The testimony of all experience has demonstrated the truth, that piety fosters and invigorates, while vice sears and hardens the human heart. Insomuch that, if forgetful of all higher considerations, it would still be the policy of a poet in order to success in an art which so much requires the exercise of our finest sensibilities, to obey the dictates of piety, and cultivate purity of heart. An erring poet has left a beacon in his own verse to warn the world of these hidden rocks, on which many a gallant vessel has been wrecked.

"I wave the quantum o' the sin,
The hazard o' concealing.
But och! it hardens a' within
And petrifies the feeling!"

Coleridge has defined genius to consist in the capacity, "to carry the feelings of childhood into the powers of manhood—to combine the child's sense of wonder and novelty, with every day appearances which experience has rendered familiar." Macaulay, in a passage which we noticed in an early part of this discussion, has advanced substantially the same idea; although it is done with a design to disparage the dignity of poetry. He says: "he that, in an enlightened age, aspires to be a great poet must first become as a little child." This remark is based on the recognition of a melancholy fact in human experience. His error consisted in regarding this fact as the honorable distinction of wisdom, instead of a shameful result of infirmity. The character of man changes unconsciously as he advances in life. But alas! if he grows wiser he seldom grows better in his experience. Many, in moments of sad review have sighed more over what they have lost than they have exulted over what they have gained in the transition from youth to manhood. Indeed that acquired wisdom is of most questionable dignity and worth, in attaining which we part with what may be called the youthful poetry of our nature. It is rather a partial and superficial knowledge which has assumed the title of wisdom. It consists not of deep and full supplies from "the Pierian spring," but of those "slight draughts which intoxicate

the brain." Yet as the world goes such wisdom carries the day. "Nil admirari," is the motto of modern science and philosophy. But the ardent enthusiasm of youth is not entirely the offspring of ignorance and weakness. Nor is the stoical indifference of mature age altogether the result of accumulated knowledge. It is well that the superstitious fears of childhood should vanish away, for *they* spring from ignorance, or rather they are perversions (caused by ignorance) of a principle as yet not developed or matured amid sufficient light. But the vivid emotions and the glowing admiration characteristic of early life are not disproportionate to the objects which call them forth. They are the ready responses of a nature not yet benumbed by familiarity, nor corroded by care, nor blinded by habit, nor stiffened by pride—at once the vivid realization of the present, and the prophetic intuition of a future state of felicity and wisdom.

"Heaven lies about us in our infancy!
Shades of our prison-house begin to close
Upon the growing boy,
But he beholds the light, and whence it flows,
He sees it in his joy!

At length the man perceives it die away,
And fade into the light of common day."

In childhood visible objects are coloured with hues of loveliness and glory, reflected from an invisible sphere. The inquisitive mind looks beyond the horizon of our senses. It extends to unseen spiritual relations. It asks of every passing, phenomenon—whence?—why? and whither? These silent questionings, these far-reaching, exploring glances of an immortal mind as it moves abroad amid scenes of novelty and wonder, are the rational sources of that quick susceptibility and kindling admiration peculiar to the morning of life: and these, when matured into the powers of manhood, constitute the high prerogative of genius. But, alas! man soon learns to stifle and smother these inward questionings, as absurd and extravagant, and in their stead to cultivate more *practical* and *substantial* qualities, as better adapted to success in life! He plucks the eagle wing of his spirit, to avoid the flights of a wayward imagination! He dims the eagle eye of his mind, to prevent its rolling in poetic phrensy; and at length adapted to his sphere, he learns to strut upon his dunghill, a tame companion of ordinary fowls! As man grows up under the dominion of a worldly spirit, and engages in the pursuits and passions of earth, a thousand causes combine to darken the generous susceptibilities of his heart, and blot out the bright capacity of admiration from his mind—without concluding them to be eclipsed and ex-

tinguished, as glimmering night-fires, by the meridian light of perfect knowledge!

We are supposing the case of one destitute of vital piety. And when we look at the dark array of hostile forces with which genius, unsustained by the quickening energy of faith, is called to contend in its earthly career, it is no cause of wonder, that it should be dimmed, and soiled, and wounded in the conflict, even if it should not be overcome and taken captive. Familiarity, custom, the sway of fashion, the influence of society, corroding care, conflicting passion, pride of intellect, and worship of Mammon—all these attend the career of man, and gradually consume the susceptibility and vigour of youthful genius. When associated with these qualities, even progressive knowledge tends to destroy the capacity of admiration. Knowledge in such a character must be superficial. It may be exact as to the details of science. It may be clear and comprehensive as to the compass of philosophy. It may cover a wide range of subjects, in every department of human discovery. And yet it may be profoundly ignorant of all. There are questions, connected with every topic of investigation, left untouched. There are depths unfathomed, in every quarter of that sea, over the surface of which he has sailed, marking its tides, dotting its islands, and defining its coasts. "There are things in heaven and earth not dreamt of in such philosophy." Truth is perceived only in its visible form and substance. The trunk of the tree is measured, and its roots as they penetrate the earth are explored; but its invisible branches stretch abroad in every direction, adorned with leaves and blossoms; and its viewless top towers to heaven, laden with fruit. Hence, because the trunk alone is visible, and the top and branches reach out of sight, the tree is considered nothing more than a dry and lifeless trunk! There is profound falsehood under that stupid self-flattery, which induces the belief that increasing experience and knowledge destroy the capacity of admiration—that science and learning are incompatible with genius—and that a poet cannot exist in an enlightened age! What has the age to do with the poet? Does it breathe and eat for him? Does it think and feel for him? No! His thoughts and feelings are his own—independent, self-conscious, thrilling, high above the heads of the multitude! The true poet is always in advance of his age. He stands alone, on an eminence, "and sees the distant tops of thoughts, that men of common stature never saw." There may be familiarity, without knowledge. Nay, there may be a familiarity, which opposes knowledge; inasmuch as when once induced, it smothers future investigation. The mind may be familiar with the surface of facts, and yet re-

main ignorant of the profound truth involved therein. Its knowledge may be like the acquaintance a stranger would form, with a company of foreigners residing in the same house, but of whose language he was totally ignorant, and with whom he had no means of intercourse. He would at first feel some curiosity in beholding their singular appearance and dress, and hearing the strange jargon in which they conversed; but at length accustomed to this, he passes them by in silent indifference, familiar with their faces, but ignorant of their minds. It is such *ignorant familiarity*, and not thorough knowledge, that destroys the sense of novelty and wonder experienced in childhood, and blights the bloom of poetic genius. Many of those early questionings of the mind are never answered in the subsequent attainments of the man. He learns to disregard them, as childish or extravagant, and having acquired the habit of indifference to such topics, he confines his attention to what he conceives a *more important* and *practical* range of inquiry. In his superficial attainments in secular and scientific knowledge, he becomes *intellectually proud*. His penetration is *so keen*, his knowledge is *so extensive*, that little remains for him to discover, and nothing to admire! For what remains unknown he can easily adjust by an intuitive decision as to what it *ought* to be, and consequently what it is! His intellect is *so towering*, that it can perceive nothing *higher* than itself, to which it can *look up* with admiration! All its glances are either directed around on its own level in self-complacent indifference, or bent down on things beneath, in stupid contempt. Such is the character of that worldly wisdom, which scoffs at the higher exercise of genius, as eccentric and visionary. But genius has a brighter eye. Its glance penetrates beneath the outward surface of things, and reaches beyond the boundary of the senses. It looks upon objects more in their true light. It traces truth in its remote relations—in forms of beauty and sublimity. And there are heights all radiant with glory, continually rising before his vision, as he advances; so that his kindling eye is ever lifted upward in admiring wonder and delight! Thus while genius preserves the vigor of its powers, it maintains an humble and child-like attitude.

But if genius be destitute of faith, if the poet be a stranger to vital piety, there are manifold and mighty causes in operation to crush the vigor of his powers—causes that arise, not only around him, in the habits and customs of society, and the sobering influence of time and experience; but causes that originate in the evil habits of his own life, and the perverted state of his moral nature. His heart clings to earth. His affections bind him to visible things. His desires

like an opposing current, resist his ascending progress. He has no high, constant aspiration, tending upward. He has no immortal hope, "anchored within the veil"—no "correspondence fixed with heaven." He has no habit of high communion with God—no confiding filial trust in Him, as a tender and compassionate Father in Heaven! Under all these disadvantages, through all these *opposing* influences, his genius must *force* its way to find a congenial element. And if, *intellectually*, his gifted spirit still mounts toward the higher regions of truth, and converses with spiritual forms and associations; it wanders thither *as an exile in a foreign land!* *The ties of his heart—the attractions of his home are not there!* And if, *as a poet*, he should still cherish a child-like capacity to *feel and admire* amid the surrounding glories of the universe; alas! it must be *as an orphan child!* God is not known and loved as a Father. And without piety, man exists in a state of moral orphanage!

But in the case of the devout christian, all such considerations become propitious to poetic genius. The entire frame and habit of his piety inclines in the same direction. The moral change which constitutes him a christian, is described as a return to the state of childhood—"Except ye be converted and become as little children, ye cannot enter into the kingdom of heaven." In the subsequent experience of the christian, God is recognized as an-unseen but ever-present father. The confiding spirit of adoption, and the humble attitude of a child, are maintained through life. And not only does the awful mystery and infinite glory of the divine character, like a pillar of cloud and fire, attend the christian through all his journey; but the visible works of nature are associated with the divine perfections, and every part of the vast universe is pervaded by the presence of its author. Adoration of the character, and admiration of the works of God, are the habitual exercises of christian faith. Under these high and sacred influences, the susceptibility and ardor of poetic genius find the most fostering encouragement.

Other considerations, sustaining the views advanced in this essay, must be reserved for another number.

W. C. S.

EPIGRAM—*By a Conservative. On seeing the State Flag upon the Capitol upside down the first day upon which the Legislature met under the new Constitution.*

The flag upside down! as the emblem one sees,
The effect, to our thinking, quite odd is,
For lo! as the folds are unfurled by the breeze,
The tyrant is over the goddess!
Virginia! this typifies rightly thy fate
To day when your children are "smarter"—
For, all topsy-turvy appears the old State
Beneath her new popular charter!

THE HEMLOCKS.

All poets who with thoughtful awe
Walk the green earth, as men advised
Of holy ground, some sweetness draw
From things of other minds despised;

And understand the hidden springs
Of love and hate in human kind.
And yet, 'tis said, a linnet sings
The sweetest when its eyes are blind.

The city ladies' eyes were wet,
Or treated with no show of scorn
His lines: they touched me nearer yet,
Although I am but country born.

My cheek was pale for lack of life,
And paler for my mourning gown;
And when he came, the winds at strife
Had brought my heavy tresses down.

And I was leaning on my hand
In listless mood: The pines below
Made solemn music through the land,
Quite up to where the hemlocks grow.

I saw a shadow move across
The cliff, before I met his look,
His noiseless foot was on the moss;
An angler by his rod and book.

The hemlock trunks were rough and tall,
Their fibrous roots, thrust forth to drink
The moisture of the waterfall,
With lichens hid the awful brink.

I would have called in my affright.
My coward tongue was stricken mute.
—It was as swift as thought or sight,
A sudden gap within the root.

And if he cried, the cry was lost,
And I was kneeling on the sod.
And wept to see the chasm crossed,
And in his grasp the broken rod.

There swung a vine with clusters brown,
Between two trunks from each to each;
With all my strength I drew it down,
With all my might I bore it down,
Until it fell within his reach.

And when he thanked me with grave eyes,
And with a pale but gracious lip,
I felt as when a maiden spies
The pennon of her lover's ship.

The ship that from a foreign sea
Brings the true heart of which she dreamed
But yesternight. A Mystery
Grew up between us then un dreamed.

I little thought of love before;
I knew he won my heart with ease.
The rustic swains who shunned my door,
Had thought me coy and hard to please.

Their laughter seldom moved my mirth
Because it was as grainless sheaves;
I better love the gala earth
And songs of birds among the leaves.

The dewy sward, the misty height
Slow purpling in the morning gleam,
The copses where with footsteps light
He came to angle in the stream.

And sat whole hours at my knee
Repeating from some pleasant book,
While tangled in a stooping tree
His line detained the guiltless hook.

And once he read beside the rill
Some verses with a cadence sweet,
And when I praised the writer's skill
He laid the poem at my feet.

And smiled and said the lines were his,
And written for a lady fair,
Who loved all Nature as it is
Better than breathing city air ;

But that she far excelled his rhymes,
And might have worn a civic crown
If she had lived in Roman times ;
And how her lovely eyes were brown.

And that he loved her more than life
Itself or fame : this much he said,
When stricken in a playful strife,
Sickening, I turned my head—

I turned my foolish head to hide
The tears that would not be repressed ;
But when my altered mien he spied,
He drew me blushing to his breast.

And I, because I understood
The story, and its purpose then,
In that brief moment,—as he would,
Turned my wet face to his again.

'And do you love me,' so he cried,
'And are you not the lady fine ?'
I knew in all the land beside
There was no lighter heart than mine.

J. M. LEGARE.

Aiken, Dec., 1851.

THE NEW CONSTITUTION.

FEMALE EDUCATION. THE SOUTHERN FEMALE
INSTITUTE AT FREDERICKSBURG, VA.

The new Constitution which has just been adopted with so much unanimity, inaugurates a new era in our history. The "old Constitution" has been overhauled and condemned as unseaworthy, and a new ship of State, after a new model, has been turned out from the stocks. The old officers have been dismissed, and the "new Constitution" has just been launched upon the popular wave, amid the vociferous cheers of an enlarged crew, with orders to leave the old landmarks, and stand out to sea in search of that Utopia which has hitherto eluded the researches of the political philosophers.

Whether the voyage upon which we have start-

ed, shall be attended with favorable winds, and conduct us in safety to the haven of our hopes, or terminate in disastrous wreck, "time, sole philosopher," must determine. No human sagacity can solve the problem. In the mean time it is useless to indulge in vain regrets and waste our breath in sighs for what has passed away never to return.

Let Conservatives and Radicals, Whigs and Democrats leave the things which are behind, and press forward to those which are before. We are all embarked upon a common bottom, with common interests and a common destiny. Let us take a calm survey of our position, and address ourselves like men to the work which lies before us. Our political opinions do not affect our moral obligations. We owe allegiance to the Commonwealth, and Virginia expects every man to do his duty in that sphere of life which Providence and the Constitution have assigned him.

For the first time in our history our theory and our practice coincide, and our new organic law proclaims with authority the "Kingdom of the People." Our bill of rights has always affirmed that all power is vested in and derived from the people, and that magistrates are their trustees and servants and are at all times amenable to them. Hitherto these political axioms have been naked abstractions. The new Constitution has clothed these abstractions with the venerable forms of law, conferring the right of suffrage upon all citizens who are in a condition to exercise an independent judgment, and express their free will, and making all Magistrates, Legislative, Executive and Judicial, eligible by those among whom they administer their functions.

This is certainly a broad base for the fabric of government. But it is not too broad for those who hold the American doctrine of the capacity of man for self-government. For ourselves we avow our faith in that doctrine, and proceed to expound some of the conditions upon which in our judgment it depends. We do not believe in the capacity of all men to govern themselves—the native African for instance, or the untutored savage. We have serious doubts about the fitness of many of those people in Europe who have been awakened to such a deep sense of their wrongs, and have struck such bold blows for their long-lost rights. We admit their right to subvert existing despotisms, but we doubt their capacity to re-construct from the ruins a fabric that will endure. We fear that they are destined to pass through a long series of revolutions and relapses into despotism, before they attain to the stature of freemen. We, Virginians, were more fortunate, we inherited the great principles of civil liberty. Our Colonial

infancy was a long probation—our revolution a baptism of blood. Even after we were able to stand alone, our fathers did not think it safe to carry out our principles to their logical consequences, and it is only after the lapse of three-fourths of a century, that we have admitted all our citizens, with certain necessary exceptions, to equal political privileges.

And now that we have taken this bold step, it seems to us to be incumbent upon all patriotic men, and especially upon those to whom has been committed the high trust of legislation, to do all that in them lies, to strengthen and to perpetuate those institutions, in whose success are involved the sacred rights, which are declared in the fundamental law, to be the inalienable heritage of the sovereign people.

Wise builders look to the foundation. This in the present case is broad enough—it is composed of the mass of the people. But breadth is not the only condition of a safe foundation. Prudent Architects regard quality, and prefer the solid rock to the shifting sand. Wise statesmen too will look to quality, or if you please, to qualification. These are prescribed in the constitution and have already been enumerated, and the enumeration is perhaps as comprehensive as it was possible to make it. Among the qualifications of a voter, are a “sound mind,” and a freedom from “conviction of criminal offences.” Here is a distinct recognition of intelligence and moral character as necessary qualifications of a voter. It would not have been possible to discriminate with perfect accuracy between the degrees of intelligence and the shades of morals which should qualify or disqualify a man for the exercise of the right of suffrage. Mind and moral character are too intangible, and inappreciable, to be weighed in human balances. Of course we do not suppose that this provision means more in legal contemplation, than is expressed in the letter. As to moral character, our law in mercy presumes every man to be innocent until he is proved to be guilty, and it therefore only excludes those who have been “convicted of criminal offences.” The spirit of the provision extends to those who are guilty. So also the term “unsound mind” refers only to those who in the language of the law are “*non compos mentis*”—have no mind. And yet we are glad to see any recognition of mind, even in its faintest glimmerings, and of moral character, though it just keeps out of the Penitentiary, as necessary qualifications of a voter. But since we have left the land, and discarded property as an element of political power, and look only to mind and moral worth, as constituting men, it follows that these should be objects of the State’s fostering care, and that whatever tends to raise

man in the intellectual and moral order, should receive the approbation and aid of the Legislator, within the sphere of his constitutional obligations. That education has this tendency will not be denied. Accordingly our Legislators have freely incorporated and liberally endowed institutions of learning of all grades, from the humblest village academy to the Military Institute, and the University of Virginia, two of the proudest monuments of the far-reaching forethought of our ablest statesmen and patriots. This beneficent legislation is, we trust, the token of still greater things to be done for the development of man’s moral and intellectual nature, in that new dominion which has just been inaugurated, and which is predicated upon the idea that man and not money is the only legitimate element of political power, and the basis of the fabric of government.

But there is an interesting class of society which has been most unnaturally excluded from all participation in the State’s parental care for the education of her children. We mean the daughters of Virginia. This we believe is the result of a mere prejudice, for which no good reason can be given. Fearful has been the penalty which woman has paid for aspiring to be wise in the garden of Eden. Greatly has God multiplied her sorrow, and long has been her penance for her fault. But even in her humiliation, her influence has been felt. She has been alternately the slave and the mistress of man, and the governors of the world have been often the automata of whose movements she has been the secret spring. It was Christianity which removed her curse, and taking her by the hand placed her by the side of man, who with one consent acknowledge her as the mother of their peace and joy. Henceforth there is no more opposition between them, than between a planet and its satellite, each moving in his own orbit, the lesser is subordination to the greater, and both in obedience to a common law.

If woman is an intelligent, moral agent why should not her mind be developed, disciplined and beautified by culture? Can it be that an educated woman will be less useful or ornamental as wife, mother, or daughter than an ignorant one? Is not the very definition of education the drawing out the powers of the subject, and does it not comprehend all that series of discipline which enlightens the understanding, corrects the temper, forms the manners and habits of youth, and fits them for usefulness in their future stations? The thorough education of females cannot be opposed but by those who have mistaken the nature and end of education, which is to qualify a woman to do with the greatest

wisdom and modesty, efficiency and ease the duties resulting from all her relations in life.

To have a smattering of science, to spout fluently a few French phrases, to keep time with the fingers in unison with an Italian song, or with the feet in the mazes of a voluptuous dance is not education. It is such accomplishments as these falsely so called, that fill men of sense with disgust, and create a prejudice against attempts to raise the standard of female education. It is the want of thorough discipline, that makes women as well as men vain, flippant, and pedantic, and disqualifies them for the sober duties of life. The time is past when slipshod feet and untidy attire are the signs of a literary woman. We agree with Miss Martineau in the sentiment, that it is a proof of greater and more varied talent to bring up a family well than to write a good book. And the discipline for which we contend would drive the whole generation of Blue-stockings from the land.

But it may be said that private enterprise is competent to raise up literary institutions of sufficient merit to attain these ends. We would not say one word to depreciate the many schools which are doing much and perhaps all that is possible, with their limited means, for the education of females. And yet we do not hesitate to express the opinion that no amount of talent and personal worth can compensate for a full corps of instructors, adequate apparatus, and the other facilities which are furnished by public bounty, for the benefit of our young men. Upon this point read the testimony of Mrs. Phelps, one of the most experienced teachers in the union. In many schools, she says a single teacher often has the charge of 40 or 50 pupils in one room, where writing, rhetoric, philosophy, painting, arithmetic, chemistry, and spelling, are all mingled together in chaotic confusion. The teacher, with no kind of apparatus for illustrations, no leisure to investigate—with scarcely time to hear a rapid recitation from memory of the lessons of each class—and this too while governing the school, called upon to make pens, to look over sums, and point out the proper shades for the embroidery of a flower. She adds that there are many schools in our country, where such scenes are daily presented. Now the teachers are not to blame for these things, they do what they can with their limited means, and deserve credit, not criticism for their praise-worthy labors. But how can such schools be compared in point of efficiency with our colleges for young men, furnished at the public expense, with an adequate corps of thoroughly educated instructors, each having his own *specialité*, and instead of hearing mechanical and parrot-like recitations, im-

parting instruction with ample time for prelections, lectures and daily examinations.

But it is said by some that the mother is the best instructress of the daughter, and that the character, mind and manners of a young lady are best unfolded in the shade of her home, and under the watchful eye of her mother. Whether this opinion be true or false, it is certain that mothers have a large share in the education of children, and are the sole teachers of many. And this fact is a conclusive argument in favor of increased facilities for the education of the present generation of young women, who are to be the mothers of the next generation of men and women. But the duties of a wife, of a mother, and of the mistress of a family, the daily cares of the household and the demands of society, are, in most cases, utterly inconsistent with the systematic and thorough instruction of their more advanced children. In such cases it becomes necessary either to send their children from home, or to have private tutors and governesses in the family. There is at the present moment a great demand for these in Virginia. This demand has hitherto been supplied from the North. But for the last few years a serious objection has been felt by many of our best citizens to the importation of governesses for their daughters from a region, where society, in all its gradations, is more or less infected with a fanaticism, which is at war with our peculiar institutions, upon which depend as the effect upon the cause nearly all that is distinctive in our habits, our manners, and our governmental policy. Sympathizing as we do with these objections, we greet with a hearty welcome "the announcement of a Southern Female Institute at Fredericksburg, Virginia," which seems designed to supply the very desideratum we have been discussing, and to carry out the foregoing principles and opinions.

A memorial was presented to the last legislature asking an appropriation to erect suitable buildings and provide a library and apparatus for this institution. Although the objects of the memorial were commended by Governor Floyd in his message, and seconded by the leading newspapers of the State, its prayer was not granted.

And yet it seems that the enterprising professors have put the school into operation at their own expense, and such we understand has been the successful working of the plan, under many disadvantages, as to have extorted the approbation of many who doubted at its first suggestion. From the "Announcement" which lies before us, we extract some of the distinctive features of this interesting institution, referring those who desire information more in detail, to the pros-

pectus. It seems to be a combination of the course of instruction and discipline of the University of Virginia, and the Military Institute judiciously adapted to female education. It is under the management of sixteen trustees, representing the different christian churches, and political parties, so that it cannot be perverted to party purposes in religion or politics.

The trustees choose the professors, one of whom is an alumnus of the University, another a graduate of the Military Institute, and the third a Frenchman—all reputed to be men of fine character and attainments. The course of instruction is by prelections, lectures and textbooks, with rigid daily examinations, and comprehends natural, mental, and moral philosophy, chemistry, history, mathematics, rhetoric, Belles-Lettres, philosophical criticism, and the Latin, French, Spanish and Italian languages.

We understand that the application to the Legislature has been renewed, and we trust that our good old mother who has done so much for her sons will not turn a deaf ear to the pleadings of her daughters.

But some men may say *cui bono*—to what good end are our young women to be taught all those sciences whose hard names have been enumerated. We have already replied that the young women of the present will be the mothers of the next generation of men and women, whose office it will be to teach at least the rudiments of these sciences to their sons, and all experience proves how much depends upon this early instruction. But the objection which this question implies evidently rests upon a fallacy which it may be well to notice. There is an idea lurking in the minds of some men that the sciences have no correlatives, no corresponding realities in the practical world, or if they have, it is something which is the peculiar property of men, and with which women have nothing to do. Now we beg to remind the objector that these sciences (or knowledges) are very harmless things, and that a woman cannot think, nor reason, nor speak, nor read, nor write, nor do any household office out of the domain of the sciences. They are merely a true account of the world within us and of the world without us, and serve to make us better acquainted with these two worlds, more useful in our several spheres, and at the same time open to us new and higher sources of enjoyment. For example, all things are either material or immaterial—belong to the world of matter or of mind. Physics treats of the former and metaphysics of the latter. The one acquaints us with the nature and properties of bodies—the other with the faculties of mind. Mathematics is merely the science of magnitude and number—of measuring and of counting from

one to infinity, and from an atom to a world. Logic is the art of reasoning, and is designed to direct the mind in searching for truth and to aid in communicating it to others. Rhetoric teaches the art of speaking with precision and clearness, with elegance and force; and criticism is the art of judging with propriety of what is spoken and written by ourselves or others. This knowledge is useful as well as ornamental—it strengthens the mind—accustoms it to systematic arrangement—gives habits of discrimination and observation, and has, moreover, important, practical applications to the daily duties of life. But independently of these uses, we can see no good reason why women who are rightly excluded from the spheres of politics and business, should be debarred the rational pleasures springing from an intelligent contemplation of the works of nature, testifying as they do with so many eloquent voices to the being and attributes of the Divine Architect who made them by his mighty power, watches over them with His all-seeing eye, guides them with His unerring wisdom and blesses them with His boundless love.

This application, deemed so novel by some, is not without two imposing precedents in history. Early in the nineteenth century Napoleon Bonaparte founded a similar institute at St. Denis, for the instruction of the daughters of the Legion of Honour. And, in the year 1818, DeWitt Clinton earnestly recommended to the Legislature of New York a plan for a female institute which had been matured by the celebrated Mrs. Willard, who founded the famous female seminary at Troy, and who, by her writings, has contributed so much to the edification of her sex. Governor Clinton's recommendation was founded upon the acknowledged principle, that mothers have great influence in forming the minds and characters of men, and that no good reason could be given why they, being endued with the attributes of mind in common with the other sex, should be denied the enjoyment and added means of usefulness attending on mental culture. The measure was supported in debate by John C. Spencer and other leading members of the house, and opposed by other members, upon the ground that learning would not help women "to knit stockings or to make puddings."

This measure, in a modified form, was passed at the next session of the Legislature. The consequences of this legislation, says the Historian, were soon apparent in the increased number of competent female teachers in New York, and in the imitation of her example by several of the new states which have made similar appropriations. So that Governor Floyd, in commending the policy to the Legislature, was following the example of two men, who have made the deep-

est impress upon their generation, and left to after-ages the most enduring monuments of their wisdom.

And now it remains to be seen whether a new Legislature, fresh from the people, and breathing the spirit of progress, will illustrate their first session, with this act of justice and beneficence, and which is in such perfect concord with the policy of "Southern Development." Right glad are we to see the awakening of the public mind upon the subject of developing the resources of the South. While we have been reposing upon the laurels won by our fathers, and living at ease on the possessions which they bequeathed us; thousands of our less fortunate citizens having exhausted the bosom of mother earth, have forsaken the tombs and altars of their sires, and have gone to strike their ploughshares into the virgin soil of the West, leaving their native fields to be covered with forests of pine, the evergreen memorials of Virginia's Prodigal sons. In the mean time the hum of industry has been heard in the Northern hive, whose enterprising inmates, with the instincts of their great prototype, the busy bee, have swarmed to the sunny fields of the South.

They take the timber from our very doors, and conveying it to their workshops, convert it into implements of agriculture for our farms, articles of furniture for our houses, and toys for our children. They take our cotton and wool, our furs and skins, and clothe us from the crowns of our heads to the soles of our feet. They penetrate our rivers with their ships, and carry our produce to foreign markets, and bring back the proceeds in the form of articles of necessity and luxury to our very doors. Their pedlars have invaded every county in the commonwealth and put the people under tribute for their ingenious wares.

Not content with employing their handicraft in the material world, we have done what we could to subject the realm of mind to their dominion. We have exported our sons and daughters to be trained in their schools, or have imported their sons and daughters to be tutors and governesses in our families. But whether our children are educated at home or abroad, the whole series of school books, from the last "illustrated alphabet" up to "science made easy" are of northern manufacture. Indeed out of the sphere of politics in which our best minds move, we have scarcely any Virginia literature. Accordingly we have acquired a habit of looking to the North for the supply of all our demands. So that even our magazines, which, on the ground of their intrinsic merit, as well as from considerations of sound policy, deserve the patronage of all our people are too often superseded by such trash as the

Lady's Book and Parlor Magazines. Let any one enter our book-stores at the present season, and he will find the "show-tables" covered with bouquets of exotic annuals—the "Amaranth," the "Iris," the "Hyacinth," and "Leaflets of Memory," spread out before him, in all the mazes of metaphorical confusion. We can scarcely procure an un mutilated foreign book, they nearly all come to us abridged or overlaid with the additions, corrections and annotations of northern commentators.

If any one asks what is the objection to these things, in their worst aspect, they only prove that southern men find it more profitable or agreeable to follow other pursuits? We answer, much every way, but chiefly because, under these exotics, there is often an unseen serpent which distils its venom into the minds of our unsuspecting youth. For an example, take one of our most respectable and widely circulated school-books, Wayland's Moral Philosophy and turn to the chapter on the duties of masters and servants, and he will understand our meaning. The truth is that with the confidence of the strong man we have been sleeping in the laps of our Northern brethren, until they have shorn us of our strength, and we have become objects of mockery and derision in our weakness. Under these circumstances it is not surprising that some of our Hotspurs have threatened like Sampson Agonistes to put their shoulders to the temple of the Union, and overwhelm us all in one tremendous ruin.

But happily more moderate counsels have prevailed, and our wise men are turning their attention, as the most efficient means of self-defence, to the *development* of our own rich resources.

Let us hope that our ears will not grow weary in hearing that word, before our eyes see any corresponding realization of the idea in our state policy.

We cannot believe that the stirring appeals in our newspapers, the vigorous speeches in our legislatures, and popular assemblies—and the long series of resolutions in our Southern Rights Associations, are all "sound and fury, signifying nothing." Accordingly we expect to see the present legislature pushing forward with vigor a judicious system of internal improvements; making our seaboard accessible to every county in the commonwealth; establishing a direct trade with foreign markets and giving encouragement to individual and associated enterprises for the conversion of our raw material into all desirable fabrics, and thus put a check to the periodical running to the North to meet every demand of necessity, and every caprice of fashion.

But we should not confine our views to the development of material wealth. The material

is subordinate to the spiritual. Matter is inert—it is the bland and unreasoning instrument of mind, which gives to it form, direction and value. "Men, high-minded men—these constitute a State."

Our true policy is to build up in the language of Mr. Garnett, "a manly, original, indigenous literature." Our very self-respect demands that we should have a race of men who have faith in Southern institutions and opinions; who believe them with all their hearts to be in harmony with all our civil and religious obligations; and who will stand in their defence upon the basis of principle, and not upon the shifting sands of expediency.

That far-seeing statesman, Thomas Jefferson, saw this cloud in the horizon, when it was not bigger than a man's hand, and lifted up his warning voice in these prophetic words. "The reflection that the boys of this generation are to be the men of the next—that in establishing an institution of wisdom for them, we bring home to our bosoms the sweet consolation of seeing our sons rising under a luminous tuition to destinies of high promise; these are considerations which occur to all, but all I fear do not see the speck in our horizon which is to burst on us as a tornado sooner or later. The line of division lately marked out between different portions of our confederacy, is such as I fear will not be obliterated, and we are now trusting to those who are against us in position and principle, to fashion to their own forms the minds and affections of our youth. If, as has been estimated, we send \$300,000 *per annum* to Northern seminaries, for the instruction of our sons, then we must have there 500 of our sons imbibing opinions and principles at discord with our own. This canker is eating on the vitals of our existence, and if not arrested at once, will be beyond remedy. We are now furnishing recruits to their school." This warning voice was heeded, and the result was the establishment of the University and other schools, which are now annually turning out young men worthy to take the reins of government from the hands of their sires, as they daily pass from the stage. In the language of one of her distinguished Alumni,—“Although the University has just attained her majority according to the civil law, yet her sons are found in the highest offices of the country. They are seen in the Senate and house of representatives; they throng in the Legislature; they govern sovereign States; they shine in the pulpit and at the bar; they are professors in our colleges, and teachers in our schools. These academies taught by them, will aid the University in turning out an army of teachers for primary schools, and thus will be established a great system of popu-

lar education, on the only plan consistent with the principles of free government, and the rights of private property." The same remarks might be applied to the Military Institute, and perhaps to other colleges in Virginia, which have received aid from the State.

In our judgment, one thing more is wanted to perfect the system of popular education so happily begun, and that is, a competent provision for the instruction of females in Virginia, and particularly with reference to the supply of the existing demand for Southern Female Teachers.

The objections which are felt to the education of our young men at the North, have even greater force when applied to our young women. The minds of females are more ductile, and are more easily moulded into the forms of the society into which they happen to be cast. That Southern people have distinctive traits of character, which they desire to transmit to their children, will be admitted by all—there are many among us who glory in them, and who grieve to see them passing away, as the venerable forms of the "old Virginia gentlemen" and ladies sink into their graves. Assuming then that Southern men admire the structure of Southern society, and prefer that their daughters should be trained in the habits, manners, principles and tastes of the social sphere in which they are destined to move, we should offer them institutions upon our soil in which thorough instruction will be imparted, and where they will be surrounded with associations, from which they will receive daily impressions of the sound principles, the pure tone of morals, the modest manners—the simplicity and the delicacy, which are the glory of Southern women. Independently of the considerations of economy involved in the case, we ask is it wise, is it self-respectful to send our daughters, at a period when their imaginations are most vivid, and when their feelings are stronger than their reason, to be infected with that sickly sentimentalism, which seems to be epidemic at the North; and which generates such monsters as the Abby Kellys and the Fanny Wrights, who stand with the Douglas's and the Garrisons upon the platforms of "Anti-Slavery Societies," and "Women's Rights Conventions;" clamoring not merely for the dissolution of the Union of the States, but also of the holy bands of marriage; and praying for the advent of that millenium when the servant shall be free from his master—the wife from her husband—the child from the parent—the citizen from the sovereign, and humanity that had been washed in the baptismal waters of christianity, shall return to its wallowing in the mire of barbarian licentiousness.

In these remarks, we mean no unkindness to

any section of this great confederacy. We would, if it were safe, break down every wall of partition between North and South, East and West, except those which are prescribed in the constitution. We desire to see all the States moving around one common centre, in a harmony as beautiful as that of the solar system. To secure this end, each State must keep within its own orbit. That not one of them may ever shoot madly from its sphere is our fervent prayer. But come what may, let us at least keep unstained our vestal virgins, that they may keep alive upon our household altars, those sacred fires which when once extinguished can never be relumed but at the eternal source of light and life. S.

Some Things about Windsor Castle and its Grounds. From my Note-Book.

Thursday, Aug. 7, 1851. At the terminus of the South-Western Railway, we took the cars, which carried us to Datchet, about a mile and a half from Windsor, twenty-four miles from London. It required an hour and a half, to make the distance—a very slow rate, but all the better for us, as it gave us almost as leisurely a survey of the country, as if we had been in a stage-coach. The suburbs of London are uninteresting, but the country becomes more beautiful as you proceed, and is very lovely when you reach the Castle. Before you reach Datchet, the terminus, you pass Vauxhall, Kew Gardens, Richmond, Twickenham, and some places of inferior name. Datchet will ever be famed as the scene of Falstaff's submersion into the Thames, hissing hot, from the buck-basket. Not very far off is the celebrated oak of the Hunter Herne.

Windsor is the most splendid of the palaces of the English monarchs, was the favorite residence of George IV., and is occupied by her present majesty during the winter. Here too is the cemetery, where have been deposited the remains of the dead of the royal family, since 1810. Windsor is a structure of great antiquity, originally built by William I., and enlarged by his successors till the reign of Edward III., who caused the greater part to be pulled down and rebuilt. Subsequent monarchs considerably enlarged it, and many great improvements were effected in the reign of George IV. I was not prepared, by the descriptions in the guide books, to see a building so imposing. Nothing of the castellated order that I have seen can for a moment bear comparison with it. The Castle has two

courts, called Upper and Lower Wards, separated from each other by the Round Tower, or Middle Ward. This Round Tower was built by Edward III., by whom it was intended as the keep or donjon of his castle, and also "for the assembling of a fraternity of knights who should sit together on a footing of equality, as the knights of romance sat at the Round Table of King Arthur, and as the Paladins sat at the table of Charlemagne." It is approached by a covered flight of 100 steps, commanded by a piece of ordnance fixed in the wall at the summit. This old tower has held at different times some notable State prisoners—among others, John, king of France, David, king of Scotland, as well as James I. of Scotland, the chivalrous Earl of Surrey, the lover of Lady Geraldine, and the victim of the jealousy of Henry VIII., and the well-known Duke of Buckingham, the last of the name of Villiers. The terraces of the Castle form a promenade of unrivalled magnificence. The North Terrace was the work of Queen Elizabeth, and a long succession of monarchs after her often enjoyed from it one of the finest prospects in the kingdom. Contemplating this glorious scene, Pepys in his diary bursts forth into admiration—"But oh! the prospect that is in the balcony at the Queen's lodgings, and the terrace and walk, are strange things to consider, being the best in the world, sure." I will not attempt further description of the exterior of the Castle, yet cannot forbear quoting two paragraphs; the first from a modern writer, the second from old Camden. The Modern says somewhat ambitiously, "Windsor with its towering castle, the ancient and magnificent abode of English sovereignty—its noble parks—its beautiful, expansive, and richly varied scenery, constitutes one of the grandest attractions of our heaven-favored island, within an easy distance of the metropolis." How differently Camden writes—"Windsor enjoyeth a most delightful prospect round about, for right in front it overlooketh a vale, lying out far and wide, garnished with corn fields, flourishing with meadows, decked with groves on either side, and watered from the most mild and calm river Thames; behind it arise hills everywhere, neither rough nor over high, attired as it were, by nature, to hunting and game."

Within the walls, the chief attractions are the apartments containing pictures. One of the rooms is called the Van-Dyck room, containing nothing but pictures by that celebrated master. They number more than twenty, and are almost all of them portraits of Charles I. and Queen Henrietta, and their children, several times repeated. The face of Charles is melancholy, and that of Henrietta not handsome. There is

also a Rubens room, devoted to pictures by Rubens, and a Waterloo room in which the portraits are only of persons connected in some manner with that battle. In England, from a vase to a triumphal arch, all intermediates included, every memorial speaks of Waterloo. Undoubtedly that was a most important victory, and the Duke of Wellington is a great hero, but really it seems to me that the English do themselves injustice, by dwelling so much on this success. It seems as if this and Trafalgar were the only ones they have to be proud of, whereas in fact they have many.

In the Guard chamber, or Armory room, is a fine display of ancient armour, but I had examined a better one in the Tower of London. The ornamental arrangement of the arms was however better here. Over the chimney-piece of this room, is the elaborate silver shield inlaid with gold, by Benvenuto Cellini, and presented by Francis I. to Henry VIII., when they met on the Field of the Cloth of Gold. In St. George's hall are placed full length portraits of the sovereigns of England from James I. to George IV. Many of the apartments are of imposing size and fine proportions, and in some the frescoed ceilings by Verrio are very attractive.

From the apartments, we went to visit the Queen's stables. Her majesty has about forty carriages here, when she is at Windsor, and horses in proportion. The number of her steeds is in all about 200. The stables are handsome buildings of stone, the floors are of the same material. The stalls are wide, of stained oak, with coarse straw matting under the horses, and abundance of clean litter; the mangers have an iron rim around them, and there is a hydrant of water in each stable. I was very much pleased with the general arrangements, as being complete, but not ridiculously expensive. Indeed, I do not see but that every gentleman, who keeps a pair of horses, would do well to have a stable of just the same sort, if he could make his servants attend to it properly. The only thing that seemed ridiculous was that the groom, who was rubbing down the horses, was dressed in drab tight and fair-top boots, which were shining as if he had just come off Piccadilly. The horses are very fine; some ponies, some saddle-horses, and some coach-horses. Each horse has his name painted over his stall, and I took the trouble to note down some of the names as matters of curiosity, and specimens of royal taste in onomatology—*les voûci*—Beauclerc, Perrot, Deacon, Ahmed, and Omar, Zuleika, Stella, Spanker, Ariel, Wildfire, Wildrose, Banter, and Dora. There are four horses of what we sometimes call milk and cider horses—that is, bays with large white splotches on them. Of course there are

carriages of all descriptions, from the large travelling carriage, with a dickey furnished with holster pistols, down to the pony-phæton, and even something smaller for the royal juveniles, as well as a garden-carriage for her majesty; this latter, however, is drawn by hand. Prince Albert also has his collection of shooting carriages. There is a very showy looking thing presented by Louis Philippe to the Queen. It is a long carriage, somewhat upon the *char-a-banc* order, with four seats, each seat holding three persons. It is entirely open, and has overhead as a covering, something like the tester-top of a bed. I cannot say that I admired it; it looked too much like a dandy omnibus. Nor, indeed, do I think that among her forty carriages, her majesty has one which she might not, with considerable gain, exchange for some that might be picked up in Broadway. It is amazing what heavy stage-coach looking things, perched up on immense, old-fashioned springs, they like to drive here. And to make them look still more like stage-coaches, they paint the running-gear red or yellow, and sometimes the body also, though this latter is generally dark. This clumsy heaviness is the less excusable here, because they have certainly the most delightful roads in the world; indeed, if this were not so, their horses, over-sized as they are, could never drag along their lumbering vehicles. It must be noticed also, that their coachmen are as magnitudinous as their carriages. There is among the Queen's carriages one handsome, light curricule, of which the dash-board, and the front of the leather-top, are bound with ivory, with very handsome effect. Among the ornaments of her stables, is a pony sent to her majesty from Java, which is certainly the smallest specimen of horseflesh that ever I saw, though of course I have seen a good many Shetland ponies in the circus. There is also, chained to a bench, a prodigious Angora cat. The attendant told us, with a manner that showed he expected to awaken emotions of wonder and of reverence, that her majesty would often come and sit for an hour upon *that bench*, and play with *that cat*. The English are not a servile people—the farthest from it in the world; but they are very, very loyal. Doubtless they look upon the sovereign as the representative of the nation, and thus in honoring her, think they honor themselves, but besides this, there is a personal veneration for a sovereign, which is obvious enough to our American eyes, and looks strange enough. It is a nation of classes, and they love classes, and they do think that some how or other, if not *jure divino*, in some other way quite as efficacious, the royal family are better flesh and blood than themselves. While, as at present, the sovereign is a delightful lady, the mother

of a fine family, that she loves and cares for as a mother ought to do, and is every way most exemplary in her domestic relations, this devotion, if not reasonable, is not ungraceful, and while we Americans cannot see why the Queen must have hundreds of horses, scores of carriages, dozens of palaces, and thousands of acres of pleasure-grounds, yet if these things must be so, we are so much accustomed to honor the sex at home, that we rejoice that the crown falls upon the head of an interesting woman, and join with our British brethren most heartily in shouting in the street, or more solemnly praying in the church, God save the Queen. After leaving the royal stables, we would gladly have visited her majesty's *dairy* and *aviary*, and especially the *Queen's private kennel*, containing dogs of various species, brought from different countries, and presented to her majesty. But we were there at the wrong hour, and thus were hindered much to my disappointment, who profess some small show of judgment in such matters. I will say here, though it is a digression, that I was very much disappointed in not seeing fine dogs in England. I had often read of the English mastiff, but the only specimen that I saw was an overgrown, stupid looking brute, shut up like a wild animal in a cage at the Zoological Gardens. Indeed, some gentlemen told me that they believed that the breed was extinct, or nearly so. The bull-dog—but really, I must reserve until another time a talk about dogs—I suppose I did see a dog that was a dog, though this was not in England, but on the Rhine. But from dogs, *revenons à nos moutons*.

We went to St. George's Chapel, which is regarded as the finest specimen in England of the florid Gothic. There is in it some very fine stained glass, and an altar piece of the last supper from designs by West. St. George's Chapel shares with Westminster, the honor of being a place for royal sepulture. Here repose the remains of Edward IV., Henry VII., Henry VIII., and Jane Seymour, and of Charles I., whose head severed from the body, was verified here by the Prince Regent in 1813. Of later monarchs, were buried here, George III., George IV., and William IV., with other members of the Royal Family. There was one monument which struck me a good deal, and even amused me. It is one to the memory of the Hon. Lt. Col. Harcourt, and on one side in bas-relief, is depicted a scene which is described to be: "the Hon. Lt. Harcourt, with thirty dragoons, taking the American General Lee prisoner on the 13th of Dec. 1776." I thought that this accidental surprise of a general who was imprudently sleeping away from his army, was a small exploit to be sculptured upon a monumental mar-

ble, and yet, as it was probably the greatest ever achieved by Lt. Col. Harcourt, I did not begrudge him the record of it. An American in England, meets with nothing in the way of pictures, monuments, or sculptures, to offend his national pride. In the two struggles between the countries, England accomplished nothing which she remembers with self-glorification. Her columns and statues tell of victories over the French and other nations, but none over America. On the other hand, our national days, the 4th of July, 22d of February, and 8th of January, and the few monuments we have, tell of our glories at the expense of England. I remember that in Westminster Abbey, I drew nigh to the monument erected to the memory of Major André with the inward reverence due to the memory of a gallant and an honorable man, and with true sorrow for his untimely death, but withal with a feeling of curiosity, to see if his friends had not on account of his death, or the mode of it, cast some aspersion upon our Washington. But there was not a word like this in a long inscription, which closed by saying that "employed in an important but hazardous enterprize, he fell a sacrifice to his zeal for his king and country, on the 2d October, 1780, aged twenty-nine, universally beloved and esteemed by the army in which he served, and lamented even by his foes." But a truce to my recollections of Westminster for the present; Windsor is a theme more than sufficiently ample. We made a pretty good dinner for which we paid enormously, at a hotel in the village of Windsor, and then took a carriage (that cost us near \$7 for about three hours,) for a ride through Windsor Park, to the celebrated Virginia Water. Our coachman rode postillion, and was dressed in white buckskin tights, and fair top boots, so that we were rather stylish in our turn-out. I will not attempt any elaborate description of our ride, though we all agreed that it was the finest that we had ever enjoyed, any of us. It conducted us through the longest and finest avenue I ever saw, and probably the most so in England, to the superb equestrian statue erected by George IV. to his father. The statute is upon a crag, and the horse paws over the precipice. Thence we continued our ride for several miles through the park, on which, perhaps, thousands of deer were grazing, amid a high growth of fern, that found as it is, in the haunts of the wild deer with us, seemed quite appropriate. These deer are tame as sheep, though they are sometimes made to furnish sport for royal sportsmen. They are driven across the park to a spot where there is a shooting lodge, and where a long fence projects into the park, and necessarily brings them

to its extremities. Of course this is not the exciting sport of deer-hunting in the wild woods, but as this cannot be obtained here, this may give some idea of it. Sometimes, (as I was told) they take a deer, and keeping him up for some time, feed him on corn, which makes him vigorous, and then they carry him off some distance into the country, and letting him loose chase him with dogs. I observed among the multitude of deer, some black ones and some white ones, though they were generally of a species very much like our Virginia deer. We enjoyed ourselves exceedingly during the ride, and our pleasure was heightened by the fact that we were six Virginians in one carriage riding across Windsor Park, a thing which probably had never occurred before. As we approached Virginia Water, there was a long stretch of old field covered with dead grass, and interspersed with small pines, and we took off our hats and shouted, hurrah for old Virginia! What if it reminded us of the most indifferent parts of our loved state? We felt that the poorest portion of Virginia was more worth reverence, than all the glories and beauties of this, one of the noblest pleasure grounds that regal wealth had ever procured, or even than the old castle itself, where reposes so much royal dust. And when again would six Virginians have the opportunity of waking the echoes amid those ancestral oaks, with so strong a cheer for the beloved old commonwealth? So we let them have it with a proud good will. Virginia Water is, where it is, in the midst of this park, a striking and beautiful object; if seen elsewhere, it would hardly command a second look. It is something between a stream and a sheet of water, and is clear and of a pretty outline, while the banks are of green turf, with the underwood and trees coming, in many places, quite down to them. One of the most striking things however, in the vicinity of it, is an artificial ruin, composed of columns, capitals and other classic stone and marble, *actually brought from Rome and Greece*, and the shores of the Levant, and here so arranged as to give a picture perfect as truth, of the ruins of some vast old temple, situated at the rocky entrance of a little vale, which concealed by a turn of the hill-side, seems to stretch away in sylvan beauty. So careful is the imitation to nature, that upon the tops of some broken columns, are growing shrubs of considerable size, while fragments of columns are scattered about as if they had but just tumbled down. In the midst of all this loveliness of outward nature, we were forcibly reminded of the depravity of human nature. A woman came along and offered to tell our fortunes, and, thinking that she would afford

some sport, one of the party held out his hand, when instead of wit, she poured forth such an unbroken torrent of hideous obscenity, that it made one feel defiled for having heard it. Had I the skill of Dickens, how could I make this incident tell against the state of morals in England? And with the poor skill that I possess, had I his unfairness, and were I willing to give an exceptional example, as a fair type of the whole, I could make of it a picture that would be an offset to many a one that has been offered as truth about America.

I think I did not mention, that when we were in the apartments in the castle, looking at the paintings, we came suddenly to an end window which commanded a view of the wide spread landscape across the Thames, of Eton spires, of trees, and lawns bounded by the distant hills, and all spotted by a bright veil of mist thrown over it. And we exclaimed simultaneously—O, how much more beautiful that which is without, than that which is within! Here we see the pictures that are the cunning works of the old masters, but it is an older hand, and one infinitely more skilful, that drew the picture that stretches out before our eyes. I remember having just the same feeling, when I looked out of a window at St. Cloud, and also at Chatsworth, and I have experienced something of the same sort when coming out of the Crystal Palace, and looking at the plain trees and grass of Hyde Park, which certainly can lay no claim to ornamental beauty. The beauty of nature how refreshing, how satisfying! Often we forget it, but it never offends by wearying us. This beauty and majesty of the works of His hands, was intended to fill us with admiration and reverence for the Creator, and to inspire us with a longing (I trust it has had this effect upon me,) for the fields of living green beyond the swelling flood, the beautiful city, the new Jerusalem, and the Temple not made with hands, eternal and on high.

S. C. L.

M. D. F. R. S.

The keeper of a paltry Scotch alehouse having on his sign after his name, the letters M. D. F. R. S., a physician, who was a fellow of the Royal Society, asked him how he presumed to affix these letters to his name. "Why, sir," said the publican, "I have as good a right to them as you have." "What do you mean, you impudent scoundrel?" replied the Doctor. "I mean, sir," returned the other, "that I was Drum-Major of the Royal Scots Fusileers."

Notices of New Works.

A FAGGOT OF FRENCH STICKS, or Paris in 1851. By *Sir Francis Head*, author of "Bubbles from the Brunness of Nassau." *Authorized Copyright Reprint from Mr. Murray's Proofsheets.* Two Volumes complete in One. New York: George P. Putnam, 156 Broadway, 1852.

The title of this volume is one of the happiest conceits that ever entered the head of Sir Francis Head. A Faggot of Sticks is suggestive of only one possible use that can be made of it—to be burned. And we cannot help thinking that the very best disposition one could make of the greater portion of Sir Francis Head's volume, would be to consign it to the usual receptacle of faggots—the fireplace.

The worthy old baronet, who has hopelessly fallen into the garrulity of three score and ten, seems to have determined upon the production of two plethoric volumes at all hazards, and has accordingly given us a profusion of uninteresting details of the most frivolous character. In one respect, his work is certainly remarkable. In the line of *book-making* no traveller of our day has done anything that approaches it. We are made acquainted with every article of clothing worn by every individual whom Sir Francis Head saw in France, from Prince Louis Napoleon down to that other more harmless monkey, which suffered military execution under a tent of the Champs Elysée, upon the fete-day of the Republic. In these descriptions of personal appearance and apparel, Sir Francis rivals the fidelity of that portraiture of the poet, when he would set before us the ghost that startled Molly Dumpling,

Tall, like the poplar, was his size,
Green, green his waistcoat was, as leeks;
Red, red as beet-root, were his eyes;
Pale, pale as turnips, were his cheeks!

In like manner, wherever Sir Francis goes, he "makes a note" as Capt. Cuttle says, of everything, however insignificant or trifling. The omnibus horses, to the number of several hundred, are exhibited to us as developing very nearly the same intellectual traits in Paris as in New York, as having the same complement of legs, and tails very similarly disposed. Statistics, too, are supplied of French babyhood, calculated to afford great interest to young mothers, as for example, how often the babies cry daily in the public nurseries, and how many nurses find employment in taking care of them. Apart too from the painful minuteness of our baronet's sketches, we are constrained to say that occasionally they transcend that delicacy which an amiable, well-bred, excellent, inoffensive, though garrulous, (we drive for once his 'substantive and six') old English nobleman ought always to observe.

That there is some useful information agreeably conveyed in the "Faggot of French Sticks," we most readily admit, but if we were compelled to pronounce upon them, by the "faggot," in a single sentence, we should turn to the preface and adopt the author's own language—"They are thin, short, dry, sapless, crooked, headless, and pointless."

This volume is a handsome specimen of a new style of publication which Mr. Putnam has begun, and may be obtained of Messrs Nash & Woodhouse.

SALANDER AND THE DRAGON. *A Romance of the Hartz Prison.* By *Frederick William Shelton, M. A.* New York. John S. Taylor. 143 Nassau Street. 1852.

We have seldom met with a more agreeable child's book than the little volume whose title we have copied above. But like the immortal works of De Foe and that mighty master, Bunyan, the tale before us is equally well adapted to the childish and the full grown intellect. A boy of ten understands and appreciates the beauty and truth of the Pilgrim's Progress; the matured and erudite man of middle age follows with delight and admiration in the footsteps of one mightier than himself. Any work which produces effects of this nature upon minds so wholly different, we may safely conclude is something more than those ten thousand ephemeral "brilliant productions" which issue in floods from the press; and when we say that "Salander and the Dragon" is calculated to please a child and instruct a grown-up man, we have paid it the highest compliment in our power.

The *Hartz Prison* is kept by *Goodman*, under the supervision of the Lord of *Conscienza*, and *Salander*—the dwarf-hero—is imprisoned there. How *slander* having entered the heart of the good man, prompts him to deny his master conscience, and the results, are beautifully related. The allegory is carried out with a spirit and fidelity—more, a high moral truth, which should place Mr. Shelton among the very first writers of his class. The humor of the work is also very striking, and if we know anything of children, is precisely of that clear, objective nature which they delight in. We think, however, that the farce is at times too broad, and that a considerable softening of the hideous little dwarf, would both make the story more attractive and improve the moral. *Slender* does not always show its full hatefulness; Mrs. Candours it above all things loves.

The engravings of the volume are in good taste, the typography and binding very neat. We have received it from Mr. Taylor, the publisher, who will send it to any part of the country post-paid, upon the receipt of a remittance of Fifty Cents.

A LADY'S VOYAGE ROUND THE WORLD; A Selected Translation from the German of Ida Pfeiffer. By Mrs. Percy Sinnet. New York: Harper & Brothers, Publishers. No. 82 Cliff street. 1852.

Madame Ida Pfeiffer is not one of those lady tourists who keep within the range of Murray's Guide Books, and travel snugly in first class railway carriages or in their own coaches-and-four, only to tell us for the fiftieth time how people dress for the opera at San Carlo, or eat their dinners in Venice. Madame Pfeiffer is, on the contrary, a born traveller, a predestined wanderer over the face of the earth, an adventurer by "circumstances over which she had no control," whose eagerness for sight-seeing has carried her out of the beaten track of ordinary wanderings, and made her acquainted with regions 'beyond the Ganges.' Embarking at Hamburg for Rio, she lingers a short time in this Brazilian capital, whence she sails for China, by way of Valparaiso. Reaching the Celestial Empire, she moves about with the utmost independence through the streets of the principal cities, and makes herself acquainted with the manners and customs of the people. From Hong Kong she goes to Calcutta and thence over land, by a most perilous route through India, Persia and Turkey to continental Europe. We have no space to borrow any passages from her sprightly narrative, but would advise such of our readers as enjoy fresh books of travel to read it for themselves.

A. Morris has the work for sale.

PUTNAM'S LIBRARY FOR THE PEOPLE:—HOME AND SOCIAL PHILOSOPHY. *First series.* New York: G. P. Putnam. 165 Broadway. 1852.

This is a first of the series of reprints from Dickens' "Household Words" which promised to be full of interest and value. Mr. Putnam's design is to republish in a cheap and portable form "all those valuable, pithy and entertaining essays which relate to domestic and social economy, familiar illustrations of natural philosophy, and kindred topics;"—he will follow up the present volume with others which, under the titles of "*The World Here and There*" and "*HOME NARRATIVES*," will embrace travellers' relations and entertaining stories;—and thus, when the series is finished, we will have, classified and in a permanent form, all the papers of any value in this little journal, which has achieved so high a degree of popularity.

We are much pleased to see such a work undertaken. "Household Words" with much ephemeral and worthless matter contains many papers of true value for the condensed information they supply:—others as worthy of perusal for their genial humor and wit, as any sketches of Mr. Dickens' we have read. We suspect that the "edited by Charles Dickens" means scarcely more than the "edited by Thomas Carlyle" on the *Latter Day Pamphlets*;—for we recognize his pen beyond all doubt in many of these short articles.

AN ADDRESS to the *Graduating Class of South Carolina College*, at Commencement, on 1st of December, by Francis Lieber, of the French Institute. Columbia, S. C. Steam Power Press of A. S. Johnston. 1851.

"The Necessity of Continued Self-Education" is the subject which Dr. Lieber selected for his address to the graduating class of South Carolina College at the late Commencement, in his capacity of *temporary President* of that institution. The effort is marked with so much depth of thought and eloquence of utterance, that we could wish for room to lay before our readers copious extracts from it. One single paragraph may we quote, equally graceful and touching in which the orator refers to the late President W. C. Preston—

"Where, in fact, am I standing? I stand here where as orator has stood of wide and high American repute,* whose wealthy eloquence has often gushed forth from this very spot in all the native energy of his Saxon idiom, perfumed with the fragrance of a scholar's mind and the aroma of a cultivated taste—a speaker whose oratory is yet fondly remembered by the humblest classes of our people. It is not more than a twelve month ago that one of them, as they assemble around the house of justice, on judgment days, said, within my hearing, when your late President passed by, with his infirm step, with which, unfortunately, you are familiar—pointing at him, the humble man said to his neighbors: "That man used to talk like a mocking-bird." And may I not add to this graceful testimonial, spontaneous like our graceful jasmine in the uncultivated woods, the words of the greatest Italian poet, when he addresses Virgil as "the fount whence issues forth a broad, deep stream of speech?"

Our thanks are due to the distinguished author for a copy of his address.

* The Hon. William Campbell Preston.

A HISTORY OF CLASSICAL LITERATURE. By R. W. Browne, A. M., Prebendary of St. Paul's and Professor of Classical Literature in King's College, London. *Greek Literature.* Philadelphia: Blanchard and Lea. 1852.

He who takes the literature of ancient Greece for a theme, will certainly find scope enough for the indulgence of his fancy, for although history may be supposed to confine an author within certain limits, yet in the discussion of the Homeric controversy, the critical examination of the tragedians, and the attempt at dissipating some of that cloud of fable which hangs around the earlier writers of that classic country, the most imaginative of authors will find himself untrammelled. Mr. Browne has given us a volume of rare interest upon this fruitful subject, one which not only proficients in the Greek language, but lovers of literature everywhere will appreciate and enjoy. J. W. Randolph has it for sale.

THE LADY KILLER. By Rebecca Hicks. Philadelphia. Lippincott, Grambo and Co. Successors to Grigg, Elliott & Co. 1851.

A Christmas present from the fair authoress! In the name of all the muses at once, we ask what chance is there of an unprejudiced opinion from us of the merits of the volume? Besides, the authoress invokes, in the preface, the protection of the public against the critics, of whom she stands in great fear. How then shall we be critical? But here, oh! most timorous and charming of authoresses, why talk of the "customary impertinence" of the critics aforesaid, who after all are to render their verdict upon the result of your labours?

'The Lady Killer' has made a sensation, which is more than can be said of four fifths of the publications of the day, and has received the warm commendations of better judges than ourselves. It can need, therefore, no praise at our hands, and as for dispraise, we should as soon think of running a tilt at the lady herself, as to look for faults in her volume, after the passage in the preface to which we have referred. We may say as a critic, however, that the story is written in the easy, unambitious style of the Virginia lady, and gives indications of a mind of rare sprightliness, such as all who enjoy the acquaintance of the authoress, know her to possess.

That obliging bookseller, Mr. Morris, is able to supply the Richmond public with 'The Lady Killer.'

NICARAGUA; *Its People, Scenery, Monuments, and the Proposed Inter-oceanic Canal.* With Numerous Original Maps and Illustrations. By E. G. Squier. Two Volumes. New York. Appleton & Co. 1852.

Mr. Squier seems to us to write altogether too much in the grandiose style of diplomatic correspondence, to be as agreeable in his present work as it is evident he might have been. The *Chargé d'Affaires* is a much less entertaining companion than the *voyageur*, and we could wish that many passages in his volumes had been tied up carefully with red-tape, and laid away in some oblivious pigeon-hole of the State Department, instead of being sent to the printers. This apart, the work is every way worthy of praise. Abounding in antiquarian research and personal adventure, it supplies us with much highly valuable information concerning Nicaragua, and many pleasant descriptions of social life in Central America. The sumptuous and expensive style of the publication reflects great credit upon the enterprising publishers.

It may be obtained of A. Morris.

DREAM LIFE: A Fable of the Seasons. By IK. MARVEL. New York: Charles Scribner. 1851.

We confess to a feeling of disappointment in this new book of "Ik. Marvel," not because it is in itself undeserving of warm praise, or unworthy of its author, but because we had looked for something quite different—something which should have about it, as the French say, *l'air fraîche*. "Dream Life" is certainly not fresh. One is reminded on every page of the "Bachelor's Reveries" and is apt to think—notwithstanding the uniform affluence and purity of the author's style, and the genuine pathos with which he frequently moistens the eye of the reader—that Aunt Tabithy was right after all, the dreaming of friend Ik. is somewhat overdone. We should sadly fail to do justice to our favorite, however, if we did not assure our readers that they will find in this, his latest, production much agreeable reading, and some sketches of American life that have not been surpassed by the best of our writers. The work is well printed and may be obtained at the bookstore of A. Morris.

1. **LIVES OF THE MOST EMINENT PAINTERS, SCULPTORS AND ARCHITECTS:** *Translated from the Italian of Giorgio Vasari.* With Notes and Illustrations, chiefly selected from German and Italian Commentators. By Mrs. Jonathan Foster. Vol. IV. London. Henry G. Bohn, York Street, Covent Garden. 1851.

2. **Lucretius on the Nature of Things.** A Philosophical Poem, In Six Books. Literally Translated into English Prose. By the Rev. John Selby Watson, M. A. To which is adjoined the Poetical Version of John Mason Good. Same Publisher.

3. **PETRIFACTIONS AND THEIR TEACHINGS; OR, A Handbook to the Gallery of Organic Remains of the British Museum.** By Gideon Algernon Mantell, Esq., LL.D., F. R. S. Same Publisher.

4. **A HISTORY AND DESCRIPTION OF MODERN WINES.** By Cyrus Redding. Same Publisher.

These handsome volumes, in different coloured bindings, and treating of somewhat diverse subjects, are the last four publications of that celebrated London publisher, Mr. Bohn, and belong respectively to those well-known series, the *Standard, Classical, Scientific, and Illustrated Libraries*. The reprint of Vasari's *Lives of the Painters* we have already had occasion to notice, upon the appearance of the first volume, and had we not done so, its fame as a standard work is too well established for it to need any commendation here. The prose translation of that bitter Latin poet *Lucretius*, seems to us exceedingly spirited and faithful, and the book makes an excellent companion to the versions of Horace and Virgil, which Mr. Bohn has recently given to the public. Of course it is quite unnecessary to say anything of the poetical rendering of *Lucretius* by John Mason Good, which is adjoined to Mr. Watson's Translation, as it is widely known and valued. Mr. Mantell's "*Fossils of the British Museum*," which seems to have been compiled with great care, and is profusely illustrated with wood-cuts, is likely to afford much satisfaction to all who are given to researches into the *arcana* of geology, and who have made the acquaintance of those interesting members of the ancient Saurian family, with the high-sounding names of *Iguanodon*, *Hylæosaurus*, *Pterodactylus*, &c. For ourselves, we must say that these wonders have never greatly interested us, and we therefore turn with pleasure from a treatise so dry, to one whose very title is racily suggestive of pleasant

associations—*Redding on Wines*. Within this volume is compressed a vast deal of curious and agreeable information concerning the vintages of Europe, from the *Johannisberger* of Prince Metternich—a rare and ambrosial essence which has moistened half the treaties of the European powers during the present century—to the *Montefiascone* of the Italian States, of drinking too much of which, the Latin epitaph tells us, the German Bishop died.

"Est, Est" propter nimium "est,"
Dominus meus mortuus "est."

On the other hand, Mr. Redding gives us some intelligence which is *not* agreeable, of the adulteration of wines and brandies. His facts and statistics on this head might furnish our total abstinence friends with good matter for commentary. Altogether, the book is a valuable addition to the library, and will no doubt command an extensive sale.

We have received these volumes from the New York Agents of Mr. Bohn—Messrs. Bangs, Brothers & Co., through J. W. Randolph of this city, at whose book store they may be obtained.

SCHIMTZ & ZUMPT'S CLASSICAL SERIES. HORACE. Philadelpia. Blanchard and Lea. 1851.

After a careful examination of this work, we have simply to say of it, that the typography is extremely faulty—altogether inexcusable; while the Notes of Zumpt, the younger, are well-timed and judicious. Intended as it is for a text-book, he has steered between the two extremes and given notes which, while they do not aid the pupil too far, yet aid him at the proper time, and in a very effective way. We express the hope that the publishers will take care in another edition, to rectify the palpable errors of print which disfigure the present edition.

Of books designed for the young, we have seen nothing better for many a day, than the recent publications of the Protestant Episcopal Sunday School Union. We have received quite a package of them from the General Agency, 26 John street, New York City, where they may be procured in any quantity. The tone of these little works is religious, but not sectarian, and their contents are of a most agreeable variety. Among the persons mentioned as authors of the stories, we observe the name of Mrs. Alice B. Neal. We subjoin some of the titles of the works—*Timid Lucy*, *Norton Hargrave*, *The Prize*, *The Way through the Desert*, *Watch and Pray*, *The Cherry Stones*, &c. These works may be found at the store of Messrs. Nash & Woodhouse.

From Harper & Brothers, through A. Morris, we have received, just before going to press with the last sheets of this number, several of their latest publications, which we can only briefly notice. Among them is a portly volume entitled *Lectures on the History of France*, by the Right Honorable Sir James Stephen, in which the politics of that country are elaborately treated down to the reign of Louis XIV. It will no doubt command a large attention. A new work from the pen of Isaac Taylor, the author of the '*Natural History of Enthusiasm*,' is another of these publications. It is entitled *Wesley and Methodism*, and embraces a historical review of this branch of the Christian Church from its foundation, with sketches of the most distinguished of its ornaments. Nos. 16 and 17 of Mayhew's '*London Labor and the London Poor*,' and No. 19 of Lossing's '*Field Book of the Revolution*,' are in no wise behind their predecessors.

SOUTHERN LITERARY MESSENGER.

PUBLISHED MONTHLY AT FIVE DOLLARS PER ANNUM—JNO. R. THOMPSON, EDITOR AND PROPRIETOR.

VOL. XVIII.

RICHMOND, MARCH, 1852.

NO. 3.

Notes and Commentaries, on a Voyage to China.

CHAPTER III.

An old record; Troubles about a cot; First impressions; Steerage treatment of sea-sickness; Holy-stoning; Jack at breakfast; Reckoning of time at sea; Sick-list; How to make it twelve o'clock; Serving-grog; Can the spirit-ration be dispensed with?; Who shall decide?; Quantity not enough to do harm; "Splicing the main brace;" Grog a panacea; Intoxication defined; How alcoholic poison causes death; Diseases caused by excessive use of alcohol; How regarded by life-insurance companies; How the question would be solved by a ballot; Wear of the animal machine; Object of digestive organs; Elementary constituents; Animal heat; Its uniformity under different circumstances; Fuel for animals; Combustion; The animal furnace; The use of blood discs; The use of the liver; Why a mixed diet is necessary for man; Composition of Alcohol; Sugar and oil; Hydrogen; Sense of fatigue; Comparative influence of beer-drinking on brick-making; Use of spirit in sustaining men under great fatigue; Under mental labor; in Cold; in Heat; As a protection against malaria; Moderate use of Alcohol; Useful as medicine; Moral effect of abolishing grog; Prevalence of drunkenness among privates in the navy; Conclusions; Water-filters and air-substitutes for grog; Spirits not a corrective of bad water; Opinion of Commodore Stewart; Iron tanks useful in the preservation of water.

In connection with the inconveniences of life at sea, I think I may present the following record without any risk of a charge of plagiarism. It was made very many years ago; but is as applicable now as it was then.

"You can scarcely conceive the many things I had to learn on entering upon my new life on board ship—for it certainly is a new life. Had I been told of all the little matters annoying in their nature that I might expect to encounter, I doubt whether I should have believed; and if I had believed, I would have remained on shore.

"When I first came on board, the first lieutenant told me I must sleep in a cot, and an officer

standing by said, 'let it be a large one, that you may be comfortable.' Three days were allowed me to make my preparations for sea; on the third I crossed Brooklyn ferry with all my baggage on a porter's cart, and I was about proceeding up the street, when I met an officer of the ship, who stopped, and with a look of amazement and jocularity cried, 'What do you intend doing with that cross-legged machine with the canvass nailed over it?'

"'That is my cot; and it is the largest I could find in New York;—you told me a large one would be most comfortable,' said I, in perfect simplicity. At this his countenance swelled, and at last he burst out into a hearty laugh, for which I was at a loss to account, as my acquaintance with the gentleman did not warrant him to take liberties; in fact I felt disposed to be a little angry.

"The officer having suppressed his laughter with difficulty, said, 'My dear fellow, you must send that shore-cot of yours back.' Here he laughed again, and I asked why I must send it back.

"'Then throw it in the river, or in the street, or do any thing with it rather than carry it on board ship, if you value your peace during the cruise; it will be a ceaseless joke at your expense as long as you hold a commission.'

"'But what am I to do for a cot?'

"My friend laughed again most immoderately, and asked how I proposed to secure 'such a soldier-like machine on board when the ship should be at sea, rolling and pitching.

"I now began to open my eyes, and enquired what he meant by a cot.

"'Oh, you'll see very soon; the ship supplies cots and hammocks; you have only to procure for yourself mattress and bedding. Take my advice and say nothing about your mistake, and I will hold my tongue too, though I confess the joke is too good to be lost. Good morning, sir, good morning;' and he hurried on board the ferry boat, laughing as he went.

"I immediately suspected there was some trick about being played on me, for I had read 'Peter Simple;' nevertheless, I determined to deposit my cot in a store, and go on board with my baggage, and, if necessary, send for the 'soldier-like machine,' which had already become an offensive object in my sight. Still, I could not imagine any other piece of sleeping furniture under this name, and was equally at a loss to

know in what manner such a one should be secured when the ship got to sea.

"Immediately after reporting myself on board to the first lieutenant, he directed a midshipman to order Mr. —, the sailmaker, to prepare a cot for me, which assured me I had done right in leaving mine on shore. I was all anxiety to see the article known on board ship by the name of cot; therefore I followed the sailmaker with my eye, and found it to be an oblong frame of wood covered with canvass, having sides and ends of the same. To each end of it are attached the clues, which are a number of cords, bearing in their disposition some resemblance to an open fan, the small end having a ring in it, by which it is suspended from a hook, driven in a beam of the vessel. When hung up it forms an oblong canvass box, which yields to every motion, and you are in no danger of being tossed out of it. When I saw it all prepared and suspended, I did not wonder at the laughter of my friend, but I felt under a constant apprehension lest he should tell the story, and my ignorance or greenness become a jest for the whole steerage. However, he has kept me thus long under obligations by his silence, and I hope he has forgotten the affair altogether. It is strange we should be so fearful of being laughed at, and yet idle time away in the country, which, if properly employed, would enlighten us on many subjects of which we often find ourselves ignorant. Indeed, I have found great difficulty in telling this joke on myself, finding, as Rousseau says, '*Ce n'est pas ce qui est criminel qui coûte le plus à dire; c'est ce qui est ridicule et honteux.*'"

"This *faux pas* made me keep a 'bright look out' for the future, and I fell into very few errors; it was some time, however, before I got to be *au fait* in the many little matters that are peculiar to a sea life. I soon became too cunning to expose my ignorance, always waiting patiently and observing attentively, till I felt sure of being correct before venturing a remark.

"To me, who had spent but a little time on the seaboard, and never had visited a man-of-war, the getting under weigh was an exciting event. Every thing seemed in a most chaotic confusion; the officers gave their orders, the midshipmen repeated them, the boatswain and his mates piped, the sailors ran aloft and down again on deck, the capstan was whirled round, the anchor was up, the sails were spread; we began to move, the leadsman cried 'by the deep, nine,' the quarter-master 'dice no higher,' which a green middy interpreted 'Christ no higher,' wondering that such profanity should be allowed,—in short, we were 'standing,' that is, sailing down the bay very fast, leaving New York enlightened by the rising sun.

"My head was all confusion. I could not comprehend any thing of the various movements around me. Yet away we went. Past Sandy Hook, and I saw the skies kiss the ocean for the first time. This thrilled me. I looked back on the receding shores of my country, and I could have wept; but Hope pointed to the ocean, and I sighed farewell, farewell. I hurried below and wrote a hasty note, and felt like cramming my whole heart into it, and perhaps I wrote more warmly than I ever did before, as they say I am very cold.

"The ship began to rise and sink as she moved gracefully over the bosom of the boundless blue waters. I was on deck again, and gave my note to the pilot, and then thought how much more I might have said, had I found words to express my feelings. Oh, how gentle was the breeze and how sunny was the sky on that April morning. But this buoyancy did not last long. I gazed around me, and felt in a glow of admiration,—then my head grew heavy,—I imagined a string was binding my temples; next came a nausea,—heavens! I would have given worlds for a permanent piece of terra firma to rest my legs upon. I bethought me of my cot, and requested that it might be hung up. The reply was a hearty laugh,—'You are very pale, you are *only* sea-sick, and your cot cannot be got till after sunset.' *Only* sea-sick, thought I, as if that were not enough. Nevertheless I had not courage to acknowledge it, and said I was very unwell,—that I was at sea, and they might fancy my indisposition to be sea-sickness,—at which all within hearing laughed heartily.

"I went below, and rolling myself in my cloak, dropped like a bunch of half-dressed flax into a corner of the steerage, hoping to get some relief, but in vain. Dinner was placed on the table close to me, and its fumes were to me disgusting. I peeped from my hiding-place, and loathed the very sight of the cheerful countenances of the middies, swallowing quantities of roast beef and potatoes, and laughing at the gay sallies in their own conversation. They seemed to me more horrible than cannibals. The corners of my mouth involuntarily stretched themselves downwards in disgust; I started up, and with a groan hung my head over a bucket. What a shout saluted my ears! 'Give him a piece of pork tied to a rope-yarn,' cried one, and in a moment the odious morsel was dangled under my nose,—'Take it,' said another, 'even if you are a Jew; the Jews only reject one part of a hog, and that is the hoofs,—so swallow manfully and you will be better.' Oh, the inhuman brutes,—not a spark of compassion in their bosoms,—phrenologists would find the organ of destructiveness largely developed in their heads I am sure.

"Escape seemed to be my only salvation ; so I belted the moment I thought I might depart from the bucket in safety, and sought the upper deck, where the cool breeze somewhat revived me. I remembered having been told by a sea-faring doctor that sea-sickness was a nervous disease, for which cold water to the head was the best remedy ; so I applied it, and I thanked heaven for my memory, blessed the doctor for his sagacity, and laid my hand on my stomach and found all tranquil.

"Soon after sunset I reached my cot, and, blessings on cold to the head, awaked next morning quite myself in spite of the motion of the ship, and the din which awakened me. I looked from my cot and beheld a number of men scattered about in different places on their knees, rubbing and grinding the deck with pieces of flag-stones and sand, while others were jerking a very large stone backwards and forwards, by means of a rope attached to either side of it ; and some were dashing water about in every direction. This operation is called holy stoning, I presume, because the men work on their knees, and is performed every morning. The noise I leave you to imagine ; and you may wonder, too, how people maintain their health in such wet dormitories ; how they managed to sleep through it all was to me a matter of astonishment ; but now I am so enured to it by habit, that I am not at all disturbed.

"After rubbing and grinding for a sufficient length of time, the master's mate of the gun-deck cried, 'Get your squillgees, and squillgee and swab up the deck.' The next thing was, that the men removed the holy stones, and applied instruments of wood resembling somewhat a garden hoe, with which they pushed off the water, while others followed them with great swabs of rope-yarns, striking to the right and the left, leaving the deck comparatively dry and very clean.

"At half past seven, or as they say on board, at 'seven bells,' a midshipman went to the officers in bed, saying to each, 'It is seven bells, sir ;' which I soon learned, was the official way to inform them that it was time to get up, or in technical language, 'to turn out.' At the same time the boatswain and his mates winded their shrill pipes, shouting, 'Up all hands, ahoy—up all hammocks ahoy.' The sailors leaped out, and began 'lashing up' their beds, and at once carried them on deck, where they were packed all round the ship's side in the 'nettings.'

"Curiosity had carried me on deck at an earlier hour, and I had time to observe every thing ; and though the ocean and sky, rivalling each other in azure blue, were grand in my eye, I was more attracted by the scene passing before me on board.

So soon as the hammocks were stowed away, the mess cooks spread out their tin pans and pots between the guns, and made every preparation for breakfast, which consists usually of cold salt-meat, sea biscuit and tea, the latter served in a tin bucket, or camp kettle, and drunk out of the tin pots, while the tin pans serve for plates, unless he prefer substituting a biscuit. Jack carries his knife always about him, secured to a button-hole by a rope-yarn, that he may be ready to cut a rope or his rations, as occasion may require. At eight o'clock, or eight bells, the boatswain and his mates piped to breakfast, and the men seated themselves in groups upon the decks between the guns and began eating. It was cheering to see the hardy fellows swallowing their beef and pork, cut in slices, on a biscuit, with such a healthy gusto. I felt no particular appetite, and I had not got what they term my 'sea-legs aboard' yet—that is, my gait was not accustomed to the motion of the ship.

"The sea day commences at meridian, and the twenty-four hours are divided into five watches of four hours each, and two dog watches of half that period. The dog watches are from 4 till 6 P. M., and from 6 till 8 P. M. Each watch is divided into eight parts, marked by a stroke of the bell : so that at half-past twelve o'clock, for instance, it is one bell ; at one o'clock it is two bells ; and thus at four o'clock it is eight bells. This manner of 'taking note of time' is at first novel, but one soon becomes accustomed to it. A marine, always stationed at the cabin door, near which hangs a watch, reports to the quartermaster the half-hours as they pass. So much for time.

"At two bells,—nine o'clock,—'the hands were turned to' by the piping of the boatswain and his mates, and the men were busied in their various avocations. The next moment after the piping, a little hand-bell was rung on the berth deck, and the surgeon with his assistant were seated at a little table near the dispensary, where they heard and prescribed for all who felt themselves indisposed. And amongst two hundred souls, there are always some who require medical advice ; indeed, I am told that five per cent. of a ship's crew is the usual number of sick on board of men-of-war. At ten o'clock, the surgeon carries a written report to the captain, and the assistant makes a list of the names of the sick and hangs it near the cabin door. This is the 'binnacle list,' and is referred to by the officers to ascertain who are excused from duty, and by the purser's steward, to avoid serving grog to men who may be taking medicine.

"At 'seven bells' (half past eleven) the sailing master and the midshipmen were on the quarter-deck 'looking out for the sun,' quad-

rants in hand. 'This was an interesting half hour, for all seemed desirous of knowing the position of the ship on the globe; and to obtain the earliest information, were sauntering about the deck, while the 'master' sat upon the taff-rail, swinging his legs over the stern, with the vizor of his cap turned behind to have his vision unshaded, alternately gazing at the sun, and reading off the figures on his instrument. The midshipmen were near him, ever and anon asking each other, as they took the instrument from their eyes, 'well, how much do you stand on.' At last the master walked to the officer of the deck, and touching his hat, said, 'It is twelve o'clock, sir; the latitude is 39°.'

"The officer of the deck called a midshipman: 'Mr. — let the captain know that it is twelve o'clock, and that the latitude is thirty-nine.' The captain was standing only a few feet from the officer; and the midshipman turning round, saluted the captain: 'It is twelve o'clock, sir; the latitude is thirty-nine.'

"'Very good, sir,' replied the captain, 'tell lieutenant — to make it so.'

"'Make it so!' I repeated to myself; 'it is twelve o'clock, and if the captain do not like it, how can he help himself.' Still I was curious to know how this order was to be obeyed.

"The lieutenant put his speaking trumpet to his mouth, and in a loud voice cried, 'Strike the bell eight, pipe to dinner, roll to grog.' And the next moment the bell was striking, the boat-swains piping, and the drums rolling—it was a Babel-like sound—and that was the way 'to make it' twelve o'clock.

"The grog was served out to the men on the gun deck, from a tub, in tin cups holding exactly a half pint. They all were standing in a crowd, separated by a rope stretched across the deck from the grog tub, and the purser's steward, or clerk, as he is now called, who called the names, and each man as he heard the summons, stooped beneath the rope, removed the quid of tobacco from his mouth, and wiping his lips with the back of his hand, grasped the tin measure and carried it carefully to his face. The feeling of recognition beamed from his eye for an instant, his breath was drawn in, and his lips kissed the cup as its contents were poured into his mouth, the head retreated backwards, till at last, he seemed to be looking at something immediately above his head. There was an expiration and a smack of the lips that declared the gueto with which the draught is swallowed. Grog is sometimes called 'gabble water,' because it makes them talkative."

Prior to the act of August 29, 1842, to regulate the navy ration "a half pint of distilled spirits" was allowed to each ration. By this law

the spirit ration was reduced to one gill for all persons over twenty-one years of age, and they were permitted to commute it for its money value. Minors are not entitled to spirits.

Since the reduction of the measure of whiskey, it is customary in very many ships to divide the ration into two doses, one of which is exhibited before breakfast, and the other before dinner. On board of some vessels it is given before dinner and before supper. Generally it is drunk undiluted.

"Oh! whisky, dear whisky! it joys and cajoles;
Lies close to the heart, like a friend, and consoles."

It is doubtful whether whisky has any other virtue than its power to cajole. It is doubtful, because the question has been asked by high authority in the government, "Can the issue of spirit-ration be dispensed with, and what substitute will answer in its stead?" The ability to dispense with the daily use of spirit must rest on the solution of another question: Is distilled spirits an essential article of diet under any circumstances? Who should be relied upon to answer this inquiry? Your old men who have tipped fifty years and more, who always "take something" to celebrate the daily triumph of the sun in arriving at the meridian, would be recreant to themselves if they do not quote their own experience to sustain the opinion that "a glass of grog is a clever thing in its way." Is it an essential article of diet? For those who have never seen any male of Adam's race live without it, grog is of course essential. Ask an Irishman if man can live without potatoes, or a son of the Celestial Empire, whether tea and rice are not the essential elements of life. From the answers the conclusion would be inevitable that without grog, potatoes, tea and rice, men must surely perish. But let us gather facts, and after comparing them, form an opinion, a rational conjecture on the subject.

If the quantity contained in the ration were never exceeded, it might be drunk possibly without any very perceptibly injurious effect. But the ration is not enough to satisfy the appetite; it is just enough to create a craving for more, and to grog-drinkers an additional glass of grog is rarely unacceptable. This fact introduced the decanter and glass among the implements of hospitality: "the only difference betwixt the teetotalers and us," said a learned gentleman distinguished for the highest qualities of head and heart, "is, that they *kant*, and we *decant*." Whether that will always be the only difference, no philosopher has ventured to conjecture.

Commanding officers, in the exercise of a discretionary power over this part of the naval ration, by what law or authority I do not know,

sometimes issue or rather prescribe an extra or duplicate ration of grog to the crew, either because the weather is very wet, or very dry; or because it is very cold, or very hot; or because it is very calm, or is blowing a gale of wind; or because the ship has made a short passage; or because she has been long at sea, or simply because she has arrived in port. These public donations of grog are made under the name of "splicing the main brace." By some gentlemen they are supposed to be proper on every marked occasion, such as crossing either of the tropics or the equator, or doubling either the Cape of Good Hope or Cape Horn. In special cases grog is given to reward extra duty or unusual service. The national holidays, and days of festivity, cannot be properly celebrated without "splicing the main brace." It might be well for those who are curious in statistics to enquire how much it costs the public treasury annually for whisky "to splice the main brace" afloat.

The various usages in relation to grog show that it is, in the opinion of the naval community, a harmless panacea for all the ordinary ills of body and mind, for fatigue and sorrow. That part of the law which makes a gill of spirits an ingredient of the daily food endorses this opinion. According to their acts in relation to it, navy officers and legislators must believe that whisky has great good qualities. Submissive to superior intelligence, seamen should not be reproached for supposing the more they can drink the better; but they might learn that to the same intellectual source they are indebted for the discovery that drunkenness is a crime, which can be prevented by the use of the cat-o-nine tails.

The subject is worth a brief but systematic examination. The word intoxication is derived from the Greek word *toxikon*, poison, and by medical writers is used in its literal sense. They speak of arsenical intoxication, or poisoning from arsenic; opium intoxication, or poisoning from opium, and of vinous and spiritous intoxication, or poisoning from wine and from spirits. But in common parlance intoxication means drunkenness, and no one entertains a suspicion that a man is poisoned when he is drunk. Nevertheless, that condition known as drunkenness is only a manifestation of poisoning from fermented or distilled spirits in common use. It is the only form of poisoning which is supposed to be curable almost exclusively by flagellation, or some other form of penal infliction.

It is not necessary to discuss whether poisoning by spirits or alcoholic intoxication can be dispensed with; the law forbids it, and legislators have prescribed a routine of treatment for all cases in the naval service.

When death follows in a case of alcoholic intoxication, the spirit has, in some instances, been found in the substance of the brain. Hence it is inferred that spirit taken into the stomach in considerable quantity enters into and mingles with the current of the circulating blood. Life is destroyed by alcoholic excess much in the same way as by hanging and drowning; death takes place by *asphyxia*. But it is not necessary here to enter into details upon this branch of the subject.

It is generally believed that the excessive use of alcoholic liquors produces various diseases—*Delirium ebriosum*, or temporary paroxysm of insanity, characterized by violent excitement—*Delirium tremens*, or *mania a potu*, the "Horror," a form of disease to which habitual drunkards are obnoxious—*Insanity*, or persistent mental derangement—(it may be estimated that twenty per cent or one fifth of all cases of insanity are caused directly by intemperance)—*Oinomania*, or that form of mental derangement which is characterized by an uncontrollable appetite for alcoholic potations. Inflammatory diseases of the brain; Apoplexy, Palsy and Epilepsy are frequently caused by alcoholic intoxication. Diseases of the stomach, bowels, liver, kidneys, skin, &c., are caused by intemperance. Spontaneous combustion is also among the fatal effects of habitual drinking.

The influence of the intemperate use of alcoholic stimulants on the duration of life has been studied with a view to pecuniary profit. It has been felt by the "pocket nerve" of insurance companies. Insurers assume as little risk as possible, and therefore they insure the lives of those who are most likely to reach advanced age. Intemperate subjects they will not insure. At the age of forty years the annual rate of mortality for the whole population of England is about 13 per 1000; and the average mortality for all ages between 15 and 70 is about 20 per 1000. According to the records of life insurance offices, the rate of mortality at the age of 40 is about 11 per 1000, and among those insured in Friendly Societies, it is about 10 per 1000. In the Temperance Provident Institution, with several lives insured above 70 years of age, the average mortality in eight years for all ages above 15 has been only 6 per 1000.*

The inference is that intemperance is opposed to longevity; and that total abstinence from the use of alcoholic drinks is favorable to the dura-

* On the use and abuse of Alcoholic Liquors in health and disease. Prize essay By William B. Carpenter, M. D. Blanchard & Lea. Philadelphia. 1850.

This essay is conceived in a truly philosophical spirit, and seems to have been written without prejudice or party views. It is worthy of attentive perusal by all who may be interested in the subject.

tion of life. Life insurance companies prefer for insurance those whose health and habits are indicative of length of days; their rules, founded on observation, exclude the intemperate.

Is alcoholic liquor, either from distillation or fermentation, an essential article of diet? The practice of the various communities which constitute the christian world answers this question in the affirmative; but the dietetic habits of Mahomedans, Budhists and Brahmins reply most decidedly in the negative. If the question were to be solved by a ballot of the entire world, the total abstinence party would be largely in the majority, because there are very many more religious misbelievers than christians. But we may approach the truth, perhaps, by a mode which, although less democratic than the ballot-box, may be, in fact, quite influential in the formation of opinion.

Every thought which the brain elaborates, every action caused by the motion of muscles and their appendages, causes an expenditure of nervous and other matters entering into the constitution of the animal body. Mere existence is associated with wear of the machine, which cannot continue in operation without a certain degree of temperature is preserved in it. To supply the expenditure and waste of matter, and keep up the required temperature or animal heat, resources have been provided by the Creator of all things, in food, in repose and in respiration.

An apparatus, consisting of various organs or instruments, is furnished to prepare food and render it fit to be incorporated in the material of the body in place of that which is worn out and lost. Without a set of digestive organs food could not be appropriated in this way; there would be no nutrition, or in other words, no supply of fresh matter in place of that consumed in the wear of the machine. The function or action of these several digestive organs is, as it were, to select and separate from the food such parts as are required to form nerves, muscles, bones, &c., and to combine their elements into the several compounds we denominate nerves, and muscles. It is essential to nutrition that the substances taken as food should contain all the elements which, in combination, form the various textures or tissues found in the animal. Chemistry has taught us that these tissues consist of several elementary or simple substances in various conditions or proportions of combination. They are chiefly oxygen, hydrogen, nitrogen and carbon, which are also the chief constituents of plants. They are called elements because they have never been decomposed, or found to contain more than one kind of matter. The four elements above named form, by combination, what are termed organic elements or constituents. They are placed in

two classes. The first class includes only the nitrogenous constituents, or those which contain nitrogen. The chief of these are albumen, fibrin, and gelatin. The second class embraces only the non-nitrogenous constituents, or those which contain no nitrogen. They are the various animal sugars and animal fats and fatty acids. Besides these organic constituents there are several inorganic or mineral constituents which enter into the composition of the animal body. They are water, lime, magnesia, phosphorus, soda, iron, manganese, silica, alumina, copper, in form of salts, oxides and acids.

In order that food shall furnish nourishment, that is, the material which is expended in the multitude of actions constantly carried on by the animal machine, it must contain the elements or constituents of that material. In other words, the food must contain the organic constituents of both classes, as well as the mineral constituents in the requisite quantity. It has been ascertained that all these constituents are contained in the flesh of animals used as food by man, and in various plants.

Besides the digestive apparatus for the purpose of nutrition, or supply of expended materials, there is another for maintaining the proper temperature. Respiration and circulation of some kind are essential to every form of organic existence, whether animal or vegetable; but every kind of respiratory and circulatory apparatus does not produce appreciable heat. The organs of respiration and circulation found in the bodies of mammals, man included amongst them, constitute a furnace or heating machinery. It is so nicely balanced in connexion with the digestive organs and skin, that the animal heat of man remains at the same degree independently of the changes of temperature of the air. The animal heat of men, under the tropic sun, is no greater than that of men within the arctic circle. But their animal furnaces require different kinds, or different qualities of fuel under different circumstances, to maintain the required degree of temperature within the premises. Fuel for animals? Fuel and food are necessary to preserve animal life. Fuel implies a burning or combustion, accompanied by an extrication of heat and also of light. Wood and coals are fuels for ordinary furnaces, but animals do not consume those articles. Wood and coals constitute fuel only in a ratio to the amount of carbon they contain; their combustion consists merely in the combination of oxygen with this carbon, and the degree of heat which combustion yields depends upon the difference of capacity for caloric, between the compound formed by their combination, and carbon and oxygen separately. For illustration, let us suppose that carbon and

oxygen, when separate, will each contain two measures of caloric; but when they are chemically united, the compound resulting from their union called carbonic acid, has a capacity for no more than two measures. It is evident, from these premises, that as the combustion, that is, the chemical union of oxygen with carbon, proceeds, two measures of caloric are turned out, set free at every step to be applied as occasions may require. This is the gross rationale or explanation of what takes place in every ordinary furnace or fire producing heat; the oxygen of the air, with its two measures of latent or imperceptible heat, unites with the carbon of the coal or wood, also with its two measures of latent or insensible heat, to form carbonic acid, which cannot contain more than two measures of latent or imperceptible heat; consequently, of the four measures of latent heat brought together, two are turned out to seek another abode, and in this way become exposed and perceptible to our senses.

The animal furnace in man is the lungs. The air reaches those organs, and every one of their thousands of minute cells, through the mouth and wind-pipe; the air goes into these minute cells or sacks composed of oxygen and nitrogen; but it comes out from them without its oxygen; the nitrogen returns to the atmosphere mixed with carbonic acid, the result of combustion. But how is it that there is carbon in those minute cells of the lungs? Where does it come from; how does it get to them?

Minute veins and arteries, continuations of the great trunks connected with the heart, ramify over the walls or sides of the little cells of the lungs. These sides are too thick to permit blood to leak through them, but still thin enough to give free passage to oxygen and carbonic acid. The blood-vessels are merely two sets of canals; every blood disc in the veins is merely a barge carrying carbon to the furnace, while every blood disc in the arteries is an unloaded carbon barge freighted with heat and oxygen, returning to the minute capillary locks in the distant structure to be there loaded with carbon and again returned through the veins to the furnace. The heart, by its alternate contraction and expansion, keeps these discs, or carbon boats, in constant motion, as long as there is carbon to be found in the tissues, or oxygen in the cells of the lungs, to unite with it there to form carbonic acid, and thus furnish heat for the animal.

The food must furnish carbon for combustion in the lungs; and the digestive apparatus deposit it in the most convenient situations to be taken up by the blood discs for conveyance to the place of combustion. This animal fire cannot go down without diminishing the powers of the ani-

mal; if allowed to go out entirely for want of fuel, or want of air to sustain combustion, the animal dies.

Indeed all the vital actions have been supposed to be explained on a theory of combustion. The attrition and reciprocal action of parts on each other produce carbonized matter which is, as it were, poisonous or deleterious, and produces death if not removed. For this purpose the blood becomes arterialized, that is, loaded with oxygen, in the lungs, which it carries through every part of the system as an antidote to the carbon, or as above stated, the blood in the lungs loses the carbon, and goes back with heat and oxygen to be again freighted with carbon.

It is also presumed that the conversion of the worn-out materials of the body, into carbonic acid in the minute blood vessels, called capillaries, is attended by an extrication of heat. But be this as it may, the function of respiration in the lungs is the chief source of animal heat.

The means of conveying carbon out of the body are abundant. The two largest organs of man are engaged in this work: the lungs and the liver. The latter organ forms bile, which consists almost entirely of carbon. That fluid plays an important part in digestion, in the intestines, on its way out of the animal.

Carbon is necessary to maintain animal heat; all things being equal, the greater the quantity of carbon which the lung-furnace can burn, the warmer the animal will be.

But man's body requires nitrogen and oxygen, besides carbon and other materials to enter it and be consumed, or rather to enter new states of combination, which are continuously changing in regular and systematic succession, in order to maintain its vitality. For this reason, man requires a mixed diet. He cannot live upon sugar alone, because, although it consists of carbon, hydrogen, and oxygen, it contains no nitrogen. Besides, these ultimate elements must be in various forms or proportions of combination; fat and sugar differ from each other only in the different proportions of their ultimate constituents, which are carbon, hydrogen and oxygen.

The food of animals may be said to be literally burned in their bodies, and this, as in the case of other combustibles, for the purpose of producing heat. The gaseous products of the combustions are sent through the skin and lungs, while the smoke, soot and ashes are represented by the excrements and urine.

"The food required by animals must bear a certain relation to the waste of matter, and to the heat required. Thus, a hard working man, in whom the change of matter is rapid, requires much more food, (blood, or proteine compounds,)

than a sedentary person; and in cold climates a much larger quantity of food rich in carbon, especially fat, blubber and similar matters, is necessary than in warm climates, where, indeed, such food excites invincible repugnance. Any misproportion in the amount or nature of the food has a tendency to induce disease. Thus, Europeans who often eat and drink as at home, when they go to tropical climates, pay the penalty of their ignorance in the very frequent liver complaints observed among them. For the same reason, hepatic disease is more frequent during summer than during winter.”*

Alcohol consists of four parts carbon, six parts hydrogen, and two parts oxygen. It may therefore be considered simply as an animal fuel; but inferior in quality to solid fat or starch; for while the latter furnish a far larger amount of carbon, they are free from the stimulating properties of alcohol, which are prominent in all its various forms. The articles of food containing carbon without nitrogen, and which are free from intoxicating or poisonous qualities are so numerous, that it is not necessary to include any of the alcoholic preparations among them, in order to furnish the quantity of carbon required for the production of animal heat. Sugar or oil might be substituted for alcohol, both being rich in carbon.

Hydrogen is a combustible which furnishes a very considerable degree of heat, even greater than carbon itself. Its union with oxygen to form water is accompanied by an extrication of heat; but an explanation of this point is not necessary for the present illustration. It is enough to remember here that alcohol contains two combustible or inflammable elements. The red men of the West, it is presumed, were not aware of the chemical constitution of whiskey, although they so appropriately named it the “fire-water of the pale faces.”

It is not necessary to consider here the articles of food which contain albumen, fibrin and gelatin, all of which contain nitrogen.

Waste of animal material is in proportion to bodily as well as to mental exertion. The sense of fatigue is in fact a natural demand for a supply of matter in place of that which has been consumed. When the muscles are exercised there is an expenditure of muscular substance as well as of nervous substance; because every action of a muscle involves also the action of its appropriate nerves. The basis of muscle and nerve consists of albumen and fibrin. There is not the slightest relation of composition between the spirit part of the ration and muscular substance. Consequently it has no nutrient pow-

ers, and is therefore not essential to enable men to endure great and long-continued bodily exertion.

The following statement bears upon this point. It relates to brick-making, which is commonly accounted one of the most laborious of all outdoor employments. “Out of upwards of twenty three millions of bricks made in 1841, by the largest maker in the neighborhood, the average per man made by the beer-drinkers in the season was 760,269; whilst the average of the teetotalers was 795,400, which is 35,131 in favor of the latter. The highest number made by a beer-drinker was 880,000; the highest number made by a teetotaler was 890,000; leaving 10,000 in favor of the teetotaler. The lowest number made by a beer-drinker was 659,500; the lowest number made by a teetotaler was 746,000; leaving 87,000 in favor of the teetotaler. Satisfactory as the account appears, I believe it would be much more so, if the teetotalers could have obtained the whole ‘gang’ of abstainers; as they were frequently hindered by the drinking of some of the gang; and when the order is thus broken, the work cannot go on.”*

Dr. Carpenter relates that a ship, on a voyage from New South Wales to England, sprang a leak after passing the Cape of Good Hope, and to keep her afloat during the remainder of the voyage, a period of nearly three months, required the continued labor, not only of the crew and officers, but also of the passengers. “At first, the men were greatly fatigued at the termination of their ‘spell’ at the pumps; and, after drinking their allowance of grog, would ‘turn in,’ without taking a proper supply of nourishment. The consequence was, that their vigor was decidedly diminishing, and their feeling of fatigue increasing, as might be expected on the principles already laid down. By the directions of their commander, (who, although very moderate in his own habits, at the time of the writer’s acquaintance with him, was by no means a disciple of the Total Abstinence school, which renders his testimony the more valuable,) the allowance of grog was discontinued, and coffee and cocoa were substituted for it; a hot ‘mess’ of these beverages being provided, with the biscuit and meat, at the conclusion of every watch. It was then found the men felt inclined for a good meal of the latter, when the more direct but less effective refreshment of the alcoholic liquor was withdrawn; their vigor returned; their fatigue diminished; and, after twelve weeks of incessant and severe labor, (with no interval longer than four hours,) the ship was brought into port

* Carpenter. On the use and abuse of alcoholic liquors. Lea & Blanchard. Philadelphia. 1850.

* Gregory. Organic Chemistry. London. 1845.

with all on board of her in as good condition as they ever were in their lives."*

That the aborigines of our country, prior to the introduction of intoxicating drinks amongst them, were capable of long endurance in the chase is generally admitted. Carefully tried experiment has led to the common practice of sailing the merchant ships of the United States without giving grog to their crews. Indeed, grog rations are now almost entirely discontinued in the merchant service, in which the endurance of men is as severely tested, as it possibly can be under any circumstances.

Both theory and experience show that the spirit part of the ration is not necessary to enable men to endure extraordinary labor.

The use of alcoholic drink is very generally supposed to be of essential assistance in enabling men to endure mental exertion; but its stimulation is invariably followed by depression of mental power. Experience shows that literary men, who have been in the habit of laboring under this kind of stimulus, have been enabled to achieve more after acquiring the habit of abstinence.

Experience confirms the conclusions derived from physiological study, that alcoholic drinks are not essential to sustain the vital actions when the body is exposed to very low degrees of temperature. The Esquimaux and Greenlanders depend upon oleaginous food to furnish the necessary quantity of animal fuel when the temperature is very many degrees below zero. Men who have engaged in the arctic and antarctic exploring expeditions, have borne the severest cold without the use of the spirit part of the ration. When men are supplied with solid food and hot coffee, they will endure cold with less suffering, and for a longer period, than when they depend upon alcoholic drinks for animal fuel.

Alcoholic liquors do not assist the body to endure a very high temperature. They supply animal fuel to the interior furnace, when it is not required in large quantity. It has been found that English soldiers in India enjoy better health and fewer perish from disease, since the establishment of temperance societies amongst them. On this point the evidence is abundant. The native inhabitants of the tropical regions of the earth, it is well known, consume very little alcoholic liquor of any kind. It is safe to assert they enjoy better health than acclimated Europeans who indulge even moderately in the use of wines or spirits.

Dr. Moseley, who resided several years in the West Indies, says, in his work on Tropical Diseases; "I aver from my own knowledge and custom, as well as the custom and observations of many other people, that those who drink noth-

ing but water, or make it their principal drink, are but little affected by the climate, and can undergo the greatest fatigue without inconvenience, and are never subject to troublesome or dangerous diseases."

Spirit drinking is set down by the most philosophical writers on the diseases of India, as the most prolific cause of various diseases of the liver.

Nor is the use of alcoholic liquors essential to protect men from morbid agencies in malarious situations. All the protection required under such exposure is found in hot tea, coffee, or cocoa. In the island of Java, near the coast, where intermittent fevers and dysenteries constantly exist, Europeans are protected by taking a cup of hot coffee before exposing themselves abroad to the early morning air.

The habitual moderate use of alcoholic liquors impairs the powers of perfect digestion by stimulating the appetite, and thus inducing a much larger consumption of food than the body in health requires for its nourishment. It cannot be reasonably doubted, that habitually over-feeding a healthy man will induce disease. Any excess in the quantity of food taken into the stomach, produces a corresponding excess in the action of all the various organs concerned in the process of digestion and nutrition. Excessive action of the machine in its parts, or as a whole, hastens the exhaustion of its powers. Health and duration of life will be in a ratio to the perfection of equilibrium between the supply furnished through the organs of nutrition, and the expenditure of the animal material. All things being equal, a well constituted animal will live longer in proportion as its respiration and nourishment are perfectly balanced, by the exercise of its muscular and nervous systems. Starvation and repletion are merely relative to the normal demand for nutrient matter, and this demand is measured by the degree of habitual exercise of the physical powers of the animal. Sedentary and idly listless persons require less food than day-laborers; the quantity which would be repletion for the former, would be inadequate for the latter, and place them in a grade of starvation.

The spirit ration is usually administered just before meals; it creates a false demand for food, while itself affords no nourishment, and adds nothing to the physical power of the man. The speed of the horse may be augmented very much for a limited period, by the application of whip and spurs; but their application adds no more to the physical powers and endurance of the horse, than the administration of the spirit ration augments the physical powers and endurance of men. The stimulus of spurs in one case, and of spirit in the other, are somewhat analogous: the

* On the use and abuse of alcoholic liquors.

armed heel alone cannot sustain the speed of the courser, nor can the spirit enable the digestive organs to dispose of an excessive quantity of food without impairing their powers. Its effects would be less prejudicial, if grog were drunk an hour after meals.

It is not to be denied, however, that alcoholic drinks, both distilled and fermented, including of course all the varieties of spirits, wines and beers, are valuable medicines. There are some few persons of feeble powers of digestion, either from original defect of constitution, or from long continued chronic disease, to whom spirits, or wine, or beer, are very important, if not essential. But this class of valitudinaries forms an exception, and should never be found among the privates of an army or navy. The discussion of the necessity of the spirit ration has been entirely in reference to men in health; it is not necessary to consider it either as a medicine or a prophylactic, that is, a means of preventing disease.

It is presumed that the abolition of the spirit ration would not be in the way of recruiting men for the navy. It is generally abolished in the merchant service; therefore those seamen who are attracted to the navy solely on account of the grog, if there be many such as has been asserted, would be left the alternative to labor on shore or to go to sea without grog.

Is it expected that the abolition of the spirit ration will abolish drunkenness among those employed in the navy? Not immediately. The present race of adult seamen will not be reformed in this respect; but it may be reasonably conjectured that the young and rising generation will become adults without acquiring the habit to drink, which is now taught by example. In the estimation of boys and minors on board, admission to the grog-tub is one of the privileges and signs of manhood. They are prone to imitate whatever is considered manly, and therefore they often anticipate the time of manhood and exhibit their precocity by drinking themselves drunk on the first favorable opportunity.

It will not be denied that a rigid practice of sobriety and temperance is desirable in every vocation of life; but it is feared this will not be brought about solely by taking away grog from sailors. The habits of men frequently spring from imitation of those whom they regard as superiors. Dr. Robert Jackson, in his work "On the Formation, Discipline and Economy of Armies," pertinently remarks: "The officer may lead by example; he cannot drive by authority. If a general of high reputation in war, instead of courting popularity by a sumptuous table and high-flavored wines, had the resolution to cover a simple board with a plain repast, similar to the soldier's mess, and measured in quantity, in pro-

portion to the number of the guests, he would have the merit of being a reformer; and if his example serves to eradicate the national propensity to sumptuous living, which is the most prominent defect in the character of the English military, he would be regarded, and justly regarded by posterity, not as a visionary reformer, but as a national benefactor of the first distinction. The plain repast is sufficient for sustenance; and a plain repast gives all the gratification to the palate of an hungry and thirsty man that a soldier ought to permit himself to receive; and, while it does this, it leaves his organs as not overwhelmed by turtle and claret, free for impressions of military glory and pursuits of military science."

"Economy, or a just measure of means to ends, lays the foundation of individual and national prosperity: adherence to it alone insures the performance of happiness. Dignity of mind and real military virtue have no connexion with sumptuous living. The conqueror is ordinarily frugal and homely, that is, the bold barbarian emerging from savage life: the conquered is ordinarily rich, luxurious, and what is called refined; that is, the creature of the appetites of corporal sense. The Spartan nation was temperate and frugal. It was august in the assembly of nations, and warlike in the field of battle. The Spartan mess-room presented little furniture that was costly, no service of plate, and few silver or gilded utensils. It presented veteran heroes teaching lessons of warlike virtue to youth, an equipment of infinitely more value than the inside of a jeweller's shop. The precedent is good, and it is not difficult to be followed. Cleomenes, one of the Spartan kings, found, at his accession to the sovereignty, that, instead of Spartans of the school of Lycurgus, a degenerated race filled the military ranks—men corrupted by the luxuries of Asia, and absorbed in the pleasures of the table. The moral virtue was lost, and even the military virtue was obscured. He meditated reform, and the first step in reform was the reestablishment of the public mess and frugal meal. Cleomenes was plain in manner and frugal in expenditure at mess; but no sovereign, whose record stands in history, was more dignified in mind; and no one—not even Louis the magnificent in all his grandeur—commanded a devotion equal to what was voluntarily given to this simple and meanly attired Spartan. The English military are perhaps more under the influence of the pleasures of the table than any other military in modern times; but they are not beyond the possibility of reform. It is reported that General Wolfe, who, while a man of superior goodness, was perhaps the most perfect soldier of the age in which he lived,

never gave an elegant, and rarely an eatable dinner to persons of the *haut gout*. The epicurean was disgusted, the soldier was regaled. General Wolfe's table was said to be an epitome of a Spartan mess-room. No one rose from it without having been furnished with the opportunity of carrying away a military lesson; and few left it without feeling an accession of military importance communicated to the mind by the impressive influence of a hero's spirit. The example was almost solitary. The career of General Wolfe's life was short; his virtues were, notwithstanding, of such force, that the impression remained long with the 20th regiment which he formed, and at one time commanded. The example of a frugal mess-table is not, the writer is aware, adapted to our present habits; but man is the child of imitation; and, if frugal regimen were the regimen of high authority and acknowledged military talent, simplicity of living might again become a fashion in the army. The young soldier, instead of exerting his genius in the improvement of a ragout, or the dressing and carving of a duck, might be formed to eat his ration of beef and bread in silence; and, instead of thinking it necessary to be intoxicated with wine, might be led to imbibe the spirit of Wolfe and Cleomenes, and thus become a soldier." (p. 337-8.)

The prevalence of drunkenness among privates in the navy may be estimated very accurately from the "report of punishments in the naval service for the years 1846, 1847" and part of 1848.*

During those three years the average mean strength of the navy may be estimated not to have exceeded 8000. Within that time those 8000 privates suffered 5761 individual floggings; of this number, 1882, or 30.93 per cent were inflicted for "drunkenness," for "smuggling liquor," for "doubling the grog-tub," and for "stealing liquor," or, in a word, for offences directly arising from grog. If to these be added the punishments indirectly connected with spirit drinking; those for insolence, turbulence, quarreling, fighting and riotous conduct, it will probably increase the number of floggings on account of the spirit ration to one half.

Careful examination of the question, in its several relations, will lead to the following conclusions.

1. A ration of spirit is not an essential item in the food of a healthy man: therefore it may be dispensed with.

2 Spirit is not essential, nor in any manner indispensable, to enable men to endure very great

cold, or very great heat, or to sustain long continued and extraordinary labor.

3. As a general rule, the habitual moderate use of alcoholic stimulants tends to impair the powers of life, and to render men more obnoxious to the influence of malaria.

4. The use of spirituous drink is directly or indirectly the cause of about one half the punishments necessarily inflicted heretofore in the naval service.

5. All kinds of alcoholic drinks should be considered rather as medicines than as articles of diet.

6. As the spirit ration affords no nourishment, is not essential in cases of extraordinary exposure to cold, heat or fatigue; as it leads to conduct requiring penal correction, and as the experiment has been extensively made in the merchant service, in workshops and manufactories of all kinds, among slaves on sugar and cotton plantations, it may be entirely dispensed with in the navy advantageously to the health, discipline and efficiency of the service.

An excellent substitute for the spirit ration would be found in a supply of filters for each water-tank, and an augmented ration of water and of atmospheric air to sleep in. Modern invention has furnished filters for water well adapted to use on ship board, far superior to the old fashioned drip-stones or analogous contrivances. Indeed there is no common necessity of life afloat which can be supplied in better condition or longer preserved than sweet palatable water. It is probable there is no material in nature less liable to spontaneous change; its constitution is as constant as the granite of the everlasting hills. Even when it contains in mechanical mixture mud and vegetable debris, they fall to the bottom, are precipitated, and the water remains entirely pure. Vegetable and animal matter in a state of putrefactive fermentation would not render water in which they were forever unfit to drink. I refer to such river waters as, when taken on board ship for use, undergo fermentation from the vegetable and other matters mingled in them, evolving fœtid hydrogen or other gaseous compounds. Water, in the offensive states alluded, should not be drunk. It is not probable that spirit essentially changes the unwholesome properties of such water, although it may render it less nauseating or less repugnant to the drinker of it. The addition of spirit serves to disguise or rather to modify a disgusting dose; but it does not render such a potation less noxious as nutritious material. It is desirable to obtain and preserve for use on board ships wholesome and palatable water, because it is one of the most essential of the constituents of animal bodies. Water which contains putrescent matters mingled in it, or saline substances in consid-

* Punishments in the Navy. Ex. Doc., No. 51. House of Representatives. Thirtieth Congress. Second session.

erable quantities dissolved in it, cannot be made wholesome by simply rendering its taste more agreeable. Diseased or decomposed flesh can not be rendered an eligible article of food by subduing its flavor in a coating of aromatics or condiments; nor can we render rosy, wormy, or putrid water a proper or wholesome drink by adding to it whisky or brandy.

All substances in a state of minute division contained in water can be removed by the process of filtering; but that which is dissolved in water cannot be separated from it by a filter. No process of filtering can remove the various salts dissolved in the water of the ocean, nor can we ever hope to render it a wholesome ordinary drink, even if we find a means of concealing its taste. Castor oil mingled in the foam of ale or porter may be swallowed without disgusting even a delicate palate; but the influence of the oil is in no degree modified by such admixture.

To retain the spirit ration under the pretext that it is necessary to improve the taste of impure or dirty water, is as absurd as to argue that it is also necessary to obviate the evil effects imagined to result from drinking water of the various temperatures at which it is found in different latitudes from the equator to the pole. If the addition of spirit be necessary to render water wholesome in very cold regions, and the same addition be necessary for its salubrity under the blaze of a tropic sun, the ration of spirit is too small. Enough should be allowed to add a little to every draught of water a man may require. Instead of a gill (the present allowance) at least a pint should be furnished for the daily consumption of each man, if we assume that a gallon of water is not more than sufficient to satisfy a laboring seaman between the tropics. It will not be contended that taking a half gill of spirits undiluted twice daily, which is the practice on some vessels, will enable men to satisfy thirst through the entire twenty-four hours on dirty or impure water when the temperature of the atmosphere is above 85° or 90° F.?

Where water becomes "as cold and chilling as the northerners," less is required to be drunk. If this comparatively small quantity be objectionable on account of its low temperature, possibly there may be some who would recommend, on aboriginal notions, raw spirits instead of water, as being less dangerous. It has been stated, upon what authority, however, I am ignorant, that the body of an Indian was found frozen upon a high way. A council of his tribe was assembled to ascertain the cause of his death. After long and serious consideration of all the circumstances, it was the unanimous opinion of the inquest that the Indian had lost his life by imprudently

diluting his whisky with water which had been congealed within him by the cold of the preceding night, and thus extinguished the fires of life.

There are men of exalted station who entertain opinions on this subject wholly at variance with those above set forth. Among them is the senior captain in the navy, the distinguished Commodore Charles Stewart. In an official letter addressed to the Secretary of the Navy, dated "Bordentown, N. J., March 11, 1850," he thus expresses himself on this point:

"At this late period of naval history it would be difficult to discover the origin of the introduction of spirits as a component part of the ration into the navies of Europe; it seems they always had and still have such an allowance. It is, however, varied in kind, so as to suit the habits of their own seamen, and the policy of their respective governments who allow its use, in rendering it subservient to the various products of their own country or colonies. England furnished rum from its West India colonies, Holland furnished gin, France issues one day wine and the next brandy alternately, Sweden and Denmark rum from their colonies," &c.

On similar grounds the English made war upon China to enforce the consumption of opium; and now His Holiness, the Pope, under stringent regulations, encourages the consumption of tobacco by all the subjects of the Holy See. It will not be disputed that an extensive popular use of rum, brandy, gin, wine, opium, tobacco, &c., is of a pecuniary advantage to the manufacturers and producers of these articles, and of a corresponding advantage to the governments which derive revenue by taxes upon them. But this fact has no influence in deciding whether any one or all of these articles are necessary either to health or comfort. Commodore Stewart continues:—

"All persons who have been much at sea are aware of the impossibility of keeping up a supply of good or pure water. Sometimes it is brackish, at others rosy or putrid, and oftentimes from long confinement in close vessels, it is found in a state of decomposition, and any fixed air it originally contained wholly separated and expelled. In the hot latitudes, it becomes in the heated holds of vessels so warm that the stomach will almost reject it; and in the higher latitudes, as cold and chilling as the northerners; thus the almost daily varying of cruising ships' positions brings with it a like variance in the water, and from these circumstances oftentimes deprives the water of its refreshing qualities. This may have originated the issue of the spirit ration in vessels of war, as a means of ameliorating this essential article of life amongst those who go down to the seas in great ships. I know that, in addi-

tion, (from experience) to be sometimes absolutely essential to the sustaining the energies of the men, when great efforts are to be made under emergencies, or to sustain them from sinking entirely after great physical exertion, influenced by excessive excitement.

"If, therefore, it in any measure form an essential to a sailor's comforts, (of which he has so few at sea,) why should the very many be deprived of it, because two or three per cent. of the whole number will, when an opportunity offers, abuse themselves and their service through an inordinate use of it? This would seem like punishing the many good men for the faults of the few."

Although my acquaintance with the naval service commenced little more than a quarter of a century since, and therefore is less than half as ancient as that of the veteran commodore who claims "an experience of nearly sixty years' sea-service," I believe that water which is pure when obtained, may be perfectly preserved for an indefinite period. I have drunk water which has been kept on board ship more than three years; it was as limpid and sweet as that from the Schuylkill or Croton after passing through the best modern filter.

The general employment of iron tanks for water in the British navy dates from 1815, and in our own service from about 1825. Upon the subject of supply of water for ships' companies, I subjoin an extract from the "Statistical reports on the health of the Navy" of England, collated by John Wilson, M. D. R. N., and published by the House of Commons in 1840 and 1841. Dr Wilson says:—

"Palatable water in sufficient quantity, is essential to comfort, and influential on health; and in no article, at least in the manner of keeping and preserving it, has there been greater improvement than in this indispensable one, in recent times, in ships of war. When water was kept in casks, it became slightly foetid, from the disengagement of hydrogen, in a few days, and, in a fortnight or three weeks, so loathsome, as to be swallowed with repugnance, even when called for by urgent thirst. The progress of decomposition, and its nauseating results, were especially rapid and offensive, when the water was most pure at least, when it contained the smallest portion of mineral admixture, and the temperature was high. When the solid food at sea consisted almost exclusively of very salt beef and pork, biscuits long baked, and puddings made of salt suet and flour, the desire for, even the necessity of abundance of water, was great. No one who has not felt it can imagine the distress that was often endured, within the tropics, setting aside the effects on health, from

the intense thirst thus excited, and the only means available for quenching it—water so putrid, and offensive, often so thick, and green from vegetable admixture, and decomposition, and emitting so strongly the factor of rotten eggs, as to disgust at once the sense of smell, and of taste.

"Happily all these evils and inconveniences are banished from the navy, by the substitution of iron tanks for water-casks. Water suffers no change in these iron vessels, however long kept, at least no change in itself, from decomposition. The metal becomes oxydised to a certain extent, and the oxyde in the interior of the tank mixes with the water, but, from its weight and insolubility, falls to the bottom, and does not, except in stormy weather, discolour the water, till the tank is nearly empty. When the water is taken from the tank in stormy weather, or from the bottom, it has a brownish color, on account of a portion of oxyde of iron being suspended in it, the greater part of which soon falls to the bottom of the vessel into which it has been drawn. It is not tainted with any thing offensive either to the palate, or the nose. There is no reason to suppose that the slight chalybeate admixture is injurious to health; it may be in such minute portions beneficial.

"It is of importance, not only that water should be kept without deterioration in ships, but also that it should be wholesome when sent on board. The first object is fully obtained by iron tanks; the last must depend on the means of supply, and care, and judgment in selection. At home, and generally in British Colonies, there is little difficulty in procuring good water, but in some of the many places visited by ships of war, it is not always easy to procure it free from mineral solutions, deleterious in quality, or quantity, or from various vegetable additions. In such cases, care and labour should not be spared in choosing and procuring the best. In some foreign ports a small charge is made for supplies of good water, to save which, bad water has been taken on board, at the expense of considerable labour to ships' companies; this is poor and injurious parsimony, which should never be practised. The acuteness and philanthropy of Captain Cook led him to lay much stress on abundance of wholesome water for the preservation of health, and to use every means for obtaining it. It may be thought that it did not require much of either quality to arrive at that conclusion; but, looking at the general practice then, and long after, it was not so self-evident as it now appears to be."

Commodore Stewart is in error to say that it is impossible to keep up a supply of good or pure water at sea; he is also wrong in attributing

the disagreeable odor and taste of water to "long confinement in close vessels," also in saying that water is "found in a state of decomposition" from such cause, and also in the notion that water contains "fixed air" (the vulgar name of carbonic acid gas,) the loss of which renders it unpalatable or unwholesome. Water contains a small quantity of atmospheric air mingled with it under ordinary circumstances, but no "fixed air" or other gas. Palatable water becomes vapid, insipid by boiling, but its flavor may be speedily recovered by agitating it in contact with atmospheric air, which becomes enveloped or mingled in the liquid.

It is notorious that the inhabitants of many towns are supplied with drinking water from tanks exclusively, and that rain water is preserved in them for years in a perfectly wholesome state. This fact alone should be sufficient to show the error of Commodore Stewart's statement and the fallacy of his whole argument. But the influence of opinion entertained and expressed by men holding distinguished positions, cannot be efficiently met by the simple contradiction of obscure individuals, and for this reason I have ventured to state why Commodore Stewart's opinion, on this point, is not entitled to the confidence of the public or of legislators. His first argument is simply this: An allowance of spirit has been given to the privates of all christian navies: the antiquity of this allowance is a guarantee of its propriety; hence it is clear that the spirit-ration should be continued in the navy of the United States. A parallel form of this reasoning will show its force. Drunkenness has been permitted in all christian navies; drunkenness is sanctioned by long custom, and hence it should be continued in the navy of the United States.

His second argument is simply this:—Impure or unwholesome water only can be obtained on board ship at sea; the mixture of spirit with impure water renders it palatable and consequently wholesome; therefore, a gill of spirit taken raw in two doses daily will correct the disagreeable taste and odour of a gallon of impure water drunk from the scuttle-butt, and at the same time bring said water to a standard temperature whether the ship be at the equator or the poles.

CHAPTER IV.

Penalty of going aloft the first time; Bat on board 800 miles from land; Flying-fish; Dolphin; Cetaceans; Dolphins not fishes; Changing colors of the dying dolphin explained.

March 18th. Lat. 59° 22' North, Long. 54° 56' West. Fresh breeze; ten knots an hour. Gulf weed floating past. It was generally be-

lieved we were in the N. E. Trade winds, but at night it rained and the wind changed.

20th. The carpenters are at work; they are altering the arrangements of the berth-deck, which will improve the ventilation and contribute to the comfort and health of all. This evening a gentleman who has never been afloat before, ascended to the mizzen-top to enjoy a moonlight reverie, where the captain of the top demanded "footing" in accordance with the custom of the sea. The rule is that the new comer shall pay an initiation fee, in the shape of a glass of grog to the top-men, or its equivalent, or submit to be tied fast in the rigging for the sport and amusement of all beholders. It is cheaper to pay the grog than risk the alternative.

March 31st. Last night a leather-winged bat was flitting about the gun-deck to the amazement of many who surmised the animal must be excessively weary after its long flight from land, the nearest point of which being at least eight hundred miles distant. But the animal probably came on board at New York during the autumn, became torpid in the winter cold, and roused into life by elevation of temperature, had emerged from its hiding-place.

March 23d. Latitude 24° 41' north, longitude 52° 33' west. Temperature of the air 78° F., and of the sea 75° F. To day the first flying fish was seen, and a dolphin was caught under the bow with a harpoon. The animal was speedily butchered and distributed to the cooks: the flesh is white, dry, and not very savory, but may be satisfactorily eaten at sea.

Flying-fishes, called *exocetus*,—(one who sleeps out, or as it might be rendered by the policemen of large cities, "a night lark")—which means a fish which sleeps on shore, not that the name describes the habit of the animal, but the ancients are supposed to have believed that flying-fishes slept out of the water:—Flying-fishes are found in various parts of the world, but abound most in warm regions. There are several species; that most frequently met is the *Exocetus volitans*. These fishes are from six to twelve inches long, with a bluish back and silvery white belly. Their pectoral fins are very large and expanded, so as to serve the purpose of wings to a limited extent. They bound out of the water and skim along three or four feet above the surface of the sea, a distance of three or four hundred feet, occasionally rising and falling in the course of their flight. Sometimes hundreds together are seen upon the wing, presenting a beautiful spectacle, their azure and silver sides glittering in the sun. They rarely remain out of water longer than a half minute. At the expiration of this time, it is probable their gills become dry, and they drop again into the

sea to take breath. The common notion is that they cannot fly when their fins become dry.

This feeble, brilliant, graceful little fish enjoys no little sympathy, because it is a victim of so many pursuers. It springs from the sea to escape from voracious fishes, only to fall a victim, very often, to rapacious birds. But it is wrong to suppose that it is never seen in the air except when pursued in the water: it is probable the animal flies for its own pleasure as well as safety. It feeds upon animal and vegetable substances. Want of strength alone prevents it from being as great a depredator as any inhabitant of the ocean.

The dolphin, be it remembered, is not a fish, although it dwells in water: it is an aquatic mammal, being included by naturalists in the order of Cetææ, which embraces dolphins, narwhals, porpoises, grampuses, whales and porquails. The cetæceans are formed for living exclusively in water; but they resemble fishes in nothing else. Like other mammals, cetæceans respire air by means of lungs, and cannot remain under water more than twenty-five or thirty minutes: they are therefore obliged to come to the surface to breathe; fishes on the contrary respire, by means of gills, the air which is mingled in sea and river waters, and are not under the necessity of coming into our atmosphere to preserve life.* The blood of fishes is cold, and is circulated by a heart having two cavities; but that of aquatic mammals is warm, and is moved by a heart which has four cavities. The blood corpuscles of fishes are elliptical; but in mammals they are circular. Fishes propagate their species by means of eggs, but cetæceans, like all mammals, bring forth their young ones alive and suckle them during infancy. I am assured by whalers, who have killed mother whales when nursing their

* M. Leroy states that whilst the water of rivers contains per litre, (about a quart, or 61 cubic inches,) 40 cubic centimetres, (about 15 3-4 cubic inches,) of gas, that of the ocean contains only 20 centimetres: and that this quantity varies according to the hour of the day at which the experiment is made, as he shows by the following table:

	Morning.	Evening.
Carbonic acid,	3.4	2.9
Oxygen,	5.4	6.0
Azote or nitrogen,	11.0	11.6
	19.8	20.5

The Statement of M. Leroy has been verified by a committee of the Academy of Sciences at Paris. The portion of oxygen varied from 32.5 to 34.4 per cent; that of the carbonic acid from 12.0 to 19.4 per cent; that of azote from 48.1 to 53.7 per cent.

This gaseous compound, mingled in rivers and seas, is doubtlessly adapted to the physiological wants of the animals which inhabit the waters, and furnishes them the exact quantity of vital air required for their respiration.

infants, that they have seen acres of ocean whitened by their milk, effused while in conflict with their pursuers.

Generally considered, cetæceans constitute a distinct, well-marked order in the animal kingdom. They all inhabit the water, and their structure is such that they cannot leave it; for this reason the ancients mistook them for fishes. The enormous size of their bodies would prevent progression on land; besides the weight of the superior parts would crush those which happened to be next to the earth. This is seen when these monstrous animals are stranded; they are flattened, and their internal organs are so far effaced by the great weight, that they can no longer perform their functions. Respiration becomes at first laborious, then interrupted, and the animal dies from asphyxia or suffocation in the only element respirable by his organs. His muscular power is not in proportion to his enormous size; and this is in accordance with a general law of nature, which provides a diminution of this force inversely and proportionately to the development of stature in all animals.

In order that cetæceans may move and change place, they require an element which sustains their mass without too much compressing it, and while affording the necessary support, does not offer too much resistance to its motions. This element is water. None of them have inferior extremities, (hind legs,) but the body, which is more or less cylindrical, always elongated, terminates posteriorly by a thick tail and cartilaginous fin, placed horizontally, which admirably perform the duty required of them. They swim by means of this tail, which pushes them forward; and the fore-fins serve to preserve them in a natural attitude, or to direct their motion to the right or to the left. The horizontal position of the tail-fins makes their manner of swimming altogether different from that of fishes; the latter, having the tail-fins vertical, push the water from side to side, while cetæceans push it from above downwards and from below upwards. This structure gives them great facility in diving, but at the same time renders their motion on the surface undulatory, which is so strong in porpoises that they seem to be always turning somersaults. The head, generally very large, is attached to the body by a neck, which is so thick and massive, that they appear not to have any. The anterior extremities are composed of short, flattened bones, covered by a tendinous membrane; they have the form of true fins, the functions of which they in fact perform.

Compared with terrestrial mammals, cetæceans are not very intelligent. Different genera and species confine themselves within certain geographical limits respectively; and it is said, that

like other animals, when driven away by their pursuers, they return again to the region of their birth. Some live in rivers exclusively, some in bays and gulfs, and others are only encountered in the open sea. There is a dolphin which never leaves the waters of the Ganges, and another which never passes the limits of the Orinoco. There are several genera which inhabit the northern parts of the Atlantic, and never go south of the 40th parallel of north latitude. White dolphins are seen in the China sea, and black dolphins in the seas of Japan. There are whales of the Cape of Good Hope, of Brazil, of Japan, of the North and of the South Pacific oceans.

The order of cetaceans is divided into three families: 1st, the Dolphinians, which includes porpoises, several varieties of dolphins and narwhals; 2nd, the Physeters, and 3rd, the Balanians. The last two families include all the various kinds of whales as they are generally called—spermaceti, black-fish, right-whale, blowers, &c., &c.

Cetaceans are very useful to human society. They furnish oil for lamps and machinery; adipocere or spermaceti for the Chandler and druggist; whalebone for milliners, mantua-makers and umbrella manufacturers, and their teeth supply an ivory used in many branches of the arts. And lastly, statesmen and politicians perceive that the pursuit of animals of this order constitutes an excellent school for the education of seamen, essential to the navy in time of war.

In the opinion of the ancients the dolphin was an amiable, good, grateful animal, which was sociable with those who treated him kindly; he obeyed them and became so fondly attached as to die of grief, when, from any cause, he was abandoned by the object of his affections. Pausanias relates that he himself saw a dolphin which, having been wounded by fishermen and cured by a child, manifested gratitude. He would come at the sound of the child's voice, and would carry him on his back wherever directed. The melodious notes of Arion subjected dolphins to his purposes; and the pastoral tastes of Oppian's dolphin was so decided, that at the sound of the shepherd's flutes he left the sea to join the flocks in enjoying the quiet and shade of the woods.

But the dolphins of the present day are stupid, brutal, voracious beasts, with only intelligence enough to devour their prey and propagate their species. It is suggested that the histories of the dolphin given to us by the ancients belong more properly to the shark. Be this as it may, the dolphins formed a very ancient race; their fossil remains are found in the marine tertiary strata of the earth.

Naturalists divide the family of dolphins into seven groups: 1, Delphinorhynchus; 2, Delphinus

proper; 3, Inias; 4, Porpoises; 5, Hypérodons; 6, Narwhals; 7, Globicephales.

The following list will show how numerous the dolphin tribes are.

Delphinorhynchus coronatus,

- " *frontatus,*
- " *rostratus,*
- " *maculatus,*
- " *malayanus,*
- " *micropterus.*

Dolphins Proper.

Delphinus delphis,

- " *tursio,*
- " *capensis,*
- " *superciliosus,*
- " *Novæ-Zelandiæ,*
- " *plumbeus,*
- " *longirostris,*
- " *Kingii,*
- " *leucopleurus,*
- " *truncatus,*
- " *cruciger,*
- " *dubius,*
- " *velox,*

- " *Desmarestii,*
- " *spurius,*
- " *niger.**

It is hoped the reader is satisfied that dolphins are not fishes. The broad and marked differences in organization between the class of fishes

* See Dictionnaire Universel d'Histoire Naturelle.

and the class of mammals are recognized by slight observation; but it may not be easy at first sight to regard cetaceans which belong to the latter as any thing but fishes, for a simple reason. The fact that fishes are peculiar to the waters is so familiar, that it is perhaps difficult to believe any animal which lives only in the ocean is not a fish. The medium in which animals dwell does not indicate their structures, organization or habits, nor, as a consequence, to what rank in the classification of animal existence they belong. All animals found in the waters are no more fishes, than are all animals which live in our atmosphere birds or insects; a quadruped is not more distinct from a toad, both inhabitants of land, than is a whale or dolphin from a shad, all inhabitants of water.

The iridescence, the changing colors of the dying dolphin, is a theme of poets, and is a spectacle very generally admired. In the minds of wonder-loving people, these changes of color shadow forth in some manner the intense agony of the animal in its death struggle. It seems to them a mystery that it should have this power; but the fact is susceptible of easy explanation.

The animal has very minute scales, which are marked by very diminutive lines. This structure, or mechanical arrangement of the scales, is the cause of the phenomenon under consideration.

The scales of the dolphin are about three tenths of an inch long and one tenth broad; they are paraboloid in shape, and marked by lines about one thousandth of an inch apart, forming numerous parabolas, which seem to have a common centre. This structure is revealed by the microscope. To understand how this arrangement explains the phenomenon, it is necessary to know that if a ray of light fall upon a plate of glass which has been ruled so as to have lines upon its surface very close together, a thousand or fifteen hundred to an inch, the ray of light will be refracted and the surface of the glass become iridescent, showing all the colors of the rainbow. The beautiful play of colors seen on the surface of the haliotis shell after the outer covering or epidermis has been ground off, is owing to a similar cause. The shell-matter is deposited by the shell-membrane of the animal in extremely thin lamina, not more than one thousandth of an inch thick. When the epidermis is ground off, the edges of these lamina "crop out," as geologists say, and form numerous, extremely minute parallel lines, which, refracting and decomposing white light into its primitive colors, as may be seen on ruled glass, produce the iridescence so much admired. The lines on the little scales of the dolphin have the same effect: and as the contortions of the ani-

mal in the agonies of death of course continuously change the angle at which they are seen by the beholder, a different hue is perceived by every alteration of position of the scales. How perfectly simple is the cause of this phenomenon, which excites almost universal admiration and wonder, to say nothing of superstition in the minds of the ignorant and vulgar!

MICHAEL BONHAM:

OR, THE FALL OF BEXAR.

A TALE OF TEXAS. IN FIVE PARTS.

BY A SOUTHRON.

PART II.—SCENE I.

Interior of Chamber in the palace of Don Esteban de Monteneros, Governor of San Antonio de Bexar. The Governor, solus, in military costume, writing at table. His chapeau bras, and sword lie before him among papers. He looks up from his reading.

Don Esteban. There! *Madre de Dios!* It is done. It is well done! It is written! The record is made. I may now take my rest. I may sleep. I have fought successfully. The battle is over. The field is won: The laurels are gathered. They enwreath my brow for ever! I defy, thee, Time! Immortality, thou art mine! I clutch thee! Oblivion, I mock thy spiteful arts! . . . Yet, let me see! Let me read once more what I have written! Despatches are not like ordinary letters. They belong to history. They make history! They answer all the purposes of fame. They are fame! Through such as these she speaks, and confers glory upon great heads! *Sic itur ad astra!* And I am not alone. Napoleon lives in his bulletins, rather than his battles! Great example that! Let me see how I have followed it.

[*Reads aloud.*]

"To his Excellency Don Lopez de Santa Anna, President, &c.

"Excellency! I have the honor to inform you of the complete defeat,—I may almost say, the total annihilation of the Texian invading army, by the small but gallant forces under my command. So complete, so sudden was the rout, that I may, without exaggeration, appropriate as my own, the language of the mighty Roman. We had but to come, and to see, to conquer! It did not even need that he should see us! The enemy disappeared at our approach. He shrunk from every encounter, and is now flying, with all speed, to the barbarian homes from which he emerged. The hateful Yankees are gone forever!—Our soil no longer blushes beneath the tread of their infamous and rebellious hordes. This defeat, so utter and complete, is due entirely to the terror inspired by our arms! So conclusive was this terror, that I cannot now be sure that any of them perished. Their slain and wounded have not been reported to me. Their flight was quite too rapid for pursuit. Ours was a victory without a blow; one of those victories in which the Generalship of the leader, sustained by the bearing of his troops, discourages in the enemy every idea or feeling of resistance. Your Excellency will rejoice with me, that the war is so

happily ended. San Antonio de Bexar is safe. We need no succours. May your Excellency live a thousand years. God and Liberty! Done, at this our Castle of Montaneros, this, &c.

There!

[Seals the Letter.

That I say is well done! Simple and expressive. To the point, without childish epithet or womanly circumlocution. In the very spirit of Napoleon's Dispatches! He could scarce have done it better! And, for the facts? Are not the Texian Rebels dispersed? Who can say where they are? Who has seen them for a month? Not I? Can I answer for what I have not seen? No! If I see not the Texans, and hear nothing more of them, am I not to suppose that they are dispersed? What more natural? And who should disperse them but myself? To my glory be it written! Caesar was a Captain—Cortez was a Captain—Napoleon was a Captain—there was a Captain among the States of the North, named Jackson or Johnson—I'm not sure which, and rather think that both are the same;—but—What ho! there Luis.

Enter Luis his Secretary.

There! for Mexico,—see that the Courier has dispatch. Life, nay, more than life depends upon his speed!

Luis. Excellency, Señor Don Pedro de Zavala, has just come in from Tuscasito and begs to kiss your hands.

Don Esteban. What! My son that is to be? I wait him here!—Fine fellow, that [Ex. Luis.] Son of mine. A little too fiery, perhaps, too warlike, at a season when bulletins can be made so expressive. Ah! here he is. Don Pedro, welcome. [Enter Don Pedro.] I rejoice to see you. My household is at your service. All that I have is yours.

Pedro. Your Excellency is too generous. Do I disturb you?

Esteban. Not a whit. I was just closing my despatch for the President, announcing the late glorious victory.

Pedro. Victory!

Esteban. What! do you ask! Have you not heard?

Pedro. Of a victory?

Esteban. Ay, indeed! Can it be that you have heard nothing?

Pedro. Not a syllable!

Esteban. What! nothing of our victory over these Texian Yankeyos!

Pedro. Not a word till now!

Esteban. Oh! Fame! O glory! What is there now worth living for! But, really, my dear Don Pedro, have you heard nothing of this glorious triumph?

Pedro. There was some rumor of a small force of Texian rebels, but it was said they were dispersed by famine.

Esteban. Famine, indeed! When will the world do justice! And our valor and skill, by which they were dispersed, must go for nothing.

Pedro. My dear Governor, suffer my congratulations. These are truly pleasant tidings. It was feared that these outlawed wretches would give you trouble. Fortunately, there were few of them.

Esteban. Few! Four thousand men at least.

Pedro. Can it be possible? And your force?

Esteban. But a poor three hundred. But they are soldiers as you may suppose. Brave fellows, I admit. You will suffer me to add that they were admirably managed! War is a science, Don Pedro.

Pedro. This alone suffices to prove it! But three hundred to four thousand! Your success was truly miraculous.

Esteban. Miraculous! Is a man, now-a-days, to get credit for nothing? Is Fate to be the enemy of Fame? I shall begin to dread lest the honor of this victory will

be ascribed to Saint Iago, as in the days of Hernan Cortez. People will begin to fancy that they saw his white horse leading the pursuit of these cursed Pagan Yankeyos. But, you are surely too wise for such notions, Don Pedro. There was, let me assure you, no other miracle in the affair than such as belongs to good Generalship—such as a true military genius may effect at any moment. The miracle lay in my successful strategy; and that you may call miracle, if you will.

Pedro. Glorious strategy indeed! But tell me, my dear Don Esteban, where was this battle fought? It is so very strange that I should have heard nothing of it before.

Esteban. [Hesitatingly.] Fought! Where was it fought? Why, I may say, everywhere! It was a sort of running fight in which, from the panic of the fugitives, the parties did not absolutely come to blows. For that matter, the rebels are supposed to be running still. They have had a prodigious fright, I assure you. It was quite in vain that I endeavored to pursue them. I could not hope to overtake them. Never did panic stricken scoundrels better use their legs. It is through their fears that you have the sufficient proof of their danger.

Pedro. Most conclusive testimony! And now, my dear Governor, of other matters. How is our fair cousin?

Esteban. We shall surprise her as I would have surprised the Texans. With this view, I have said nothing as yet of our little arrangement.

Pedro. Indeed! But my dear Don Esteban—

Esteban. A part of my plan, Don Pedro! I am none of your rude, direct, undivesting, matter-of-fact persons, to speak out abruptly to the simple point before me. This requires no sort of genius. I am for a stratagem in most things, as a matter of art and refinement.

Pedro. But, my dear Don Esteban, where's the necessity of stratagem in a case like this?

Esteban. Necessity! Where's the necessity of my daughter marrying at all! It is matter of taste purely. Now, my tastes lie in stratagem. I never broke my egg, or ate my supper, or kissed my wife, or did any other natural and necessary thing, without a stratagem. Stratagem is to action what the wine is to the feast,—the oil to the dressing; the salt to the salad; the sugar to the cake; beauty to the woman; wisdom to the man; glory to the saints, and tail, hoof and horns to Don Sathanas! If you deny me my strategy, Don Pedro, I deny you my daughter,—and there is an end of it!

Pedro. But, my dear Don Esteban, will you not make some allowance for the impatience of a lover?

Esteban. To be sure! so I do! so I will; but you must suffer me to say too, that I require, in turn, some allowance to be made for my genius as a strategist. This is my life, my passion. You shall have my daughter: but only after a process of my own; and I tell you that, as yet, she does not know you in the character of a lover. I shall surprise her with the fact—an agreeable surprise, as I shall design it—though surprises of this sort usually operate pleasantly on the fancies of young damsels.

Pedro. I hope they may in this instance.

Esteban. Never doubt it, Don Pedro. Only, don't be impatient. Hear my plan! First, for the masked battery.

Pedro. The masked battery?

Esteban. Exactly. I speak in military parlance;—and a masqued ball may fairly be considered a masked battery.

Pedro. I begin to see.

Esteban. Don't attempt to anticipate. It's quite impossible that you should divine my expedients. A few explanations shall enlighten you. Now then, and firstly,

as she is, by the favor of Holy Mother, a christian damsel, you shall assail her as a Turk!

Pedro. As a Turk! I' faith, Don Esteban, your stratagem promises to be somewhat intricate.

Esteban. Intricate! To be sure. This is the very nature of all stratagem, to be intricate. But patiently. Look you then. I propose a Bal Masqué, at the Palace, this very night, solely to bring about this stratagem.

Pedro. But shall I not see Olivia before to-night?

Esteban. Oh! ay! See her, to be sure, as often as you please; but not a word of your passion, or of our purpose, till I give the word. I am Governor and Commander here, in Chief, and we must proceed in all things, in military fashion. I must give the signal,—my hand must fire the train.

Pedro. Well, Governor, I hope you will not by your stratagems succeed in compelling my cousin to a flight as rapid as that to which you forced the Texians.

Esteban. Well hit that! Very good! No! no! To prevent that danger, let us go to her at once. Ho, within there!

[*Enter Luis.*]

Esteban. Say to the Señorita, Donna Olivia, that Señor Don Pedro de Zavala of Tuscacito, and myself, present ourselves to kiss her hands.

Luis. The Señorita has gone to the Plaza, your Excellency.

Esteban. To the Plaza! Good! The day is a fine one. We will follow her, Don Pedro. [*Luis assists him with hat and sword.*]

Pedro. With all my heart.

Esteban, [bowing him to advance.] Your servant, Señor.

Pedro, [bowing and retreating.] Pardon me, your Excellency, but your politeness must not make me forgetful of your rank.

Esteban, [aside.] Excellent young man! He was born to be a courtier. [*Takes the arm of Don Pedro, and together they march stately out.*]

SCENE II.

The Plaza, or Public Walks in Bexar. A gay scene of trees and shrubbery. Prolonged vistas filled with groups of well and variously dressed people of both sexes. The ladies with parasollets and head-dresses and veils, but without bonnets. A frequent sprinkling of the military, and occasionally a peasant. Bonham enters as a gay Mexican cavalier, while Crockett is garbed as an arriero, or mule driver.

Bonham. All goes as we would have it. You appear the very person that your habit speaks you; A yeoman of the States, a wagoner, May well beseem the Mexic muleteer, And play the part with all the natural grace Of our brave western hunters. A good bronze, Is that upon your cheeks. Renew it often When the chance favours. We must separate now. You hurry to our lodging. 'Tis not well We should be seen together. I will join you Within the hour and bring your last instructions; Meanwhile forget not you were born a Mule!

Crockett. Mum is the word!—the uncongressional word:—

It's mighty hard not to forget it, Major, But I am in for it now.

Bonham. And must go through!

'Tis but a day. Away! We separate.

Crockett. Ah, ha! You're for staying awhile longer

among these beauties. Well! I'm tough and gristly now, but I was tender enough once, and there was a time when the very sight of a pretty gal used to make my heart thump agin my ribs, for all the world like a cracked drum at a Nashville muster. I like to look at the critter still, but she don't make the old drum beat any longer. But, mum's the word; the Major's looking wolfish! I'm off. [*Exit Crockett.*]

Bonham, [solus.] She comes not! And I look for her in vain.

Bright eyes, sly glancing through their falling veils,
Like stars through pliant folds of floating cloud,
Shine on me as I pass; and swan-like forms,
Swim in spiritual movement 'mongst the trees.
But here—among the thousand still supreme,
Leaves them to fruitless triumph. Can it be
That she has play'd upon my foolish passion
And mocks me with her promise? Idle fear!
She cannot thus do wrong unto herself,
And to that angel purity of glance,
Needing no sweet assurance from her tongue—
Though that were angel's too. She must be here!
Why do I seek the crowd? In some lone spot,
Hallow'd by solitude from the vulgar mood,—
'Tis there that true maid would receive her lover;—
There, by yon silent groves that skirt the river,
Methinks she wanders now: and—Ha! she comes,
Even now, from thence. I will conceal myself. [*Goes aside, while Olivia enters, looking anxiously around her.*]

Olivia. I see him not! No form in all the Plaza,
Tells me of him. He has forgotten me!
How should I move so proud a heart as his?
What charms are mine that I should make this conquest,
Oh! wherefore should I hope—yet wherefore tremble
Lest he forget me? Can it be, my heart,
I love this stranger?

Bonham, [behind her.] If you do, dear lady,
It were the blessing, which, beyond all others,
His inmost spirit prays for.

Olivia. What have I said!
Ah, Señor, you surprise me.

Bonham. Sweet surprise!
At least, to the offender! Ah, forgive me
If, stealing on thy steps, mine ears grew happy
With what they drank from thy unconscious lips.
Oh! let me make complete the dear assurance,
By the frank homage of a heart that brightens
In the sweet glimpse vouchsafed me of your own.
I love you, lady!

Olivia. Ah! Señor, do you love me?

Bonham. With all my heart, with all my strength and soul,
My thought, my hope, mine eyes, I love thee, lady.

Olivia. Ah, Señor! Oh! my foolish heart be still,
Nor in the sudden trouble of this joy,
Declare your foolish fondness. [*Aside.*]

Bonham. Not a word,
Nor look of blessing, lady? Did'st thou hear,
The faith my worshipping heart has offered there?

Olivia. Did I not hear! Can I believe thee, Señor?

Bonham. Say, shall I swear it, lady? By what star,
Brightest and sacrest in Beauty's eyes,
Purest in Heaven's! Prescribe to me the oath,
And by the stars—and by those eyes, I swear,
And on this hand;—nay do not keep it from me.

Olivia. Oh, do not swear! It needs not—will not prove

What you declare so fondly. Do but speak—
Or look—the words once more, and—

Bonham. Speak, O! speak!

Olivia. And—I'll believe you!

Bonham. Will you believe me!
Ah! sweetest, never did a maiden's faith
Less peril on a lover's! From that hour
When my most fortunate eyes, by Lova's rancho
Beheld your beauty—

Olivia. Señor, by that rancho—
That scene of strife and dread, I still remember,
Never to lose it—when the wild Camanché,
Smote me to earth, and 'neath his savage fury,
Hopeless, I shriek'd for succor, and—I found it!
Nor succor only! You came, you conquer'd, Señor,
More than the desperate savage.

Bonham. Dear Olivia,
The same eventful victory made me yours,—
Captive to those dear eyes, and witching beauties,
That seem to sadden o'er their own swift triumphs,
As if the world had nothing left to win.

Olivia, [softly and in low tones.] To me it hath not,
now.

Bonham. My prize, my precious angel!

Olivia. And did you love me then?

Bonham. That very moment!
Ah! sure you must remember how I held you,
Close lock'd in my embrace,—the danger over,—
Feigning belief that, in your feminine terror,
Your strength had left you.

Olivia. And it had, believe me,
Else I had never suffered such embrace,
Even from the one so—

Bonham. Wherefore on the word,
So full of precious promise do you pause?

Olivia. Oh, no, I should not speak; but you were
right,—

The strength of will, at least, if not of person,
Had left me when I trembled in your arms.
Nor would I chide you with a show of rigor
That needed no display. I heard your voice;
Its gentle accents soothed me;—saw your form—
And in your loving tenderness of look,
Felt any thing but weakness. I was strong,
And—but 'twere most unmaidenly to show,
How great my weakness now.

Bonham. Speak on! Speak on!
Give to each dear emotion fitting speech,
That I may feel, how bless'd o'er other men,
This fortunate moment makes me.

Olivia. Oh! no more!
Here comes my father.

Bonham, [aside.] Then my trial comes!

Enter Don Esteban and Don Pedro.

Olivia. My dear father!

Esteban. How now, Señorita! It's as hard to find
you as the gold mines of Gallipango. We have met with
every body in all Bexar, but yourself—among others,
with your good aunt, the ever-to-be-loved-and-honored-
at-a-distance, Donna Elvira Teresa de los Flores y Ba-
namos, who would have held on to an antediluvian himself
had he only come in the guise of a bachelor. These old
maids keep their hold upon a single man, as if every nerve
had a tooth of its own. It's only when I meet with her
that I am painfully reminded that I am a widower. But
I shook her off finally, by a stratagem, calling to her side
Don Vincente Trueba, who is more certainly a marrying
man than I am. She took to him as a hungry serpent
to a drowsy frog. A most happy stratagem, that of mine,
eh! Don Pedro.

Pedro. Truly, a most happy stratagem!

Esteban. Who have you here, Señorita? Señor, your
health.

[Bonham bows in silence]

Olivia. This, my dear father, is the brave gentleman
who saved my cousin Donna Maria and myself from the
Camanches, at the fountains of Loro.

Esteban. Indeed, Señor, I rejoice to see you. My
daughter has already made me acquainted with your valor,
and the great service you rendered herself and cousin. I
love men of valor. I am one myself. I hate ingratitude,
and will show that I am grateful. Señor, I kiss your
hands, and beg to assure you that all that I am, and have,
is at your command.

Bonham. You do me too much honor, your Excellen-
cy; the small service—

Esteban. Small service, do you call it? What! to save
my daughter, Señorita Olivia de Monteneros, from a horde
of rascally Camanches, a small service! By the wisdom
tooth of my great grandmother, I would not suffer your
enemy to speak of it so lightly. It was a great service,
Señor, and you managed the rascals famously. It was a
nice stratagem! You took them by surprise—I can see
that. Pray tell me how you planned it: a very nice
stratagem, no doubt—worthy to be studied.

Bonham. Nay, your Excellency, but there was no
stratagem at all. I simply heard the screams of women,
hurried to the spot, and had the good fortune to extricate
your daughter and her cousin from the savages.

Esteban. Bravely done, and told with rare modesty!
Still, I should have preferred that you had operated a
little more by the rules of art—a little more strategically.
At all events, the affair tells for your valor. No small
odds, Don Pedro, one man to some fifteen or twenty Ca-
manches.

Bonham. But two, your Excellency.

Pedro. The Camanches are very cowardly scoundrels.
One good man, with half a heart, is equal to a score.

Bonham, [to Pedro.] Did you ever manage a score of
them, Señor?

Pedro, [fiercely.] Hey! Señor.

Esteban. Indeed, Don Pedro, but we differ very much
in that opinion. But the subject of Camanche valor will
serve for future discussion. Meanwhile, this noble gen-
tleman—Señor—[to Bonham]—I would bring you to the
knowledge of my excellent kinsman, here, Don Pedro de
Zavalo, but that I have not the honor of your name.

Bonham. I am known, sir, in Mexico, as Don Armador
de Aguilar.

Esteban. Don Armador de Aguilar! A good name—
an historical name, as I may say. Your family came in
with the conquest.

Bonham. They did, your Excellency.

Esteban. You will inherit their fortunes. You are a
conqueror also. You look like a man who has been used
to conquest.

Pedro, [half aside, at Bonham.] "Great as he is in
dust he lies.

He meets a greater, and he dies!"

Bonham, [aside.] Truly I think, this gallant jeers at
me:

We'll fathom him anon.

Esteban. What is't you said, Don Pedro?

Pedro. Truth, Señor, nothing of much. A poor jest,
On a much poorer subject.

Esteban. A wise business that. But let me bring you
to know this gentleman, Señor Don Amador de Aguilar.
You should be friends. Both young, and brave, and of
ancient family. Ah, if it had not been for the success of
my stratagem—if we had not utterly annihilated these
Texian rebels, scattered them to the four winds of heaven,
how I should have rejoiced to see you two, rivals for fame
and smiting hip and thigh among the runagates.

Pedro. These Texians are no Camanches—not easily
driven by fine caparison and the mere show of weapons.

It will require blows, absolute blows, with strong arm and good metal, I can tell Don Amador, whenever he shall meet with them! [*Touches his sword.*]

Bonham. Don Pedro thinks as I do, your Excellency. He has probably met these Texians in battle. They have felt his sword. He knows them, or rather he has made them to know him by the strength of his arm. Ha! Señor, isn't not so?

Pedro, [*laughingly.*] No, Señor.

Bonham. Texians are not Camanches. They will require good weapons, and it is part of my business here to seek them with mine. I am indifferently ready for any enemy, and keep up the practice sometimes with a friend behind the walls of La Guayra. It is my favorite place of practice, when in Bexar, at sunrise every morning.

[*Touches his sword and looks significantly to Pedro.*]

Olivia, [*aside.*] These men mean mischief.

Esteban. Well! well! whether Camanche or Texian, I feel sure of both of you. My strategies, and your valor and vigor, would soon bury the whole banditti of Texas in the Gulf. You must go with me, Señors. My home shall be your home. Don Pedro, it has long been yours. Don Amador, it must be yours from this moment. Come!

Pedro. You must pardon me, your Excellency; but an engagement—an engagement of honor. [*Looking to Bonham.*]

Esteban. Indeed! but this will never do. We must find another engagement for you. You must come with me. I must know Don Amador better: and you, Don Pedro, must unite with me in securing his friendship. Two such gallants are not met with every day in Bexar. Ah, Señors, we are quite too far from the great centre. The rays of Mexico seldom reach, and never warm us; and when we can lay hands, as now, upon one of its choice spirits, we must not suffer him to escape. Hear you, Don Amador. Come along! Come with me—I have a most delightful stratagem in progress.

Pedro. I too have a stratagem, your Excellency. It is very like, your friend, Don Amador, has his also. If he be the gallant that you speak him, as I do not question, he can scarcely well be without one.

Bonham. True, I have my stratagem, Señor, and am always ready for a good one, such as your Excellency and Don Pedro may propose. It is possible that I may match you both with something in return. At present, however, I have an engagement, your Excellency, and must beg you to excuse me.

Esteban. By'r Lady! but I take this ill, Señors.

Olivia. I see that I must interpose, at last, To end this struggle. Señor Don Amador, Give me an arm, I pray you: nay the other—Don Pedro will support me on the right—You must attend me Señors; I too have My little stratagem,—to wake the envy Of all the Plaza. Not a maid that passes, And sees me thus so gallantly attended, But sickens with vexation. 'Tis so seldom That I have chance to move them to this measure, I must not lose it now. You are kind, Señor Don Amador. [*Takes the reluctant arm of Pedro.*]

Bonham, [*offering.*] Cheerfully, I yield me, Dear lady, to the sweetest despotism, And know not how to murmur.

Esteban. Well managed, Olivia. Ha! ha! You have your stratagems also. It is a gift in the family.

Pedro, [*to Bonham, looking behind Olivia.*] I trust, Señor, that you will not forget the claims of your friend. If my engagements are thus interrupted, I can assure you they are by no means forgotten.

Bonham. Never doubt me, Señor. My friend will not, and I have usually been found true to friend and foe.

Esteban. Pshaw, gentlemen, your better friends are here;

Would you seek truer? Come with me; I'll find Friendships enough, and, may be, warmer feelings For any dozen cavaliers. Lead, Señorita, The day is leaving us.

Olivia. My triumph, Señor, Must be complete. The woman's stratagem Must make me without rival on the Plaza, Though the day leaves us. See, they pass us by, Nor spare the show of inward grief they feel, At such unwonted conquest. Oh! gentlemen, You make me proud to-day.

Bonham. It is man's pleasure That Beauty should be proud.

Olivia, [*bowing first to Pedro, then to Bonham, while they are respectively menacing each other, and thus they go forward.*] Don Pedro!

Pedro. Señorita!

Olivia. I am too happy, Señors.

Bonham. That you should be so, with my ministry, Leaves me still happier, lady. At your will Let friend and enemy wait. As I am true To Beauty, I will be as true to friendship, And not less true to hate. Let them both know That truth and valor need no better plea Than beauty's laws prescribe. Then take me, lady, And still the time that keeps me in your service, My heart shall hold too short.

Esteban. Well said! Well said! How dextrous are these Mexican gallants. What says't Don Pedro?

Pedro. Why, that I am no Mexican gallant. Fine speeches are not my vocation; but I can strike hard blows when the time comes for it.

Esteban. Let the time come before you speak of blows.

Bonham. At least my speeches tell not of my blows. They speak for themselves.

Pedro. And mine!

Olivia. Sirs, must I wait you?

[*Exeunt omnes. The Governor leading the way, and the two rivals still supporting Olivia, and preserving an exterior of courtesy in her eyes, pass out, exchanging sinister glances at every opportunity. She turning alternately upon them, and with a smile, watching and striving to discourage their hostility.*]

END OF PART II.

SHORT SERMONS.

FROM PARISIAN STONES.

NOTRE DAME.

Nineteen hundred years ago, Julius Cæsar, then on his victorious march towards Britain, conquered the Gallic tribes, known as the Parisii, and took possession of their stronghold. It was a small island in the river Seine, called in the Celtic tongue, "*Louton-hezi*," or dwelling of the waters, and in the centre of the huts which

covered its surface, stood a Druidical altar, cemented with human blood. Naming the island "Lutetia," Cæsar erected forts at the extremities of the bridges which connected it with the main-land, and the Gallic idols were dethroned, that a trading company known as the "*Nautæ Parisii*," (the *bourgeoisie* of those days,) might substitute a votive altar to Jupiter. *Optimus Maximus*—the "Zeus" of the Greeks. This, in its turn, was changed into a christian chapel, and was duly dedicated to St. Stephen, soon after St. Denis, the Areopagite, set out upon his miraculous pilgrimage, carrying his head under his arm. And it was there that Julian, the indefatigable apostate, was proclaimed Emperor by his soldiers in the year 360. Gallantly did the Napoleon of those days lead his cohorts to conquest and to victory, but he fell at last, far beyond the Euphrates, pierced by a Roman arrow.

The island was soon covered with buildings, and as the walls of Lutetia were extended on either bank of the river, the faithful enlarged and added to their shrine. But the Merovingian race were alike unable to repel their Norman foes, or to foster civilization, nor did Paris prosper until Charlemagne, with his fair-haired Teutonic warriors, came to conquer peace. Goths, Huns, Normans and Saxons were driven back to their homes, and one iron edict was every where proclaimed to the conquered—a sword was planted upright in the earth, and every head had to bow lower than the hilt as its owner passed—or it was at once lopped off. The sword, as the protector of the cross, thenceforth was honored at "Notre Dame."

Next came the Capet race, and under their fostering devotion, the Metropolitan church rose to its present proportions, with lofty nave and massive towers, brilliant windows, and quaintly carved altars. Hither, for nearly eight hundred years, came the "legitimate" sovereigns, to worship in state, and in the adjoining palace, the Arch-primate of France signed those edicts which stretched victims upon the rack, to prove the dominion of the church over the human mind—doomed them to pine in dungeons, to prove that the church was sovereign of the human heart—and crushed thousands of Protestant hearth-stones into desolation, to prove that at Rome alone was the entrance to Heaven.

Proudly from the tower-top, waved the Royal flag, golden lilies studded its pure white field, and often the vaulted roofs echo with *Te Deums*, chaunted in honor of French victories. At one time, to gratify a wanton favorite—at another to revenge a fancied insult—and often to uphold the church, war was the ruling passion of the Capet race. And it was the ruling passion of the French race, from the day when the astute

Richelieu resolved to humble the feudal aristocracy, by making military renown the only title to honor and fame. Even the churchmen buckled on armor and followed the white pennon to the field, as we learn from the old distich.

"Un archevêque est amiral,
Un gros évêque est caporal;
Un prelat preside aux frontières,
Un autre a des troupes guerrières;
Un capucin pense aux combats,
Un cardinal a des soldats."

Louis XIV, who never knew any other rule but his own will, and who united to the madness of arbitrary power the fury of intolerance, fanned the war spirit into a flame. Often did Notre Dame echo with solemn thanksgiving for victories—on the Rhine, on the St. Lawrence, on the Moselle,—and the people, charmed with captured standards, toiled to sustain the armies sent forth. The history of France during that period is but a record of wasted blood and treasure, poured forth by the lavish hand of her rulers, and during the first three quarters of the eighteenth century, the French armies were absent forty-six years on hostile expeditions, interfering in the politics of neighboring nations in the genuine Kossuth style. Gradually, the licentious habits of the camp pervaded society, and France became noted for brute force, reckless expenditure, and unblushing dissipation—"her dark Bastille, her bankrupt exchequer, and her shameless court."* And, rising above the roll of drums, or the hum of the city, the great bell of Notre Dame rang forth its joyous notes, as Royalty came often in state, to kneel in penitence, and bow humbly before the delegate of the Roman Pontiff. Religion, like a whited sepulchre, covered a rotten and vile state of society.

The bell next pealed forth a different note, and the "tocsin," which was the death-knell of the Bourbons, introduced a new set of performers at Notre Dame. Years of warfare, that evil school, had engendered a frightful indifference to the Divine command, "thou shalt not kill," and so lowered the standard of morality, that the social bond was easily broken, and full sway was given to individual passions. A naked wanton, elevated upon a triumphant car, and surrounded by a radical host, received at Notre Dame the homage of Paris, as the "Goddess of Reason."

The white flag of France no longer floated from the towers of Notre Dame, and its Gothic aisles were barracks for armed men, who worshipped Mars and Moloch. Monarchy had been overthrown, but the Temple of French Liberty, like that of Juggernaut, was known by the im-

* Sir Henry Lytton Bulwer.

molated victims with which the road leading to it was overlain. Faction after faction rose, struggled, and fell. The Constituents, the Girondins, the Terrorists, the Thermidorians, and the Directory, succeeded each other like the slides in a phantasmagora. It was reserved for a small iron-nerved Corsican, whose life proves the superiority of the sword over the pen, to restore order, and to command peace. One of his first acts was the abolition of the philosophic rite of theophilanthropy, and again did the solemn ritual of Rome echo through the vaulted roofs of Notre Dame.

In vain did other nations seek to intervene, and fruitless were seven successive international coalitions. The tri-color waved in triumph on many a victorious field, annihilating Italy, crushing Austria, humbling Prussia, and bringing a score of vassal-kings to pay homage at the coronation in Notre Dame. There, with high pomp, was christened the imperial heir, and there, after gall-ing reverses, did the Austrian Empress make her last "confession" in France. The Bourbons again made their appearance—then were banished for a time—and then, hedged by foreign bayonets, returned thanks in Notre Dame for their "restoration" to the throne of St. Louis. England, to bring this about, spelt "that little word, w-a-r," during twenty bloody years, and her wretched artisans now groan beneath the load of six millions of pounds sterling, added to their national debt.

The old church was again restored to high honor. Thither walked the royal family, in long monkish processions, and the minister of war gravely informed the army, (the army which Napoleon had commanded,) that the 16th Infantry was excellent at prayers, or the 10th Artillery incomparable at Easter service. The great bells, for some fifteen years, greeted royal worshippers, but the "tocsin" at last warned them that it was to seek safety in flight. Their crafty cousin, with an umbrella under his arm, walked into that caravaneray of rulers, the Tuileries, and again the tri-color waved from Notre Dame.

Slowly and sadly did the great bell toll, and Notre Dame was filled with sincere mourners, around the corse of the Prince of Orleans. An amiable husband, an exemplary citizen, a brave soldier, he would have modified his father's rule, and, when called to succeed him, have proved himself "worthy and well qualified" to govern France. Deprived of his counsels, the infatuated old man runned a career of nepotism, avarice and selfishness, until the outraged Parisians sent him forth in a one-horse carriage, to seek disguise and exile.

Theorists now reigned in France, and Notre

Dame was deserted for "fraternal cook-shops," "political clubs," and other instruments for threshing to the very chaff the elements of society and human nature. Utopian syrens, singing "reform and popular rights," were ever chiming up some new idea as a ladder of life, endeavoring to stand upon the topmost round, and draw the ladder up after them. Real reforms were unheeded—above all, that blasting spirit of Federal centralisation, which makes the schemer who can muster the strongest force in Paris, monarch of France. The money-making bourgeoisie feared radicalism—the royalists rushed to pave the way for a Bourbon—the speculators had their coffers filled with government securities, purchased at low rates—and Louis Napoleon, having no claims to support but the nose and the name of his warrior uncle, drew in the meshes of his net.

Notre Dame was again the scene of a gorgeous spectacle, as the "President," having chastised France with fire and sword, defied the law, and trampled a constitution into the dust, received the sanction of the church. The *corp d'œil* as described by a correspondent of the *London Times*, was imposing indeed.

"The pillars of the great nave, adorned with purple-colored banners, sprinkled with stars of gold—the velvet draperies and enormous garlands of foliage and flowers, which covered and fell from the galleries—the richly decorated flags, carrying the arms and names of the chief cities of the empire—the columns of the sanctuary, covered from base to capital with silk brocade of crimson and gold—the altar in the choir, with its rich and gaudy ornaments—the benches for the authorities, and the constituted bodies—and the galleries on either side crowded with persons *en grande tenue*—the orchestra of 500 executants, vocal and instrumental, disposed in the galleries at the extremity of the choir—and, the principal feature of all, the lofty dais, with hangings of crimson and gold doubled with white, surmounting the *estrade*, which faced the altar and supported the *siège d'honneur*, whereon sat Louis Napoleon with his "*prie Dieu*," the Archbishop of Paris (who officiated in the service) to his right, and the attendant bishops to his left—these, and other objects too numerous to specify, all glittering in the light of the countless wax candles, which pained the eye to look upon, gave to the ancient cathedral, one of the architectural glories of Paris and the world, a strange and fantastic aspect, which made it difficult to believe oneself in a place of worship. The general effect, indeed, was quite as theatrical as it was brilliant. It was, nevertheless, a surprising and intoxicating spectacle."

What will be the next ceremony at Notre Dame? Will it be the marriage of Louis Napoleon to some princess, or his oath of allegiance to a Barbary King as "High Constable of France"—"legitimate" sovereign saying mass, or a "Goddess of Reason" presiding over socialist anarchy? Who knows? No one! The picture is dark behind and obscure before.

Meanwhile, the "nephew of my uncle" is endeavoring to prepare a foundation for his own or some other sway, by casting massive edicts upon the moving quicksands of Lamartine's revolution. So long as it may last, his despotism, like that of Napoleon the great, will be terrible, but then it will be so glorious, and so warlike, and so gigantic—that Frenchmen will adore it—until they adore something else.

PERLEY.

PONCE DE LEON'S DREAM.

BY T. BIBB BRADLEY.

Inscribed to W. Gilmore Simms, L.L. D.

What emotions of joy pervaded the breast of Ponce de Leon, when first he beheld Florida, the land of sweet flowers and limpid streams! Confident now of finding his long-sought Fountain of Youth, his joy knew no bounds. Often he wandered from his companions, and roaming alone in the blooming forest, gave himself up unrestrainedly to his delightful musings.—*Wash. Irving.*

PART I.

Within fair Florida's domain three hundred years ago,
How solemn stood the lordly oaks, how hoar the mistletoe,
That clung and deftly nestled there, upon those monarch
trees,
As woman's constant love to man, defying storm and
breeze.

O'er valley, vale, and sombre mount, dispelling dismal
shade,
O'er river, rill and sparkling fount, in every secret glade;
On drooping vine and cypress tall, on ash and aspen light,
In loveliness the sun at eve cast golden beams and bright,
A parting smile then threw o'er earth, his farewell glance
then gave,
And sweetly lingering gently sank within the waiting
wave.

Then rose with mild serener beam the golden-cinctured
maid,
A mellow light within her eye, in fairest garb arrayed.
For briefest space alone she paused to view the fairy
scene,
Ere called her star-decked maiden train, right fitting train
for Queen;
In circles small then waved her hands, with golden brace-
lets bound,
And summoned all who owned her sway, her glittering
throne around.

Each handmaid saw the gorgeous gem from out the dis-
tant space,
Each joyously obeyed the sign, and paused in proper
place.
Such happy smiles dame Nature cast upon her fav'rite
land,
E'er flowers bloomed and budded there by gentlest ze-
phyrs fanned.
Bright sank the sun, fair rose the moon, fair was the river's
flow
Within fair Florida's domain three hundred years ago.

Brave Ponce de Leon wand'ring there, by fond delusion
driven,
In quest of vernal Fount of Youth, sure found alone in
Heaven,
At eve reclined in pensive mood, beneath a cypress tree,
Forgetting toil and weary march in pleasant reverie.
"Amid magnolia blossoms here sure fairies often creep,
And agile elves and blithe some sprites fantastic revels
keep!
In summer midnight still and calm, sure gambol they in
glee,
Sure many a llesome dance they have, in sportive
frolic free!
Or weary with their lively play, their perfumed couches
make
Of bud, and leaf, and flow'et soft, and elf-like slum-
bers take."

So mused the Spaniard passing there, from painful roam-
ing free;
Well pleased, he deemed it fairest spot that on the earth
might be.
Each moment added increased joy; and raptured at the
scene,
He called it habitation fit for elf and fairy Queen.

Well skilled and apt De Leon was, well trained and quick
his eye,
To view such winning landscape o'er, new beauties to
descry.
On other lands had rested oft his raptured, lingering
glance,
On fairest spot of Italy, on vine-clad fields of France;
Reclined on banks of Spain's fair streams, at sunset's
quiet hour,
He pensively had marked the waves, and felt their
soothing power,
As native cot to peasant boy, familiar to his sight
Was each dark grove that saw the flow of Guadalquivir
bright.

A wanderer from his joyous youth, he well had learned
to brave
The direst perils landmen fear, all dangers of the wave—
Strong hope to cheer, brave soul to dare, and might with-
in his arm,
Not dangers met in any land, could give him hurt or harm.
Each lonely isle in ocean's waste, from kindred islands
baun'd,
The mourning breezes sighing o'er, his waving hair had
fann'd.
Yet spot like this, so pure, so calm, had Leon never seen,
Caressed by wind as soft with balm, his forehead ne'er
had been.

Upon the vale, he gazed awhile, in velvet garb arrayed,
A moment with the straying brook his joyful vision strayed,
A while he glanced with raptured look, at aspen glitt'ring
bright,

Wah quivering leaves on every bough each tremulous
with light,
A moment hearkened to the song of wanton mocking-
bird,
'Mong whispering pines and vocal oaks in dulcet meas-
ures heard,
Then watched the small retreating lights by sparkling
fire-fires given,
Then counted fav'rite stars of his, as shone they in the
heaven,
By sight and song then soothed to sleep, soft drooping
closed his eye,
With gentle riv'lets foaming near, and love winds mour-
ing by.

Thus gently breathed De Leon worn, in calmest grateful
sleep,
With moon to guard his weary form and stars their watch
to keep.
When sweetest dreams of purest bliss, in thronging troops
and fast,
Within the chamber of his mind in brightest guises passed.
The captive chained in dungeon deep, and sighing for the
air,
Bereft of light and hopeful soul ne'er dreamed a dream
so fair,
As welcome sound of gliding boat, bestowing strength
and life,
To sinking sailor battling waves, nigh ceasing hopeless
strife,
As bright as seems in pilgrim's dreams, on grim Saha-
ra's sand,
The well-remembered brooklet's flow, within his native
land,
So stole upon the Spaniard's soul, as if by angels given,
A vision blest of heavenly joy that quiet hour of even.
Surpassing this in joyous bliss, ere vowed his marriage
vow,
Such hopeful dreams ne'er lover had as Ponce De Leon
now.

PART II.

They say that Ponce De Leon often told his compan-
ions of enchanting visions which visited his slumbers.
He frequently asserted that a beautiful spirit-maid came
to him in his sleep, and told him of a certain isle called
Bimini, where he would find his Fountain of Youth.
There the earth is always green, the flowers are ever
blooming, the waters limpid and delicate; not rushing in
rude and turbid torrents, but swelling up in crystal foun-
tains and winding on in peaceful and silent streams.
There no harsh and boisterous winds are permitted to rav-
age the beauty of the groves, there prevails no melan-
choly nor darksome weather, no drowning rain, nor pelt-
ing hail; a perpetual youth and joy reigns throughout
all nature, and nothing decays or dies. Would God I
were there!—*St. Basilus.*

Of Heavenly mien beside him seemed, to fancy's misty
sight,
A woodland nymph of sweetest form enrobed in snowy
white.
Her trailing garments fell behind, reposed in graceful
fold;
And near with gentlest dalliance strayed the wooing night
winds bold.
In eye as deep as deepest spot in ocean's azure blue,
Where sailing seaman pausing still his fathom line o'er
threw,

A mild subduing mellow light in quiet splendor lay,
As if her orbs from heaven had ta'en some purest, holiest
ay.

Reflecting moonbeams' willing light a circling golden
crown,
Her forehead bright, of Parian white, with loving pres-
sure bound;
And many a sparkling effort made enamored glance to
throw,
At dewy lips with nectar fraught, in rosy mouth below.
Upon her swelling bosom strayed, dark-flowing curls nor
few,
Full o'er her face with loveliest grace a gentle shadow
threw.

A purer bloom on smile-lit cheek reposed in healthier hue,
Upon beloved Dian's face, ne'er fond Latona knew.
With martial leap from parent brain, young Pallas burst-
ing armed
With queenlier form or finer grace, approving Jove ne'er
charmed.
As fair in mien ne'er Dido seemed, when bold Aeneas
came,
By single glance enkindling fast love's quickest, fiercest
flame.

As erst of old with fleetest haste from high Olympian
heaven,
To speeding wings by thoughts of love, a bolder impulse
given,
Sweet Venus fled, nor gazed behind each sulky glance to
view,
That haughty Juno's vengeful eye in ireful envy threw;
On, darting on with speediest sweep, as arrows cleave the
air,
O'er shoulders smooth as ivory far-waved her auburn
hair:

Nor ceased her eager course nor paused, till neath in
green array
Fair Ida's cherished bowers of love, in soft repose she lay.
A moment brief then poised in space, sustained on out-
spread wing,
As calmest lull of Spring-winds soft, which bounteous
showers bring,
She glanced her eye o'er wood and grove, with eager
wish to see
Anchises dreaming dreams of her, beneath her myrtle
tree.

When viewing with far-reaching sight, in graceful out-
lines traced,
Her slumbering lover's cherished form, with plumed hel-
met graced,
In waving circles drooping down, her earthward course
she tends,
With balmiest sighs a fragrance soft to perfumed breezes
leads,
With noiseless footfall she alights, her dreaming love
one by,
And on him turns a glance that burns, with flame-enkin-
dled eye.

Thus fair, thus graceful seemed the Nymph to Leon's
wildered sight,
As if escaped from fairy land, in swift impetuous flight.
And as she paused near Leon's form with rosy lips apart,
With tiny hands on trembling breast to still her trem'ulous
heart,
So gently pressed the velvet grass her little fairy feet,
That grateful blades beneath unsoiled, bestowed their
kisses sweet;

And eager moonbeams softly crept from ash and cypress tree,
And hastened on through orange bowers, such glorious sight to see.

The woodland maid serenely gazed, and pitying glances threw.

From eyes like angels sooth may have, but mortals very few,

Upon the war-worn warrior's form encased in coat of mail,

That form that many a storm had braved, and many a winter's gale ;

That torn by many a battle long, by many a siege harassed,
Tho' scathed ne'er bent, tho' scarred ne'er bowed, unyielding to the last.

Then still advanced with tread subdued and slowly leant her there,

Until the slumberer's breath disturbed her curls of floating hair.

Upon his forehead, rough and high, her twining fingers placed,

And touched with care the wrinkles there by direst hardships traced.

Nor lingered long the maid to note how fleeting time's decay,

Had solemnized her raven hair with sacred strands of grey,

But utterance gave to dulcet words with full delicious tone,

From lips as soft as Cashmere's rose, her rarest rose full blown.

SONG OF THE SPIRIT MAIDEN.

De Leon, De Leon, why sleepest thou now,
With tokens of sorrow traced over thy brow ?
Is care thy sad portion by night and by day,
And will not soft slumber sooth sorrow away ?

Oh ! swiftly I've speeded from Dream-land this night,
Ne'er pausing a moment, on ever in flight,
I've journeyed o'er mountains and swam o'er the sea,
Awake thee, awake thee, I've tidings for thee !

In Bimini island green-crested and fair,
Where cypress and palm trees e'er blossoming are,
Where Zephyrs enamored the sweet flowers woo,
The solace of sorrow lies waiting for you.

On many bright lands thy bold footsteps have been,
Fit homes for the weary thy vision hath seen,
Gem island by fond waves of ocean caressed,
Where tempest-tosted seamen from danger might rest.

For storm-nurtured petrel, though wanderer he,
Ne'er journeyed more fathoms alone o'er the sea,
Than thou with brave Colon, the mariner's king,
Whose requiem ever the billows shall sing.

Yet island so cheery, so lovely to view
Ne'er welcome hath offered to Colon or you,
As Bimini island where alway the surf,
With gentlest obeisance approaches the turf.

The rarest of flowers so plenteous there grow,
That withered leaves falling, when spicy winds blow,

In circles borne upwards, float cloud-like for miles,
'Till odorous ocean receives them with smiles.

There myrtle, magnolia and cypress combine,
To give to the island a beauty divine ;
And birds of fair plumage in trills ever sweet,
Fond praises of Bimini softly repeat.

Gay ever with blossoms, caressed by the breeze,
In sunshine all glittering bloom alway the trees.
By tempest uninjured, full branches they bear,
Nor leaf-stopping autumn, nor winter they fear.

There leapeth in beauty, and sparkleth in glee,
Thy fountain of youth overflowing and free,
As mirror of silver, bright burnished it seems,
Forever emitting its clear limpid streams.

At roseate matin fast hastens the sun,
To cast his first beamings this fountain upon,
And Luna above it oft pauses in flight,
To see her form mirrored in waters so bright.

A velvety margin the blue waters have,
Where roses and lilies, sweet suppliants, crave
Permission to droop them, and gently bestow
Their lingering kiss on the surface below.

De Leon, De Leon, if more thou wouldst know,
Awake thee from slumber and with me come go,
Ere star-light hath faded, ere moon-beams may pale,
O'er mountains and forest, o'er valley and vale,

Where wooed by the ocean, by Zephyrs caressed,
In vernal bloom budding, in happiness blest,
E'er sparkling in verdure, 'neath balmy skies,
Queen-bride of old Neptune, sweet Bimini lies.

PART III.

The waters of Helicon and Parnassus have no sanative power, nor other stream gliding on our earth. But hard by the eternal throne of God, our ever-blessed Maker, the true Fountain of Life gushes up and thereof the Angels and Arch-angels forever do drink. *Vicesimus Knox.*

With cadence soft and musical the maiden ceased her song,

But 'mid the forests still and calm, its echo floated long,
Now ling'ring 'mid the cypress boughs, now whispering with the pine,

Then fleeting, fleeing, flowing on in fitful measures fine,
'Till mingled with the rippling noise loud murmuring brooklets gave,

In stronger tones of dulcet sound it found its fitting grave.

Ah ! see the slumberer moving now, the sleeper's pulses thrill,

And inspirations fast and deep his heaving bosom fill !
A smile his forehead dallies o'er, as in his happiest mood

And furrowed cheeks yet all suffused with warm Castilian blood;
With eager impulse open now his sleep-refusing eyes,
And straight before he gazeth long with look of mute surprise.

As feels the sinking mariner, when swiftly floating by,
Huge, broken spars elude his grasp and leave him there to die,

As prisoner lone in dreary cell, with iron fetters bound,
Whose list'ning ear hear Chauncleer, with shrillest matin sound,

Announce to him Aurora fair, slow ushering in the day,
That ere its close will view his form a lump of lifeless clay;

As feels the mother when she knows that stern unpitying death,

Upon her child, her only child, hath breathed with noisome breath,

Upon those eyes once sparkling bright, his icy seals hath placed,

And on that snow-white purest brow his mournful token traced,

So felt De Leon, conscious then that visions fond and vain,

Had sported with his hoping soul, and left him sad again.

Alas! alas! that waking sight such bliss could e'er destroy,

The maiden sped, to dreamland fled, and with her bore his joy,

His holiest joy without alloy on winged pinions bore
And left him weeping, wailing there in agony full sore!

Protracted sighs that well bespeak the anguish of his soul,
From out his sorrow-laden breast in slow succession roll;
From eyes that oftener far were wont in generous pride to gleam,

Large trickling tear-drops down his cheek in rapid torrents stream.

Ah! Ponce De Leon well for thee, broad-breasted man of oak,

No human eye beholds thee wail for this thy saddest stroke!
Thy lordly pride could never brook to yield to melting mood,

If witnessing thy helpless grief a comrade near thee stood.

For ne'er has freeman seen thee shrink, nor mortal seen thee quail

In strife, or siege, in woe or war, in tempest or in gale.

Yet weep De Leon, freely weep, alone and desolate,
Let every willing tear drop sad pursue its trickling mate!
There's little fear of prying gaze, thy sole companions are
The solemn forest-trees around, that in thy sorrow share.
Beside thee wave the willows lone all sadly to and fro,
As if lamenting buried dead the cheerful earth below;
About thee grieving night-winds sing their slow and serious lays,

Above in sparkling sympathy sad stars pour down their rays.

Then weep, deluded Leon, weep the hope hat cheered thy heart,

That far hath led thee o'er the sea and bade thee early part

From kindred race and native land, sweet joys of love forego

Thy pining, yearning, longing soul may never, *never* know.

Amid the many gifts to man for mortal uses meet,
Abundant found in every land is water ever sweet.

The tired laborer owns it sweet with irksome toiling spent,

And sated prince when gen'rous wines afford no nutriment.

Oh! fair to view this liquid pure wh'er'er it hath its birth,
In crystal goblet flowing free or bounding o'er the earth!
In glitt'ring rain drops falling fast, transparent globes that form,

In passing shower of early spring or in the winter's storm!

In sparkling tear by purest joy from eye of maiden led,
In pitying streams from angels' eyes for human woes e'er shed!

Or in the morning's trem'lous dew soft quiv'ring in the light,

Which God the Giver ever spreads to cheer our mortal sight!

Upon our bounteous mother-earth what copious waters glide!

Capacious seas upon whose breast large navies safely ride!
Majestic rivers rolling on with right baronial mien,

And fairy lakes reflecting each fair Luna's roseate sheen!
How many a fountain gushes up with murmur and with song,

And many a brook soft warbling makes as journeys it along;

And silvery streams, or large or small, their fertile windings take

'Mid pleasant fields of waving grain, their burning thirst to slake.

Yet ah! vain dreamer, none of these, tho' pure the waters be
May give to man perpetual youth, from danger set him free!

Not limpid draughts from clearest streams in fairest lands that leap,

Not famed Bandusia's joyous fount where guard sweet Naiads keep,

Such precious priceless boon may yield, to mortals e'er denied:

Our native earth for all her sons hath resting-place supplied.

Or ever silver cord be loosed, or broken golden bowl,
From crumbling tenement of clay departs the immortal soul.

Then search, oh! mortal, not on earth such vernal fount to find,

But *upward* look with eye of faith and calm and trusting mind

Encompassing Jerusalem, blest city of our God,
A city girt with sapphire walls by angel footsteps trod,

Where toil, nor woe, nor death is known, nor darkness there, nor night,

Celestial waters ever flow, and gleam in golden light.

One draught from that divinely source, a single drop if given,

Will yield thee never-ending youth, and life fore'er in heaven.

When this thy soul hath tasted once, thy voice will ever sing

Amid the sons of God on high, "*Hosannah To Our King.*"

Huntsville, Ala., Oct. 1851.

HISTORY OF RICHMOND.

CHAPTER TENTH.

DESCRIPTIVE LETTERS.

We are fortunate enough to have in our possession a series of letters dated from Richmond, appearing to have been written some few years since, and to have passed between two young friends. The package, for some time, lay stored away, wrapped carefully up, and endorsed "A Week in Richmond." From it we make extracts; leaving out, of course, matters of a private character, as well as much unnecessary description, and many unmeaning soliloquies and meditations. Some characters are here spoken of, and some persons described; let it not offend any one now in Richmond, nor let it be imagined that persons are thus dealt with who live among us. For we have been careful not to publish here any extract in which the present citizens are spoken of; but have selected only descriptions of the dead or the living absent, who formerly flourished in Richmond. We would not excite the vanity by praise, or hurt the feelings by censure, of those with whom we daily associate; and shall therefore defer to some future period any further extracts from these letters. With this explanation, we enter upon the office of editor; and, if we might hazard an opinion, would say that the writer of these letters must have read, and with close attention too, "The Letters of the British Spy."

LETTER I.

Richmond. Friday.

"You are curious to know, my dear H., my impressions of Richmond; and to ascertain whether all that you have heard in its favor is correct. My silence makes you think me to like the place and the people; or else, I would find a voice for my complaints, if dissatisfied. You are right; to be disappointed is to complain, and as I have not hitherto complained, you infer that I am well pleased. My time has been well spent in looking through Richmond; in making the acquaintance of its men of note, in mingling quietly in its society, and in admiring the beauty of its natural scenery, and of its public buildings. As I have seen this people under all circumstances; when collected for political discussion under the excitement of an election—when gathered in their churches to listen, or to sleep, as drowsiness or devotion might dictate—in their business employments—in their courts of justice, or in their gay assemblies—I may be supposed to

know something of them; and my impressions shall be detailed now for your benefit. My first view of the city was from a point of observation where it appears most beautiful, and the sensation of pleasure then received by me will never be forgotten. It is certainly one of the most beautiful cities in its situation and its buildings that I have ever seen. As the cars came bowling along, approaching the river and the city, the whole scene burst on me at once, and Richmond lay like a panorama before me. As we slowly approached and traversed the bridge, I could take in all the points of beauty, and note the crescent-like shape of the city as it lay along the river, flanked by Church Hill, crowned with buildings, on one side, and the hill, intended for the cemetery of Hollywood, covered with tall trees on the other; the capitol rising in finished beauty in the centre—and spire, and dome, and handsome edifice combining to make up a *tout ensemble*, the equal of which my eye has no where rested on. It wants only a few noble cathedral-like buildings, and a few tall and well-proportioned monuments to the great men our State has given to the world, to make Richmond the equal of any of the beautiful places of even the old world. The capitol of course first strikes a stranger's eye. I had heard much of its imposing appearance, and was prepared for something beautiful and grand. Nor was I disappointed; high above all stands this majestic structure, the first and the chief object of attraction. I could almost exclaim with an enthusiastic German who, after he had viewed this model of beautiful and antique architecture from every side, finally crossed the river, and mounting a hill some miles distant, that he might see the capitol standing alone, and apparently high in air, declared that it was 'a palace built upon clouds.' I have walked around it again and again, inspecting every part and admiring it from every point of view. It is to me a source of constant pleasure, and I often ramble out into the square by moonlight to see the increased and softened beauty of this masterpiece of Grecian architecture. Let me describe it to you; imagine then a building 90 feet long, 50 high, and 60 feet broad, standing on the brow of Shockoe Hill, surrounded by trees, grass, gravelled walks and flowers, alone and high, built in imitation of the Maison Quarree of Nîmes in the purest Grecian style. A handsome portico stands on the southern side, fronting the brow of the hill, overlooking the river and the city. This portico is covered by an extension of the roof, supported by massive columns. Neither entrance steps nor balustrade is on this point; on each side broad flights of steps lead up to the first floor; underneath these are entrances to the offices of the

Treasurer, &c., in the basement. On ascending you enter a large hall lighted from above; on one side is the Chamber of the House of Delegates; on the other a passage leading to the portico, into which passage opens the door of the Senate Chamber, and in the centre, surrounded by an iron railing, stands Houdon's statue of Washington. The figure is placed on a pedestal, is of natural size, and is said to be a correct likeness in face and form. It represents him in the dress of a General, leaning slightly against a bundle of Roman Fasces, over which a military cloak is thrown, the right arm extended, the hand grasping a cane, the head bare, and the attitude one of ease and dignity. The form is robust and manly, the face a calm, thoughtful and determined one. My opinion of his carriage and appearance, that he was one of the most dignified and manly of men, was fully confirmed by this statue. Ascending a broad flight of stairs you reach the upper story, and enter a gallery running round the open space, through which light is admitted from the roof to the floor below; into this gallery open the doors of the State Library, the Governor's office, and other offices. The Library is a well selected and well kept one; it contains on its well arranged shelves 14,000 volumes, consisting chiefly of law books, historical works, and political records for the use of the Legislature. The librarian I have found a courteous and obliging gentleman; through his kindness I have spent many pleasant hours in this rich storehouse of knowledge. The view from the windows of the capitol, on every side, is a fine one, and the southern view is peculiarly so. Below you is the town stretching up and down the river, over the hills and along the shore—the river itself, with its falls, rocks and islands, and the bridges spanning it—the town of Manchester opposite, the water glistening like silver in the sunlight as it winds its way, now disappearing and then shining through the trees that cover the islands and stand on the banks—the dock and the shipping in the distance—the stir of men busily engaged in their avocations—St. Paul's church sending its tall spire into the sky—other churches and handsome edifices in various parts of the city—the white walls of the Penitentiary, whose inmates representing every class of villainy, form a complete congress of crime, and the square itself, with its green sod and broad walks, covered by a review of troops and crowded with citizens—all these taken in from one point of view form a picture most interesting and most beautiful.

LETTER II.

Saturday.

I have walked much about Richmond; it is a

most difficult city to perambulate, as most of its streets are a succession of ascents and descents, and although the steepness of its hillsides is very much cut away, still it is a rough city to walk in. In many places I noticed that in leveling the streets, houses were left standing on a bank above; and in some instances another story had been added under the house where the cellar stood. On Main street, upon the lower side, between 11th and 12th streets, are two old looking wooden houses, with the lower stories of brick, which had evidently been thus built from this cause. The upper part of this street was once cut away in grading it, so as to leave the houses on their old foundations high above its level.

"My walks led me to the lower part of the city, that I might inspect 'the old Stone House.' It is a plain, even rough, one story house, the oldest in Richmond, standing on the Main street, and made of stones not very well cut or worked for the purpose of building; it presents an ancient and rather unsightly appearance. Jacob Ege, of Germany, settled here, and built this house previous to the erection of Byrd's Warehouse; his descendants still occupy it. Some of our greatest men have resided in it, when it was used as a tavern; Monroe boarded in it when he went to school in Richmond; Washington, Jefferson, Lafayette, Henry, Lee and others have made it a stopping-place. I looked on it with reverence, as the unsightly predecessor of the present beautiful and well furnished hotels of Richmond, and as a place honored by the residence of our great men.

"In my ramblings about the city, I have been struck with the number of handsome private residences; in no city of its size have I ever seen so many, and it might very justly be called 'the city of handsome houses.' I noticed three styles of building among the habitations of the better classes, and many among those of the lower orders, from the shanty upwards. The most ancient is the large, square, two story brick house, roomy and massive, yet of somewhat clumsy appearance; and possessing more solidity than elegance. Specimens of this class are found in the Governor's House, and in many other of similar appearance and greater age scattered throughout Richmond. Another style is a very singular one in appearance; it seems to have been an imitation of the English bay window style. Many squarely built houses have this bay window style added to them; part of the wall bulging out in the form of a half hexagon on one side. Others appear to be triangles made of three two story hexagonal towers, with a portico filling up the open space at the base of the triangle, and the pointed roofs joining one another. Of this latter kind there is a specimen on the corner of 9th

and Marshall streets, just opposite the residence of the great Chief Justice, and on the same square with the residence of Chapman Johnson, Esq. This style seems to have affected a large number of the houses of the city of any great age, giving them and it a singular appearance. The third style is that of modern houses, where men have taste and wealth. I have been in most of the streets of the city, and seen the outside of all the public buildings, and the inside of many. I would weary you with descriptions of them all, and must therefore leave many out, or give you a general account of them all.

"The Market Houses cannot boast a very imposing appearance, or much elegance of structure, or cleanliness of keeping; they are rather dingy looking affairs, yet large and commodious. They are well supplied, although many things are brought from a distance, and there would appear to be a dearth of market gardens and fruit orchards around the city. Indeed, in my rides in the country I was surprised to see so much uncleared land, and so little of that minute cultivation in small farms and gardens that might be looked for near a large city. The Hotels of Richmond are numerous and well appointed. They mark the advance of a people in civilization, for it is only in communities highly cultivated and possessing the spirit of trade and travel, which seems to spring from a state of civilization, that we find the science of entertaining, like other sciences, to flourish. The hospitable habit of the age, and the absence of much travel in former times, prevented the hotels from being more than places of occasional entertainment, and resorts for political or for frolicking purposes. The hotel system of Europe and the North is now the adopted policy of Richmond, and is necessary in a city of its size; it is in fact filled with large hotels and boarding houses. To speak of them all is impossible without wearying you; I will mention one or two—the most superior. The Exchange, standing on the corner of Franklin and Pearl streets, first in extent and superiority of arrangement. Although well built and presenting an imposing front, it is badly situated. If it had been placed on one of the vacant lots fronting Capitol Square it would have formed quite an ornament to the city and the chief place of resort to travellers. This is the only thing wanting to render it perfect, as in every other respect it realizes that sensation of comfort which is expressed by the question, 'Shall I not take mine ease in mine inn?' The American and the City Hotel, on Main street, are well kept houses. The Columbian, on Cary street, is much frequented and well furnished. The Powhatan House is deservedly much patronized, because it is kept in the best style and on temperance

principles. These are but samples of them all. There is one drawback to the pleasure a traveller has in visiting Richmond, and that is in the great inconvenience experienced at the Depot of the Richmond and Potomac Rail Road Company. You would scarcely believe it, yet it is surely the fact, that this company, actually allow passengers to land from their cars in the middle of the street, without shelter from the pelting rain or burning sun, in the midst of noisy porters and hack drivers, and then to pass through the mud or dust to the sidewalks. This is a convenience I have noticed in no other place; it is an honor peculiar to Richmond, and a contrivance to secure the comfort of travellers which the managers of affairs for this company, alone of all other companies, have the honor of originating and carrying out.

"The public square, on which the capitol stands, is a great place of resort for strangers. As it is in the centre of the city, and a place from which many fine views may be seen; as well as being also the actual seat of government, it is much frequented. The grounds are laid out in a stiff style, with walks straight and well gravelled, cutting one another at right angles; boards are put up here and there directing all persons to keep off the grass; and everything looks as nice and prim as if under the special guardianship of some maiden lady of antique age, cleanly habits and vinegar countenance. I had always imagined our good old mother State to be more of a matron, and that she would allow her sons free liberty to walk or roll on the grass plats around her house without let or hindrance. The old lady, or some of her agents, has shown bad taste in ornamenting the grounds around the mansion; I always thought her patriotic, and yet she has scarcely put a single American tree near her house. They are foreigners all. Now, I think she has shown good taste in building her place of residence after an ancient and foreign model, and I am perfectly satisfied with it, because it belonged to a free people, and she never had taste enough to make any thing better. But really she has carried it too far, for such a domestic character as she is, to have nothing but European trees, when she might have had the finest looking and most shady trees in the world out of her own woods. She might have known that they would not thrive as well, nor stand the climate as her own would do. Most of them are lindens too—a tree devoted to witchcraft and magic,—and, therefore, however much they might flourish in Salem, Massachusetts, or in Kinderhook, New York, are totally unsuited to her plain, straightforward, upright and sagacious character. The result is as might have been expected; these European, magic loving trees, have not

flourished on the soil of this American, candour-loving old dame. They look stunted and withered; if not yet dead, they are already a prey to worms, and would make far better fuel than ornament. I would advise her to shear them all down, and plant in their stead plenty of hickory and ash, with other such trees of native growth, and let the little boys climb up after nuts, and roll on the grass to the fullest extent, like young sovereigns as they are. She might have, if she wished it, in the small surface of her pleasure-grounds, every tree that grows in our woods; as her sons have lived, and acted well, too, in every part of the country, she might fitly represent the extent of her influence, by gathering around her mansion every kind of tree, from the live oak of Florida to the fir and pine of the north, from the cypress of her own coasts, through the various kinds of oak, buckeye and cottonwood of the west, to the stately and beautiful forest trees of California. How much better would it be to do this, and to take advantage of the natural beauties of the situation, by making the walks serpentine instead of straight and stiff. I found another instance of very bad taste also; in or near two of the walks there are found, standing near as many hydrants, two singular looking structures, which obstruct the path and mar the beauty of the place. What they are it would puzzle any one to decide. Our old mother is clearly not responsible for their erection, as I am informed they were put up by one of her agents, who was fond of doing things in an extra manner, and did this without her knowledge. They cannot be altars; as although surrounded by woods and near fountains, the naiads and the dryads are not now adored; nor have I ever heard their erector accused of any tendency to devotion. They might be meant as altars to Bacchus; which the running water near and the inverted copper bowl on the top seemed to deny. Altars they must be, as I can make them out nothing else; and for want of a better I dedicate them to the god of Folly.

"In another part of the square stands a stump tower, crowned with a bell, from which alarms of fire are given. It was doubtless intended as an ornament to the city, and for the sake of contrast, was made as much unlike the capitol or any other elegant piece of architecture as possible. The idea by which it was built, was evidently taken from that beautiful specimen of art, a Dutch pigstye. In these, the inhabitants are placed in the different stories, and are fed from the top so that nothing is lost in going through; the fattest hogs being always found at the bottom. Very economical, no doubt, and suitable exactly for the purpose; yet why it should be imitated in a building placed upon the public

square, and near an imitation of the Maison Quarree, is a more puzzling riddle than any I have yet encountered. I have looked in vain over the State annals for the name of some enthusiastic Dutch Governor, by whose order it might have been erected; and must leave it to men of more historical research than myself. By way of atonement, perhaps, for this unsightly object, the City Hall, where the United States Court is held, stands opposite the capitol, and is a most beautiful piece of architecture. It is the most perfect in the city; even more so than the capitol, as that is somewhat disfigured by the long and narrow flights of steps leading to an entrance on each side, and by a tall flag-staff topped with a gilt ball which protrudes from the centre of the roof. Neither of these, I am sure, ever entered into the conception of the Greek artist. This building, however, has nothing to interfere with its perfect beauty. It is admirably proportioned in length and height; at each end is a columned portico of the Doric order, with broad and low flights of steps extending the breadth of each. The roof is concealed by the arrangement and the width of the cornice, so that only the dome of its centre can be seen. The exact proportion and perfect finish of the building would make it, if constructed of marble instead of freestone, among the best specimens of ancient style in this country.

LETTER III.

Sunday.

You ask me of the pulpit in Richmond—how it is filled—and whether men of eloquence and power are in it. I have noticed the churches and the church-goers in this city with some care; as a correct opinion may be formed of the character of a people by observing their regularity, or their want of it, as church-goers. For although it is true that,

'Some go to church, just for a walk,
Some go there to laugh and talk,
Some go there the time to spend,
Some go there to meet a friend,
Some go to learn the parson's name,
Some go there to wound his fame,
Some go there for speculation,
Some go there for observation,
Some go there to doze and nod,
But few go there to worship God;'

still, it shows a habit of morality, and this habit acts as a restraint on men. The church is then a means of making good citizens, and as such, even if no higher motive prevail, ought to be encouraged by all who wish prosperity to the State and good order in the community. This motive, my curiosity also, and, I hope, a better one than either, devotion, led me into many of the church-

es of the city. The one that I entered first was a plain looking building, both inside and out; rather old, and at no time very handsome; the congregation had gathered with seriousness in their faces before I entered, and the minister had risen and was choosing his text as I took my seat. His appearance was singular; tall, so as to appear almost gigantic, with a frame of great physical power; a countenance stern and even harsh in repose, with an eye, that unless lighted up with some humorous thought, appeared dull in its repose, and a manner at first quiet and heavy. His subject was the final judgment; and as he seemed to rise with the awful grandeur of his theme, his form would dilate, his countenance become lighted up, the dull eye looked like a furnace that had received fresh fuel and blazed with intense expression; it seemed to open and brighten as he developed the subject he had in hand. The vehemence of his gesture and the stern expression of his face, added force to the words as they flowed from his lips; and his voice like his appearance, harsh and strong, seemed under no control in its lower tones, although it rung out like a trumpet call in its powerful, startling bursts of sound. No man in appearance, voice, and gesture, or in the compact, vehement and massive power of his intellect, as well as in force of reasoning and felicity of illustration, ever so impressed me with the sense of power as this man has done. I felt what was meant by the term Boanerges, when I heard this thunderer speaking forth in tones of majesty the folly of resistance to God's will, and placing before men the consequences of their delusion, and painting in fire words the day of final judgment, until the lurid flames could almost be seen writing on the clouds of darkness, ascending from the pit of terror, the words 'Harvest past,' 'Not saved,' to a despairing multitude. He recounted their crimes, as in a court of justice, brought up before each one his sins and errors in all their magnitude and in all their aggravations, and then laid open the punishment of the law. I never saw any man more the master of powerful invective, following on the most conclusive reasoning urged in the most effective manner. The power of sarcasm too was not wanting, and was used with tremendous effect. What struck me most forcibly, was the ease with which he passed from one emotion to another, rousing and allaying the passions with the same master-hand. The awful, the terrible, the ludicrous even, the sarcastic and the pathetic; all that was gentle in the lovely character of Jesus, and all that was grand and fearful in the idea of an avenging God, were expressed and vividly represented. I cannot give you any idea of the man by quoting his words, although there were startling bursts of eloquence

and impressive sentences uttered forth; yet it is not in isolated phrases or single sentences that this man can be measured, any more than a specimen rock could exhibit the grandeur and the massiveness of Gibraltar. So impressed was I with the manner and force and meaning of the man, that I could not put down his words in my memory. To compare him with the mass of ordinary preachers, is to institute a comparison between a milldam, that has accumulated waters for a week, and in turning a wheel exhausts itself by the effort; and the constant and resistless flow of a mighty river. This man would possess influence anywhere and in any occupation; I never yet saw a man who exhibited so many elements of power.

"In the afternoon I walked up the street and looked over the various churches; entering some of them rather to inspect their appearance than to hear discourses. The most beautiful are the Gothic church on 5th street, and St. Paul's on Grace street, near the square. The first is the most perfect and beautiful specimen of Gothic architecture I have ever seen even in our northern cities; some may surpass it in size and grandness of appearance, none in its internal arrangements and perfect finish. A critic might notice, yet would not condemn, a departure from the usual style in its galleries. St. Paul's is a handsome specimen of the Grecian style of architecture of the Corinthian order, and is quite an ornament to the city; yet upon the top of this handsome Grecian temple I found a modern church steeple; a bringing together of things new and old that rather surprised me. This adds, however, to the appearance of the city. Richmond would look much better if all its many churches had steeples. This church was closed and I did not enter it. I am informed it is as handsomely furnished within as it is beautiful without; its congregation is the richest in the State, and the church is the most popular of any in Richmond. How much better would it have been if the style of building for these two churches had been reversed; the beautiful Grecian would have suited both the size and the situation of the present Gothic; and the large, massive looking St. Paul's would better become the Gothic style of building. Then, too, as it is near the capitol, a Grecian structure, each would have appeared more beautiful by contrast, had the church been Gothic. In walking around the square the number of mean looking buildings surprised me; there were some few good looking ones it is true, yet the mass of them were not so. This square is the central place of the town, and the place where strangers naturally go; to give effect, it should have been either kept bare of houses that thus the capitol might

stand out alone, or it should have been surrounded by the city churches, by the public buildings, by splendid residences, or by extensive and nobly built hotels of different and beautiful styles of architecture, that thus each might set off the beauty of the other and add ornament to the city. The capitol would thus stand like a pearl of price surrounded by a circlet of gems; and no city of the world would possess a more beautiful promenade than Richmond. To-night I went to the Monumental church and heard another of the great men of the city; this, as you are well aware was built on the ground occupied by the burnt theatre. Need I describe the sensations that crowded on me as I sat in the place and thought of that scene of merriment so suddenly turned into mourning, and of the cries of anguish from the sufferers and from those bereft of friends. Truly this was a place right and proper on which to erect a church, wherein were to be preached the consolations of the Christian religion. A place where thus the memory of the dead was kept in constant remembrance, where the ministrations of the church were a continual funeral sermon, and a spot of earth dedicated to levity and blasphemy, baptized in the tears and the groans of the living and the dying, where death had been in all its horrors, was a fit place for the life-giving words of the gospel and the hope of immortality to be promulgated. The church is of a singular shape; octagonal, with three porches. In the front one stands a monument to the dead, with the names of the sufferers on it; it is a plain, altar-like structure, being only intended to bear the names of those who perished; the church is their monument. The side porches afford entrance to the body of the church; and also, by winding stairs, to the galleries above, without encroaching on the octagonal shape of the body of the building. The internal appearance is very striking; imagine a perfect octagon of large size, the galleries filling up seven of the sides, leaving one for the pulpit and reading desk; opposite these a large, handsome and well-toned organ with a well-trained choir; the octagonal shape making some singular pews on the lower floor, and giving a peculiar appearance to the whole church; the roof rising to a dome lighted from above. Now imagine this handsome church filled closely with the beauty, the fashion, and the wealth of the city, making up what we so rarely find under such circumstances, an attentive, devout congregation. After the sublime service of the Episcopal church was over, the preacher rose; I was prepossessed with his appearance, and the feeling increased as he spoke. Tall, dignified and graceful in person, carriage and gesture, with a countenance expressing gentleness and kindness of heart, a voice sweet and finely modulated, a mind classically educated and rich in stores of learning, in the literature of his own profession and in general knowledge, he possesses a suavity of manner that would make him a favorite in or out of the pulpit, and in any society where worth, courtesy and intellect are passports to attention. The discourse was in keeping with the appearance and character of the man; elegant in diction, sweetly persuasive in manner, he sought rather to touch and soften the heart than to break it; love and mercy were the accents on its lips, and not the harsher notes of terror and of guilt's punishment. His subject was the raising of Lazarus from the dead; and he so pictured the grief of his family, the sympathetic tears of Jesus, and his consolations to the afflicted sisters, the joy and gratitude as well as the amazement of the multitude, that we could almost see Christ standing at the open grave, and at his voice the dead coming forth in life and health and purity. He possesses, with all his gentleness, that manly elegance as an orator that Campbell does as a poet; and that finished and polished diction, combining strength and beauty. I find it difficult to compare him with the former speaker from the total dissimilarity of the two men. Perhaps a comparison might be sought in the ancient reputations of Hercules and Apollo, the several representatives of strength and elegance; or, if we compare them with speakers of whom we have heard, the comparison instituted by Wirt between Patrick Henry and Lee would suit better. One I described as the most forcible speaker I ever listened to; he was like a torrent forcing its way, overthrowing everything in its course, and leaving prostrate all opposition; the other, like a mild and gentle river, flowing through banks rendered fertile and beautiful by its waters, glancing in the sunlight and passing on its course with joy. One swept every chord of the lyre with a master's hand, yet excelled in the higher notes; the other filled the ear with sweet, low tones that touched the heart without terrifying. The eloquence of the one swells and rolls like the powerful sound of some mighty organ that fills the ear with the its thunder-tones, and hushes us into silence by its power and its richness; the musical diction of the other, like the sweet sounds of the Eolian harp, attract attention by their melody, and fill the soul with harmony. To conclude—one possesses strength and the other elegance; one has grace and sweetness of expression, the other force and fire; one touches the feelings, the other overpowers both heart and intellect; one must have a mighty subject to grapple with, he requires opposition to draw forth his full powers, and never moves so forcibly and majestically as in the tumult of debate, when attacked by

fierce and well-appointed foes; the other passes gently along, shunning opposition and tumult, and suits better the professor's chair than the angry forum. The one would lead a column into battle undauntedly and rejoice in the shock of arms, had his training been different; or he would have been an unflinching partisan and commander in political warfare, or an effective leader of opposition in Parliament or Congress; the senatorial dignity, or the foreign mission, would suit better the character of the other. One would have preached and struggled with Luther: the other have written and prayed with Melancthon.

LETTER IV.

Monday.

Among the most beautiful views in or about Richmond, that which is seen from the top of Church Hill strikes me as superior to all others. As a walk around Calton Hill in Edinburgh is said to have first suggested the idea of a panorama, from the varied beauty of landscape presented on every side of it; so here we have at once suggested the same idea, because of the exceeding and diversified loveliness of view that nature and art have combined their efforts to produce. No man of taste has ever stood upon the point of Church Hill at sunset, while the summer sun was shedding its yellow radiance over the beautiful scene before and around him, without being enraptured with the exquisite beauty of the view, and struck with the panorama-like character of the picture presented to his gaze. The city stands opposite, rising on the steep sides of Shockoe Hill, or lying along the river bank, or filling the valley between the hills—the village of Manchester, resting on the ridge, from which its former name of Rocky Ridge was derived, and the green or cultivated slope of the Falls plantation, spreading over the opposite shore—the river rolling off in the distance—the capitol standing in its beauty—the antique Egyptian architecture of the Medical College—the port filled with shipping and various water craft—all objects of interest and beauty in themselves—while over the whole scene the gorgeous hues of a summer sunset give coloring and softness and finished beauty to the picture. lighting up in a golden glow the countless windows of the city, rendering more yellow the turbid water that rolls down the falls, and enriching with its flood of light the combined view of city, river, and country landscape. Campbell's beautiful lines. (written in a scene of similar beauty, although visited at another period of the day,) involuntarily came into my mind.

'Ah! long shall I delight
In the memory of that morn,
When I climbed the Danube's height
To the fountain of the Thorn.

'And beheld his waves and islands,
Flashing, glittering in the sun,
From Vienna's gorgeous towers,
To the mountains of the Hun.

'There was gladness in the sky,
There was verdure all around,
And where'er it turned, the eye
Fell on rich historic ground.

'Over Aspern's field of glory
The noontide haze was cast,
And the hills of Turkish story
Gleamed with visions of the past.'

Another very fine view of Richmond is presented from the upper extremity of the city. Here I climbed a hill that rises on the river bank near the reservoir, and sat down to enjoy the beauty of the view. The place on which I sat is intended to be laid out for a cemetery. It certainly will make a most beautiful one, as the ground is covered with forest trees, and instead of the dead level that seems to be chosen usually for burial places, is beautifully undulated. I wish no harm to the citizens of Richmond, yet I should like to see this ground handsomely laid off, and showing here and there appropriate monuments. They have exhibited but little taste hitherto in their public cemeteries. It was late in the day when I reached my place of rest and sat down to enjoy the view. Here the river rushes down the falls, and you sit above the murmur of them—opposite are several islands—the pump-house, raising water for the city reservoir is beneath you—near by stands Belvidere, the residence of Col. Byrd in former times, when Richmond was a village and a plantation—farther off, the Penitentiary, with its white walls, the Armory, and the many mills and factories worked by water-power are seen—the bridges crossing the river in various directions, with the evening train rushing over one of them, strike the eye, and the busy city seems more distant than it really is, as the evening landscape becomes obscure and the confused sound of man comes like the hum of bees faintly to the ear. It was a mingling of sights and sounds that struck forcibly on my senses, and gave rise to many reflections. This is the time and place when I naturally fall to moralizing on the vanity and shortness of human life and effort; when the contrast between the quiet of nature and the bustle of man is shown, and when the evening of day naturally reminds us of the close of life. It is good then to muse and moralize, to look over the past and to think of the future. I thought over in my mind the scene this place, now tenanted by thousands

must have presented when Powhatan ruled and Smith visited here. Surely, if we now believed, as the wise ancients did, in tutelary divinities, we should hold that the spirits of Smith and of Pocahontas preside over the destinies of Richmond. The Roman or the Greek would have reared altars to their memories and instituted funeral games in their honor. As I sat and thought of their lives and their influence, and remembered that here they first met, I thought how happy it would be if their remains, which now moulder unnoticed in different parts of England, could be here brought together to adorn and honor the great city of the commonwealth they both aided to build up. In my mind's eye I placed a monument to Smith on the highest point of Church Hill, where he might appear to watch over the good of the commonwealth, and to stand as a sentinel on guard against its foes. And one to Pocahontas on the spot where I took in this goodly view, the high hill overlooking the river in the new cemetery—where she would stand the Minerva of our State—and, like her great prototype, overlook her favorite city in its progress in arts and arms. Smith was buried in London, and his remains lie in Saint Sepulchre's church, Skinner street. 'A large flat stone in front of the communion table engraved with his coat-of-arms, is all now remaining to the memory of Capt. Smith. The three Turks' heads are still distinguishable, but in a few years more they will be entirely effaced by the many feet which every Sunday unconsciously trample upon the tomb of so famous a man.' Pocahontas lies buried at Gravesend where she died. I doubt not that their remains could be removed, and funds soon raised to erect for each a noble monument. Is it not strange that those to whom we owe so much honor should have nothing of it rendered them? And now while I am thus building monuments, the great mover in the scheme of colonizing deserves one also. I mean Sir Walter Raleigh. We do not pay sufficient honour to the memory of our benefactors; what American has ever made a pilgrimage to the tomb of Raleigh, or sought out the resting place of Pocahontas or of Smith? If the remains of these three were among us, and deposited in our city, what a trio of worthies we would possess. I should like to see them brought over in pomp, and with appropriate ceremonies buried in our midst; and stately monuments to represent the memories of the chivalrous and accomplished Raleigh, the resolute, energetic Smith, and the gentle and lovely Pocahontas, erected over their remains. Pocahontas at least deserves this at the hands of the women of Virginia; she was a most beautiful and worthy type of her sex in our State. But in this utilitarian age, how can we

expect anything of the kind, when trade and speculation attract all attention, and leave none for the good and great of past ages. Perhaps, however, as these are elevated situations, there might be a combination of the useful, the ornamental and the reverential, by making these monuments very high, and attaching to each the apparatus of a windmill; thus we might have served out to the citizens of Richmond the Pocahontas corn meal, the Raleigh flour, and the Capt. Smith bran and shorts; the names would at least render them popular, and a thriving trade might be thus driven; doing honor to our benefactors, ornamenting our chief town, and filling our pockets by one and the same operation! The occupation would not be altogether inappropriate; as Capt. Smith seems to have spent most of his time in obtaining corn for the colonists, and Pocahontas was never so much greeted as when she sent in abundant provisions to our starving ancestors!

LETTER V.

Tuesday.

You know my fondness for examining graveyards, and inspecting closely those places where the dead are buried, and where the living build monuments. The House of the Living, as the Israelite styles his cemetery, has always been to me a place of very great interest. I have always held it as a decided mark of civilization to take care of the dead; and I think that a scale of the progress of humanity could be well made by tracing the mode and style of burying, and the funeral ceremonies, with the inscriptions upon tombstones. What a change and what progress from the first rude efforts of a tribe to commemorate the death of a chief, by raising a tumulus of rock over his remains—or by slaughtering captives and animals around his tomb as servants and companions in the world to which he had gone—while the poor follower was committed to the earth with scarcely a stone to mark his resting-place—from the time of the Greek and Roman burning his dead, that the ethereal part might pass off in flame to heaven, and that corruption might not touch those they had loved—in the embalming of the Egyptian, faintly foreshadowing their belief in a resurrection—and the Parsee exposing his dead on high towers, that the sun might draw up to himself the remains of those who had spent life in his worship—down to the present time of enlightenment, when the ornamented grave-yards, the tomb over the humblest individual, and the inscription of love and of hope in death and in eternity, show that death has lost his terrors. In the graves and the tombs of man we see his belief in immortality, instinct-

ively appearing in earlier ages, clearly taught and believed in now. A history of the modes of burial of different ages and nations, would show a history of man's religion.

The oldest grave-yard in this place, is that around the old church on the Hill. I walked over it, and entered the church so famous in our annals, where Patrick Henry's eloquence roused Virginia to arms, and where he so clearly spoke the voice of the nation when he said, "Give me liberty or give me death." I sat within this venerable place, and pictured before me the scene as it occurred 72 years before; the clear March morning in 1775, when there met here the delegates from all parts of the colony, and when the church held the concentrated wisdom and intelligence of the State. Had I the painter's pencil you should have the scene when, after a few days of doubt and indecision, Henry rose and electrified the Assembly by his eloquence and his daring. From that time the voice of this people was for war. I was more impressed than ever with the power of a single man in influencing the mass of a people, and directing or changing the course of events. A few obscure men gathered in a country church, are impelled to undertake a mighty enterprise, such as the world never saw before, by the eloquence and earnestness of an untaught rustic. It was as though a spark had fallen on a mass of gunpowder. The man came and the hour—and lo! the explosion that resulted shook monarchs on their thrones, waked up the spirit of enslaved nations, cleared away the mists of prejudice, broke down the barriers of oppression, raised to life the submerged principles of classic liberty, and still echoes and reverberates from nation to nation, and from age to age, until that voice, thus spoken, shall go round the world changing and improving wherever it goes. How great a matter a little fire has kindled.

The graves lie around the church; some well built and ornamented, others scarcely raised above the sod; many chief citizens of Richmond lie here with sculptured praises, yet none of our great men of national or State celebrity. The monument that most struck me was one bearing the inscription, "Dedicated by Filial Piety to Parental Love." The beloved wife, the kind husband, the affectionate father, the worthy citizen, the stranger from England, Scotland, Ireland, Spain, Italy, France and Germany; the professional man of eminence, the unlettered man of poverty; the wise and the wealthy; the man of sorrows to whom life was a burden; the young and joyous with bright hopes and strong anticipations; the infant that knew nothing but its mother's look of kindness, and the old man who had outlived all his kindred; hearts that have

felt every emotion, that have been wrung with passionate grief, or beat tumultuously with joy; eyes that have beamed with gladness, or been drowned in tears of sorrow; tongues eloquent in words and mighty in influence, whose voice has given rapture or destroyed peace; all that the living suffer, feel, think, love, hate, fear or desire, all lie here. In one common resting-place or caravanserai of the dead, they wait until the trump of doom shall summon them forth. To such a spot how truly Longfellow's words apply,

"This air is full of farewells for the dying,
And mournings for the dead."

The other cemetery is on Shockoe Hill, and is very large, and more ornamented. It is regularly laid out, whereas, the one on Church Hill has no regularity, or paths, or ornaments, except the few old trees that stand in it. The regular walks, the exact division, the ornamental trees, and the handsome monuments, render this a place of some beauty. The situation is, however, unsightly; a dead level at the extremity of a street, with the Poor House in front, and the rough sides of Union Hill nearly opposite, are all the beauties of situation that appear. The ground, however, is well inclosed, and well laid off in walks and roads, divided into lots and planted with trees and flowers. The monuments are many of them pyramid columns; this seems to be the chief style used. Very few are of that exquisite and costly character we see in places where cemeteries have been long established, and where it is as fashionable to ornament tombs, as it is to excel in the beauty of carriages and horses, or to take pride in a handsome house and furniture. I sought out the burial-place of John Marshall, and with some trouble found it. A plain, massive tombstone, covered the grave, made of the finest marble, and with this simple inscription.

JOHN MARSHALL,

Son of Thomas and Mary Marshall,
was born the 24th of September, 1775.

Intermarried with Mary Willis Ambler
the 3rd of January, 1783.

Departed this life
the 6th day of July, 1835.

Near it stands the tomb of Daniel Call, the brother-in-law of Marshall, and not far off is that of Wickham, both distinguished lawyers; the latter one of the most eminent in Virginia. The marble records neither the fame nor the services of Marshall; there is no laboured pomp of eulogy, and nothing special to mark the spot where this great man lies. His tomb is as simple as his

life was pure. Bishop Moore, Judges Carr and Stanard, Benjamin Watkins Leigh, and many others of talent and eminence are buried here. Peter Francisco, the strongest man in Virginia, and an efficient soldier in our Revolution, lies here without a stone to mark his resting-place; surely this man deserves a monument better than many of those whose real or imaginary virtues are sculptured here. The State owes him one; and that it has not been made is proof of the oft-repeated adage, that republics are ungrateful. There is great need in a city of the size and with the future that Richmond has, of a large and better place of burial; and I am pleased to hear that it is intended to lay out a large and handsome cemetery on the river bank.

In crossing the valley to visit the church on the hill, I came on an old building called the Pine Apple church. It has belonged to several denominations, has been sold and left by the different congregations, and now is the only church in Richmond unoccupied, and looks deserted and desolate indeed.

It is a square house of brick, with a steeple stuck on one side of it, crowned on its summit with a singular pine apple like piece of work, that has given the name. The entrances are at the corners, the galleries are reached by circular stairs outside the building. The house looks like a square block of brick work, with no doors at the sides, at each corner a column, and these corners, thus cut off into small porches affording entrance to the body of the building. Added to this singular church and queer-looking steeple, to complete the ludicrousness of the picture, there is a small railed flat on the top, by way of giving finish and completeness to the building! It looks, indeed, as if the church had belonged to different denominations, and been under the charge of a succession of eccentric pastors, who had each added some oddity of his own, and had succeeded in making it more like a temple of Momus than a house of devotion.

I passed also the Jews' place of worship; they have two plain and neat synagogues in this city. I like a zealous Jew, and admire their ancient and renowned faith. They have seen the rise, the decay and the fall of almost all religious forms, and think themselves proudly preëminent as containing within themselves the original form of faith, and the elements of reproduction. Judaism is the true Phoenix; it will yet arise from its ashes in a purer, nobler form, and the hope of both Jew and Christian be realized in its resurrection and in its extended and useful influence.

Somewhat to my surprise I found a Quaker meeting-house, and saw several of the brethren in the street. I have often thought that, if this sect were not so ascetic as to forbid literature,

or so much devoted to trade, no finer field of contemplation could be afforded for the exercise of thought than their silent meetings. To see many hundred of them in a room, sitting in deep silence, so that even a full-drawn breath could be heard, the only sound that breaks the silence being the sob of some penitent as the tear rolled down his furrowed cheek; then, too, no eye of man fixed on you to disturb the current of your thoughts, but solemn stillness in the presence of others, tending to wrap the soul in devotion, or to stimulate the intellect; surely no better time could be afforded for the entrance and the evolution of thought.

If the system of faith and education which these men possess did not narrow the mind and cramp the expression of thought and feeling, if their customs did not prevent the writing or preparation of sermons, and if their dialect and mode of expression was not a stereotype one, we might look for the production of some wonderful mental effort that would astonish the world. As it is the spirit of the age has left them. Like the cast off garments of former times, they serve but to remind us of the past, as relics of what has been, and of what is fast hastening away never to return.

A revival of Quakerism would be of all phenomena the most curious, and the most improbable. Their dress, and speech, and mode of thought, like their form of religion, is of the antique order, and is venerable as a singular ruin—the relic of a mode of religious thought. They conjugate the verb to 'be in' its past tenses.

If you ask why, in a letter intended to treat of the cemeteries of the city, I speak of these modes of religion: I answer, that I consider them well placed among the dying and the dead.

How singular, and how well filled too, is that grave yard which contains extinct forms of faith!

LETTER VI.

Wednesday.

I have noticed closely the professional men of this city during my short stay here, and it gratifies me to say that both in the legal and medical professions there are many eminent men, fully able to keep up the former reputation of the city. To draw comparisons would be impossible, as I have not heard the lawyers in the courts of justice, and fortunately have been kept from the pulse feeling fingers of the physicians. They have been pointed out to me; and as it might please you to know them, I will describe some of the most eminent, as they appear to me and as their friends describe them. Here, as everywhere else, the men who deal in health must

yield to those who have the control of property; the doctors must give precedence to the lawyers. Mr. — is a tall, fine looking man, although now advanced in life, he still possesses a fine face and vigorous form; age has not dimmed his eye, nor impaired his capacity, either mental or physical; studious to a great degree, and therefore closely confined at home, he is nevertheless sociable and agreeable in the circle of friends. Possessing native good sense, an intellect strong and plodding rather than powerful and brilliant, he has improved it by the study and enriched it by the close application of his whole life. In fact he may be said to have devoted himself to the study of the law as we are required to devote ourselves to our God; with his whole heart, and mind, and strength. What his style of eloquence might have been when he practised in other courts I know not; the practice in the Court of Appeals has certainly tended to remove all flowers of fancy, all the beauties that imagination could gather, all the ornaments that historic research, or the facts of daily intercourse and reading, and all the illustrations that poetry or science might bring. It has cultivated the mind, removing all extraneous brain not needed in its own exercise, and thus treating the intellect as the jockey or the fencer does his body; removing by training and diet all superfluous flesh, and bringing the man down to nothing save bone, sinew, nerve and hardened muscle.

The dry diet of the Court of Appeals produces a similar effect; and no man can come forth from that arena a well-trained champion, and possess either the flow of fancy, the fire of imagination, or the eloquence of diction he once possessed. He is intellectually mummified for life. Nor does the voice and gesture improve but rather deteriorate in compass and variety; there is no occasion to please an audience by mellifluous tones, or by graceful carriage, or by elegance and appropriateness of gesture. It will not surprise then, when I say that the subject of this sketch, who was eminent in this court,—first among its foremost,—possessed with this intellectual dryness and hardness, incident to his profession, a voice intended only to address the judge who sat before him; and that to those on each side its tones, now a whisper and then a roar, had in them any thing else than pleasure.

The skill required in this court is something like that learned by a top sawyer. When one of these useful individuals is standing and laboring over a saw-pit the up and down fling of the saw is all that is seen, the grating harsh sound of the saw is all that is heard, and the result is that the tough log is cut through, knots and all, and of the planks thus made houses are built wherein men dwell comfortably, and fences are

mended through which trespassing had been done. The public think it a very necessary thing and praise the top sawyer; yet neither grace nor melody came from his work, and those approaching too near were liberally sprinkled with saw dust. Even the habits of this court, however, could not affect the dignity and grace of Mr. —'s carriage. No man in Virginia perhaps has higher reputation as a lawyer; no man has devoted himself so thoroughly to the intricacies of his profession, and no one deserves better his reputation.

Mr. — is another great lawyer at this bar, well known in the State Legislature and in Congress; of a short thick set figure, active and vehement rather than graceful in manner he yet possesses dignity; lively and fond of company, he is not and never has been the same close and heavy student as the great lawyer just spoken of; yet he possesses more fancy and more vehemence, and at times rises into a high strain of eloquence; he can when he pleases touch the feelings and stir the heart, and possesses evidently so much personal popularity as to be a great favorite with the public. His appearance is now that of a man much broken; his head is nearly bald, yet his broad sensible face and keen bright blue eyes still indicate vigor. He is a man well suited to act as mediator or pacificator in any cause, or on any mission that he might be sent; his popular manners, sound sense, and warm heart would give him every probability of success in such an undertaking. I will not enumerate his political services; they have been many and various; although from mingling together in himself the lawyer and the statesman, occupations each of which requires the whole attention where a man desires eminence, he did not obtain the highest place in either. Still he has done much and it has been well done; his name will be classed among Virginia worthies and associated honorably with those who labored for the union in troublous times.

From what I can learn of his style of speaking, I judge him to have had two styles; the first and best was when he was young; then, ardent, impassioned and vehement, he moved his audience by the fire and earnestness with which he took up a cause, by the rich play of fancy, and by the storm of words and vehemence of gesture which marked him when most roused; without, however, much grace of manner or distinct logical power.

In later years when his mind had been logically trained in the Court of Appeals, and, when from his habits and natural disposition to indolence, he had neglected close and continuous study, the power of fancy had left him, the vehemence of manner was gone, the power to

move and interest an audience had very much departed, and the faults rather than the benefits of his course of training were apparent. Had he retained the force and power of his earlier days, cultivated his talents and increased them by industrious application, added the voice and grace of oratory and the logical acuteness acquired in this court, he would have been among the very first of Virginian orators.

Both of these gentlemen should be held up to our young professional men; the first as a model for imitation, showing how far industry and close, persevering labor will carry a man who possesses rather good sense than talent; the second is an instance of talent impoverished by the want of industry, and powers directed to various pursuits, wasted for want of concentration, and diminishing instead of increasing in their progress.

But let the men of the bar, yield to the men of the bed side. Dr. — came to Richmond many years ago, a tall, ruddy, blue eyed, light haired and fine looking man; you would perceive that he is from the Emerald Isle, for he possesses somewhat the accent and the real Irish frankness and power of blarney; full of fun, anecdote, wit and humor, he would make a pleasant acquaintance anywhere. He is a very popular physician, and possess a very large practice.

I tried to analyse him and to ascertain wherein lay his power and skill, and how he obtained so much fame and such a lucrative practice. He rather decries heavy students, and those who pay great attention to the minutiae of the profession; who think, by profound scientific knowledge, to carry their way in the practical science of medicine; saying that good common sense, close attention and experience are the only requisites for success. He is an illustration of his own theory, for he possesses great shrewdness, good sense, power to observe and remember, and certainly his practice has been so extensive that he has also much experience. I cannot think his theory a perfect one, although I see its correctness. If he made scientific knowledge the basis of his theory I would be satisfied with it; the fear is lest others, not so well qualified in every respect as he is, should, by neglecting to inform and to train themselves properly, become those legalized murderers that every uninformed physician or quack must be. The doctor's manner in the sick room is good; his native sense enables him very quickly to ascertain in what manner to comport himself, and so versatile is he that he can suit in voice, language and manner the roughest Son of the Brogue, or the most courtly and polished gentleman. With his suavity and liveliness of manner, fund of droll anecdote, friendliness and real skill he is a favorite

among the sick, and commands and deserves an extensive practice.

There is another physician of age and eminence, who has high reputation here. Of him I cannot speak so fully; the public know but little of the qualities of a physician's mind; his profession is a private one, there is no opportunity of public display, and he can only be judged of by two things, his success in practice and his attention to the sick. They esteem him a man of talent, therefore, if he possess a good manner, and if his patients generally recover. Doctor — is remarkable for his fluency and for his conversational power; he certainly is a most agreeable talker and one of the most courtly gentlemen I have ever seen.

His skill is acknowledged, and his practice extensive. I am told that in the sick room nothing can equal him in softness of manner and kind attention; his presence is a balm to the sick, more soothing than any emollient, and if no other sedative can have power to calm, the charm of his conversation and presence will.

I would continue these descriptions as there are many others as worthy of note; yet I will not weary you by speaking too long of so dry a subject as that of the lawyers, or so unhealthy a one as that of the physicians. The number of young aspirants for practice in medicine and in law is very great; I fear many of them have a very limited constituency. It does not, however, seem to depress them, as a pleasanter set of men I have rarely met with.

Quacks of various kinds flourish here, save only the water curers, and the Homeopathists, the muddiness of the water,—preventing success to any physician who prescribes much of it,—prevents the one; and the disposition to give twenty grain doses of calomel in cases of bilious fever, hinders the infinitesimal doses of the other from becoming popular.

LETTER VII.

Thursday.

You are curious, my dear H., to know something of the society of Richmond, and especially of the ladies; and you ask whether it holds the preëminence in respect to the beauty and loveliness of its ladies, that it does in beauty of situation or of view, and in position as capital. As you will not let me off then, I must speak of the society here, and as carefully as possible of the ladies; you will not show my letter, I am sure, to any one from Richmond, lest my free-speaking pen should bring me into trouble when I again visit this city.

I have been struck with the number of fine looking middle aged man, and portly gray-haired seniors in this city; and I am pleased to see

many of them on horseback. It is a pity that this good old Virginia custom does not more prevail here; sure the inequalities of the town itself should require it, as there is very little inducement to walk in this up-hill and down-hill city. The military and the fire companies please me by their manly and well-trained appearance; the collected bar presents many fine looking heads, and contains a great mass of intelligence and talent; the men of the lancet, really, when we consider their killing propensities and profession, have a very benevolent as well as a very intelligent look; the ministry is able and the pulpit well supplied. Richmond has the materials of good society in it, and although my short stay here has prevented my entering much into its society, I can yet see that these materials are well worked up. But, "the ladies," you say; "pray tell me of their beauty." Well then—very few of these ladies possess the art of walking well; indeed, it must be said they are awkward walkers. The streets are but badly adapted to exhibit the graces of fine walking; and to this cause alone the want of much grace in this exercise must be attributed. How is a lady to walk with ease when she walks up and down hill? it necessarily gives her a manner of walking that shows the sole of the foot; stepping on the heel in going down, and on the toe in going up, the body is thrown either forwards or backwards, and this gives the carriage an ungraceful appearance.

Richmond is famous for beauty of situation and of scenery, and for handsome houses, and, as I mentioned, for fine looking elderly men; an impartial Providence does not give all favors to the same place, but distributes them; it would be strange then if Richmond bore away the palm for beauty; that is, if the number of beauties that she possesses should so stand forth as to overcome all its other attractions.

That there is much beauty here I believe, yet as there is no promenade a stranger would not perceive, nor find it out. In many other places, there is nothing to boast of save the beauty and grace of the ladies; Richmond has much else to boast of in its trade and its position. I say not that there is no beauty here—there is much; only that the beauty of Richmond does not surpass that of other places, as the scenery and the buildings do. It is not the capital of the State in this respect. I am informed that if the ladies of this city do not walk well, they are most dignified and graceful in the dance.

The society is delightful. Although there is that air of business about the mass of the people, which is always found in a place of trade; yet no people are more fond of amusement and of sport; the winters are very gay and full of

liveliness; parties and amusements of every kind are in vogue; the theatre is much frequented and every source of pleasure eagerly sought after. For many years past there have been clubs formed here for amusement of different kinds. One, the Quoit Club, meets at Buchanan's Spring near the city. Joining in the sports of this Club was a favorite amusement with Chief Justice Marshall; every Saturday evening the gentlemen who compose it, and they are among the first citizens of Richmond, assemble to pitch quoits and dine together, spending the day in exercise and hilarity. The old man was as eager in the game as any boy could have been; he was a good player, hurling a heavy quoit with much certainty, and enjoying the fun and jokes as one of the youngest of the party. This is the parent club of many others of a similar kind; a grove of trees, with a fine spring near it, affording shade to all and water to those who like to drink it, is selected; the ground is levelled and marked out for pitching; cards, wine, religion and politics are alike forbidden, because among men they are apt to engender strifes; quoits, mint juleps, shirtsleeves, and all the materials of a good dinner are allowed. These, with numerous picnic parties for the ladies, form some of the summer amusements; convivial clubs of various names are in vogue during the winter months. Of these last the Owl Club is best known; its name indicates its time of meeting; it is made up of wits and fun lovers of all kinds; wine, cards and backgammon are brought in to aid the festivities of the evening.

The circle of fashionable society in this city is so large that it has some inconveniences; there is but one circle, and this has been increased with the growth of the city, until now a fashionable party is a full house. Richmond is too large for one, and not large enough for several circles of fashionable life. One injurious result of this state of things is, that as all cannot be invited to a fashionable party, the young married ladies are left out, to their own loss of enjoyment, and to the detriment of society itself; for their culture and experience is always needed to give tone to the character, and to prevent flippancy in the conversation of fashionable society. By dividing into many circles there would be more real enjoyment; yet this will not take place until the city has very much increased in numbers and in wealth. Society then in Richmond is not literary, is not of scientific character; it lacks the tone a due mingling of the middle-aged and the married give; yet it is of a joyous character—that of youth—and consists chiefly of a fun-loving, merry-hearted, time-killing set of young folk.

There are few promenades in this city, and very little disposition to make use of those that

exist. The capitol square, and some of the most handsomely built streets are made use of by the ladies as promenades; it is but seldom, however, that they are frequented. A beautiful place of exercise might be made of the railroad bridge; it is high and uncovered, so that it affords a fine view of the city, of the river both above and below, and of the country beyond. As one has to pass through the dust and turmoil around the Depot to reach it, and as the footway upon it is a very disagreeable one, these are probably reasons why the ladies have not frequented it. Yet there are so many advantages connected with it, and it is so fine and breezy a place, that it is worth some sacrifice to enjoy them. This city needs other squares to be laid off for exercise and pleasure, beside the one already existing. The upper part, which is now rapidly increasing, especially requires this improvement; if the ground was now secured and planted with trees, it would soon be surrounded with handsome blocks of houses, and the adjoining lots be very much increased in value. If more attention was paid to out-door exercise, if the dust of the streets, which very much prevents promenading, was cleared away, and public squares laid off for the purpose, we should see fewer pallid countenances and dispirited, languid forms among the ladies of Richmond. I have been astonished to see so few of these ladies on horseback. As they do not walk much, I looked for them to turn out in the saddle, and to gain health and beauty in the inspiring gallop. They do not know that a graceful form never appears so well as when on horseback; and that, although without leaf or branches, no tree bears so beautiful a flower as the saddle tree. I wish to see the time when the sight of a lady on horseback would not excite surprise in Richmond.

Among the places of amusement here is a reading room; not as much frequented as it should be. The Library Association contains 2,000 volumes of books; some of which are common-place, nor can the collection be said to be very creditable to so large a city as Richmond. I regret that there is no chess club in this place; (you know my fondness for the game;) on enquiring I learned that the game was not played here except in private circles. Some very excellent players are found; yet none whose reputation, as skilful players, has gone abroad. Such a club would attract strangers, and train into skill and reputation the good players of the city. Chess has never been a favorite in Virginia, as backgammon and cards have prevented much attention to it; as, however, it is a game that all, even the most scrupulous, might play at, and is withal so improving as an exercise of pure intellect, I hope to see it becoming a favorite among

the good citizens of Richmond. A club formed in one of the coffee houses of the city, and a few games played in public, would give a commencement to the fashion; and after a time the young men of the city might think it more an object of ambition, and perhaps one requiring more intellect, to play a good game of chess than to dance gracefully. A library, a reading-room, or a restaurant furnished with chess-boards, would be an attractive addition to the city.

One thing that I have noticed here, is to my ear very disagreeable; it is the prevalence, among certain classes of the population, of the northern mode of pronounciation. I find no fault with it when spoken by a northern man, because to him it is natural; and I know that many valuable citizens of Richmond were born and bred on the other side of the Potomac. What I object to is to hear this dialect aped and imitated by native born Virginians, and, I am sorry to perceive, especially by young ladies who have acquired this foreign speech where they have also obtained their education. Would you believe it, not only is the full broad sound of the alphabet's first letter wofully diminished by this economical mode of speech, (which appears of so saving a character, that it will not spend much breath in words,) not only are Virginia peculiarities of dialect abolished, and even by some laughed at as unfashionable; but even such elegancies of expression as the "hull" (whole) State, the "rice" (rise) of the river, the Chinece nation, the fall of the *doo* (dew,) &c., are occasionally uttered. I think too that I have heard the *wig* (whig) party spoken of as assembling in some 'ouse. What would the stately dames of olden time have said to this; those honorable matrons who were taught in youth to bear themselves with propriety in speech, person and behaviour; in whom the domestic virtues shown so unassumingly and yet so brightly, like the quiet, yet warm hospitality of their own firesides; whose busy knitting needles, and whose active superintendence of their families showed that, like the virtuous woman of Holy Writ, they worked willingly with their hands, and looked well to the ways of their households; whose descendants now rise up and call them blessed; who were instructed how to walk from the parlor to the kitchen, and back again; who could as well direct in one, as pre-side in the other; and who would as soon have uttered a solecism in language, such as those I have mentioned, as have dropped a stitch in their knitting work. Peace and honor to their memories! Surely, if there are some things in the habits of the men of former times that this generation has improved upon, we cannot boast any superiority now to the ladies of the past. Nor can the character of the Virginia matron of

the Old Dominion be equalled or surpassed by that of any generation of women in this or any other land. I look upon these changes that are now occurring among the young women of our cities in their language, habits and manners, as more important than questions in government; for they exist among those who rule and direct the men who carry out the government; and who, influencing all around them, are themselves uninfluenced by those whom they affect. Woman can alter the dialect, change the manners, dictate the dress and habits of life, and control the morals of every community. More potent than the law, and more influential than the bayonet, she rules by persuasion where man cannot conquer by force. The cartridge-box is mighty; it has overturned empires and destroyed millions. The ballot-box is mightier; it has regenerated nations, called into existence, and given a voice to the will of the people, silenced an oppressive rule, and animated the spirit of good government. Every one will admit, however, that the band-box is mightiest of all; it is the oldest, the most universally felt, and will be most enduring! From the time, anterior to that of fig-leaves, when our beauteous mother Eve combed out her tresses, using some brook as a mirror, and her slender fingers in place of tortoise shell, down to the present, and as far as we can imagine into the future, through every age, clime, country, nation, kindred, tongue, and individual man this influence has been, and will be experienced. Whatever the head-dress, whether natural or artificial, beautiful or ugly in the abstract, the eye and the tongue underneath it have justified its adoption, and proved it to be a crown of more power, and more universally and reverently bowed down to, than that of king, pope or emperor; and more an object of attraction and desire, than is the laurel crown upon the head of him who has linked his name to honor by immortal verse. Great is the power of woman! I wish much in this age of so-called improvement and progress, (although much of the improvement is retrograde, and much of the progress circular,) that it could be impressed upon the minds of those Virginians who use this drop-stitch style of speaking, that there are some things fixed and settled. Religion and morals, for instance, are determined by the law of the land and the word of God; grammar, language, and pronunciation, by the literature and the practice of the highly educated classes of a country. Our rules of grammar and mode of pronunciation ought to be those of the literature of England, and of the Court, the Parliament, and the Universities of that country. Tried by their standards, it will be found that the broad Virginia dialect is that which the gentlemen's sons, who

settled the Old Dominion, brought with them across the Atlantic; and which still prevails in the elegant circles of the mother country. We still find in the good old country neighbourhoods of Virginia that this is the dialect of the upper and educated, and the other of the lower and ignorant classes; it is there, as it formerly was in all parts of the State, a perfect shibboleth. Now, with many the tables are completely turned, and the pronunciation of the inferior orders is declared right and proper. The evil already exists, and the impression has been largely made upon that class of society most difficult to reach by remedial measures. Young ladies who have received educations in northern schools, or who have gone to northern cities for the purpose of obtaining "an air," (airs, not graces, are thus received,) are the subjects of this disease. Upon such brains, as on other soft substances, impressions are easily made; and they retain the foreign ideas, and the mincing, clipping dialect of their school-fellows, instead of our native-born thoughts, and full, rich and sonorous mode of speaking. The complaint is not only of frequent occurrence, (being of an eruptive character, breaking forth on all occasions,) it is also contagious, and therefore calls for legislative enactment. Or perhaps the medical society of the State should take it with consideration, and extend a *cordon sanitaire* upon our border, as well as administer curative doses of sulphur to all who show the symptoms. Doubts, I learn, are entertained by some of the learned faculty whether, (as an alteration of the voice, as well of the words spoken, generally indicates greater danger in disease,) the prevalence and persistence of this complaint may not show more serious disease than we imagine. It may not be, say they, simply an affectation of the tongue, but may be more deeply seated, and have its origin in the brain. Others again liken it to that elegant disease, the dance of St. Vitus, affecting the organs of speech, and assert this strong point of comparison—that both are very much diseases of imitation. Others again, trace it to hysteria, affecting the throat, and direct *asosœtida* and garlick. I should suppose that change of air would have a good effect; travel expands the mind and is an excellent means of cure in many diseases, especially in those last mentioned. An Atlantic voyage and a residence in those circles, among whom the refinements of education and the elegancies of conversation still exist, might cure; or perhaps some of the watering places might have power; some spring of Parnassus, or that "well of pure English undefiled" may prove a last resort in hopeless cases.

I should omit some of my most pleasant evenings spent in Richmond, if I did not speak of

the friends I met with in its various and well-attended Masonic Lodges. I am very happy to say that our glorious science flourishes here, and that there has been lately quite a revival of it among the brethren. There was a Lodge working soon after I came to the city; and, as I was unknown to any of the craft, I had to work my way in. And having proved myself a mason, it was enough; my reception was that of a brother, and I who came here with scarcely an acquaintance, found myself surrounded by troops of friends. I never felt more gratified, and never saw more reason to rejoice that I was "a brother of the mystic grip and word."

Men whom I had never seen, and on whom I had no other claim, came round me; and I found myself at once in the midst of real friends, bound to me by every tie that community of sentiment and sacredness of obligation can impose. In sickness or distress I could find aid; and in a place of strangers, where but a few hours before I had no friendly eye, or voice, or hand, by the revelation of our peculiar language I found myself possessed of as many friends as there were masons in Richmond.

I saw the benevolent working of our Order in its charity to the poor, the widow and the orphan.

Some years ago several officers of our Navy were in a small sail-boat off the coasts of Sicily, and as a storm, sudden and fearful, came up, they found themselves on a dangerous shore, unacquainted with the coast, and unable to get into harbour. Their situation was seen, and their signals of distress also, yet so high was the sea and so dangerous the attempt, that no one ventured to their assistance. The shore was covered with multitudes watching with interest their progress and their probable fate. Only one officer on board was a Mason; he stood up in the bow of the boat, and made the sign of the Master Mason in distress; no voice could be heard; nor, if heard, could the language be understood. Instantly a dozen men ran down to the beach, launched a boat and put off. Their friends and families clung around, and with all the vehemence of the Italian gesticulation, urged them to stay. They flung them off, and with difficulty and toil, beaten back by the waves, and their boat half swamped, succeeded at length in reaching those who so much needed aid, and in bringing them into harbour. These men were Masons, and in running this risk to save the life of a brother Mason, simply performed a duty. This is but a small part of the praise that belongs to an Order which has existed for ages; which is a bond of amity and friendship among men of different conditions, and of various nations and occupations; which not only cares for the sick, buries the dead, protects the widow and orphan,

but also endeavors to prevent strife among men, to bring peace on earth, and to make men not only good citizens, but excellent in all the relations of life. You never hear of two Masons fighting.

It is a singular fact, and speaks highly in favor of Masonry, that all the chief officers of the Revolution, with one exception, were Masons; and that exception was Benedict Arnold. I believe no author has mentioned this remarkable fact; although all who have written of those times have remarked the wonderful unanimity and harmony that prevailed, and have expressed surprise that men from totally different sections of the country, and from colonies jealous of one another, should have conducted themselves in the trying and harassing events of the war with so much perfect internal peace. Washington is well known to have been made a Mason in Frederickburg, (near which town he was brought up,) and to have acted as Master of the Lodge in Alexandria, near his place of residence.

Such an Order, I think, is necessary in so extensive a country as ours, to serve as a strong and secret bond of union between the far separated and disunited parts. Certainly I judge that this city will show a strong hand for the union; the number of Lodges is great and the interest in the science of Masonry on the increase. It is the headquarters of our Order; and I anticipate much pleasure in seeing the meeting of the Grand Lodge of Virginia. This is said to be the most dignified and intelligent body of men that meets in Richmond; consisting of the choice men of the State, gentlemen by birth and breeding, trained and taught in the dignified ceremonies, the ancient mysteries, and the charitable and heart cultivating practices of Masonry.

The citizens of Richmond will at once perceive that changes and improvements have been made since these letters were written. The Pine Apple church, which seems to have diverted this letter-writer so much, is now opened for religious services, having been altered, painted, and improved. It is no longer an object of ridicule. The Capitol Square is undergoing great changes and improvements; trees have been planted and serpentine walks laid out, a fountain built with a *jet d'eau* shooting up a column of spray in its centre. In fact, the square just now looks like a beauty who has only half finished her toilet, and is playing the agreeable with one side of her face, and upon this side still stands an ugly wart in the shape of the unsightly Bell House. May it soon toll the knell of its own destruction! Other squares have been laid off in various parts of the city, and no place will now be better supplied with promenades than

Richmond. A beautiful cemetery has been laid off in walks and lots on the ground referred to in one of the letters. It is almost untenanted, however; the citizens of Richmond being afraid that the dead bodies, if buried there, would in some unknown manner affect the water of the river and the reservoir, or, what is perhaps a more probable conclusion, fearing that the noise and tumult of the Falls might disturb the repose of the dead. It, would, perhaps, render more fashionable this place of burial, if the hint given in regard to the remains of Pocahontas was carried into effect.

THE MADONNA DELLA GUARDIA.

BY GEORGE E. SENSENEY.

The Madonna della Guardia
Stands on the mountain height,
Outside Genoa's ivied gates;
The boundless sea in sight.

In the old, monastic city,
On canvass may be seen,
A peasant low on his bended knee,
His staff upon the green.

He was praying on the mountain,
To his lips the cross was prest;
The Madonna shone in a silver cloud,
With Jesus on her breast.

"Why dost thou pray in the open air,
With no priest to shrive thy soul?"
"No altar is here where the faithful kneel,
No priest in purple stole."

Then spake the heavenly visitor:
"Build up a chapel here;
Let the incense burn in the holy vase
Through all the sainted year."

"Santissima Madonna,
I am poor; it were a sin
The arch should show the unhewn stone,
Where the faithful enter in."

"Then go thy way believing,
Thy mission tell," she saith,
"To the villages down in the valleys below,
All things are done by faith."

So he rose and went his journey
To the villages known for thrift;
And the chapel's rich domes and cupolas
Bespoke the costly gift.

The Madonna della Guardia,
In fresco set with gold,
Is worshipped still; while beneath the nave
Lies the peasant-builder cold.

SHADOWS OF THE MOUNTAIN-PINE.

THE SOLITARY PINE.

Sunnyslope, 14 Dec.

This morning a beautiful sunrise kindled the eastern trees, and now the full flood of day is pouring along the mountains. The pines stand out in clear relief upon the peak yonder, and their slender stems—were it sunset—would cut for you the crimson disc into two hemispheres of fire. One stands apart, and above the rest. It has stood there long like a lofty soul above the lowlands; and in it I find ample food for reverie. By degrees surrounding objects fade, the white clouds float across the tender blue of the deep sky without attracting, in any degree, my attention;—the solitary pine—a lofty human soul—is there alone, and half aloud I murmur to it, as though like the Talking Oak it indeed had power to hear me and to answer.

Pine! that standest ever there above the lowlands, art thou not the counterpart of a lofty soul—if such indeed thou art not in good sooth—in many things?

First, for thy calmness and resignation. With these the thunder and the sunshine come to thee alike, as the merciful gifts of heaven. The storm may burst above thee with its awful roar, the wild blasts howl and shriek in the dark night, when all is deep weird gloom, and unimagined terrors thunder round thee;—yet thou heedest not. Well dost thou trust that merciful Providence will "cause the day to dawn"—that all is for the best, since heaven decrees it; that through the dark stern night the sunrise yet must burst, and that all gloom will fly before its warm, clear, hopeful smiles. With these great gifts—thy calmness and resignation—all changes of the seasons and the years are nought to thee. Thou knowest that the heavy clouds which blot the heavens, and shadow all the fair, bright earth with sorrowful gloom, hold yet within their bosoms healthful rains, which falling on thy brow, will give to it new life, as to all kindred brows. In the darkest and stormiest nights, though the great thunder roar, and the live lightning break above thee like a heavenly curse, thy faith is firm and steadfast:—though the trunks of a thousand forest comrades crash down and lie shattered, like so many poor wrecks there before thine eyes, thou tremblest not; but fixing on the wrathful heavens thy calm and prayerful eyes, murmurest in tones which mount above the thunder and the storm, "Father, thy will be done!" Thus long hast thou in hope, not fear, been ready for the appointed hour—whether it come in early spring when tender airs blow gently

round thee, and the little flowers are nestling at thy feet; or in the fruitful summer when thou shadowest from the sultry sunlight springing shrubs; or in the autumn, or the winter, when, with feeble limbs and snowy head, thou standest—mighty old!—thy brow turned up toward heaven;—the appointed hour through all thou long hast looked for; and the stroke of fate,—sooner or later doomed to fall on thee alike with all,—brings nought of fear to the heart whose old worn trunk alone, it knows, will crumble into earthly dust, oblivion.

Like a great soul in many things.

Again for thy bounteous hands! All seasons come to ripen thee and give thee power;—thou gatherest it in spring, when the fresh mornings sink into thy heart; through long, dark, quiet, dewy nights in summer-time; in autumn days, when the bright sun perfects that strength which elsewhere dies away. A strength and richness alone for others! For when the winter is passed and spring hints of its coming in every glance of violet eyes; then all those cones which waxed in size from little tender buds, and thrust out from the green rind their scaly leaves; and all those tassels which waved around thy head, thy ornament and vesture;—all are freely given by thy bounteous hand, and—cast upon the earth,—there die away into the soil which nourishes the wood beneath thee.

Like a great soul that takes to his breast the tender forms of little children, loving them the chiefest among all, thou claspest to thy bosom the little twittering birds which fly to thee, and cheep and play about thee making in the air their perfect natural music for thy gentle, kindly words;—the solitary dove, so long “in firry woodlands making moan,” comes to thee confident of love;—the poor, lorn owl, falls heavily, sorrow-laden on thy shoulder, and in uncouth notes tells of the afflictions of his lone life with the whole world for his enemies. They know—ah! well know—that thy mighty heart has room enough for all! And the little summer birds go darting joyfully, rising and falling on the waves of air; the melancholy dove forgets to moan; the solitary owl is lulled, by thy murmuring, into quiet sleep, wherein his woes and griefs are lost to memory.

Thou lovest all! oh mighty power which heaven has granted to the lofty soul! And loving all, thy trust is ever steadfast that thou too art loved. With clasped hands, and earnest, hopeful eyes, thy thoughts are of the brighter world through all—through darkness, and through storm—and on thy brow a golden glory rests, nor flits, nor wanes, which speak of heaven to all!

Pine! that standest ever there above the lowlands, art thou not the counterpart of a lofty

soul—if such indeed thou art not in good sooth—in many things?

THE SECRET OF THE MOUNTAINS.

Sunnyslope, 15 Dec.

I know not how it is with others but to me all sorrows and heart-sinkings come with far less poignancy amid the fair, calm, silent mountains. They seem to afford the soul that consolation which the ever-surgings sea of life, breaking on rugged shores, yearns for in the far southern solitudes, where stretch the golden sands, and the flowery savannahs roll their gentle grassy slopes to the lip of the weary waves. Above the level lowlands, with their broad sail-dotted rivers, their marts of traffic and never-ceasing toil, the mountains seem to breathe a purer atmosphere, and the heart turns to the true in life with less distraction. Like the down-tied carrier pigeon which struggles and beats the lower air for liberty, and being loosed soars steadily towards heaven—more and more steadily moves as it reaches upper air—the soul soars here in a calmer ether, almost above the obscuring clouds of life.

In the long evenings of December, it is true, all this is partially forgotten beside the dying, white-hooded ember, which wafts the restless mind back over the sea that has been past, to its storms, its shipwrecks, its despair. Then, it is true, the whitened brand, which we thought the gray crumbling ashes had extinguished, burns again upon being moved and blown upon by the breath of memory,—and the heart, like a stricken moor-fowl, suddenly droops its wing from the skies and drops to earth, cut down by a thought that flashes through the half-darkness of its gathering oblivion.

But when morning dawns upon the mountains, and the wide valleys are steeped in the shadows of the lofty pines, and nature seems to smile with her large, bright eye upon the world, the heart again revives. Revives in joy and peace with all those roseate recollections and inspiring dreams which beguile us of the ills of life. In the clear golden sunlight sorrow seems to wane and fade, and again we see through a clear and healthful atmosphere the various forms which God has sent to beguile us of the ills of life,—the tranquil hopes, the serious joys, the calm and tender love of woman and of friends; that greatest solace to the poor heart, torn and wounded by the thorns along that path of life it is doomed to tread. Like the image of the river-pine whose outline reflected in the stream is stirred for a moment by some passing keel, but settles again se-

renely in the blue vault of heaven below, the heart again subsides into a calm, happy peace—heaven-born.

The mountain-nations, through all history have ever hoped, and bent their eyes upon the great mist-shrouded future:—in Spain's old Moorish, and in her modern days; in the times of Hassan in Arabia; in Saxon England, and Gaelic Scotland; in Hungary from the times of Saint Stephen; and in Switzerland, which, all mountain, is another name for liberty and hope. The men of Grütli hope still in their mountain cave, meet often to take counsel on the midnight heath; and the Switzer tells you they will one day rise in their old-world might, and shape the destiny of their country.

It is not difficult to explain this hope, give a sufficient reason for these mountain influences; but the heart only could estimate justly the explanation. Unless the enquirer has stood above the lowland, amid the clear, fair sunshine, and felt upon his brow the joyous inspiration of the mountain wind; unless he has forgotten, thus placed, the small, soul-obscuring harassments of life, and felt there, before nature and nature's God, the high, clear, trustful hope of better and brighter things for all, whether his country, or his heart-friends, or himself; unless banishing from his memory all evil thoughts, he has gone thus high up upon the silent peaks and seen the sun climb slowly, or at setting write its hymn of praise in golden letters on the blue heart-moving heavens—I fear it is wholly beyond my power (as it was beyond the power of the helmsman seen by Count Arnaldos) to tell him in what lies the secret of the mountains.

ON THE "BLUE BALL."

Sunnyslope, 20 Dec.

From the window of the room in which I trace for you upon perishing paper these lines which—like footmarks upon melting snow—I can scarcely hope will last much longer than that paper soon to be torn or thrown aside, you have in clear relief against an azure sky that conical peak which is called the "Blue-Ball."

It had long stood there beckoning to me with those waving, tasseled arms, its long pine boughs on which the unmelted snows (upon a nearer approach) gleam like diamond bracelets on the wrists of beauty; and had said to me more than once with its silent lips, "Come—come!" So to-day I traversed slowly the scant league which separated us, scarce heeding the idle Shenandoah, scarce glancing on the fir-clad mountain-steep above, my eyes fixed only on the soli-

tary peak, which—another Vesuvius—plunged its shaggy summit in a smoke-like cloud. At last I reached the top, after body-labor, as toilsome as the mind-labor of arriving at the zenith of some great science; and then I saw what certainly repaid me for my trouble, the far-and-wide-stretching lowland of the great Valley.

Stand in thought at my side and look! To the right a country of rolling hills and fertile meadows is traversed by the glittering riband of the river. At intervals the white houses of little villages are scattered like handfuls of snow in gentle depressions of the valley, under hillocks, which the folks there honestly tell us are lofty hills. The glance gliding onward like an arrow past the mark at which it is aimed, rebounds from the distant line of blue, which, far beyond Winchester, has merged its lofty oaks into the azure vapor of the sky. To the left the mountains stretch again; but this is our old Blue Ridge; and the Shenandoah, were it to run backward like Hezekiah's shadow, would seem to strike against the tall, wave-like Fort mountain, instead of rolling as it does at the feet of little Strasburg. The fleecy clouds float above village, field and stream—float ever like those ocean birds which, never alighting, sleep, and dream, and live upon their wings. You would fain soar—for wings grow to your shoulders—like those clouds above the lowland fields;—but hold!

You stand upon a precipice which is as sheer a descent as the trunk of the lofty tree which, taking root at its foot, waves its long boughs within ten feet of your hand. It is the clear shaft of a mountain pine, and its ever-moving tufted head (winds never rest upon the "Blue Ball") seems almost to brush your face. A hunted bear or deer might with an easy bound alight in its bushy tassels; and even a runaway negro (were it in Cuba) might leap upon and cling to its stem and so descend, before the bloodhound, baying on his track, could, by the circuitous path, arrive at the steep precipice's base. A rugged and gnarled pine (all is pine, pine!) rears its knotty trunk from the rocky bed—with tassel-covering—on which you stand; and, with one hand clinging to it, you may look far down and wonder that the mast-like tree below, so swaying in every wind for long and stormy years, has never felt its roots, though deep struck in the mountain's heart, give way.

Forget the precipice on whose rocky shoulder you are perched like a bird, and look again. Along the mountain side are scattered enormous rocks apparently thrown there in careless sport by some youthful Titan. They each weigh something like a hundred tons; between their sides, and in the crevices you might walk upright, as in winding passages; and though dwarfed by

the height, they look vast, and cold, and cruel, if you but reflect that were the limb to snap on which you lean, you would be dashed in pieces on their surfaces as easily as the porcelain toy of a child let fall upon a marble step. Beside them are large trees which benighted hunters or gay parties have kindled; and with their burnt out hearts they return a hollow sound to the haud, like the voices of unhappy souls with human hearts, burnt out by the fires of misfortune. Beyond these old stonehenge rocks the eye falls upon a little white mountain cottage, nestling like a snowy rabbit, with its ear-like chimneys and windows through which the fire light blazes, like red eyes, beneath the shadow of the peak.

Beyond all, at the mountain's base, the river leaps gaily toward the white-armed drooping sycamores, but gurgles on, like a child who makes pretence to fly into his mother's outstretched arms, but darting suddenly aside runs laughing by. These sycamores are large—one cost me eleven trides to encircle it, and, hollowed, would contain a small family.

Pardon my string of hobbling similes, and for want of a better, take this slight sketch of the "Blue Ball" mountain landscape; which, indeed, like most landscapes cannot be described, but must be seen.

The smiles of the blue heavens, like human smiles, have more and deeper meaning in them than can lie in any words.

SUNRISE IN THE MOUNTAINS.

Sunnyslope —.

The old unwearied sun who has looked with his calm changeless eye on so many scenes of sorrow and joy, beauty and deformity in his pilgrimage from the infancy of earth, toward the goal of time, is pouring upon the mountain land the glories of his unclouded brow. The dewy grass glitters like an emerald sky inlaid with stars; the smoke gently curling from white chimneys against an azure heaven—deep, cloudily tender azure—is a flood of gold in the warm light, and resembles to the musing eye naught so completely as a gentle loving soul, which imprisoned for a time in an earthly body (that grew gradually old and dry, and finally was struck down by the axe) has taken at last its flight in the presence of warm, loving hearts, and leaving behind the worthless ashes of its mortal state, gone up to the far blue heavens.

The birds twitter on a thousand boughs; the tender grass peeps from beneath the thick oak-leaf carpet, woven by the swift fingered autumn wind; the face of all nature is mild, tender,

happy, and the smile of the holy sky lies reflected not in all streams, and meres and river floods alone, but in the earth, the flowers, the dewy grass, the tall old ever-waving pines. On such a day you do not read Ecclesiastes. These gentle winds and tender grasses, all sprinkled over with early flowers, are very, ah! very far from whispering "all is vanity." What vexation of spirit rather is not turned by such fair morns into holy calm repose of spirit—a repose in which an all-embracing love comes to the heart like the smiling sun-shine through a forest-roof upon the earth below—a love heaven-born? No! poor heart! *all* is not vexation of spirit, nor yet all vanity! Throw off the clouds upon the heart as yonder sky throws off the mist, as yonder mountain, rearing its serene brow to heaven, casts down the river vapor above which its green peaks soar. If some still linger far too heavy and stormy to be thrown aside, borrow from the poor Mohammedan his battle-cry, whether in scimitar-strife, or that other strife wherein the blows cut deeper than any scimitar's edge; and with resigned submissive heart, murmur his "Allah Akbar," which is prayerful hope. Poor mourning, suffering humanity, tossed upon a sea of doubt and anxiety; buffeted by stormy winds; struck by the billow-blow of fate until every fibre of the worn wood cracks, and the keel which ploughs the surge of life trembles and well-nigh parts—there is a quiet harbor for all tempest-beaten hearts.

And through the clear atmosphere of such a day as this we see it on the distant horizon; and so seeing it may still dare hope, nor heed the mountain billows yet between!

WITHOUT AND WITHIN.

Sunnyslope, 23 Dec.

Yesterday, on rising or rather waking, I saw pass downward by my window a stream of downy flakes like feathers from the breast of a white pigeon struck in mid-heaven by the huntsman's fowling piece. Rising I was suddenly aware, as the last remnants of my dream—of smiling fields and joyous country-side excursions—disappeared, that all, the fields, the trees, the far-stretching mountains, were one white bridal veil. Snow is commonly likened to a shroud, but it does not present itself to me in that light. Beneath it the rich earth is not dead, but holds within its bosom the hope and the faculty of a joyful and glorious rejuvenescence. When the bridegroom spring shall come to kiss the lips of his bride, he will raise the bridal veil, and the charms of the fair earth will reveal themselves in smiling joy; her downy cheeks; her tender vio-

let eyes; her smiles reflected from her gentle lord.

Soon the great sun soars above the mountain-tops, and the whole landscape is awakened from its silent, darkened sleep. Over the snow run long shadows of lofty trees, jewels glitter on every bough, and the mountains stand out like giants with snow-clad shoulders.

As the day advances innumerable snow-birds and other small twitterers enliven the out-door chill, clear air; and in the garden you may trace the regular footmarks of the rabbit, driven thus close to human habitations by his hunger, though the downy snow has nearly obliterated the traces of his delicate feet.

As the evening comes on, you look upon the landscape in its white vesture and think that nothing could be more superb. The sun sets in a blaze of fire, reddening the rippling cloud-sea, like a burning ship, and far up shoot long golden plumes which—fixed in the white cap of the mountain by the fiery carbuncle of the planet—sweep like gigantic feathers of tropical birds from the horizon to the utmost zenith. The rich crimson radiance streams along the snow, pierces the delicate mist which defines the course of the river, and flooding the whole fair scene in rich light, melts in the obscure depths of the eastern forest. Every moment changes in the landscape strike the eye, for the sun, upon the mountain, is but the half of a broken shield of gold, and the winds drive on the shiplike clouds—as they die away like the sound of those faëry “horns of Elfland faintly blowing.”

Finally the sun raises their golden crowns from the mountain trees, plunges below the horizon, and the black wing of night obscures the whole of the fair scene which you have gazed on so admiringly:—night which, shutting out the beauty of the external world, impresses upon us so forcibly that softer and more heart-entrancing beauty of the inner, fireside, domestic world—the heart's domain alone. You abandon without regret the mountain view, for you have a scene more sweet and dear than any landscape, though the variegated bloom and tender air of spring, instead of bare boughs and snow, attracted you. The happy fireside and its happy faces!

Listen! The logs are roaring a changeful bass like the wild organ-tones of the wood from which they were hewn, when the mountain-wind waked up their sorrowful hymn of suffering and grief; and a cloud of sparks incessantly glitter like shooting stars. The small hale hickory logs, writhe and complain as the blaze seizes on them like young souls for the first time tried in the fires of adversity,—hurled against the repellant strength of the great world. The wind moans

and cries around the gables—a poor unfortunate soul shut out by the curse of a homeless wandering destiny from the bright circle—and peeps under the door and through the frost-covered window-panes, complaining ever that the latch it forlornly rattles is not opened to it. The house-dog tied to its straw-filled kennel bays the haughty moon which throws the shade of the fleecy clouds from her pale brow—as the gauze veil is tossed from the face of beauty—and soars above the heights in cold, hard, freezing splendor. Without is heard the murmured bass of the wagoner's song, as he unhitches his shivering horses which have all day long toiled patiently to fill the ice-house from the pond below the hill; and the letters are delivered at the door by a tall form on whose shoulders are seen heavy snow flakes, the vant-couriers of the fast coming column which he has scarcely escaped, flying along the rugged mountain road. One army has already invaded and taken possession of every hill and field and forest bough, but ere the morning another will have reached the mountain-land, and every green thing (as before the “Late Comers” of the middle age) will have disappeared.

But no matter for the coming snow or the moaning wind crying forlorn around the gables towering high up in the cold dim night; no matter for the chill and trembling hound without, baying the haughty moon; no matter for the shivering horses, and the murmured song which mingles with the moaning blast in weird chill unison! There is here a spot which the snow-army cannot invade; where reigns perpetual peace, and all is the heart's domain.

Around you are gathered those smiling faces whose very presence is a solace to the heart; those tender, loving, happy, sparkling eyes whose light is strong enough to throw into shadow all the sorrows and misfortunes which poor human nature inherits from its birth. What though the storms of life beat heavy and unceasing there without—within this charmed circle no hostile influence can come; or if it comes, its power is broken in its grasp by the magic—ah! the mighty, the all-conquering magic—of the smiles of the dear loved ones! Let the snows of life then fall, the chill winds moan, the darkness wrap as in a pall the paths we are doomed to tread—there is here a light which has the power to drive away the darkness and the cold, and fill the poor heart once more with a quiet joy.

Thus I believe, think all, whether the pure and loving, or the hard and base. But alas! we are weak, unsatisfied, so restless! Whirled along in that flood of life in which are so many sunken rocks, where shipwreck is so frequent, we dream of such a quiet harbor, where no hostile winds have power to rage, where storms cannot reach,

where all is joy, and calm, and happy exemption from care. Heaven answers the broken prayers offered in agonizing moments with such sincerity, and the waves subside, the winds fall faintly on the poor, rent sails, the harbor is before us, and we dream that we are contented, wholly—for all time. We dream it! For the storm again attracts—the gentle ripple is monotonous and dull to the eye which rejoiced to look upon the storm-waves, and the shattered foam; the harbor is abandoned, for the distant Ophir gleams, and murmurs of its gold; and once again the poor storm-beaten bark is launched upon the ocean,—yearning again to breast those mighty waves—the waves of human life!

A SNOW STORM.

Sunnyslope, 24 Dec.

Before it was comparatively the merest handful of white feathers from the breast of a stricken bird, which fell upon the landscape; to-day, you might imagine that one of those vast sky-darkening flocks of American pigeons read of but seldom seen here in Virginia were passing; and that all the world had turned to sportsmen and were showering down their fleecy plumage.

To drop figures, we are in the midst of a snow-storm which is wrapping the whole landscape in a denser and denser mantle, and drifting in the gusty wind against fences and high banks, until it overtops the passing horseman; and, unlike the charm-word of the magician which transformed suddenly a cold, bleak winter into tender blossomy spring, has already changed the face of nature into one great mask of snow and glittering icicles. It rises outside the window panes like that wall of which we read separating warm China from the bleak Siberian Tartar-land;—it is piled up on the thinnest boughs with such perfection as no hand of man, though deep versed in the laws of gravitation, could ever equal; it lies white and deep on door-steps, and on porches, and has drifted, blown by the wind there, quite up to the knobs of outer doors. On all the familiar household objects exposed to it, it is falling still, and by evening, should it continue at this rate, the paths, and roads, and walks will be mere myths, once heard of but not believed in now.

Farther, it falls on mountain-tops, upon the rugged, piled up granite ramparts, or on the waving evergreens whose boughs bend to the earth beneath it, but roused at last by the tyranny grown to excess, cast off the burden. On gently flowing rivers, and mountain torrents, which alike absorb it in their bosoms and glide on with increased waters. On horsemen jogging

forlornly on encumbered roads, and shaking it ever and anon from their hats, and cloaks, and gloves, while visions of happy comfortable homes come to tantalize them with every gleam from farm-house windows. On sad and merry horsemen. On him who hastens on to be received with open arms by one whose love is all to him on earth; on him who dashes on with streaming hair and burning heart beating against his frozen mantle, to catch the last sigh of his dying child, before, through the still hushed air, the little soul is wafted up to heaven.

Further, it falls on merry, jubilant, laughing parties gone a-sleighbright—bright cheeked maidens and gay youths whose dancing eyes and jocund exclamations when they pass across bridges, and the expected kiss is struggled for and taken, tell that life and joy are in excess there, and that though the jingling bells make merry music in the frosty air, the music of their beating, happy hearts is yet more sweet and rapid than those tinkling chimes, singing and dancing round them as they glide! On poor men's habitations and the iron traceried verandas of the rich; on prison roofs, whereunder pine those poor souls which society has shut up for their offences against its laws; on ships far out from land whose decks are marked by forward and back pacing feet; on the bare brows of forlorn lovers who, standing on the shore, with clasped hands, behold the loved one waving still, from the fast gliding bark, her handkerchief; and dream they see it still though the fluttering pennon and the flapping sails are lost in the snow-storm dashing full, into those poor, sad, yearning eyes.

Further the tender snow falls upon graves of little children; on places where strong men rest like fallen forest trees; on those old evergreen decked "God's-acres" where the aged after life's weary pilgrimage have lain down to rest, with confidence and certain hope that all shall yet arise when heaven shall melt the shroud. It wraps them all in mild white beauty, defining every outline of the hillock clearly; and rests upon the letters, carved in bold relief; and on the faces of the angels; and on the cherub's wings; and on the cross above; and on the figure of a dying Lamb. Sleep tranquilly like seeds there in the cold dark earth beloved dead ones, for the spring shall come and ye shall rise in the warm light of heaven's perfect day. Sleep quietly, oh little tender children; strong men struck by fate; sleep quietly, in peace, oh holy blooming Eld! The ancient virgin gold, far purer than the new, is chiselled into holy chalices; the strong tree, struck down in its power and pride, is carved into holy shapes for high cathedral vaults, through which the thanksgiving hymn is pealed; the tender bud is placed upon

the virgin's breast whose soul has flown to God. Sleep quietly, oh tender little children, mighty men; sleep quietly beneath the snow, oh holy blooming old! The day will dawn when all shall pass away, and spring will open in another and better land, where comes no snow, nor rain, where toil and grief and anguish are unknown.

Further the merry snow falls gaily on young children chasing each other through the drifts, and snow-balling right and left the passers by, till their cheeks are crimsoned and their frozen hands yearn for the in-door blaze. On little school girls tripping along to school with their swinging satchels, and their wimples which the careful mother tied beneath their chins, dismissing them with admonitions and a parting kiss.

On cheerful city dwellers, meeting at street corners with hearty greetings and invariable surmises on the weather; on all alike it falls, without a shadow of partiality or favor, in town and country, throughout the lowland and here in the mountain land—the merry virgin snow!

—
CHRISTMAS.

Sunnyslope. 26 Dec.

Christmas day has floated onward but is not forgotten; onward like a fair tropic bird, which passing jubilantly through the air, on many colored wings, pours into human ears a joyous hopeful carol; onward like a courier who, at full speed, flits along the sunny highway, scattering, for gloomy souls, long agitated by the rumor of dread wars, the news of the great victory and the TREATY which shall usher in a thousand years of Peace.

In the beautiful Christmas morning they arise—the happy little children,—and run merrily to see what St. Nic. has filled their stockings with; the good, old merry Nicholas, the patron saint of girls and boys. Torn from the pegs on which they hang, the stockings are soon rifled, and they scamper back to bed shivering with merriment and joy. Soon the whole household is gathered in the breakfast room, and Christmas is commenced with prayer and singing. How clearly echoes that joyous religious strain in the bright morning air, and over the snow and the old heavy-laden forest. For on every bough the snow is piled, and ever and anon as the breeze touches them they throw down jewels on the ground already so richly endowed with diamonds set in alabaster. On every inch of ground the deep veil lies—on every fence top it is piled; the whole is hushed by the morning light.

The children do not look at it however—they scarcely look at any thing as yet. Breakfast is but a mock-meal, dispatched in haste; for greater

things than snow, or sunlight, morning song or breakfast, are to come!

In the next room is a mysterious thing called a Christmas-tree, as yet unseen, but most devoutly believed in. Old St. Nic. has been there they know after filling the stockings—Old Nic., that popular gentleman, with long carrotty nose depending on his full mustache; mustache and beard as white as snow (which indeed has fallen on them) rippling on his breast; and old steeple hat, the fashion any number of years back in the old, dim past. Certainly St. Nic. 'went' in there after smoking comfortably his short German pipe; a bushy pine sapling on his shoulder, which he planted upright, and hung full of presents for the little ones! How popular the old man! Surely such a saint were worth the whole calendar put together; were the very prince of saints indeed; were almost enough to make one turn Catholic upon the spot!

Yet there are those hardy wights among the children who display at times, a most reprehensible free-thinking,—and on what? Why they even dare to whisper that the Saint in question is no being at all in sober reality—that he is a myth—his reindeers all imagination, his sleigh (with jingling bells, distinctly heard last night) a hypothetical sleigh; his very nose, and steeple hat, and short dark pipe, and beard, and quivering smile, of more than doubtful reality! Mind though—they do not dare to express this conviction plainly; and certainly not in my very words. They hint it—the little base freethinkers—they whisper it in your ear with sly smiles, and make believe they jest! But still they will not be convinced, and turn orthodox again until those numerous bundles, taken from the carriage on Christmas eve, are satisfactorily explained; until they know exactly what sister and mother and all have been working at so long by stealth!

They suspend, however, all final opinions until the tree is seen, and soon the room-door is opened and they flock in like chirping birds and gather with noisy joyous exclamations round the precious tree. Surely a real tree! and real beautiful presents growing on its magic boughs, such as pine never bore before! The presents too are all duly ticketed, and as each little boy or girl receives into his or her apron, or open hands, the numberless articles, they raise that hubbub of rejoicing which is Christmas day's alone. The oldest—especially the little merry-eyed girls—no longer spite of all this wonder believe in St. Nic. (about whom a lingering superstition had remained.) but openly charge their grown up sisters and mother with fabricating many of their gifts. From all this shouting, laughing chaos of showering presents, children rolling on the floor, and noisy shaking of the magic tree by little ones, you

suddenly escape; escape but to reflect that you are no longer young, and that you no more can possess those happy bright illusions of awakening life.

So Christmas day commences.

It goes on with the rolling organ music, which first low and thrilling,—yet a blessed peace born with it—pictures forth an humble manger, and a rising brightening star; then, deep and wailing like a soul that cannot rest from stormy grief, brings to the eye a lurid hill top and a cross prepared; then loud, triumphant, glorying in its power—a showered flood of strong, rejoicing, sweetest harmony—it stamps upon the heart more deeply than before upon the eye, a holy form that, rising heavenward, stretches o'er the earth—the poor, convulsed earth—hands that rain down blessings!

It goes on with the joyous meeting of old friends and relatives; with calm, happy converse of the aged; and gay revellings of children;—and ends with toasts innumerable “fathom deep”—in heartfelt earnestness—for absent friends.

But why should I further speak of Christmas, the time that needs description less than any other? For half the year the “Noël Noël” of the middle age resounded in all hearts—for the whole year, the “Happy Christmas!” of to-day is well remembered. The old, loving, merry, joyous, blazing Yule-tide is a reality in every heart—the pen that strives to trace its outline even, finds the attempt so vain!”

And so with these few words “about Christmas-times. I end my idle scribbling, wishing that you and all have had a “merry Christmas”—much more that we may all have “happy New Years!”

SONNET.

Beatrice, thou art gone above, to dwell
With the choirs whom the world could never stain,
—And thy voice joins the harmonies that swell
In one unending, sweet and sacred strain.

And I am still on earth, but ne'er again
Shall I at eve unto thee listening tell

The wild imaginings of a dreaming brain
Which thou didst seem to understand so well:

Thy snowy arm a pillow—which no more
Shall give me rest. Beatrice, if thou hearest,

From thy most glorious abode in heaven,
Guide me, O guide me to that happy shore;

Forgive my faults, thou who wert ever dearest,
For the Eternal Sire hath me forgiven.

The Poetry of Judge Henry R. Jackson.*

BY J. A. TURNER.

Judge Jackson is a native of Savannah, and is still a resident of that place. Were I to hazard a guess at his age, I should say he is about forty years old. He is a graduate of Franklin College, Athens, and does honor to his Alma Mater. After his graduation he was editorially connected with the “*Savannah Georgian*,” one of the ablest democratic papers in Georgia. This connection continued until the winter of 1849, when, as he was called to other duties, it terminated; to the disadvantage of the “*Georgian*,” be it said, though that journal is still conducted with ability. In 1846, when the Mexican war broke out, the subject of this article was elected to the colonelcy of the Georgia regiment, which position he gallantly filled; and several of his best poems are the result of his military expedition beyond the Rio Grande. In 1849, he was elected by the Legislature of Georgia, Judge of the Eastern Circuit for four years—so that two years of his term of office yet remain unexpired. Distinguished as an editor, and as commander of a regiment, he does equal honor to the ermine.

So much for the *personnel* of our author;—and now for his poetry.

If fervid feeling, and the command of correct and polished language, in smoothly flowing versification, establish any claim in their possessor to be called a poet, then is Judge Jackson one of the first poets America has produced. I know that the North American Review has not written our author a passport to Parnassus, nor have the Dollar Magazines or Penny Posts manufactured him into a poetical prodigy by dint of much speaking, and inordinate puffery, on account of his doing the Grub-street drudgery of their columns. But notwithstanding all this, I place Judge Jackson, as a poet, by the side of our best American poets—Bryant, Longfellow, &c. And be it understood, that when I give Longfellow a position with Bryant, it is not because I think him as worthy of it as Halleck and Hoffman, or even the facetious Holmes and Saxe, but out of respect to the general opinion of the American public, moulded too much, I am bold to allege, by publications inferior in point of taste and capacity.

As better evidence of what I say of our poet, than any other testimony which I can adduce, I shall offer copious extracts from the collection

* TALLULAH, and Other Poems. By Henry R. Jackson. Savannah: John M. Cooper. 1850.

of poems before me, leaving it to the verdict of an intelligent and discerning public to say whether or not I have established my premises. So confident am I in my positions, that I am willing to leave the poems mostly to speak for themselves.

Our author has not published a great deal in the newspapers and magazines, and the first collection of the effusions of his muse is the one before me. He tells us in his preface to this volume, that he "makes no pretension to literary excellence." He says of his poems, that they are the "offspring of moments of leisure from more engrossing pursuits, and are, strictly speaking, fugitive in their character,—but little time or labor having been bestowed upon their composition. He is aware that their interest, (should they indeed be possessed of any,) will be limited to the places which they describe, and the persons to whom they refer. It is from the affection which he feels for the former, and a hope that they may afford some gratification to the latter, that he has published them in their present form." This is the modest and unaffected bow which our author makes by way of preliminary to the presentation of his bouquet of Georgia flowers. He speaks of the "affection which he feels:"—and his most striking characteristic is that he is a poet of the household and fatherland affections. Those under the paternal roof, his wife and children, and his native State, form the burden of his song. And this does honor alike to his head and heart.

The first piece in the book is headed, "My Father," and is one of the finest he has written. Dr. Griswold, in his "Poets and Poetry of America," edition of 1848, on page 541, gives us this poem, saying, in a short note, "Some of his [Jackson's] poems published since 1840, are distinguished for much simplicity and feeling." The Doctor very correctly characterizes our author's poetry. Cowper's little poem on the receipt of his mother's picture is justly celebrated for its tender emotion and deep affection—

"My Mother! when I learned that thou wast dead,
Say, wast thou conscious of the tears I shed?
Hovered thy spirit o'er thy sorrowing son,
Wretch even then, life's journey just begun?
I heard the bell tolled on thy funeral day,
I saw the hearse that bore thee slow away,
And turning from my nursery window drew
A long, long sigh, and wept a last adieu."

But there is nothing in Cowper which can surpass in pathos and delicacy of feeling, as well as in beauty of expression, the whole of our author's poem, styled "My Father." As the extract I give from Cowper commences, "My Mother," so one of the verses in Jackson's poem commences, "My Father."

"My Father! when they laid thee down,
And heaped the clay upon thy breast,
And left thee sleeping all alone
Upon thy narrow couch of rest,
I know not why I could not weep—
The soothing drops refused to roll,
And oh! that grief is wild and deep,
Which settles tearless on the soul!"

Having given this verse to show how favorably it compares with, if it does not excel the extract from Cowper, I will now present the whole poem, the remaining verses of which will form a setting scarcely inferior in beauty and richness to the jewel they surround.

"As die the embers on the hearth,
And o'er the floor the shadows fall,
And creeps the chirping cricket forth,
And ticks the death-watch in the wall,
I see a form in yonder chair
That grows beneath the waning light;—
There are the wan, sad features—there
The pallid brow and locks of white.

"My Father! when they laid thee down,
And heaped the clay upon thy breast,
And left thee sleeping all alone
Upon thy narrow couch of rest,
I know not why I could not weep—
The soothing drops refused to roll,
And oh! that grief is wild and deep,
Which settles tearless on the soul.

"But when I saw thy vacant chair,
Thine idle hat upon the wall,
Thy book—the penciled passage where
Thine eye had rested last of all—
The tree, beneath whose friendly shade
Thy trembling feet had wandered forth—
The very prints those feet had made,
When last they feebly trod the earth;—

"And thought while countless ages fled
Thy vacant seat would vacant stand—
Unworn thy hat—thy book unread—
Effaced thy footsteps from the sand—
And widowed in this cheerless world
The heart that gave its love to thee—
Torn like the vine whose tendrils curled
More closely round the falling tree;—

"Oh! Father! *then* for her and thee
Gushed madly forth the scorching tears;
And oft, and long, and bitterly
Those tears have gushed in later years;—
For as the world grows cold around,
And things take on their real hue,
'Tis sad to find that love is found
Alone above the stars with you!"

The "Burial of Sir John Moore" has made Wolfe immortal, with scarcely another emanation from his pen; and though Richard Henry Wilde has written much other good poetry, his fame as a poet rests *par excellence* upon "My Life is like the Summer Rose." If Judge Jackson had never written any thing else than "My

Father," that poem alone is worthy to hand his name down to posterity.

There is but one alteration I could wish made in the whole poem, and that is in the last line but two. Where Mr. Jackson says "*take on*," I would say "*assume*," because it would be more melodious, and because one word had better be used than a greater number, where the syllables are equal—provided the idea can be as well expressed with one. Thus altered, the line, instead of being,

"And things *take on* their real hue,"

would read,

"And things *assume* their real hue."

Of like nature as the poem quoted, is that on page 79, headed "*My Mother*."

"Pale-footed Time, tread light
Upon my Mother's brow ;—
The cord of life is slight
Which holds thy burden now.
Spare, spare love's lingering hours,
Which fade before thy breath,
Like summer's fragile flowers,
Beneath the frosts of death!"

This is the first stanza, and the others are equally beautiful. Upon the whole, it is not so good as "*My Father*." Perhaps it may be because the author speaks of his Mother, instead of to her.

Here is another poem of affection—"My Wife and Child"—written while the author was in active service as Colonel of the Georgia Regiment. It is dated "*Camargo, Mexico, 1846*," and is found on page 47.

"The tattoo beats ;—the lights are gone ;—
The camp around in slumber lies ;—
The night with solemn pace moves on ;
The shadows thicken o'er the skies :—
But sleep my weary eyes hath flown,
And sad, uneasy thoughts arise.

"I think of thee, oh ! dearest one !
Whose love mine early life hath blest ;—
Of thee and him—our baby son—
Who slumbers on thy gentle breast :—
God of the tender, frail, and lone,
Oh ! guard that little sleeper's rest.

"And hover, gently hover near
To her, whose watchful eye is wet—
The mother, wife—the doubly dear,
In whose young heart have freshly met
Two streams of love, so deep and clear—
And cheer her drooping spirit yet !

"Now, as she kneels before thy throne,
Oh ! teach her, Ruler of the skies,
That while by thy behest alone
Earth's mightiest powers fall or rise,
No tear is wept to thee unknown,
Nor hair is lost, nor sparrow dies !

"That thou canst stay the ruthless hand
Of dark disease and soothe its pain—
That only by thy stern command
The battle's lost, the soldier's slain—
That from the distant sea or land
Thou bring'st the wanderer home again !

"And when upon her pillow lone
Her tear-wet cheek is sadly pressed,
May happier visions beam upon
The brightening currents of her breast,—
Nor frowning look, nor angry tone
Disturb the sabbath of her rest !

"Wherever fate those forms may throw,
Loved with a passion almost wild —
By day, by night—in joy or woe—
By fears oppressed, or hopes beguiled—
From every danger, every foe
Oh ! God ! protect my wife and child !"

Now, this is a real, straight-forward poem, giving, in plain words, an account of the author's situation, and the feelings of his heart for his absent wife and child. There is none of the would-be transcendentalism of the Boston school of Poetry—no seeking to mystify the author's meaning with oddities, quaintness, or affectation of expression, so as to make the idea seem grand, or to make it appear that there is an idea where there is actually none. Look at the picture. The tattoo is beating, the lights gone, and the camp slumbering. But there is no slumber for the poet. And why ? He is thinking of his absent wife and child. The anxiety of the father and the husband chase sleep from his eye-lids, and a prayer goes up from the gallant soldier's heart for the "loved ones at home."

The poem of affection next in order is, "*To my Sister after her Marriage*," on page 95. I give only the last stanza of this piece, in order that I may have room to present in full the whole of the succeeding one :

"God bless thee, Sister ! not a tie
That linked our hearts is broken yet ;
If life for thee should wear a sky
Of gloom—behold my sun is set !
Of brightness—lo ! my sky is clear !
For still in spirit we are one !
God bless thee ! thou wert ever dear,
Yet dearest now, since thou art gone."

This was written when the author's sister left the parental roof to follow the husband of her choice. But too soon, alas, the monster sped a dart, which laid that sister where the "wicked cease from troubling, and the weary are at rest." Then followed the poem on page 99, "*To my Sister after her Death*." The first line is,

"Yet dearest now, since thou art gone."

Here the word "gone" is used in both cases. But mark the difference in its meanings in the two connections. In the first instance his sister

is gone—but gone whence, and whither? From the home of her parents to that of her husband. But ere the partially sad strain is ended, death comes, and sadness itself whispers,

—“Yes, thou art gone!”

But “gone” whence, and whither? In this instance, from life to death—from earth to the cold and dreary mansion of the grave—from the warm embrace of friends to the icy bosom of unrelenting death! How little, comparatively speaking, did the word “gone” mean before; and now, how much does it mean—how intense becomes the import of the word. Will not these touching stanzas awaken a sympathetic chord in the heart of all who read them?

‘And thou art gone! Yes, thou art gone!
Without a word of sad farewell—
Without a parting look or tone—
And gone how far, oh! who can tell?—
Or say how lone, how dark and drear
Thy pathway to the spirit land
Companionless—with none to cheer—
Or journey with thee, hand in hand!

“That thou hast left thy wonted place,
That I no more shall see thy form,
Or gaze upon thy gentle face,
Or hear thine accents soft and warm,—
Oh! this were of itself a woe—
A grief to fill a flowing cup,
For God alone can fully know
How hard it is to give thee up!

“But oh! the grief is sadder yet,
In deeper shadow veils the eye,
Like clouds, which, when the sun is set,
Blot star-light from the azure sky,
To think that *thou*—the gentle, mild,—
The soft, the tender, timid one—
Upon that journey, long and wild,
And terrible, should’st go alone.

“Thou, made to love and to be loved,
To lean upon a stronger arm—
Where’er thy gentle footsteps roved,
A shield to guard from every harm—
’Tis woe at times to think that thou,
Oh! doubly dear, dependent one!
A path whose horrors none may know,
Or tell on earth, should’st tread alone!

“Yet not alone!—down sinful thought,
That still would reach beyond the grave!
Oh! not alone!—since she was taught
To lean on Him who died to save.
Oh! not alone—His staff and rod
She firmly held, as failed her breath;—
She walked with God, and calmly trod
The vale of shadows, and of death!

“Yes! He has blest thee!—Thou art gone
Above, a brighter home to find!
But thou hast left, departed one,
A darker earth for us behind.
The sun is bright—the sky is blue—
The world speaks with its wonted tone—

Yet all is night to us who knew,
And mourn thine angel spirit gone!”

Thus much for the poems of affection, addressed to persons dear to the poet’s heart and home. That same love of home expands into a wide channel and forms patriotism, or love of his native State. And this is the affection for fatherland of which I spoke. Judge Jackson loves the Union—loves America—but loves Georgia better:

“You love the glorious Union with affection firm and true,
And yet of earth is Georgia far the dearest spot to you.”*

He sings of her mountains and her streams—her waterfalls, Tallulah the terrible, and Toccoa the beautiful—of her vales, her trees and her birds. He does not go across the waters to copy a favorite expression of some English poet concerning a foreign bird, made classic by Wordsworth, by Collins, or Gray. But he sings of the Whippoorwill, a bird familiar to every Georgian, and dear because familiar:

“Bird of the night, sad Whippoorwill,
Alight upon yon waving tree,
And with thy sweetest warblings fill
The star-lit grove for me!”†

And so, when he sings of trees, it is not concerning some hackneyed exotic that he pours forth his melody, but it is of the live-oak that he discourses: thus—

“With his gnarled old arms, and his iron form
Majestic in the wood,
From age to age, in the sun and storm,
The live oak long hath stood;
With his stately air, that grave old tree,
He stands like a hooded monk,
With the gray moss waving solemnly
From his shaggy limbs and trunk.”‡

Or thus, of the dog-wood tree:

“When the spring is here with its voice of glee
Through the woods ’tis sweet to stray,
And to sit and muse by the dog-wood tree,
While the zephyrs now are sporting free,
And the birds are on each spray.”

And here are the first four lines of the poem descriptive of the lovely vale of Nacoochee:

“Where Yonah lifts his bald and reverend head
The humbler Alleghany peaks above,
Beneath his shadow pleasantly is spread
Nacoochee’s vale—sweet as a dream of love.”§

The following beautiful stanza is the first of the poem called “Toccoa:”

"Embosomed in the primal forest shades,
And surging gaily thro' the day and night,
Dashing thy waters into myriad braids
Of diamond spray, that sparkles down the height,
And changes hue beneath the shifting light,
Laughing away the hours in childish mirth,
And gently dallying with the ear and sight—
Scarce calls thy murmuring voice an echo forth,
Toccoa, merriest water-fall of all the earth!"*

In contrast with Toccoa, the beautiful, is Tal-
lah, the terrible :

"Terrific spectacle, whence Nature speaks
A language of majestic eloquence
To him who in her awful presence seeks
The broader glimpses of Omnipotence."†

Here is the first stanza of the poem, "To the
Chattahoochee River :"

"Still rolling on thy course, majestic stream,
With anthem tones, and waves of starry light,
Now sporting joyous in the noon-tide gleam,
Now waking far the echoes of the night !—
Fair river, I have come to muse by thee,
For clouds of sadness o'er my spirit roll,
And I would list thy stunning minstrelsy—
Thy solemn voice is soothing to my soul."‡

And here is the first stanza of the poem, "Among
the Mountains in Georgia :"

"Ye glorious Alleghanies! from this height
I see your peaks on every side arise;
Their summits roll beneath the giddy sight,
Like ocean billows, heaved among the skies.
In wild magnificence upon them lies
The primal forest—kindling in the glow
Of this mild Autumn sun with golden dyes,
While in his slanting ray, their shadows grow
Broad o'er the paradise of vale and wood below."§

Even the "red old hills of Georgia" have
charms for the heart of our poet,

"The red old hills of Georgia,
So bald and bare and bleak—
Their memory fills my spirit
With thoughts I cannot speak.
They have no robe of verdure,
Stript naked to the blast;
And yet of all the varied earth
I love them best at last."||

After giving these various extracts—"orient
pearls at random strung"—from poems concern-
ing scenes in Georgia, which I would gladly give
entire, did my space allow, I must be permitted
to present the whole of the beautiful piece enti-
tled "Oconee." After this I will give one other
poem entire and bring this article to a close.

"Oconee! in my tranquil slumbers,
At the silent dead of night,

Oft I see thy golden waters
Flashing in the rosy light;—
And flashing brightly, gushing river,
On the spirit of my dream,
As in moments fled forever,
When I wandered by thy stream;—

"A forest lad—a careless rover—
Rising at the dawn of day—
With my dog and gun—a hunter
Shouting o'er the hills away;—
And ever would my shoeless foot-prints
Trace the shortest path to thee;—
There the plumpest squirrel ever
Chuckled on the chestnut tree.

"And when, at noon, the sun of summer
Glowed too fiercely from the sky,
On thy banks were bowers grateful
To a rover such as I—
Among the forest branches woven
By the richly-scented vine,
Yellow-jasmine, honey-suckle,
And by creeping muscadine.

"And there I lay in pleasant slumber,
And the rushing of thy stream
Ever made a gentle music,
Blending softly with my dream—
My dream of her, who near the waters
Grew beneath my loving eye,
Fairest maid of Georgia's daughters—
Sweetest flower beneath the sky!

"With snowy brow and golden ringlets,
Eyes that beggared heaven's blue,
Voice as soft as summer streamlets,
Lips as fresh as morning dew!
Although she played me oft the coquette,
Dealing frowns and glances sly,
These but made her smiles the dearer
To a rover such as I.

"What if the earth by fairer river
Nurses more beauteous maid than she—
He had found a slow believer
Who had told that tale to me;
And sure I am no knighted lover
Truer faith to ladye bore,
Than the little barefoot rover,
Dreaming on thy pleasant shore.

"The happiest hours of life are vanished;
She has vanished with them, too!
Other bright-eyed Georgia damsels
Blossom where my lily grew;
And yet the proudest and the sweetest
To my heart can never seem
Lovely as the little Peri,
Mouldering by the murmuring stream!"*

I have mentioned that Judge Jackson's mili-
tary expedition beyond the Rio Grande, was the
occasion of several of his best poems. The fol-
lowing entitled "The Dead of the Georgia Reg-
iment,"* is of remarkable interest and beauty :

* Page 133. † p. 21. ‡ p. 75. § p. 119. || p. 43.

* Page 185. † p. 51.

"Where the turbid Rio Grande
Rushes swiftly to the bay;—
Where the gray Sierra Madre
Looms o'er sunny Monterey;—

"At Victoria;—at Tampico;—
Where San Juan's ramparts rise;—
And where snow-capt Orizaba
Freezes in the torrid skies;—

"Ye are slumbering, gallant soldiers!
Each upon his couch of sand—
Death had tapped but once his tattoo,
And ye were a silent band.

"Who is posting now the watches
Round the still and sleeping camp?
Who is giving now the challenge,
When with dew the earth is damp?

"As ye saw the torrid sun-set
On the jagged mountains shine,
And retreat was beat at evening—
Who commanded then the line?

"Patriot soldiers! gallant Georgians!
Who leads on the column now,
As in dreams your eager spirits
Rush upon your country's foe?

"Or when gentler visions gleaming,
Take the place of battle's strife,
Are ye still as fondly dreaming
Of the dear, and distant wife?

"From your eyes do gushing tear-drops
Trickle down your sunburnt cheeks,
As some feeble, dying comrade
Of his Georgian children speaks?

"Or have dreams of home and kindred
From your slumbers quickly fled,
As the shaggy wolf at midnight
Howls above your desert bed?

"Do ye hear the raging mothers!
Do they break your deep repose,
As they rush and roar from mountains,
Covered with eternal snows?

"Calm your slumbers, dauntless soldiers!
Suns were hot, and sands were deep,
Marches long, and knapsacks heavy,
When ye threw them off to sleep!

"Deep your rest, ye gallant soldiers!
Wolf may howl and savage yell;
Rushing, roaring from the mountains,
Northerners into rage may swell;—

"Still ye lie in tranquil slumber
Through the grave's protracted night,
Waiting till God's own *reveillé*,
Beating, rouse the dead to light."

going poem is unequalled. The stanza commencing,

"Who is posting now the watches?"

absolutely oppresses us with its solemnity. As we read, we can almost see the pallid forms of the dead soldiery lying around camp-fires gleaming with a preternatural glare, while we hear the ghostly tread of a pale corpse keeping sentry over its companions of another world. We have nothing at all like this poem, in the effect it produces, save in the paraphrase by Byron of the inspired writer's account of the "Destruction of Sennacherib:"

"For the angel of death spread his wings on the blast,
And breathed in the face of the foe as he passed;
And the eyes of the sleepers waxed deadly and chill,
And their hearts but once heaved, and forever grew still."

Judge Jackson has—

"Death had tapped but once his tattoo,
And ye were a silent band!"

This is equally solemn, (and according to the principle of Longinus, conveyed in his citing the phrase, "And God said, let there be light, and there was light," as the best example of the sublime,) it is far more sublime. Certainly it is more simple, curt and pointed than the stanza from the author of *Childe Harold*.

To conclude—permit me to say that in the specimens I have presented from Judge Jackson's poetry, I have followed the volume before me in its punctuation,—which I consider very faulty, instead of pointing anew. It may be remarked, however that there is a certain peculiarity about the Judge's poetry which requires a peculiar punctuation, though not the system which we have in the volume. But I have not time to go into an examination of this subject. There is a "philosophy of point," as Edgar Poe has it, and authors and publishers should pay more attention to it. I do not know whether it is the author, or the publisher, who is to blame in this instance.

In a letter now before me, Judge Jackson says: "I have never flattered myself as being more than an ordinary verse-maker; and have not published a book with the expectation of being ranked among authors." A classic Roman poet says something similar:

"Primum ego me illorum, dederim quibus esse poetis
Excepam numero; neque enim concludere versum,
Dixeris esse satis."*

I will only add that Horace and Judge Jackson are both mistaken as to the merits of their muse.

For solemn grandeur and sublimity, the fore-

* Hor. Sat. iv, 39.

YARROW UNVISITED, (1809.)

BY WILLIAM WORDSWORTH.

From Stirling Castle we had seen
 The mazy Forth unravell'd :
 Had trod the banks of Clyde and Tay,
 And with the Tweed had travell'd ;
 And when we came to Clovenford,
 Then said my "*winsome Marrow*,"
 "Whate'er betide, we'll turn aside,
 And see the Braes of Yarrow."

"Let Yarrow Folk, *fræ* Selkirk town,
 Who have been buying, selling,
 Go back to Yarrow, 'tis their own ;
 Each Maiden to her Dwelling !
 On Yarrow's banks let herons feed,
 Hares couch, and rabbits burrow !
 But we will downwards with the Tweed,
 Nor turn aside to Yarrow."

"There's Gala Water, Leader Haughs,
 Both lying right before us ;
 And Dryborough, where with charming Tweed
 The Lintwhites sing in chorus ;
 There's pleasant Tiviot Dale, a land
 Made blithe with plough and harrow :
 Why throw away a needful day,
 To go in search of Yarrow ?

"What's Yarrow but a River bare,
 That glides the dark hill under ?
 There are a thousand such elsewhere
 As worthy of your wonder."
 —Strange words they seem'd of slight and scorn ;
 My true-love sighed for sorrow ;
 And look'd me in the face to think
 I thus could speak of Yarrow !

"Oh! green," said I, "are Yarrow's Holms,
 And sweet is Yarrow flowing !
 Fair hangs the apple *fræ* the rock,
 But we will leave it growing.
 O'er hilly path, and open Strath,
 We'll wander Scotland thorough ;
 But, though so near, we will not turn
 Into the Dale of Yarrow !

"Let beeves and home-bred kine partake
 The sweets of Burn-mill meadow ;
 The swan on still St. Mary's Lake
 Float double, swan and shadow !
 We will not see them ; will not go
 To-day, nor yet to-morrow ;
 Enough if in our hearts we know
 There's such a place as Yarrow."

"Be Yarrow's stream unseen, unknown !
 It must, or we shall rue it :
 We have a vision of our own ;
 Ah! why should we undo it ?
 The treasured dreams of times long past,
 We'll keep them, winsome Marrow !
 For when we're there, although 'tis fair,
 'Twill be another Yarrow."

"If Care with freezing years should come,
 And wandering seem but folly,—
 Should we be loth to stir from home,
 And yet be melancholy ;
 Should life be dull, and spirits low ;
 'Twill soothe us in our sorrow,
 That earth has something yet to show,
 The bonny Holms of Yarrow !"

LOLA MONTES UNSEEN.

Omne cum *Bennett* pecus egit altos
Visere Montes.

At Castle Garden we had seen
 Ernani's fate unravelled ;
 Had trod the Battery's dusty walks,
 And 'Broadway up' had travelled ;
 And when we passed the Hospital,
 Then said a sweet cajoler,
 "Whate'er betide, we'll turn aside,
 And see the famous Lola."

"Let Louis, King, *fræ* Munich town,
 Upon his throne a shaking,
 Take back his Lola, she's his own,
 A countess of his making !
 On Iser's banks, by dint of tin,
 Perhaps he could control her ;
 But we will upwards *haut de ville*,
 Nor think of seeing Lola."

"There's Brougham's Lyceum, Tripler Hall,
 Both lying right before us ;
 And Christy's, where the sable band
 Sing nightly in full chorus ;
 There's Barnum's, pleasant humbug seen
 By lunar light or solar,
 Why waste our time, with many a dime,
 To go in search of Lola ?

"What's Lola but a dancing girl,
 That puts all morals under ?
 There are a dozen such elsewhere
 As worthy of your wonder,"
 —Strange words they seemed of slight and scorn ;
 Then sighed my sweet cajoler,
 And slapped me in the face, to think
 I thus could speak of Lola !

"Oh! fair," said I, "is Lola's form,
 And soft her motions flowing !
 Red seems the rouge upon her cheeks,
 But we will leave them glowing.
 By gas light's glare, to Union Square,
 We'll act to-night the stroller ;
 But, though so near, we will not turn
 To take a peep at Lola."

"Let Gotham's thousand sheep in flocks
 Around the *Montes* rally ;
 Let down town people, if they please,
 Applaud the *corps de ballet* !
 We will not see the figurantes,
 Nor yet the Countess *sola* ;
 Enough if on the bills we read
 The titled name of Lola."

"Be Lola then unseen, unknown !
 She must, or we shall rue it :
 We have some modesty, we own ;
 Ah! why should we undo it ?
 The virtue prized of times long past
 We'd keep for a consoler,
 Nor cry for this, that we should miss
 The graceful step of Lola."

"When Bennett's freezing rule shall come,
 And virtue seem but folly,—
 When that dear, sacred place, called 'home,'
 Is filled with melancholy ;
 When wisdom's old, and truth grows cold
 As iceberg circumpolar,
 Then we shall buy a stage-box seat
 And cry *encore* to Lola!"

X. Y. Z.

QUEEN VICTORIA.

One of the questions most frequently asked of one who has been to England is, did you see the Queen? And while there are in England, within the realms of nature and of art, so many things, ancient and modern, far greater, more soul-stirring to behold, than the Queen, albeit of the mightiest monarch on earth, yet when one is in London, there is nothing that he is more impatient to get a sight of than her Majesty. And this is natural. Many great things are to be seen in this land of ours, the greatest and most blessed on earth; but though the old proverb says that a cat may look at a king, it was made before America was discovered, and our American cats are denied this privilege. Now as we go abroad to see what cannot be seen at home, we naturally look first to the monarch, as being a thing which never has been, and never can be in North America. I say never has been.—Did it ever occur to the reader, that no King ever trod the free shores of North America? For I call not the Indian Sachems, Kings; they were merely, (if a term may be allowed expressive of such a combination,) a sort of Patriarchal War-Chiefs. But of a *jure divino* monarch, sprung from royal loins, and the transmitter of the same heritable grace to his posterity, we have never had a specimen. Charles II. thought of coming to the loyal Old Dominion, but did not—we have had some ex-Kings of the Bonaparte stock, (by the way, the President of France was once in America for a short time,) and Louis Philippe, who was private citizen, king, and ex-king during his eventful life, was in the United States when he was *ante-king*. But a monarch in full feather, *de jure et de facto*, we have never seen in our land. Within some enchanted circles, no one can enter who has any metal about him, and so, that golden gaud, the crown cannot be allowed upon the head of any one, on the soil over which the Genius of American Liberty her waved her wand. Or, as men uncover before royalty, in token of reverence for the presence, thus when monarchs present themselves before the people, that greatest of sovereigns, and of oldest lineage, though lately come to his rights, the insignia of monarchy must be doffed. Therefore, if we Americans, when abroad, are anxious to see a live monarch, it is simply because the species is not to be found in our own latitude, and not because of any suddenly inspired reverence. I was amused, when one day in London, having expressed to an Englishman my desire to see her majesty, he mistook the cause of my earnestness, and thinking that I had formed such exaggerated ideas of royalty

that I would be disappointed, he said, "you will find that she looks very much like other people!" I smiled and wondered if they thought us as ignorant about them, as they show themselves to be about us, when they express their surprise that we speak *their language* so well. But an American need not hesitate to confess that he feels for the occupant of the English throne, a sentiment apart from that of curiosity. When he looks upon London Tower, or Westminster Abbey, or York Cathedral, he is impressed by something more than mere architectural effect. These were famous places of old, and he bows with reverence in the presence of the spirit of the Past. And is not the English monarchy one of the mightiest things that have come down to us from former ages? It is the representative in part of Saxon manhood, and Norman daring:—Chivalry, the Crusades, the Feudal System, the Reformation, the settlement of our own land, the struggle for Liberty, the Ascendancy of the People, the Progress of the Age—these are some of the great ideas that give majesty to the British throne, as the eternal snows do to the brow of Mont Blanc. And what names come to our memory as we look upon that throne? Alfred, William the Conqueror, Cœur de Leon, bluff King Harry, every inch a man, whatever else he was; Queen Bess, mark-worthy as any of them, and though she was not Queen of England, the lovely Queen of Scots, not to speak of William III., the champion of protestantism, and others of later date! How dear too, was that throne once, in the eyes of our forefathers? And what state oftener than Virginia exhibited that chivalrous loyalty, which is the instinct of generous bosoms, and indeed is but patriotism in another form? True loyalty is the begetter of independence, and it will be found that those who honor their monarchs while they allow them, are the most jealous assertors of republicanism, when they assume that form of government. I believe, moreover, that we feel for Queen Victoria, a special regard. I have, in our country, often heard kind expressions about her, and I never heard I believe, anything that might not have been repeated in England. By the way, if this is not true, I have a good deal to answer for, inasmuch as to say this was my master-piece, whenever I had reason to reciprocate to an Englishman, any compliment paid to our country—a thing that often happened.

I was very anxious to see the Queen, and it is not always easy to do this. Some of my friends left London, I think, without accomplishing it. She is very locomotive. During the short time that I was in England, she paid two visits. I think, to Osborne House, her palace in the Isle of Wight, and another to Balmoral, her summer

residence, away up in the Highlands of Scotland. When she is in London, she rides about a good deal without any sort of state, but the glimpse that can be caught of her as her carriage passes, is of course very unsatisfactory. I was somewhat fortunate in seeing her in at least four different situations, and will give a brief description of the occasions, as I noted them down at the time.

The first place at which I saw her Majesty, was the Crystal Palace, the best place for seeing her last summer, as she went there regularly. She would have gone, no doubt, in her character of the world's hostess, and to patronise the exhibition, if it had needed or would have allowed it; but it was an affair far too great for the patronage of the mightiest monarchs—nay it was in itself absolutely greater than any monarch. Queen Victoria, in the Crystal Palace, was a spectator, and went probably mainly for her own gratification. But when present, she was doubtless one of the most precious, and most looked at articles there—I was about to say, not excepting the Koh-i-noor, but I have too sincere a respect for Queen Victoria, to compare her with the greatest and most transparent humbug that the four quarters of the globe sent to the World's Fair. The Queen attended the exhibition, occasionally on other days of the week, but always on Saturday, on which day the exhibition, ordinarily open at 9 o'clock in the morning, was not open to visitors in general, until 12. The Queen came at 9, and remained until after 11. Saturday, June 15, by the kindness of Dr. Moorman, one of the commissioners from Virginia, I obtained admittance, while the Queen was making her visit to the Palace, and was quite close to her, while for some time she was full in view. I was agreeably disappointed in her appearance. I had been led by the accounts of some of my American acquaintances to suppose that she was homely, which she certainly is not, though as certainly, she would not be called handsome. If she should ever be obliged to get a passport at Washington from the same faithful clerk who gave me mine, he would describe her thus—Forehead, medium; nose, large, aquiline; mouth, large; chin, retreating; eyes blue, with a good deal of white; age 32; stature short and plump. It might be supposed that these elements combined, would be lacking in pulchritude; but the same conclusion might be formed about me, upon reading my passport, which would be a mistake of course; and therefore, let no one form too unfavorable an idea from this enumeration of features, though it is correct. Yet, neither on the other hand would it do to take, as unflattered, the numerous portraits of her Majesty—painters are but men. There is, however, something

about her face so peculiar, that you never hesitate for a moment to recognise it, whether on the panel of an omnibus, or in the miniature in the Crystal Palace, composed entirely of diamonds; just as we know Gen. Jackson's features, even on an old tavern sign board, in which a weather crack has run a sort of Mason and Dixon's line between the north and south portions of the face. One feature of the Queen's face is very recognisable: her upper lip is a trifle too short, and leaves her mouth partly open, and her upper teeth slightly exposed,—very pretty teeth they are; but the effect is a little peculiar. When I saw the Queen, she was leaning upon the arm of her husband, who is tall, handsome, and gentlemanly looking. She was in the British machinery room, looking at an invention for polishing sewing needles. The tableau was to me impressive. It was not without emotion that I looked upon the Queen of the mightiest kingdom (not country) on earth, surrounded by the machinery of those manufactures which contribute most to the greatness of that country; and at the same time, upon a wife noted for her domestic qualities, leaning upon the arm of her husband, and looking with interest upon the implements of female industry. Her figure cannot be called good, but it is better than I expected to see it. She was dressed in a bonnet of light blue material, a cherry coloured spencer, and a white dress flounced. There was nothing in her dress or manner to distinguish her from any other lady; and I was obliged to ask before I was positively certain, that I was looking on the Queen. There is not any thing in her countenance denoting high mental power, though there is no approach to inanity, nor is there any particular sweetness of expression, nor yet anything of the opposite, only she looks as if she had a will of her own; and what may seem strange, there is nothing which struck me as indicating very high breeding. Indeed, she did not seem to be entirely at her ease. Whether it was because they were talking to her about machinery of which, of course, she knew nothing, and was embarrassed for a reply, or else from a consciousness of being looked at,—though one would suppose that by this time she was accustomed to the public gaze,—or, finally, because she had been up late the night before at a Fancy Ball at St. James' Palace, or for some other reason, there seemed to be wanting that absolute composure and self-possession which one would expect to see in the Queen of England.

The next time I saw the Queen, was August 8th, the day of the prorogation of Parliament. I had been to the Continent, and had returned a few days before this imposing pageant took place. I will not attempt a circumstantial de-

scription of it, as my present purpose is to speak of the Queen. Indeed, I saw only the procession. The act of prorogation took place, of course, within the walls of the House of Lords, and every inch of space there, was packed with privileged persons. Our Minister, Mr. Lawrence, was as kind to us as he could be, but said that his official station did not give even his own family the entrée upon this occasion. But after all, while it would have been a thing worth seeing, to behold the Peers assembled, and the Commons standing at their bar, (badge of their former inferiority.) and to see the Iron Duke bearing the Sword of State before her Majesty, and some one else the Sceptre; and to see the Lord Chancellor deliver kneeling, to her Gracious Majesty on her throne, with Prince Albert beneath her, and on her left, the Speech, which she is sure to read—according to the newspapers—in a clear and impressive tone; while I say, to see all this and more, would have been worth, much perhaps the bravest show was outside. The day was delightful, clear and balmy. The Queen has been so fortunate in regard to weather in her public days, and this is such a noticeable thing in England, that her people have the superstition that she is almost *potens tempestatum*. A friend of mine went to Ascot races, the day that the Queen was to be present. The morning had been lowering and dropping; but just as the Queen came up, the clouds chanced to disperse, so as to let the light through, and an Englishman standing by exclaimed, "God bless her Majesty, she brings sunshine wherever she moves." The late drenching reception at Liverpool, proves however, that neither Canute nor her blessed Majesty, can stay the watery element when it has a mind to come. The crowd that hastened to witness the prorogation procession was immense. Shall I say that there was a million of people between Buckingham Palace and the new Houses of Parliament? If I say so, and am wrong in my estimate, I am sure I do not know whether I shall give too large or too small a number. The avenue through which the cortege was to pass, was double lined with policemen and soldiers. Allow me one word about the Horse Guards. I saw much that day and at other times that was costly and magnificent—much silver and gold and precious stones, and marble and carved wood—much that was wonderful and wasteful, but the most *regal* thing I ever saw in all my life, that is, the thing most worthy to be the peculiar possession of kings, was the Horse Guards of London, as they appeared that day, forming the escort of Queen Victoria. It was like the scene in the Legend of Montrose, where the Highland Chieftain wins his wager that he can show costlier candlesticks

than his Lowland entertainers, by making his Highland clansmen stand with torches in their hands. There is nothing after all, as valuable as men. And then such men as these are! and so appointed! They are all six feet high and upwards, and mounted upon black chargers of unusual size, yet not the least clumsy, but on the contrary, noticeable for their light cat-like step; all thorough bred, groomed to perfection, and gorgeously harnessed. The men wear metal helmets, with a horse tail, and have a steel breast and back plate. They have on white buckskin breeches, and jet black hussar boots, with a long, shanked plated spur, and ride upon a snow-white sheep-skin, covering their holsters before, and their portmanteau behind, and contrasting with fine effect, with the colour of their horses. Besides their pistols, they carry a heavy sabre, and have a short fire-lock slung on the right side. Never did I behold so showy a body of men that at the same time looked so effective. But to return to the solemnity. Along the avenue thus kept open by soldiers and police, the procession took its slow and stately way. In front came separately, two or three State carriages, so gorgeous in their appearance, that they might well have been mistaken for the royal vehicle, though they bore only some of the high officers of the household. Then came the Queen's carriage, composed, apparently of glass and gilt, and drawn by eight cream colored stallions; a coachman having two of them in hand, while a groom walked at the head of each of the other six. Within sat the Queen, wearing a light crown, and on her *left* sat her husband, Prince Albert. I cannot say how the Queen was dressed on this occasion. My fair readers—if I have the honor of having such—will excuse me for the omission, as I have shown by what I have said as to this particular, when I saw her at the Crystal Palace, my desire to do justice to this part of my subject. But on this occasion, I had not time to make a leisurely survey. The progress was slow, to be sure, but then it was a moving pageant, and there was a great deal to be seen, as, the State Carriage, the Queen, and Prince Albert; and if the truth must be told, I could not help taking some time to look at those marvellous eight cream horses, decked with gilded harness and floating ribbons, and held by such stylish grooms. So I marked not the dress. I marked well, however, the countenance of her Majesty. Her face was very much flushed, and its expression was that of high excitement. She looked handsomer than she did at the Crystal Palace, and more queenly; but still I wondered that she had not more composure. It was certainly a trying thing, to pass thus in state through that immense concourse, who were cheering her at every step,

while the great guns of the Tower were momentarily booming forth their thunderous gratulation, and announcing to the expectant crowd at the House of Lords, that Queen Victoria was approaching; and reminding the lady herself, that soon she must walk up through that chamber of Aristocratic Peers, with blood as good as her own, and read to them a set speech. Now, all this was, I say, a thing that would be trying to any lady, with, or without a crown. I believe, nevertheless, that I could find more than one lady in Virginia, who, if called upon, could bear her part in such a pageant, as well as, it may be better, than the grand-daughter of George III, and daughter of Edward Augustus, Duke of Kent, and the widow of the Prince of Leinengen.

The next time I saw the Queen, was August 28th, at Edinburgh. I will take the liberty of just copying my journal notice of this occasion, as (though hastily written) it has a fresher sound than any thing more elaborate.

—Went down to Holy-rood Palace to witness the arrival of the Queen. She had desired that there should be no public reception, nor manifestation; but the people, especially those so far from the metropolis, never get entirely accustomed to royalty, and flock out to see her Majesty, whenever she stirs. It was a very interesting and imposing sight, to behold the multitude that were assembled this delicious evening, in the great park of the Palace, or the valley, rather, at the foot of the surrounding mountains. The people not only filled the plain, but were crowded up the ascent of Arthur's Seat, and Salisbury Crag, that they might command the view. The prevalence of the tartan plaid in the dress, increased the picturesque effect of the crowd. A line of soldiers was established from the Railway Station to the Palace, on each side of the road; and as the cortege started, the cannon uttered their reverence. The Queen and her party rode from the Station, in hired carriages, but of course, they were in the finest style; they were coaches drawn by four horses, which were ridden by postillions. In advance of the Queen, went a carriage, in which rode the Sheriff of the county, Mr. Goodson, with attendants. Then came the royal pair. Prince Albert was seated on the left; dressed in plain looking gray clothes, and with an ordinary hat on; on the right was the Queen, in her riding dress and bonnet. Her bonnets are small and open, and always set off from her brow, and show out her face. This is the third time that I have seen the Queen: once at the Exhibition, when I thought she looked embarrassed—next in the procession, on her way to prorogue Parliament, when her face was flushed with excitement—and now, on this occasion, when she looked calm and satisfied

and proudish. I suppose *she takes on* (as the saying is) a little more in this, in one sense, provincial place, than she does in the great metropolis. It is human nature. How can a young woman have a handsome husband sitting as her unequal at her left, and see an immense multitude pressing to look at her, at risk of life and limb, and not be proud? Her blessed Majesty, however, is esteemed the reverse of haughty, and she bowed graciously to her people, as they cheered her. Next came the royal children: bless their hearts, they were quite as handsome and sweet; looking as if it had been their good fortune to have been born republicans some where in the Old Dominion, instead of being as they are, a sort of state furniture: children with a father provided by law, and selected by diplomatists. Behind the royal carriages came another with Lord John Russell, who attends her Majesty, as the member of the Privy Council; selected to give the Queen wholesome advice at Balmoral, in all emergencies that may occur there, whether of state or household. The people cheered Lord John, and he acknowledged the compliment by gracefully raising his hat, and exposing a countenance which well becomes a counsellor to a young woman, whether Queen or other, as being one which no lady could by any chance fall in love with. Lord John is handsomer than Lord Brougham—let him derive what consolation he may, from that. The people here do not know how to cheer. I have remarked this on several previous occasions. They raise a faint, a doubtful noise, as if they were taking a liberty, or were afraid of frightening the horses. One difficulty, however, is, that they do not exactly know what shout to raise, to a female sovereign. *Vive la reine*, would sound clear and graceful; but of course, it would not do to borrow a thing so national as a welcome: our American *Hurrah!* is cordial and strong and stirring, but somehow it seems rather coarse to be addressed to a Queen; and *Long live the Queen*, is too long, and *Welcome Victoria*, too stiff for a shout; and so they are in doubt, and are obliged to let out of the mouth, a slim aphonous something, that just about comes up to Virgil's account of the noise made at the sight of Eneas, by the Grecian chiefs in the shades below:

———pars tollere vocem
Exiguam; inceptus clamor, frustratur hiantes.

The procession was closed in a very characteristically English way, by a detachment of Police, and a regular omnibus, which some how or other, had got in there. Nothing is more strongly associated with a stranger's recollections of England, than the Police and the 'busses—one typifying the order, the other the bustle of Lon-

scription of it, as my present purpose is to speak of the Queen. Indeed, I saw only the procession. The act of prorogation took place, of course, within the walls of the House of Lords, and every inch of space there, was packed with privileged persons. Our Minister, Mr. Lawrence, was as kind to us as he could be, but said that his official station did not give even his own family the entree upon this occasion. But after all, while it would have been a thing worth seeing, to behold the Peers assembled, and the Commons standing at their bar, (badge of their former inferiority,) and to see the Iron Duke bearing the Sword of State before her Majesty, and some one else the Sceptre; and to see the Lord Chancellor deliver kneeling, to her Gracious Majesty on her throne, with Prince Albert beneath her, and on her left, the Speech, which she is sure to read—according to the newspapers—in a clear and impressive tone; while I say, to see all this and more, would have been worth, much perhaps the bravest show was outside. The day was delightful, clear and balmy. The Queen has been so fortunate in regard to weather in her public days, and this is such a noticeable thing in England, that her people have the superstition that she is almost *potens tempestatum*. A friend of mine went to Ascot races, the day that the Queen was to be present. The morning had been lowering and dropping; but just as the Queen came up, the clouds chanced to disperse, so as to let the light through, and an Englishman standing by exclaimed, “God bless her Majesty, she brings sunshine wherever she moves.” The late drenching reception at Liverpool, proves however, that neither Canute nor her blessed Majesty, can stay the watery element when it has a mind to come. The people not only filled the plain, but were crowded up the ascent of Arthur's Seat, and Salisbury Crag, that they might command the view. The prevalence of the tartan plaid in the dress, increased the picturesque effect of the crowd. A line of soldiers was established from the Railway Station to the Palace, on each side of the road; and as the cortege started, the cannon uttered their reverence. The Queen and her party rode from the Station, in hired carriages, but of course, they were in the finest style; they were coaches drawn by four horses, which were ridden by postillions. In advance of the Queen, went a carriage, in which rode the Sheriff of the county, Mr. Goodson, with attendants. Then came the royal pair. Prince Albert was seated on the left; dressed in plain looking gray clothes, and with an ordinary hat on; on the right was the Queen, in her riding dress and bonnet. Her bonnets are small and open, and always set off from her brow, and show out her face. This is the third time that I have seen the Queen: once at the Exhibition, when I thought she looked embarrassed—next in the procession, on her way to prorogue Parliament, when her face was flushed with excitement—and now, on this occasion, when she looked calm and satisfied

and *proudish*. I suppose *she takes on* (as the saying is) a little more in this, in one sense, provincial place, than she does in the great metropolis. It is human nature. How can a young woman have a handsome husband sitting as her unequal at her left, and see an immense multitude pressing to look at her, at risk of life and limb, and not be proud? Her blessed Majesty, however, is esteemed the reverse of haughty, and she bowed graciously to her people, as they cheered her. Next came the royal children: bless their hearts, they were quite as handsome and sweet; looking as if it had been their good fortune to have been born republicans some where in the Old Dominion, instead of being as they are, a sort of state furniture: children with a father provided by law, and selected by diplomatists. Behind the royal carriages came another with Lord John Russell, who attends her Majesty, as the member of the Privy Council; selected to give the Queen wholesome advice at Balmoral, in all emergencies that may occur there, whether of state or household. The people cheered Lord John, and he acknowledged the compliment by gracefully raising his hat, and exposing a countenance which well becomes a counsellor to a young woman, whether Queen or other, as being one which no lady could by any chance fall in love with. Lord John is handsomer than Lord Brougham—let him derive what consolation he may, from that. The people here do not know how to cheer. I have remarked this on several previous occasions. They raise a faint, a doubtful noise, as if they were taking a liberty, or were afraid of frightening the horses. One difficulty, however, is, that they do not exactly know what shout to raise, to a female sovereign. *Vive la reine*, would sound clear and graceful; but of course, it would not do to borrow a thing so national as a welcome: our American *Hurrah!* is cordial and strong and stirring, but somehow it seems rather coarse to be addressed to a Queen; and *Long live the Queen*, is too long, and *Welcome Victoria*, too stiff for a shout; and so they are in doubt, and are obliged to let out of the mouth, a slim aphonous something, that just about comes up to Virgil's account of the noise made at the sight of Eneas, by the Grecian chiefs in the shades below:

———*pars tollere vocem*
Exiguam; inceptus clamor, frustratur hiantes.

The procession was closed in a very characteristically English way, by a detachment of Police, and a regular omnibus, which some how or other, had got in there. Nothing is more strongly associated with a stranger's recollections of England, than the Police and the 'busses—one typifying the order, the other the bustle of Lon-

scription of it, as my present purpose is to speak of the Queen. Indeed, I saw only the procession. The act of prorogation took place, of course, within the walls of the House of Lords, and every inch of space there, was packed with privileged persons. Our Minister, Mr. Lawrence, was as kind to us as he could be, but said that his official station did not give even his own family the entrée upon this occasion. But after all, while it would have been a thing worth seeing, to behold the Peers assembled, and the Commons standing at their bar, (badge of their former inferiority.) and to see the Iron Duke bearing the Sword of State before her Majesty, and some one else the Sceptre; and to see the Lord Chancellor deliver kneeling, to her Gracious Majesty on her throne, with Prince Albert beneath her, and on her left, the Speech, which she is sure to read—according to the newspapers—in a clear and impressive tone; while I say, to see all this and more, would have been worth, much perhaps the bravest show was outside. The day was delightful, clear and balmy. The Queen has been so fortunate in regard to weather in her public days, and this is such a noticeable thing in England, that her people have the superstition that she is almost *potens tempestatum*. A friend of mine went to Ascot races, the day that the Queen was to be present. The morning had been lowering and dropping; but just as the Queen came up, the clouds chanced to disperse, so as to let the light through, and an Englishman standing by exclaimed, "God bless her Majesty, she brings sunshine wherever she moves." The late drenching reception at Liverpool, proves however, that neither Canute nor her blessed Majesty, can stay the watery element when it has a mind to come. The crowd that hastened to witness the prorogation procession was immense. Shall I say that there was a million of people between Buckingham Palace and the new Houses of Parliament? If I say so, and am wrong in my estimate, I am sure I do not know whether I shall give too large or too small a number. The avenue through which the cortege was to pass, was double lined with policemen and soldiers. Allow me one word about the Horse Guards. I saw much that day and at other times that was costly and magnificent—much silver and gold and precious stones, and marble and carved wood—much that was wonderful and wasteful, but the most *regal* thing I ever saw in all my life, that is, the thing most worthy to be the peculiar possession of kings, was the Horse Guards of London, as they appeared that day, forming the escort of Queen Victoria. It was like the scene in the Legend of Montrose, where the Highland Chieftain wins his wager that he can show costlier candlesticks

than his Lowland entertainers, by making his Highland clansmen stand with torches in their hands. There is nothing after all, as valuable as men. And then such men as these are! and so appointed! They are all six feet high and upwards, and mounted upon black chargers of unusual size, yet not the least clumsy, but on the contrary, noticeable for their light cat-like step; all thorough bred, groomed to perfection, and gorgeously harnessed. The men wear metal helmets, with a horse tail, and have a steel breast and back plate. They have on white buckskin breeches, and jet black hussar boots, with a long, shanked plated spur, and ride upon a snow-white sheep-skin, covering their holsters before, and their portmanteau behind, and contrasting with fine effect, with the colour of their horses. Besides their pistols, they carry a heavy sabre, and have a short fire-lock slung on the right side. Never did I behold so showy a body of men that at the same time looked so effective. But to return to the solemnity. Along the avenue thus kept open by soldiers and police, the procession took its slow and stately way. In front came separately, two or three State carriages, so gorgeous in their appearance, that they might well have been mistaken for the royal vehicle, though they bore only some of the high officers of the household. Then came the Queen's carriage, composed, apparently of glass and gilt, and drawn by eight cream colored stallions; a coachman having two of them in hand, while a groom walked at the head of each of the other six. Within sat the Queen, wearing a light crown, and on her *left* sat her husband, Prince Albert. I cannot say how the Queen was dressed on this occasion. My fair readers—if I have the honor of having such—will excuse me for the omission, as I have shown by what I have said as to this particular, when I saw her at the Crystal Palace, my desire to do justice to this part of my subject. But on this occasion, I had not time to make a leisurely survey. The progress was slow, to be sure, but then it was a moving pageant, and there was a great deal to be seen, as, the State Carriage, the Queen, and Prince Albert; and if the truth must be told, I could not help taking some time to look at those marvellous eight cream horses, decked with gilded harness and floating ribbons, and held by such stylish grooms. So I marked not the dress. I marked well, however, the countenance of her Majesty. Her face was very much flushed, and its expression was that of high excitement. She looked handsomer than she did at the Crystal Palace, and more queenly; but still I wondered that she had not more composure. It was certainly a trying thing, to pass thus in state through that immense concourse, who were cheering her at every step,

while the great guns of the Tower were momentarily booming forth their thunderous gratulation, and announcing to the expectant crowd at the House of Lords, that Queen Victoria was approaching; and reminding the lady herself, that soon she must walk up through that chamber of Aristocratic Peers, with blood as good as her own, and read to them a set speech. Now, all this was, I say, a thing that would be trying to any lady, with, or without a crown. I believe, nevertheless, that I could find more than one lady in Virginia, who, if called upon, could bear her part in such a pageant, as well as, it may be better, than the grand-daughter of George III, and daughter of Edward Augustus, Duke of Kent, and the widow of the Prince of Leinengen.

The next time I saw the Queen, was August 28th, at Edinburgh. I will take the liberty of just copying my journal notice of this occasion, as (though hastily written) it has a fresher sound than any thing more elaborate.

—Went down to Holy-rood Palace to witness the arrival of the Queen. She had desired that there should be no public reception, nor manifestation; but the people, especially those so far from the metropolis, never get entirely accustomed to royalty, and flock out to see her Majesty, whenever she stirs. It was a very interesting and imposing sight, to behold the multitude that were assembled this delicious evening, in the great park of the Palace, or the valley, rather, at the foot of the surrounding mountains. The people not only filled the plain, but were crowded up the ascent of Arthur's Seat, and Salisbury Crag, that they might command the view. The prevalence of the tartan plaid in the dress, increased the picturesque effect of the crowd. A line of soldiers was established from the Railway Station to the Palace, on each side of the road; and as the cortege started, the cannon uttered their reverence. The Queen and her party rode from the Station, in hired carriages, but of course, they were in the finest style; they were coaches drawn by four horses, which were ridden by postillions. In advance of the Queen, went a carriage, in which rode the Sheriff of the county, Mr. Goodson, with attendants. Then came the royal pair. Prince Albert was seated on the left; dressed in plain looking gray clothes, and with an ordinary hat on; on the right was the Queen, in her riding dress and bonnet. Her bonnets are small and open, and always set off from her brow, and show out her face. This is the third time that I have seen the Queen: once at the Exhibition, when I thought she looked embarrassed—next in the procession, on her way to prorogue Parliament, when her face was flushed with excitement—and now, on this occasion, when she looked calm and satisfied

and proudish. I suppose *she takes on* (as the saying is) a little more in this, in one sense, provincial place, than she does in the great metropolis. It is human nature. How can a young woman have a handsome husband sitting as her unequal at her left, and see an immense multitude pressing to look at her, at risk of life and limb, and not be proud? Her blessed Majesty, however, is esteemed the reverse of haughty, and she bowed graciously to her people, as they cheered her. Next came the royal children: bless their hearts, they were quite as handsome and sweet; looking as if it had been their good fortune to have been born republicans some where in the Old Dominion, instead of being as they are, a sort of state furniture: children with a father provided by law, and selected by diplomatists. Behind the royal carriages came another with Lord John Russell, who attends her Majesty, as the member of the Privy Council; selected to give the Queen wholesome advice at Balmoral, in all emergencies that may occur there, whether of state or household. The people cheered Lord John, and he acknowledged the compliment by gracefully raising his hat, and exposing a countenance which well becomes a counsellor to a young woman, whether Queen or other, as being one which no lady could by any chance fall in love with. Lord John is handsomer than Lord Brougham—let him derive what consolation he may, from that. The people here do not know how to cheer. I have remarked this on several previous occasions. They raise a faint, a doubtful noise, as if they were taking a liberty, or were afraid of frightening the horses. One difficulty, however, is, that they do not exactly know what shout to raise, to a female sovereign. *Vive la reine*, would sound clear and graceful; but of course, it would not do to borrow a thing so national as a welcome: our American *Hurrah!* is cordial and strong and stirring, but somehow it seems rather coarse to be addressed to a Queen; and *Long live the Queen*, is too long, and *Welcome Victoria*, too stiff for a shout; and so they are in doubt, and are obliged to let out of the mouth, a slim aphonous something, that just about comes up to Virgil's account of the noise made at the sight of Eneas, by the Grecian chiefs in the shades below:

———*pars tollere vocem*
Exiguam; inceptus clamor, frustratur hiantes.

The procession was closed in a very characteristically English way, by a detachment of Police, and a regular omnibus, which some how or other, had got in there. Nothing is more strongly associated with a stranger's recollections of England, than the Police and the 'busses—one typifying the order, the other the bustle of Lon-

don; and as there are so many of both, and as both are so necessary to his comfort, they become a part of one's fixed ideas of the metropolis. In the evening, I saw the Queen riding out for an airing, without any soldiers or attendants, other than outriders, and the Captain of the Police as a guide.

Just in front of Holy-rood has been newly erected, and is not yet entirely finished, a statue of Queen Victoria, in Scotch stone. It seems to me to be executed in a much more pleasing manner than the marble one that stands in the court of the Royal Exchange in London. Her blessed Majesty will probably have more representations of herself in stone and bronze, and on canvass and glass, than exist of any other English monarch. This is the second statue that she has in Edinburgh, as she graces likewise the top of the Royal Institution; a building designed for a picture gallery. As I gazed upon this statue of a young Queen, upon whom every blessing seems to have been showered down, I thought how different had been the lot of her whose mournful history gave Holy-rood Palace its chief interest. More gifted by nature with personal charms and mental endowments, amiable in disposition and of a loving heart, she led a life of incessant terror, to suffer a cruel death at last. Certainly she had not the steadfast principles of the pure Victoria, but then poor Mary had been differently brought up, and she was sorely tempted. Poor Mary—happy Victoria: thus let my first parallel end. But surely the present Queen, happy in assured position, and in the affection of her people, and happy in a well assorted marriage, and in a lovely family, surely she does not forget, when occupying old Holy-rood, to sympathise with the trials and sufferings of poor Mary. The contrast between the two Queens, was afterwards brought very forcibly to my mind, when I made a visit to the old castle of Edinburgh. In one room of the castle, is a picture of Mary, showing, I think, more of her surpassing beauty, than any other picture I have seen; and hanging up on the wall close by it, is a Genealogical Chart, exhibiting the line of descent of her Majesty, Queen Victoria, through the Anglo-Saxon, Scottish and Norman Monarchs, and concluding with the words, "*VICTORIA, whom God preserve.*" Amen, I could truly say—may God preserve her for the benefit of this great people; and may he preserve her from the errors of the lovely Queen of Scots, and from her unhappy fate. May her character never be assailed, and may her reign be long, and be signalised in after years, as the good times of the happy and Virtuous Victoria. Alas, poor Mary! She had no well matched husband to satisfy her loving heart, nor sweet family allowed to grow up around her. Her counsellors

were not wise and prudent men; the times for her were out of joint; and she could not, in those fierce times, hold a sceptre; but how resplendently could she have adorned a throne, in times like these! And, therefore, while we join with those who cry, "*Victoria, whom God preserve,*" we will not forget the while to sigh, Alas poor Mary, beautiful Mary!

I chanced to see the Queen, the day after her visit to Edinburgh, pass by Stirling, on the railway. The cars of the special train that conveyed her party, (I think there were four of them,) were handsomely painted, and seemed to be sumptuously furnished within. A detached engine went on before, to clear the way of all possible obstructions. I have noticed the expression of the Queen's countenance on some occasions before, as not exhibiting the absolute self-possession that I expected to see. There was no want of this trait upon the present occasion. Her face was as composed as if she had been sitting for her daguerreotype. Two companies of Highland soldiers were drawn up at the station, to receive her Majesty. They were in full Highland dress, which is the uniform of a regiment or more in Scotland: it is strong, but is incongruous, uncomfortable, not very decent, and altogether absurd. They wear the petticoat with nothing under it, coming half-way down the thigh, and red stockings coming half-way up the leg, leaving bare and visible, a wide intermediate portion of red hairy flesh, that looks disgusting. I was told, that formerly, they wore trowsers under the kilt, in the winter season; but that an order had lately been issued from the Military Department, forbidding this solace in any weather; and requiring them to brave the cold as best they may, "which," said my informant, the Scotch coachman, "must be a sair punishment, in the interior of the winter." They wear also a soft, low shoe, with a broad buckle, looking as unmilitary, and unfit for service, as any thing that can be readily imagined. They have on the regular modern uniform coat; the short swallow-tail of which, dove-tails in a very funny way, into the gathers of the kilt. They have also modern arms. Why they should modernize every thing but the nakedness, is not easy to say. They have also a pouch of skin fantastically ornamented, hanging down in front. Some lairds in the Highlands wear this dress, I am told, from choice; and I saw in Edinburgh, a young gallant, vapouring about in this garb, with his dirk, or *skein duh*, stuck in between his stocking and his leg.

Some miscellaneous observations will close this article, which may well be styled rumbling, as I have been following the Queen in her processions, from London to Balmoral.

We have been accustomed, in the United

States, to respect the Queen for her domestic qualities, and I suppose that she deserves, on this score, all the praise she has received. The match between the royal cousins, is said to have been one of love; if this is uncertain, the sincere consubial affection existing between them, is not doubted; and domestic happiness, that so often flies affrighted from royal abodes, seems to have folded securely its silver wings, in Buckingham Palace. A gentleman told me, that he had been informed by the Physician of the royal household, that there was not within the range of his practice, a nursery that could exhibit better trained children. But physicians, as portrait painters, are but men. Much, however, of the credit of the *menage*, is attributed to Prince Albert, of whom I say nothing here, because I hope to have another opportunity of saying something about him, and something to his credit too. But every body says that the Queen is a model wife in all points. She is an early riser and very industrious in her movements, and as punctual as Shrewsbury clock. When she gives notice that she will be at any place at a given hour; as, for example, at the Crystal Palace at nine, or at Edinburgh at half-past two, she arrives at the minute. This is a virtue worthy a monarch, or at least, the want of it is most unkingly. I shall never forget how the King of Holland, one night, kept me and fifteen or twenty thousand other malcontents waiting, because of his wanton unpunctuality, for two miserable hours, in a crowd, perilous to life and limb, on the edge of the wharf at Rotterdam. For this, and other reasons, may I live to see Holland a republic. The Queen travels a great deal. They say that it is necessary for the health of her body, and perhaps of her mind. Some years ago, oftener than once, at particular times, she gave reason to fear, that her direct descent from George III, was not without its dangers. I am sure that there is no one that has every looked upon her brow, who would not be heartily grieved to learn that such a shade had gathered over it. The Queen is understood to be truly pious, and I verily believe that the English esteem this as a jewel in her character, more precious than any of the jewels that shine in her crown. The people love her very much, and only fear that she may die. But I think I have before said something in the *Messenger* upon this topic; and, therefore, I will forbear now. But I ask—is it surprising that they should love her, and be proud of her? Allow a monarchy in a free country, and could a throne be better filled? Look over Europe, and say if there is one, half so well filled? And so they pay her well. John Bull is a grumbler, but no niggard. She receives nearly two millions of dollars for herself, independent of the appoint-

ments for her husband, and her eldest son, the Prince of Wales; and, I believe, her other children also. She has at least seven Palaces, many thousand acres of pleasure grounds, and all other things in a concatenation according. She was not always so rich. Her father, just before her birth, was obliged to borrow money from some humble friends, to enable him to bring his wife to England from the Continent, that her child might be born on English soil. And what equivalent in service, does she render the people for so much money? Ah, that is a question for the English; let us leave that for them to settle; it would not do for an American to strike the balance. Does she interfere personally in the government? Certainly not. The English government is a machine that would embarrass her, if she had much to do with its practical working, much more than did the needle machine that she was examining, when first I saw her in the Crystal Palace: but she is the head of the government. Certainly, just as she is Commander-in-Chief of the Land and Naval forces; but she is no more an Elizabeth, than she is a Boadicea. How far she is the guiding head, may be judged in part, by the following sentence, taken from an eulogistic article, in *Tait's Magazine*: "We have had three Parliaments, and three Administrations, since Victoria ascended the throne; and she has held the reins so steadily, that no one can tell whether her leaning be in favor of Whigism or Toryism." In other words, she has had nothing to do with the practical administration of the government; for the essence of that administration, consisted in the ascendancy of one or other of these parties. I cannot forbear quoting another sentence, though rather long, from the same article, as it shows how trivial are some of the most important of the ultroneous acts of her Majesty. The writer says, that she gave up her privilege of free postage, when Rowland Hill's system was introduced, and adds: "The yielding up of this immunity, was a graceful acknowledgment of a great social improvement; and if her Majesty continue to pursue the course indicated by a step like this, and refuse her royal countenance to such items of expenditure as the erection of stables for the Prince of Wales, before his Royal Highness can possibly require such accommodations, the people will continue to bless her, and hail her as the Sovereign, *who, of all others, has entered most profoundly into their feelings, and sympathized with their hopes and struggles.*" Surely, popular favor was never offered at a cheap rate. Yet, the Queen is certainly not without political power; and if she should join any party, would be an important ally. So, too, she is the head of the church, nominally; but does not meddle much, either with its faith, or its go-

vernment; not having taken sides, openly, either for, or against, the Puseyites. Yet, here we may find an illustration of her personal influence; for her private opinions are supposed to be against the Oxford men; and this, undoubtedly, is encouraging to their opponents. Likewise, there can be no doubt, that the unanimous rising of the people against the arrogance of the Church of Rome, is to be attributed, in part, at least, to the fact, that one of the prerogatives of the Queen, was believed to be attacked.

But could not the English dispense with a monarch altogether, and govern themselves better without, than with the cumbrous, expensive, and inoperative machinery of the throne? Of course, I do not mean to discuss so broad and important a question, at the close of a sketch of the Queen; and I only allude to it, to say, that if the English ever get so fairly into the current of the Progress of the Age, as to attempt a real Republic, that there never could be a better time for the movement, than would be presented at the death of the present Queen. (*Quod diu avertant Di.*) The change of government would then be a deliberate act upon principle, as it ought to be, with such a people as the English; and never could the Phenix of Liberty hope for better ashes whence to arise, while monarchy itself would undergo a sort of apotheosis, and the sainted memory of Victoria, first and last of the name, be revered forever. S. L. C.

Notices of New Works.

THE ICONOGRAPHIC ENCYCLOPEDIA OF SCIENCE, LITERATURE, AND ART; Systematically arranged by G. Heck. With Five Hundred Steel Engravings. By the most distinguished artists of Germany. The text translated and edited by *Spencer F. Baird*, A. M., M. D., Professor of Natural Sciences in Dickinson College, Carlisle, Pa. New York: Rudolph Garrigue, No. 2 Barclay Street, Astor House.

Two years ago we had occasion to lay before our readers, in a somewhat extended notice, the leading features of this magnificent work, as they had been sketched out in the Prospectus, and partially exhibited in the first six numbers. The work is now completed, and though we can add little in its commendation to what we said at that time, we cannot let the opportunity, afforded by its appearance in a perfect form, escape us, to acknowledge its high claims upon public patronage. Justice alike to the enterprising publisher, Mr. Garrigue, and to Professor Baird, the faithful and intelligent editor, demands that we should do so.

Unlike many serials of pompous pretensions, the Iconographic Encyclopedia has fully maintained to the last,

the excellence of its letter press and the exceeding beauty of its steel engravings. We have recently been looking over these latter with great delight, and been impressed, in the agreeable occupation, with the truth of the old Horatian apothegm,

*Segnius irritant animos demissa per aures,
Quam quae sunt oculis subjecta fidelibus.*

One derives but a feeble impression from reading a paper, however clear and well elaborated, upon any scientific subject, compared with that which is made upon him by studying accurate diagrams and plates relating to it, and it is precisely upon this principle that the Iconographic Encyclopedia bases its title to general approval. *It writes by images.* In every possible branch of human investigation which is capable of being illustrated, it gives us spirited pictures of the *rationale*. Architecture, ship-building, painting, sculpture, national characteristics, the animal, vegetable and mineral kingdoms—all are set before our eyes in the most exquisite and life-like engravings. In dwelling thus upon the plates we would not by any means be understood to undervalue the text, which has been in part translated with fidelity and spirit from the German original, and in part written expressly for the American edition, by Prof. Baird and his associates, upon a more extended scale than the German. On the whole, we must say that in our judgment, Forty Dollars can not be expended to better advantage than in the Iconographic Encyclopedia.

A DICTIONARY OF THE GERMAN AND ENGLISH LANGUAGES, Abridged from the author's large work, for the use of learners. By *G. J. Adler*, A. M. New York. D. Appleton & Co., 200 Broadway. 1852.

We cordially welcome this excellent abridgment of Professor Adler's larger and more critical work. The volume to which we refer—his German-English Lexicon—can scarcely be rated too highly, for luminous method, clear arrangement, and philological discrimination in the mysteries of German compounds. Yet for this very reason it is less valuable for every-day use;—it is rather a complete and scholarly critical lexicon for those who have already penetrated deep into the language, than a dictionary for beginners. This abridgment is at once concise and full—contains, if we do not mistake, all the words of this larger volume—and in all but mere critical detail, is fully as valuable as that work. This we believe at least from a general comparison of the volumes with each other.

In no department of letters are progress and improvement more notable and certain than in the philological department—and for a very simple reason. Language is eternally progressive: and spite of the objections of those *laudatores temporis acti* which are found in every country, we may also say eternally improving in excellence and real value. Many persons sigh for the old Saxon English of Dean Swift, lamenting the Latinized and Gallicized and Hellenized English of to-day; but they are wholly oblivious of the vast scientific improvement of our tongue by the addition of thousands of new words.

The new is always the best Dictionary. We now have lying before us the "Christian Ludwig Deutsch-Englisches Lexicon—Leipzig, 1765," a somewhat famous tome in its day. We thought it of great excellence and value; but are constrained, for all *useful* purposes, to prefer much this little abridgment of Professor Adler bearing the figures "1852" upon its title page.

CHAPTER V.

Obstacles in the way of Carpenters at sea; Mess arrangements in a gale; Inconveniences from constant motion; Man overboard; Rope-yarn Sunday; Practices on the first Sunday of the month; The law of 1800 "for the better government of the Navy," copied from the English "Usage of the sea-service;" Religion in the Navy established by law; Contrast between the law for the army and for the navy; Third article of the law; Want of classification of crimes; Profane swearing contrary to law; Charge of drunkenness not easily proved; Various kinds of punishment; General summary of the provisions of the law; Authority to punish restricted to the Captain; Constitution of courts-martial; Capital offences in the Navy; Thirty-first article provides vicarious punishment; The hazards of life in the navy; Moral influence of the Act of 1800, on officers of the line; Assertion of line precedence or supremacy; The terms "sea-officers," "civil officers," and "officers proper of the navy;" Why assertion of line precedence is repugnant to staff officers; The term rank explained in a note; No definition of the term Navy; Authority in the navy; Responsibility of Captain; Summary Court; Inefficacy of Punishments; Corporal Punishment considered; Military government an aristocracy; Imprisonment as a means of correction; Classification of offences; No law for organization or government of the navy; Fallacious experience; Mode of legislation for the navy suggested.

March 25th. Latitude 26°26' north; longitude, 48°28' west. Fresh top-gallant breeze; the ship close hauled on a wind, bowlines taught, (i. e. tight,) and mizen topsail furled. We are dashing along at the rate of ten knots an hour. The work of the carpenters has been attended by many small annoyances and difficulties, which on shore, would be considered almost insurmountable. The moment a chisel or any tool is laid down, a roll of the ship may send it flying across the deck, not without danger to those in its way. Sometimes the entire work-bench is turned over

and the tools scattered; but such accidents do not stop the work.

March 26th. The day commenced with a strong breeze, and squalls, and at eleven o'clock, P. M., the ship was "lying to" under a close reefed main top-sail in a gale of wind. It was necessary to cover our mess-table by a wooden frame work, having compartments for the plates and dishes to prevent them from sliding away while we ate. It requires some exertion and experience to keep one's place at table on such occasions. In such times the cooks find it difficult to keep their fire and kettles in juxtaposition. Yet experience imparts skill under all circumstances; and old cruisers will not permit bad weather to excuse the cook from producing his dinner at the appointed hour. Men must eat, even if the topsails are close reefed.

March 27th—Night. The wind does not abate; the sea has increased, that is, the waves are larger and the motions of the ship are so great that the carpenters have almost given up their work. While I write I am braced in position, and candle and inkstand are tied fast. The wind roars among the spars and rigging as I have heard it in gusts through a forest. The timbers and staunchions are creaking; there is the surging of the rudder on its pintals as it is struck by the waves with a force seemingly enough to tear it away from the stern—a force computed to be equal to a weight of three tons to every square foot. There is the rushing, gurgling noise of the sea passing the sides, and an occasional splash of water tumbling in a shower on deck from a broken wave. Such are the mingled sounds around me, that the ship seems a huge living monster in agony of pain, endeavoring to suppress complaint. It is cheerless, even depressing. This eternal motion is exhausting; one cannot read or even think in the midst of such sounds until after long habit has made him indifferent to them. But we are in no danger; we are only uncomfortable, and our recollection of the gale will be lost in one day of pleasant sailing under a bright sky.

March 30th. The gale has passed away, but the weather is still boisterous and the sea rough. The ship is under single reefed topsails and courses. The latitude at noon was 24°52' north, and longitude 46°56' west. No trade wind yet.

At two o'clock Midshipman H., a boy of fourteen years' old ran from the lee-gangway, to-

wards the "officer of the deck" holding up a thermometer, his whole deportment exhibiting consternation. Utterance seemed to be lost; he stammered out, "Sir! Sir!"

"What's the matter, Mr. H.," demanded the officer; "broken a thermometer, eh?"

"No, sir; Maynard, sir."

"Well, what of Maynard, sir?"

"Maynard, sir, drawing a bucket of water to try the temperature, fell overboard."

"Man overboard, man overboard," shouted several voices.

"Cut away the life-buoys," cried the officer of the deck. "Rise tacks and sheets; man the main clue garnets and buntlines; down with the helm, quartermaster: up mainsail; man the weather topsail braces; haul foretopsail brace; let go that lee foretopsail brace: jump, men, jump: clear away the starboard quarter boat." The orders were given and obeyed in less time than is required to record them, and the almost immediate effect was to check the ship's headway, then six knots, and very soon to give her stern board, that is, cause the vessel to move stern foremost, and in the direction of Maynard, who was seen about two hundred yards off, rising and sinking from our view as the crests of waves hove up and broke between us. He sustained himself well, and seemed to be quite self-possessed. A life-buoy floated a hundred yards from him in one direction, and a ladder, which had been thrown over board, about fifty yards from him in another. Officers and men watched him from the taffrail with deep interest. It was evident that he saw neither life-buoy nor ladder. Some delay in lowering the boat was caused by a canvass boat-cover being laced over it as a protection from the effects of the sun. Yet a very short time elapsed, however long it appeared to us, anxiously excited for the fate of the man struggling for his life, within our sight, in a rough feathery sea. His cry of despair came to us in a feeble sound, but in a moment we had the delight to see the boat glancing over a wave, every man bending his oar, and presently a seaman in the bows stretched out his hand and seized that of the exhausted Maynard. We saw him lifted out of the water. Then the life-buoy was picked up and the boat returned to the ship. She was hoisted up to the davits and secured without accident, notwithstanding the rough sea. The boatswain managed her handsomely, and gained approbation for the coolness and skill he displayed.

Maynard was conveyed below, very much exhausted by his long swim and fright; and what man could undergo such peril, and escape without suffering from the effects of terror? He was pale, his lips blue; his eyes were glazed and al-

most starting from their sockets; his whole aspect betrayed fright and exhaustion. His pulse could scarcely be felt. He received the attentions his condition required, and in a few hours was able to speak composedly of what had happened.

Maynard is one of those slow-moving, helpless beings, frequently found among the "landsmen" on board ships of war. He was addicted to strong potations, and being unable to provide for himself by labor on shore, he had sought to serve his country in the navy: but he is not a solitary instance of a hard bargain among the patriotic servants of the people. He was willing to do all he could, but he could do nothing well; even when his intellect was not clouded by emanations from the grog-tub, he seemed to encumber every thing by his help. In the course of his duty, he had attempted to draw a bucket of water for a midshipman of the watch, whose business was to ascertain and record the temperature of the sea. This is done once in two hours. As the ship rolled deeply to leeward, a wave caught the bucket, with the effect of communicating a powerful jerk to the man holding the rope attached to it, because he held it tightly. He lost his equilibrium, and holding fast to the bucket, pitched into the sea.

When he rose to the surface, he found the little wavelets, formed on the face of the great waves, were blown in feathering spray and dashed almost continuously in his face. He was forced to swallow a considerable quantity of salt-water, and his first effort was to avoid it. He beheld the ship bounding away from him under single reefed topsails before a strong wind. He had no distinct appreciation of his peril at first. But a doubt that he was missed, or if missed, could he be seen, occurred. He saw the ship change her course, so that her side was offered to his view, but the next moment her stern was presented to him again, and his hope sank under the idea that on one knew he was not in the ship. The spray almost beat his head under. He saw neither life-buoy, nor ladder, nor boat; the stern of the ship was towards him and to his imagination, she was fast leaving him to perish in the midst of the ocean. It was then, in a phrensy of despair he began to shout.

The incident made no impression upon him morally. Bodily pain and the fear of being left were strongest in his memory. He did not remember whether a distinct idea of death and eternity had entered his mind at all. It is very certain his love of grog was not abated by the event.

April 1st. For eight days past the wind had been from the southward and eastward. Our course lies southeast, and therefore against the

wind. Showers of rain and squalls have filled up the day. I note the weather, because we are making a track for Maury's wind and current charts.

The sea has subsided considerably, but to keep out the water, it is necessary to keep the upper half-ports shut in. This is "rope-yarn Sunday." The ordinary work of the ship is suspended as far as practicable, and the day is allotted to the men for the purpose of making and mending their clothes. Every thorough-bred seaman is able to make his own wardrobe, from head to foot. Wherever a dry spot can be found on the gun-deck, groups are seated with their clothes' bags cutting out and sewing garments. The name of the day seems to be connected with the comparative quiet which prevails. Thursday, or Saturday, is commonly the special day for tailoring; but almost every day men spend a part of their leisure with the needle; some of them use it very skillfully.

April 2nd. Being the first Sunday of the month the religious services were preceded by reading selections from the naval articles of war, that is, "an act for the better government of the navy of the United States," approved April, 1800. On board of well disciplined ships, the officers and crew are mustered on the first Sunday of every month to hear read by the Captain's clerk, such portions of this antiquated law as bear especially on the conduct of sailors. On this occasion the officers are in parade dress; the formality is calculated to increase respect for the law. This custom is commendable, because it is calculated to acquaint every one with the provisions of military law under which he lives: but the law itself is so little in harmony with the spirit of our political institutions, and in many respects so directly at variance with daily practices and omissions afloat, that it is questionable whether the reading of it in the usual manner is advantageous to discipline. It is generally followed by discussions at mess-table which commonly result in convincing every reflecting mind that the whole system of naval organization and law should be revised.

The law of 1800, "for the better government of the Navy," consists of eleven sections. The first section contains forty-two articles; the second three; the sixth, seven; and the remaining sections one each. It is the only statute designed for the regulation of the naval service. It was probably sketched by naval officers of the time, and may be regarded as an imperfect transcript from the British statute book. In those days we acknowledged our inferiority to Great Britain, by imitating her in all things relating to the navy; a contract for iron guns for the navy in 1796, stipulates that they "shall conform exactly in

weight, bore, calibre and length, to British ship guns of the same dimensions now in use."* We have ceased to copy the models of British guns and British ships; it is time to have some improvement in our copy of their naval statute book.

Look at those naval articles of war; listen to the strictures upon them which may be heard during discussions at mess and in pleasant moon-lit first watches.

The first article enjoins upon commanders of vessels of war, "to show in themselves a good example of virtue, honor, patriotism and subordination," and to watch over the conduct of those under their command, and "to correct all such as are guilty of "dissolute and immoral practices" "according to the usage of the sea service."

Every Christian gentleman will respect this simple recommendation.

But it gives to commanders an indefinite power to correct the conduct of subordinates by an indefinite rule. The usage of the sea service is not uniform: each commander establishes rules for the internal regulation of the vessel under his command, and carries them with him, modifying them from time to time as his own experience may suggest. There is an usage of each commander, but scarcely any practice is uniform throughout the navy. The rules which govern the allowance of water may be taken as an example; one commander gives his crew as much water as they require; another allots every man one gallon and not a drop more, and a third limits the allowance to a less quantity. It may be fairly asked, the usage of what sea service is to rule? When the law of 1800 was enacted our navy was too small and too young to have acquired an usage of the sea-service. It is presumable that the usage which obtained in the British navy, upon which our own is modelled, was contemplated by the framers of the law. But how is British sea-custom to be applied in the navy of the United States? Our commanders may be ignorant of the details of British naval usage without incurring reproach; yet, in minor cases at least, they are enjoined to correct the faults of subordinates by the *lex non scripta* of a foreign sea-service in which they have had no experience.

The usage of the sea-service in legal construction, means the *lex non scripta*, or common law of the sea-service peculiar to a nation. To be available in law, a custom must be sanctioned by general consent, and be undisputed for a very long period—certainly not less than twenty years. Next, if it exists, its *legality* must be established; for if it is not a good custom, it ought to be no

* American State Papers. Naval Affairs.

longer used; and to be good, it must be legal and immemorial. A usage or custom to be *immemorial* in England, must have been used so long "that the memory of man runneth not to the contrary. So that if any one can show the beginning of it, it is no good custom. For which reason no custom can prevail against an express act of parliament, since the statute itself is a proof of a time when such custom did not exist." "Now time of memory hath been long ago ascertained by the law to commence from the beginning of the reign of Richard the First; and any custom may be destroyed by evidence of non-existence in any part of the long period from that time to the present."* The reign of Richard I. began about the year 1189.

Again, what practices are dissolute and immoral, besides those specified in a subsequent article of the law? It is difficult to give a definite answer. If a commander fail to be exemplary in his own conduct, or to notice the deportment of those under his command, how can he be legally punished? Upon this point even the usage of the sea-service may be appealed to in vain for reply.

The second article requires that "Commanders of all ships and vessels in the navy having chaplains on board, shall take care that divine service be performed in a solemn, orderly, and reverent manner twice a day, and a sermon preached on Sunday, unless bad weather, or other extraordinary accidents prevent it: and that they cause all, or as many of the ship's company as can be spared from duty, to attend at every performance of the worship of Almighty God."

This article is clearly mandatory; but there is no definite punishment laid down for its infraction on the part of commanders. It is unusual to respect all its provisions. In the course of more than a quarter of a century I have not known of religious service on any other day than Sunday, and on that day, only a single observance, and not "twice a day," as the law directs. I have heard of one ship only on board of which there were two daily religious services.

By what rule is it to be determined that the manner of performing divine service is solemn and reverent? Opinion on this point will vary according to sectarian views. Religious services performed after the manner of Methodists or Presbyterians, are not respected by Roman Catholics, and by them would not be regarded as solemn or reverent; nor can those of the several protestant sects, *in foro conscientiae*, consider the daily mass of the catholics respectable, solemn or reverent.

What manner of divine service does this law require to be performed "twice a day?" There

is nothing either in the letter or spirit of the law from which a reply can be inferred. But all sects in the ship, whether Roman Catholic, protestant, dissenter or jew, are required to join together in some kind of religious worship. In too many instances, we imitate British practices; so in this, the Episcopal service of the Church of England, regarded as it were in the light of a compromise of all religious views, has come to be, in form, the established religion of the Navy of the United States. If sailors generally entertained definite views of religion, there would be very often difficulties of conscience to overcome in order to obey the call to divine service. But being for the most part totally indifferent on these points, they observe religious ceremonies as they do military parades, simply because it is part of the duty they have agreed to perform.

Individuals, both officers and privates, have urged that to be present at the Episcopal services, was repugnant to their religious faith; and on this ground they have been excused by the commander of the vessel from assisting in Sunday's worship. Commanders are guilty of assumption and arrogate power, when they assume to suspend or abrogate entirely the operation of any law, either wholly or in part. Some parts of the Act of 1800, authorize commanders to exercise a discretion in the discharge of special duties under it; but the theory is that efficacy of law depends upon obedience to all its provisions; and, therefore, unless it be expressly stated otherwise, no one charged with its administration can safely be permitted to excuse, at discretion, any one from its operation, or enforce one part of the law, while he openly disregards another provision of the same statute. The moment officers assume a right to select particular provisions of a law for their guidance, or to reject parts of a law, they virtually exercise a discriminating and partial veto power over the acts of Congress, and thus far bring law into contempt and set it at defiance. The clause in question is imperative; its language is that commanders "shall" "cause all, or as many of the ship's company as can be spared from duty to attend at every performance of the worship of Almighty God." It leaves the commander no discretion in the premises; it gives him no authority to excuse individuals on any other plea than that of duty. And when he assumes it, he acts contrary to the injunction of the preceding article, and no longer shows a "good example" of "subordination;" and, if declining to attend church be included among them, he not only fails "to correct," but encourages "immoral practices," whenever he excuses any one from assisting at the performance of divine service. But he has quite as much right to excuse

* Blackstone's Commentaries

men from Sunday worship as he has to entirely dispense with the religious services which the law commands to be performed "twice a day."

There is another question under this article, which abstractionists and strict constructionists may consider to be of paramount importance. Can an officer or private in the navy be legally punished for disobeying an order to attend divine worship?

The law directs divine service to be performed twice every day, a sermon to be preached on Sunday, and requires that all persons on board shall attend at every performance of worship. If this can be regarded as a "law respecting an establishment of religion," it is unconstitutional, and its provisions are null, because the constitution of the United States declares that Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof."

John O'Brien, Esq., of the United States army, states the argument on this point; it seems to be so pertinent and conclusive, that I commend it to attention.

"The first amendment to the Constitution declares that 'Congress shall make no law respecting an established religion, or prohibiting the exercise thereof? This is a general, sweeping prohibition, admitting no exception of persons, places, or officers. It deserves attention. Congress is not merely forbidden to establish a religion, or to make any law even respecting such establishment. The amendment goes further, thus: The legislature is prevented from making any law respecting the establishment of religion, not a religion, or any special religion, but religion in its widest and most extensive meaning. The word thus used refers not solely to this or that particular creed or sect, but to all religions and all sects collectively, as well as to each of them individually.

"The framers of our constitution and the people who adopted it, deemed religion far too sacred and high a matter for the interference of any human power, and for this reason they jealously guarded against any action whatever by the legislature on this sacred subject. Our government is formed to settle the relations of man to man, but dare not intermeddle with those of man to his God. Any law of Congress requiring any one man, or any set of men, to attend divine service, were it but on one single occasion, is a law respecting or relating to the establishment of religion. Such a law would, therefore, be null and void. Congress might not designate any particular form of service, and thus might not make a law respecting any particular form of religion. It would, however, be not less a law, respecting the establishment of religion generally, and would, therefore, come

under the law of the Constitution. Our whole political theory is opposed to such legislation. A fundamental axiom with us is, that political governments have no right to meddle, in the remotest manner, with religion in any way, shape or form. Under our Constitution, neither Congress nor any individual, has the shadow of a right to compel any one to attend the divine service of any church whatever, even if such church be of his particular creed. This amendment to the Constitution renders null and void, in all cases and for all persons, any law, military regulation, or order, requiring attendance at divine service. No pretext of military discipline will avail, since the Constitution is full, clear and imperative, making no exceptions and admitting none.

"The amendment we are considering, also forbids Congress to pass any law prohibiting the free exercise of religion. Any law enforcing attendance on divine service would, so far as it was effective, prohibit the *free* exercise of religion. Any individual who was thus forced to attend church, would practise religion not *freely*, but on compulsion.

"Again, it is a matter of religious duty with members of some creeds to abstain from attendance at divine service of any other than their own church. This abstinence is for them, as much an exercise of religion as any positive act. They are exercising their religion by this, as much as a Jew is doing so, when he abstains from the flesh of unclean animals. Now, if a law requires him to attend a divine service of a church not his own, it prohibits him not merely from the *free* exercise of his religion, but from any exercise of it in this particular.

"With regard to such persons, there is yet another protecting article in the Constitution. The sixth article of this instrument declares, that 'no religious test shall ever be required as a qualification for any office of public trust under the United States.' A religious test is the requiring of any act to be done, or any article of belief to be asserted or derived, as a condition of office, which act or assertion is in violation of the trusts of one or more religious creeds. If the religion of any individual requires him to abstain from attendance at any particular form of divine service, and it is made by law a part of his official duty to be present thereat, such law imposes a religious test on this person, and virtually excludes him from office on account of his religious belief.

"As an objection to the arguments founded on conscientious scruples, it is urged that the reasoning which has been used proves too much. The members of some religious denominations are opposed to war, and to all forcible resistance to wrong. Still, from the arguments used, it

compulsory on an officer or soldier to do his essential duty of opposing the public enemy.

"This objection, so plausible in appearance, will, on examination, be found to have no bearing on the point at issue. The general principle is fully admitted, that any construction of one part of the constitution which renders another portion of the same instrument a mere nullity, must necessarily be erroneous. One clause may limit or modify the effect of another, but it can never destroy it. In any case, therefore, where those parts of the constitution securing religious liberty, must, if carried into vigorous practice, annul, in effect, the power vested in Congress of creating and organizing an army, [or navy.] we are bound to conclude that they are modified and restricted by this grant. This is on the principle that the grant of any power, carries with it the grant of all powers necessary for its exercise. But this principle by no means interferes with another of equal force, which is that in all cases where two clauses of the Constitution do not conflict in any way, both are to be deemed of full force. We have seen that certain clauses of this instrument prevent the passage of any law requiring attendance at divine service. If it can be shown, that this prohibition necessarily interferes with any power necessary for Congress to exercise the prerogative of raising or organizing an army, we will readily admit, that so far as it does so conflict, and so far as it relates to the public force it is ineffective. To do this it would be necessary to prove that attendance on divine service was an obligation of such nature, that an army [or navy] could not exist, or that it could not perform its essential and appropriate duties without conforming to it. If this cannot be made evident, then Congress has as little power of requiring the attendance of soldiers [or sailors] at church, as it possesses over citizens.

"On this point but little need be said. It is evident to every mind that attendance on divine service is purely a religious duty between man and his Creator. It is in no sense a military duty. Armies [or navies] are raised for no such purposes. Desirable, then, as it may be to encourage religion among all men, the Legislature has no power whatever to force this matter either on the army, [the navy,] or on the public at large. It must be left to each one's conscience and sense of gratitude to the Deity.

"It is true that Congress can enforce duties, other than military ones, on soldiers [or sailors,] but its power in this respect over the military, [ashore or afloat,] is precisely the same as it is over citizens. It is subject to the same restrictions. And if the fundamental law of the Union has prohibited any interference with religion and religious duties, this prohibition is of as full force

with respect to the army as to citizens, unless, indeed, it can be shown that such restriction is inconsistent with the existence and essential purposes of the army."

The second article of the act of 1808 is strikingly in contrast with the second of the articles of war which govern the army. We have seen that the first is imperative; but the last is simply advisory; its language runs thus: "It is earnestly recommended to all officers and soldiers diligently to attend divine service," &c.

The object of Mr. O'Brien in his argument was to show why "Congress did not declare that it is required of all officers and soldiers" to attend divine service. It is evident from the general tone of the article, that Congress entertained a strong desire that soldiers should attend church; but in obedience to the Constitution, it refrained from compelling them to do what it only earnestly recommended. "A recommendation, however urgent, is not a command."

The enactments of Congress on this point for the army and navy are remarkably opposite; in one case the constitution is respected; in the other it is disregarded. Congress alone is responsible for this discrepancy. It is the duty of the national legislature to make laws; and at the same time to treat the Constitution with entire respect, by acting in perfect subordination to its provisions. It is the duty of every citizen, whether employed in any branch of the military service of the government or not, to obey the law. It should not be presumed by an officer of the navy, or army, that Congress and the Executive would make an unconstitutional law. Has an officer of any grade authority to decide upon the constitutionality of a law, and to be governed in his action under it according to his own decision? The assumption and exercise of such authority must endanger military discipline, and tend to place men in the power of officers who might be cruel and capricious, almost beyond the protection of law. No such authority should be recognized.

If legislators in their enactments are openly insubordinate to the Constitution, they should not complain of those who are insubordinate to their statutes. Through the influence of pernicious example, disobedience may be transmitted from the legislature, in a descending scale, from the commander-in-chief to the privates in our military establishments, with the effect of destroying all discipline and subordination. Disobedience to law should never be permitted in any case. If a law be unconstitutional even, it belongs to the law-making power to annul or amend it, and

* A Treatise on American Military laws, and the practice of courts martial; with suggestions for their improvement. By John O'Brien, Lieutenant in the United States Army. Philadelphia. 1846.

would follow that Congress could not make it not to those whose office is to administer and obey the laws. While he acts in obedience to law, it is a privilege of every American, if he believes the law to be wrong, to state his objections, so that they may be considered by legitimate authority; but he must submit cheerfully to the result of deliberate examination by such authority, even when contrary to his own deductions.

The third article of the act of 1800 is as follows: "Any officer, or other person in the navy, who shall be guilty of oppression, cruelty, fraud, profane swearing, drunkenness, or any other scandalous conduct, tending to the destruction of good morals, shall, if an officer, be cashiered, or suffer such other punishment as a court-martial shall adjudge: if a private, shall be put in irons, or flogged, at the discretion of the captain, not exceeding twelve lashes; but if the offence require severer punishment, he shall be tried by a court-martial, and suffer such punishment as said court shall inflict."

The classification of crimes or offences here is remarkable. Oppression, cruelty, fraud, profane swearing, and drunkenness are all embraced under the mild generic denomination of "scandalous conduct" and, are of the same enormity, if measured by the penalty awarded by the law. An officer guilty of any one of these offences may be cashiered, that is, discarded disreputably from the navy, or he may be punished in any manner a court-martial may point out; but a private is subjected, ordinarily, to be punished at the discretion of the captain, by flogging to the extent of one dozen lashes, or by being put in irons. The period of confinement in irons, or whether he is to be in manacles only, or in shackles only, or in both, is not stated. The captain assumes that all these details are left to his discretion and he acts accordingly.

Oppression and cruelty are classed with "profane swearing." The last in a military point of view, is merely a gross, absurd vulgarity, which brings no absolute injury on any one, but cruelty is a wanton infliction of misery, calculated to goad men to mutiny. As far as it relates to profane swearing the law is obsolete: I have no recollection of hearing of any officer or man being punished for this indecorous habit.

It is difficult to establish a charge of drunkenness against an officer, or even against a private, before a court-martial. But when the allegation is made against a private, commanders have little hesitation in deciding upon the charge, or in sentencing the offender to punishment. It is very rarely that privates are innocently punished by captains under this charge; but they sometimes escape deserved castigation when the case is tried before a court. The reason is that witnesses are

reluctant to testify on a point which has no clear definition in their minds. They are not satisfied that when the mental equilibrium is disturbed in any noticeable degree, consequent upon swallowing intoxicating drinks, that the condition is described by the term drunk. There seems to prevail a vague notion that illegal drunkenness consists in a total suppression of mental power, accompanied by an almost complete loss of muscular ability, resulting from drinking an excessive quantity of distilled or fermented liquor.

Court. "Was he drunk at the time stated?"

Witness. "I should not say he was *actually* drunk; he talked a little thick, and could'n't walk exactly straight; he might have been a *little* disguised as regards to liquor, but I can't swear he was drunk."

Court. "What do you understand by the term, drunk?"

Witness. "I can't say exactly, for I know some men who are smarter for being a little sprung. I once knew a mate that wasn't fit for duty till he got his three or four glasses in him. I suppose a man's drunk when he is fighting, noisy, don't know his friends and won't listen to reason. The court knows, a man may get rousing; merry over his glass, say and do many foolish things, and none of the company say he was drunk. I should not like to swear a man was drunk, unless I was very clear as to the fact."

A very free construction has been placed upon this article, and modes of punishment instituted which are not even alluded to in the law. In practice, privates were put in irons and flogged. In many cases confinement and restraint are necessary preliminaries to trial; in such instances, simply putting in irons cannot be fairly considered as the punishment. A man in a state of riotous intoxication is put in irons to prevent injury to himself and others; but if released on becoming sober, and he escape subsequent castigation because he had been already confined, there would be in fact no punishment for his offence. Among the modes of punishment not alluded to in the law, which have been resorted to in the navy, are the "colt" or rope's end; the rattan; carrying a heavy shot during a watch; standing upon the capstan; riding the spanker-boom; gagging; bucking, &c., &c. The two last are rare. Gagging is effected by securing a rod of iron or wood across the wide open mouth; it is employed as the only effective mode to stop a stream of the vilest, vituperative profanity which angrily drunken seamen alone are capable of imagining. Bucking is a means originally invented for securing such prisoners as possess a natural facility of escaping from fetters; it consists in placing a bar or rod of sufficient length crosswise beneath the hams and in front of the elbow joints, after the

wrists and ankles have been put in irons. This arrangement of course confines the prisoner to a sitting posture, and restrains his motions to very narrow limits. It must be a most irksome position to endure for any considerable period.

These and some fantastic modes of punishment may have had their origin in the British navy in the days of Benbow and Roderick Random, long prior to the discovery that crime might be cured by "moral suasion." These modes of chastisement are used for the correction of minor faults, such as do not require the severity of the "cat." They are not to be considered indicative of the cruel or tyrannical spirit of officers; they are more open to be charged with culpable leniency, than harshness in the administration of the naval code. Nor are these modes of punishment positively illegal, although they are not prescribed in the law: they are, it is to be asserted, "according to the usage of the sea service," and therefore sanctioned by the first article of the act of 1800.

The three first articles of this statute, it has been shown, are designed to correct those who err in their conduct morally; no one of the offences named or alluded to is peculiar to military organization.

Articles four, five and six award death or such other punishment as a court-martial may adjudge, for neglect to prepare at the proper time for battle; for disobedience of orders, and for cowardice, negligence or disaffection during battle. Article seven enjoins the preservation and transmission to the proper officers of all papers found on board of prizes, and mulcts any invasion of this injunction, in the share of prize money due the offender. Embezzlement of property taken from the enemy, and pillage of prisoners are punishable by sentence of court-martial, according to articles eight and nine. Holding unauthorized intercourse with an enemy; failing to report within twelve hours the receipt of any letter or message from an enemy or rebel, subjects the offender to the penalty of death, according to articles ten and eleven. Article twelve provides that spies shall suffer death. According to article thirteen those convicted of mutiny shall suffer death; but mutinous or seditious practices may be punished at the discretion of a court-martial. Article fourteen provides "death or such other punishment as a court-martial shall inflict" for disobedience, and for assaulting or attempting to assault a superior officer on duty. Quarrelling is punishable at the discretion of a court-martial. The only penalty of deserting to an enemy, (article sixteen,) is death; but desertion without this aggravating circumstance, (article seventeen,) may be punished with death or otherwise at the discretion of a court-martial.

Frauds against the United States, (article nineteen,) and loss or injury to vessels from heedless navigation are punishable at the discretion of a court-martial: but an officer who sleeps upon watch, (article twenty,) or otherwise neglects his duty, "shall suffer death" or other punishment; a private guilty of like offence may be flogged or put in irons. Murder committed by any one of the navy while beyond the territorial jurisdiction of the United States, (art. 21,) may be punished by death. Failure in discharging properly the duty of convoy of vessels, (art. 22,) is punishable at discretion of a court. To receive merchandize on board public vessels, (art. 23;) to waste or embezzle public property, (art. 24,) are punishable as a court may determine; but a wanton destruction of public property, (art. 25) incurs the penalty of death. Thefts of amounts of less than twenty dollars, (art. 26,) are punished at the discretion of the captain; beyond that value by sentence of a court. Offences committed against people on shore, (art. 27,) are subject to punishment by sentence of court-martial. Every person in the navy is liable to punishment, (art. 28,) if he fail to do his best to bring offenders against the law to trial. Article 29 relates to muster-rolls, books, &c., transfer of accounts, and directs that the captain "shall cause the rules for the government of the navy to be hung up in some public part of the ship, and read once a month to the ships company." It is common to see the commander's general orders for the internal regulation of the ship under his command hung up, but not "the rules for the government of the navy." Article 30 restricts authority to punish to the captain, and limits punishment by him to twelve lashes with the cat-o'-nine-tails; but the authority was for many years exercised by the lieutenant on watch. Any master-at-arms who may suffer a prisoner to escape from his custody, (art. 31,) "shall suffer in such prisoner's stead." Crimes not specified, (art. 32,) are punishable "according to the laws and customs in such cases at sea." The remaining articles refer chiefly to the constitution of courts-martial, which are composed always of commissioned officers of the line exclusively, although neither the letter nor spirit of the law requires that members shall be of that class alone. There is one exception on record: a man was tried and convicted of murder by a court, convened under the authority of the late Commodore Jacob Jones in the Pacific, part of the members of which belonged to the medical staff of the squadron.

The second section of the act refers to courts of enquiry. The third section provides for the continuance of the authority of officers in case of wreck or loss of the vessel. Section 4, pro-

vides that the pay of those taken by the enemy is to continue. Section 5, makes prizes the property of the captors; and sections 6 and 7, relate to the distribution of prize money. The class of steam engineers were not in existence in the year 1800, and for this reason they are not mentioned in the law. Sections 8, 9, and 10 relate to pensions.

This brief summary of the act of 1800 shows how little it is in harmony with the spirit of the age; its barbarity might be inferred from the fact that there are not less than sixteen offences to which the penalty of death is attached.

To neglect to prepare for battle;

Disobedience of orders, or cowardice, or disaffection during battle;

To hold unauthorized intercourse with an enemy or rebel;

Failing to report within twelve hours, the receipt of a letter or message from an enemy or rebel;

To endeavor to corrupt any person in the navy to betray his trust;

To disobey the lawful orders of a superior officer;

To draw, or to offer to draw a weapon upon him;

To desert or entice others to desert;

To perform duty negligently;

To sleep on watch;

To leave his station before being regularly relieved;

To burn or unlawfully set fire to any kind of public property;

Mutiny and murder. And all these offences are alike punishable by death under this code.

But the most barbarian-like clause of the whole is the thirty-first, which makes the master-at-arms, (a petty officer who performs the functions of a jailor,) responsible for the crime of any prisoner who may escape from his custody: its language is, he "shall suffer in such prisoner's stead." This clause has never brought any master-at-arms to the gibbet, but its provision is not the less unchristian on that account: it partakes of the spirit of the Chinese law, which sanctions vicarious punishments for all crimes.

Truly, the hazards of life in the navy are numerous: it is exposed to the chances of battle, to the perils of the sea, to the pernicious influences of climate, and lastly to an antiquated and barbarous code of laws. It is true, Congress has abolished punishment by the cat-o'-nine-tails; still, under a code which sets out with marked attention to minor morals and manners, and the establishment of a national religion afloat, men may be hung, or ignominiously shot to death, almost *ad libitum*.

There are certain features in this code which

tend to develope and foster the self-esteem of those who hold office under it; especially of those in whom vanity naturally preponderates in the mental constitution. A midshipman, a mere boy, may be a "superior officer;" at any rate, he is likely to think he is always, relatively to privates. This reflection is not calculated to diminish his importance in his own estimation. If he is a giddy youth, it may be anticipated he will soon acquire an imperative and overbearing deportment towards inferiors, as he is reminded monthly that the law puts at stake the life of any sailor who even offers him the slightest personal injury. Feeling that the law protects him from assault by an inferior, under penalty of death, and from simple insult or disrespect, under pain of the "cat," he acquires confidence. He may have no disposition to enforce the law; still it imparts to him a sense of security, in the same manner as arms at hand give a confidence where there is possibility of being attacked, even when one is decidedly averse to using either sword or pistol offensively. While the law, in this view of it, tends to encourage official vanity and pride, it exerts an humbling, an humiliating influence over privates. In some instances at least, instead of exhibiting a simple manly respect, they become cringing in manner towards officers of all degrees and quality.

The idea exists pretty extensively that the chief, if not the only objects of this law are to support officers of the line in the discharge of duty. It gives a discretion to captains and to courts-martial in awarding punishments for crime; as it is the practice to constitute courts of line officers exclusively, and as none can become captains except line-officers, it is easy to infer that power, respectability and distinction can inure only to the line: the staff is excluded. In the minds of very many, staff-officers are never admitted to an *official* level with those of the line under any circumstances whatever, although they pay to staff-officers, *unofficially*, due respect, and entertain for them personally, as much consideration and kindness as gentlemen can reasonably expect or desire from each other. If a surgeon and a purser of twenty years' experience in the navy, and a newly commissioned lieutenant of the line were directed to examine a cheese, and report in writing their opinion on its condition or quality, the chances are ninety-nine in a hundred, that the young lieutenant would claim as a right, inherent to his pertinency to the line, to place his signature to the joint report above that of the old surgeon and purser. Yet, in his opinion, perhaps nothing would be more preposterous, than to see the name of a senior lieutenant of the line, written below his own, on any official paper. There is a feeling, a tone of official

supremacy among line officers of every grade, which they think their duty requires them to assert over staff-officers upon all *official* occasions. A line-officer of the grade of commander and a surgeon may have associated for years; and, as friends and mess-mates, shared in common the pleasures of life, and faced the dangers of battle and escaped shipwreck together: yet, while as an individual he would incur any risk to serve him, the commander would be a little disturbed, if that surgeon should so far question his precedence and supremacy, as to precede him in ascending a ship's side-ladder on an *official* occasion, or sign an official paper before him. His official self-esteem would be wounded, and he would, most probably, remind his friend of his own official importance.

This punctilious feeling is illustrated also by the names of classes in common use, which seem to have been contrived to foster the ideal superiority of the line: at least the sensitiveness of staff officers has suggested such a construction. Officers of the line have been erroneously termed "sea-officers," while those of the several staff departments, as the medical, the pay and provision, and the steam engineer departments, have been as erroneously called "civil officers." The duties of all are alike performed at sea, and therefore, the name "sea-officers" is equally appropriate to all: and, as all are alike subject to military laws, to military tribunals and customs, wear military badges and trappings, and are imbued with a common military tone and spirit; and, as the object of the combined labors and vocations of all are alike military, there is no propriety in calling any of them "civil officers." It is true, these names might be considered to be simply technical: but, even admitting this, they are not well chosen. Since officers have not been content to call themselves exclusively "sea-officers," they have also styled themselves "the officers proper of the navy," as if none others are properly officers of the navy. This indication of a desire on the part of line-officers to be prominently distinguished above the class mis-called "civil," has, in effect, diminished the respectability of the latter appellation in the navy, and made it, in a manner, distinctive of an inferior caste, composed of staff-officers, whose position in the navy is like that of a first wife's children in a family, ruled by a cold-hearted step-mother who has offspring of her own; they have the family name, but are not allowed an equal voice or position in the household, to the support of which they may contribute a full quota.

Professional ambition is laudable. But to vainly boast of belonging to a profession, as if all merit consisted in the membership, is almost inexcusable, even among very "young gentlemen."

It is an honor to be of the navy, for the reason that the glory of its achievements sheds a distinguishing ray upon all its members, both ancient and modern, whether of the line or staff. In the language of the distinguished conqueror on Lake Erie: "There is glory enough for all;" no man need complain of his share, or seek more, by assuming titles, calculated to disparage the labors of those in any department of the service, necessary to its efficiency.

There is nothing in the letter of the law of 1800 to warrant notions of the kind described; but its general spirit tends to produce the effect alluded to. Officers of the line commence their military career as boys, and grow up under this code; the notions inspired by it become so familiar to their minds, that their propriety is neither questioned nor examined.

This tone of line supremacy and line precedence, so continuously asserted, is not peculiar to our service. It is common in the British navy; but there it is less remarkable, because the punctilious attention given, in the society of Great Britain, to the consideration of rank and precedence, seems merely to find an analogue in the organization of the navy and army of an aristocratic government. Under a republican form of government, however, any assertion of supremacy of the sort stands out prominently and becomes remarkable, if not offensive. It is totally at variance with our political institutions and social condition. It might have been anticipated that military organizations, closely copied from those of an aristocratic government, would not harmonize with the principles and customs of a free democracy, under which the law gives no man precedence. If a citizen gains precedence or supremacy, he owes it to a common appreciation, by the public, of his distinguished talents, or merit of some kind, but never to legal enactment or official vocation.

When adult men, who have been educated and grown up under a democracy, enter the military service in the staff of either the army or navy, which is necessarily organized on the aristocratic principles of government, they find this assertion of precedence and supremacy of the line, on all official occasions, repugnant to all their established opinions. They soon become imbued with the military tone of the society of which they constitute a part; but they never learn to feel, they should always appear in public as the inferiors of their mess companions of the line. They feel that a law of seniority should be, in its operation, common to all. Probably this is the reason why the medical officers, as long ago as 1816, asked for a definite position, or assimilated rank, in the military organization of the navy. To very many, their pretensions and

claims have not seemed to be unreasonable; but they have been continuously resisted by the line generally, and in spite of the general order of the Secretary of the Navy on the subject, issued in August 1846, the question is still mooted and remains unsettled. And it will probably thus remain until a code of laws, in harmony with our political creed and the progressive spirit of the age, is devised for the government of the navy.

It will be perceived that, in my poor opinion, these pretensions between officers of the line and of the staff about rank,* that is, relative position, have their origin exclusively in the antiquated law of 1800, in the system, the confused organization of the naval service, and in its want of harmony with our political and social condition.

Connected with the formation of a code of military law for the navy, there are several points of interest and importance, which should be deliberately considered: a navy is defined to be a body of citizens armed and trained to fight the enemy at sea—an army distributed in fortresses which move about on the ocean. A ship's company, in a frigate, compares with a regiment of the army; but the companies of the naval regiment are called "divisions." Besides fighting the great guns and discharging other purely military duties, our nautical soldiers, or men-of-war-men, are required to manage the machinery, by which their fortress is made to move from place to place. They exercise, as it were, a double vocation; they are sailors and soldiers at the same time.

The object of a military organization by land or sea, is efficient military aggression and defence. Authority must be centered in one man; and to him all must render prompt and cheerful obedience to secure success. What is true in this respect of an entire army or navy, must be true of its separate, component divisions. All authority and power, necessary to fight and sail a ship, must be placed in a chief officer, the captain; but they should be strictly limited to these ob-

*The meaning of the word rank, used as a military technicality, is relative position. It means nothing more nor less. It is sometimes used synonymously for the word grade; but a little examination will show that it should never be so used when precision is desired. There are several grades of line-officers: the grade of captains, the grade of commanders, of lieutenants, &c. All captains are of the same grade; but no two captains are of the same rank; every captain has a position which is relative to other captains, and (the senior excepted) is below some one in the grade. A ranks B, because his relative position is before that of B on the list: so, it is said, captains rank commanders; because the relative position of the grade of captains is before that of the grade of commanders in the classification or scale of military organization of the navy.

jects, so that the individuals subordinate to him, may each enjoy as much personal freedom of action as is necessary to happiness, and consistent with the circumstances of their situation. But it does not appear necessary, in order to secure prompt obedience, that the captain should possess plenary powers of punishment, or that individuals should possess neither rights nor privileges independent of his pleasure. Therefore, it becomes necessary to define carefully what are the rights and powers of all; and what degree of discretion may be safely allowed to each. A general responsibility must be required of the captain; therefore, a proportionate discretion should be given him to act; but it is not necessary he should be held specially or particularly responsible for every department in the ship. Particular responsibilities may be assigned, by law, to officers subordinate to him. The purser may be held responsible for the pay and provision department, and the surgeon for the individual and general treatment of the sick and hurt, independently of the captain. It is not necessary that the captain's authority should enable him to decide upon the correctness of the purser's accounts, or upon the condition of health of any individual, who may represent himself incapable to discharge duty, or what course of treatment may be requisite for his recovery. The law should require him to aid both the surgeon and purser in the discharge of their respective duties, for which it holds them directly responsible. It is not necessary that the surgeon, or purser, or, indeed, the chief of any staff department in the ship, should be subordinate to any officer whatever, except the captain.

Prompt obedience cannot well be enforced without prompt or summary punishment. But, it does not follow, necessarily, that the power to punish must be given to an individual.—The object may be attained through the medium of a ship's court, composed of three or more officers, detailed under authority of the captain. A schedule of faults, offences and crimes, might be prepared, with the punishment annexed to each; and under it, the functions of a ship's court would be analogous to those of a jury; it would determine, by the evidence, upon the guilt or innocence of the accused; but the law alone would award the punishment. A very few minutes would be sufficient to try by such court, any of the petty gangway cases, which it is the practice now, for the captain alone to examine and adjudicate. A similar principle of trial might be adopted for the observance of courts-martial, in which the law of 1800, places too large a discretion. The feature of courts-martial most inconsistent with our political creed, is the sworn secrecy of the members as to each others votes. It is not perceived

that an open vote or expression of opinion as to the guilt or innocence of a person would be dangerous, either to the members of the court, or to justice. Judges and jurors in civil courts do not find secrecy, as to their opinions in any case, necessary to their own personal safety. Whether it would be either safe or judicious, to go below the various grade of commission officers in the formation of courts, is questionable. In a very great degree, a commission is a guarantee of intelligence, probity and experience, which are important qualities, for any body clothed with power to decide upon the truth of allegations which involve chastisement in any form. Privates are not supposed to be endowed with these attributes; there are, doubtlessly, very many among them entirely capable to act as jurors. To make them eligible to such position, by selection under authority of the captain, would tend to elevate them and increase their self-respect, because it would open to them a path to distinction among their fellows, which, under the present system, has no existence. A ship of war is truly a microcosm—a little world in which public opinion exists and is respected; it only requires to be elevated and directed to make it as influential for the common good in a community at sea, as in a community on shore.

The punishment of individuals who disregard the law is designed for the common good of the community, by restraining those who are prone to imitate bad examples. That mode of punishment is best which most perfectly accomplishes the object, and at the same time, renders the necessity of its infliction the least frequent. But the best mode has not yet been ascertained.

All penal codes; all systems or modes of punishment; all plans for preventing offences against persons or property, or for securing obedience to authority, hitherto devised by the wisest legislators, are defective, if they have not entirely failed in their object. The Russian knout, the bastinado, the whipping-post, the rattan, the bamboo, the cat-o'-nine-tails, confinement in fetters, the solitude of the dark cell, imprisonment and labor in silence, restricted diet, branding, maiming, decollation, hanging and shooting, have been employed vigorously without improving the virtue or morals of men. Crimes are not less frequent or less shocking now, than they were a century since, either in Christian societies, or among the various communities of religious misbelievers. On the contrary, it is suggested that crime has increased in proportion as prisons have been made places of agreeable residence, and punishments of all kinds have been made seemingly more tolerable, and criminals more respec-

table.* It is even suspected there is more generous sympathy exerted in behalf of the vicious, of those who are guilty of crime in any of its gradations, from murder and arson down to the smallest misdemeanor, than in favor of disease-and-poverty-stricken but virtuous and industrious citizens. A brutal courage often evinced in the perpetration of crime, attracts respect and excites pity for a condemned criminal, while the virtuous humility of poverty passes unheeded: a man would be spurned as an honest beggar, who, as a felon, forcibly detained in a palace of criminals, would provoke the respect and the activity of the benevolent to release him from the infliction of law. While this falsely called benevolence exists—while pity sheds more tears over the murderer than over his victim, it is not reasonable to expect that any system of punishment will be effectual in preventing crime. Even the limited protection which law is calculated to afford honest citizens against the violence and misdoing of the vicious, is diminished by the too frequently successful efforts of sympathizers of criminals to shield them from conviction on trial, and to procure pardon for them when condemned. Crime is thus indirectly encouraged by increasing the avenues and chances of escape from punishment.

Any system of punishment to be valuable, must be devised on a theory that it will be faithfully observed in practice; observation has led to the opinion that certainty of chastisement is more influential in securing obedience to law, than its severity.

There can be no punishment which does not involve suffering in body, or in mind. Then the question to be solved is, what kind and degree of pain can be inflicted on individual offenders, consistent with humanity, for the common advantage of the community?

Severity of punishment must always be in a ratio to the sensibility of the individual punished, just as the destructive effects of a projectile depend as much upon the degree of resistance it meets, as upon its own momentum. What would be inexpressible torture to one, might be only a tolerable degree of pain to another. For this reason it would be, perhaps, unjust, especially in a military community, to inflict the same kind and degree of punishment for the same misdeed, without reference to the sensibility of the culprit. Flagellation with a birch rod is sufficiently afflicting to a tender youth; but, such means of chast-

*See, "The London Prisons," with an account of the more distinguished persons who have been confined in them. To which is added, a description of the chief provincial prisons: by Hepworth Dixon: London, 1850. Also: "Latter Day Pamphlets" No. 11, March, 1850. Model Prisons. Phillips, Sampson & Co., Boston, 1850.

tisement would rather excite the derision of a rude, stalwart Anglo-Saxon or athletic negro, than inspire dread of its repetition.

Men generally are influenced in their actions by fear, or by the prospect of advantage, real or imaginary. Men whose sentiments have been raised by education, are controlled by public opinion, by a fear of censure or a desire of praise: to a proud man, extinction of life is preferable to disgrace. But there are men whose stolidity and moral obtuseness is such that they are almost, if not entirely, incapable of distinguishing between approbation and censure. Men of the classes from which our ships are manned, in very many instances, can be convinced of wrong doing only by suffering corporal pain. Men of this description will always be found in our ships of war; at any rate, as long as the policy of using up imperfectly elaborated, badly constituted citizens in the military services of the country, is encouraged. To exclude such men from the military service would be wise in one sense; but, it would, in fact, increase the class of ruffians and highwaymen among citizens. Not to provide means of restraint adapted to the low grade of moral constitution of such men, would be injudicious. What mode can be devised in place of flogging, which has been abolished, it seems, almost impossible to conjecture.

Among the objections to the infliction of stripes, as a means of correcting offenders and securing a due respect for law, it is urged that it is barbarous in fact, and degrading in effect.

Corporal punishment is, in appearance, more severe than mental infliction, because the manifestations of its pains are immediate and visible. Who will not admit, for example, that the mental anguish of a mother bereaved of her offspring is less easily borne than the pains of travail? A man of spirit suffers more from confinement during any considerable period, than from the infliction of a dozen lashes. Men-of-war sailors not unfrequently beg that confinement may be commuted to flogging. The severity of this mode of punishment I suspect has been over-estimated: I have no recollection of an instance of a culprit suffering in health as a consequence of being punished to the extent of a dozen lashes, but I have known men whose bodily condition has been impaired by long confinement.

It is because there are no palpable manifestations of pain in the modes of silent punishment, such as imprisonment in fetters, solitary confinement, the dark cell, restriction to bread and water—that they are less severe, less barbarous than corporal punishment. They do not, like the infliction of stripes or the shower bath, shock the public sensibility. The shriek of distress, the cry of pain, even when uttered by a

quadruped, awakens sympathy in a man of feeling, and a desire to relieve the sufferer, no matter whether the patient be writhing under the “cat” of the law, the “key” of the dentist, or the surgeon’s knife. Our sympathetic sense or instinct does not pause to know whether he who cries of bodily pain is virtuous or vicious, a saint or a cut-throat; our impulse is to extinguish the pain, or rather the manifestations of it, which are always disagreeable and disturbing.

Whether punishment by stripes is more degrading, morally, than any other mode of correction, depends very much, though not entirely, upon conventional ideas. A Mohammedan has four wives, and enjoys the respect of his fellow-citizens; but a Christian is degraded and disgraced in the community if he is known to have more than one. The Chinese officer suffers disgrace when he is deprived of a particular button or a peacock’s plume; and, to crop the queue of a Chinese citizen by judicial sentence, is infinitely more degrading than corporal punishment with the bamboo. It is true, that some old men-of-war sailors boast that they have never been whipped; but, I have no recollection of any sailor who regarded flogging as a greater disgrace or degradation, than being put in irons, or who esteemed a ship-mate less because he had been flogged or imprisoned, provided he bore the infliction without outcry, or as the phrase is, “like a man.” For this reason, flogging has less effect in deterring others from committing offence. The disgrace or degradation which we might suppose *a priori* would attach to flogging, has been taken away by too frequent, and sometimes irregular, wanton and unjust resort to this mode of punishment. Although flogging has been abolished, it may be safely asserted, that if the question were submitted to a vote among sailors in the navy, the expression of opinion would be almost, if not entirely, unanimous, in favor of re-establishing the use of the cat-o’-nine-tails. Their reason is, that the lazy and skulking will seek and submit to confinement in irons in bad weather, and thus force all the work upon those who are well disposed to do their duty.

Flogging, as a means of punishment, either ashore or afloat, has one advantage over any kind of imprisonment. Its pains are limited to the culprit: those who may be dependent upon his labor, are not made to participate in the castigation, for the moment after its infliction, he may return to his avocation. For a similar reason, it is preferable to any system of penitential fines as a mode of punishing those offenders against the law, who rely upon their labor to procure daily food for themselves and families.

It has been suggested that in populous communities, offenders against law might be effectually

restrained from the repetition of any offence by the infliction of stripes in public, but without publishing the name or exposing the face or person of the culprit. He would feel the pain of the flogging, but experience no degradation, because no one need be informed of the chastisement. If a vagrant, for example, guilty of drunkenness and turbulent conduct, were to be covered with a hood and gown, and flogged at a public whipping-post, it is supposed he would be unwilling to incur a repetition of the pain; while the same individual, punished by thirty days' confinement, on better food and in more comfortable lodgings than he is accustomed to while at liberty, would have no dread of a repetition of the chastisement. To individuals, possessed of little or no moral tone, mere confinement is no punishment. Such persons cannot be restrained by fear of degradation; they have neither character nor name to lose, and they are, therefore, sensible only to corporal pain. The question, then, may be, whether the infliction shall be upon the skin, by stripes, or through the medium of internal organs, by starvation, at the risk of health? especially in persons who are but poorly nourished under the most prosperous circumstances of their degraded habits.

It will be admitted that men in the navy have been flogged and kept in irons wantonly and unjustly; but the misuse of power is not a conclusive argument against its legal exercise. Arbitrary power confided to an individual who is not held strictly responsible in practice for the use he may make of it, is always liable to be abused.

It has been suggested as a popular and important objection to corporal punishment in the navy, that, not being equally applicable to all, it tends to the creation of privileged classes, because the law exempted officers from the lash; and, in corroboration of this position, it is urged, that the Constitution does not recognize distinctions among citizens of the United States. Therefore, officers should be obnoxious to the same kinds of punishment as privates for like offences; because the nature and enormity of an infraction of law cannot be justly measured by the rank or quality of the offender.

The formation of military government rests upon a legal recognition of classes. Every military community must consist of privates and officers; and these must be divided into classes, each having a peculiar position, with corresponding authority and respect assigned to it. For this reason, a military government, in the etymological sense of the term, is aristocratic, an aristocracy being a form of government in which the authority is confided to the nobles, to the exclusion of the people. In this form of government, it may not be either unjust or inexpedient

to graduate the enormity of an offence by the quality or rank of the offender, and to establish different modes of correcting offences of the same character according to rank, that is, according to relative position and authority. The law of 1800, in this view, makes such distinctions. According to article 20, any officer of the navy who sleeps on watch shall suffer death, but a private may be put in irons or flogged, not exceeding a dozen lashes at the discretion of the captain. The consequences of a private sleeping on watch are of little importance; but, in the case of a lieutenant, they might be fatal to the safety of the ship.

But the most cogent argument against flogging in the navy or army, is, that this mode of punishment is not in harmony with the institutions of our country. If whipping-posts were in general use on shore, I see no conclusive reason why flogging, properly limited, should not be practised in the navy.

Imprisonment does not seem to exert much influence in preventing crime or reforming criminals on shore, if we may rely upon statistics. It is questionable whether this mode of punishment is, in itself, or in its effects, less degrading than that flagellation. In a very populous district, the number withdrawn, for the purpose of punishment by imprisonment, from the labor or work to be done in the district, is scarcely, if at all, perceived; but, in a small community, in a ship of war, for example, in which every private's physical force is appreciable, and in which every private has an allotted duty to perform, no one can be withdrawn without imposing that one's duty on others. Twenty men may be required to reef a sail without extraordinary toil, but if five should be imprisoned, the whole work falls upon fifteen, who are thus made to participate in a punishment not merited by themselves, but justly awarded by law to their five fellow-reefers. The summary punishment by flogging, is, for this reason, better adapted to the circumstances of a small community at sea.

The offences which may be committed against law in a navy or army, may be embraced in two divisions: one includes only those incident to military life, such as mutiny, mutinous conduct, holding unauthorized intercourse with an enemy being a spy, sleeping on post, desertion, neglect of duty, performing duty negligently, cowardice, disobedience of orders, disrespect to superiors, oppression of inferiors, indulgence in vicious practices, as gambling, intoxication, lying, skulking, &c., quarrelling, waste or embezzlement of public property, making false or fraudulent reports; and among officers, assumption of illegal power, and dishonorable conduct. The other division includes offences against law, which may be com-

mitted in civil life, such as murder, arson, larceny, assault and battery, &c.

The offences in the first division, should be carefully classed and defined; and punishments graduated and assigned to each according to its enormity or importance. These punishments should be speedily awarded, and promptly inflicted. The modes of punishment should be adapted to the circumstances of the community for whose benefit they are designed. The correction of offences under the second division may be by the same modes, at any rate, with slight modification, as are in use in the United States; murder and arson by hanging; larceny, by imprisonment, &c., &c. It should be borne in mind that ships of war do not embrace space for jails or prisons; and the only effectual mode of confinement is to place prisoners in irons between the guns on deck, under the watch of a sentinel.

This whole subject is of great interest to the navy, and indirectly to the nation. This consideration, I offer as apology for dwelling so long upon a law, the provisions of which, are a half century behind the times, and in conflict with a spirit of progress, which characterises the present age.

There is no definite naval organization; there is no law establishing grades of officers, or rank for them; and, practically, there is no law for the government of the navy. The whole service, as far as relates to fundamental law, is in a state of confusion and contradiction. Under the present fashion of legislating, there is not much hope of speedy reformation. During a session of Congress, the current affairs of the navy occupy all the attention which members of the standing naval committees can conveniently divert from their general duties as representatives. The naval committee, without overlooking other matters, has not the time necessary to examine all the points which deserve consideration, in devising fundamental laws for the organization and government of the navy. To act intelligently, the members should possess a certain appreciation of technical facts and opinions; but they have no time, even if they were desirous to do so, to collect facts or to estimate the true value of opinion, independently of the mere weight of authority.

For twenty years past, efforts have been made from time to time, to establish an organization and law for the navy, through the agency of boards of experienced line-officers. The propositions of those boards have never been entirely acceptable. They have generally borne the stamp of conservatism, or they have been redolent of the age and prejudices, which, in many instances, characterised the members of those boards. They seemed not to have looked beyond the track of their own individual experience, which con-

sisted in seeing done when last at sea under their own command, what they had seen done in 1801, also under their own command. Their experience was without variety, and often without comparison or observation. They might be simply gentlemen who follow an established routine, which they had acquired as midshipmen fifty or more years ago; and because they had repeated all the various steps of that routine very many times over, they were supposed to have acquired an experience which eminently fitted them to legislate for the whole navy. But experience, which teaches improvement, does not consist in witnessing an act, many times repeated, through a long series of years. Such repetition establishes the act strongly in the memory, without adding anything whatever to useful knowledge. Opinion based on such experience, is of little value, even when uttered by the most respectable gentlemen of advanced age. Truth is to be acquired only by comparing the differences and resemblances of phenomena, moral or physical, in the various relations and circumstances under which they may be presented. To observe and compare phenomena successfully, is not within the mental power of all men; and taking the several reports made by them as evidence, it may be supposed, very few of those gentlemen did more than put on paper what they remembered to have seen. Those reports are copies one from the other, with occasional varieties of language. A comparison of the codes of regulations of 1802, 1818, 1833, 1841 and 1843, exhibits so much similarity of tone and object, that it is easy to imagine they had all been prepared by the same hand. They have increased in size, not by the addition of new ideas, but by expanding old ones into detailed statements. They are all characterized by a British origin; though far from being faithful copies, they may be termed imitations.

A special committee of Congress, with power to send for persons and papers, authorized to sit during a long recess, might collect all the facts and opinions required to enable it to present a law which would cover the ground of organization and of government. Such a committee should consult separately, a dozen or more men of reputed intelligence, from every grade and vocation in the service, and patiently cross-examine them all, as has been done sometimes when about to legislate for the manufacturing or other interests, involving a necessity of technical knowledge.

There has been too much legislation based on the suggestion or representation of individuals; and this has led to the many imperfections and fallacies which might be cited from the statute book. We have had this kind of legislation by a few of the older officers of the line from time

to time, for a half century. The navy is still without organization, and will continue to be, until the system is changed, and the work of naval legislation is taken from navy officers and assumed in earnest by Congress to which it rightfully belongs.

"TWILIGHT DEWS."

BY RAPHAEL.

In this still twilight hour
Why wilt thou, oh! fond memory, awake,
And from my heart its calm contentment take?
As by thy magic power
Rise up the buried hopes—the grief and woe,—
The thoughts and wishes vain of "long ago"
In this still twilight hour!

Unto my childhood's home
Why wilt thou, oh! sad memory, return,
And, (as the autumn winds at nightfall mourn)
So sad yet faithful roam?
Haunting each well known path and cherished spot
Recalling hours that *pray to be forgot*—
Dark hours in that lone home!

In that far silent room—
The room made sacred by Love's first sweet spell—
Why wilt thou, oh my heart! still mournful dwell
In loneliness and gloom?
Dreaming forever of the faithless one—
Listlessly brooding over joys now gone—
Alas! that silent room!

Those vows of constant love—
Those promises of lasting truth and faith
Whispered by lips now cold, *but not in death*.
Oh! heart, why wilt thou rove?
When other ties, formed since that day of change
Should, from all former idols, thee estrange—
Alas, that faithless love!

The blessing and the prayer—
Oh, soul! how canst thou breathe them still for *one*
Who wrecked thy happiness ere 'twas begun—
Who wandering now afar
Perchance gives not one passing thought to thee,
Or thinking, muses cold and carelessly,
Unheeding thy fond prayer.

Oh weary, weary heart!—
Oh soul, still faithful to a faithless love—
Oh memory, swift the bitter fount to move—
When will the woe depart?
When will the sad remembrance leave my breast?
When will the troubled waters be at rest?
Oh weary, weary heart!!

HISTORY OF RICHMOND.

CHAPTER ELEVENTH.

HEALTH.—CITY INSTITUTIONS.—MANUFACTURES.

Having spoken of the History of Richmond in its chief events, and in its most remarkable men, it will be necessary, in giving a full account of the City, to make mention of its peculiar institutions, and to speak of it as a place of health.

And, in considering the healthiness or unhealthiness of a place, we find it to consist first in the situation; and this should be examined, not only in reference to surrounding objects, as rivers, marshes, or mountains; but, also, with due reference to the geological formations. There can be no doubt, that certain kinds of sickness pertain to certain soils, and that diseases are often confined to particular regions, or, at least, spend their chief violence in such regions. Ague and Fever, for instance, exists chiefly on marshy soils; and the Cholera has proved more violent in limestone basins of a certain character, and rarely, if ever, invades a granite range of country. Other causes of health or sickness consist in the water drunk, and the air breathed by a people; and this latter should be examined, not only as to purity, but also in its temperature and its moisture, that is, in the sun that shines on, and the rain that falls in a city or country.

These are generals or naturals, and on them depends the habit of the place, as to its good or evil health.

Food, modes of dress, manner and customs of a people, as to labour, study and diversion, are artificials or particulars; and affect a people less, because they are not so much dependent on them. These influence individuals, while the former ones affect masses, and that, under all the circumstances of life. They are entirely beyond our control, and act on us before we are able to discover the right hand from the left, or to know the peculiarities of food or dress; they affect us in sleep, when we are unconscious of their action; in sickness, when we are unable to resist them; in mature life, when our powers are full and strong; and, in old age, when our strength has departed. Add to these causes, the influence of epidemic diseases, prevailing at times in a city, (which, however, are, in some measure, modified by situation,) and we have all the circumstances that affect the health of a community.

An examination, then, of the situation, water, climate, and habits of the people of the city of Richmond will determine its health.

The geological formations of the soil on which Richmond stands, are of primitive rock, overlaid

by gravel, sand, and alluvial deposits. It stands where the granite rock of the primitive formations meets the alluvial; deposit of which the lower country is made. This is shown in the masses of granite forming ledges across the river, obstructing at once the water in its passage down, thus forming the falls, and the tide in its passage up, making Richmond the head of tide-water on the James. These underlie the hills on which the town stands; and these hills consist largely of rolled gravel, sand, shell-marl, &c., evidently the result of alluvial deposit upon the granite basis of Richmond. And these substances were, no doubt, deposited when the place on which Richmond now stands, lay many fathoms deep under the sea; and the storms of ocean, lashed into fury, rolled mountain waves over its site, tearing up the foundations of the present city, piling gravel and sand in heaps, and finally passing on to break in foam and spray upon its sea coast, or what we now call the Alleghany mountains. When, by the upheaval of the land, the sea was compelled to retire, the foundations of Richmond city stood out a mass of granite rocks, covered with the wreck of the ocean, and cut into deep ravines by sea currents. And these ravines have been made still deeper by the constant action of falling rains and running streams, since the beginning of time.

The foundations of Richmond being, then, upon primitive formations, it follows, that its situation must be a healthy one; for, it has ever been observed, that, other things being equal, there is more exemption from disease upon a primitive or granite formation, than upon any other. There are found many fossil remains in the sand and marl, which are frequently met with in digging foundations for houses; beside the usual ammonites and other shells, fossils of the seal, the porpoise, shark and other fish; as well as those of reptiles, crocodiles, &c., have been met with.

The shark may have caught his prey among the columns of our courts of law; the lazy whale has floated in the pleasant sun shine on the surface of the sea, where now are our busiest haunts; oyster beds have grown upon in our streets; seals, sufficient to furnish all Richmond with caps, once swam and dived in the place where tall houses stand; shoals of herrings, or porpoises, may have met over the capital, in solemn conclave, to decide upon the destiny of their race, or to make laws for its regulation; and the rapacious crocodile, with his devouring jaws, may have crawled out to sun himself on such an island as the top of Richmond Hill, and made his home in the play-ground where children now shout in boyish sport.

Not only is Richmond thus well placed, but

its situation is favorable also, from its being built on high hills, above the low grounds where sickness might prevail, far from the region where malaria exerts its deleterious agency in producing remittent bilious fevers, with no low marshy soil near it, and no mingling of salt water and fresh in its river to produce disease, or at least, give a tendency to ill health, it stands (from its situation considered in every respect) a place marked out for good health.

Again: as many diseases in a city arise from deficient sewerage, or from dirty streets, and the consequent accumulation of filth, the peculiar situation of Richmond renders her exempt from these causes; not that her streets are swept by authority, but from her position as a city of many hills, her streets are all more or less inclined, and are swept clear by every shower that falls. It is, indeed, astounding to see with what force the waters pour down her streets, and how thoroughly the work is done by them. Were it not for these scavenger showers, the accumulations, acted on by a hot sun, would certainly produce much sickness of a dangerous character.

Although there are many springs and wells in and around Richmond, the supply of water for the city is taken from the river itself, by means of water works and reservoirs.

The many springs and wells which supplied the city before the river supply was obtained, do not furnish such pure water, being saturated by passing through beds of marl, or deposits of sand containing iron ore, and various other mineral substances. The river water, if it was always clear and free from sediment, would be of the very best kind, and when clear, no water can surpass it. It has been found that this water and that of the Mississippi, are best for long voyages; keeping pure for a long time in distant and hot climates.

We have made some experiments on the river water, and that of various wells and springs in the city, to ascertain which would be most wholesome to drink, and also to find out whether the waters of the reservoir could be injured by passing through lead pipes.

In speaking of the geology of Richmond, we omitted to mention that iron, and perhaps other metals also, were found in the sands, &c., constituting the surface. When the sea waves broke over this part of the country, the water itself, and the force with which it was moved, rubbed down elevated points, and strewed the materials thus loosened, over the bed of the ocean. In this manner, veins of iron ore were crumbled to pieces on the surface, and their contents scattered far and wide; all through this section of country, we find iron disseminated in the soil, and as a

consequence, chalybeate springs are found where no iron ore in veins exists.

The water of the springs and wells of the city, so far as we have examined them, contain acids that act on lead and other metals,; they likewise contain compounds of lime, some of them possess a good deal of alum, and others are chalybeate in character. The city spring and the water of the capitol square, act strongly and readily on lead. Even the water of those springs as it passes from the pipes, if tested carefully, shows the presence of lead in small quantities, and this is much more apparent, if it be permitted to stand awhile in a leaden vessel, or if that metal be in any way placed in contact with it.

The water of the reservoir, if tested after it has passed through the iron and lead pipes of the city, will be found to contain no trace of lead whatever, although some lime will be found in it, and an abundance of organic matter. When filtered, to separate these last from it, no water can be purer or more wholesome to drink.

The climate of a place is its air, and must be considered under its temperature in the cold of winter and the heat of summer, under its moisture or dryness in the amount of rain that falls, and in its prevailing winds. No city can be better placed than Richmond in point of climate: It is exempt from those cool, cutting winds that render many of our northern towns dangerous winter residences to invalids; its northern breezes are mild and tempered. Neither has it the hot and malarious air of the towns farther south, nor is it liable to that scourge of many southern cities, Yellow Fever. It is not too much elevated by propinquity to the mountains, to render its winter cold excessive in degree, or long continued: nor is it exposed to the miasmatic influences that prevail on the low sea coast around Norfolk.

But in the central climate of the State, neither north nor south, midway between the mountain air and that of the sea coast, it lies in that first medium, most favorable to the health and longevity of its inhabitants.

The latitude of Richmond is 37° 39' 17" north; the longitude 77° 27' 28" west. It lies on the same parallel with Grenada, in Spain, with the island of Sicily, and with the city of Aleppo, in Asia. Owing however to the difference between the climates of places lying on the same parallel in Europe and America, Richmond has by no means the hot and often sickly atmosphere that exists in those situations.

We have been furnished with the observations made upon the climate of Richmond, for the hygrometrical year, ending August, 1851. They were furnished us by Mr. David Turner of this city, and were made by him for the use of the Smithsonian Institute:

	Ther.	Barometers.	Cloudiness.	Rain.
1850.				
August,	77	29.837	4.4	7.59
September,	69.9	29.953	3.4	4.24
October,	59.5	29.945	2.1	03
November,	53.4	29.973	4.3	2.85
December,	44.3	29.963	5.2	5.02
1851.				
January,	43.9	30.011	3.7	43
February,	49.2	30.113	4.3	3.62
March,	51.3	29.962	3.7	6.26
April,	57.9	29.850	4.5	5.46
May,	69.2	29.962	3.7	2.83
June,	74.8	29.885	4.2	2.21
July,	80.1	29.846	5.3	2.44
An. Mean,	60° 8	29,941 in.	4.06	42,92 inch.

In expressing the degree of cloudiness, 10 signifies sky entirely covered, 0 perfectly clear.

The habits of the people of Richmond are certainly favorable to health; because they are not a laborious people, nor do they at all deprive themselves of pleasure or sport of any kind. They are active and fond of all kinds of enjoyment, and endeavour to pass life with as little care as possible. The various clubs formed in the city for quait pitching, and the avidity with which amusements are sought after, show them to be a pleasure loving people.

In the summer, all who can do so, leave Richmond for the watering places or for the country; and this annual journey, very much tends to recruit the delicate, and to keep in health those who undertake it.

The travel to and from the distant spring, where bad water is drank for the sake of good health, strengthens the languid frame, and quickens the feeble pulse; and the valuable qualities of the water as a fountain of health are trumpeted forth by those who have received benefit from the journey, and echoed by others interested in keeping up the reputation of the watering place. Each spring is esteemed a vast reservoir of patent medicine, prepared by the beneficent Deity, for the benefit of the real or supposed sufferer, and for speculators to make money by.

Mineral springs are no doubt of much value in many cases, yet they are chiefly valuable in proportion to the length and roughness of the road leading to them; and to a patient, able to undertake the journey, the rough jolting and the plain fare, with the necessary scramble to obtain a proper share of it, must be beneficial. The change of scene, absence of care, new associates, and firm belief in the virtues of the spring, work wonders in the curable cases of disease.

A rail road leading up to one of these health-giving springs, would very much destroy its reputation, by making it easy of access, and thus preventing the beneficial journey.

The cunning monks, the physicians of former

times, understood this principle well, and often sent a dyspeptic or hypochondriacal person a long journey on foot or on horseback; called him a pilgrim instead of a patient; and instead of impressing him with firm faith in some distant and had tasted water, persuaded him that prayers put up to a certain saint, in some imaginary holy place, would work a cure. In each case, it was necessary that the prayer should be said and the water drank at the fountain head; the water being, in general, signally inefficacious if drank at home; and the saint, although supposed to be in Heaven, was totally unable to answer the prayers, unless he had been propitiated by a long journey, or by a severe exertion in dancing on his tomb for a length of time.

We might be prepared, then, to expect good health among the people of Richmond, and such is the fact; it is the healthiest city of its size in America, and, perhaps, in the world. The deaths are about 1 in 70, while in many other cities of its population, the deaths are 1 in 35. We have collected statistics of the comparative healthfulness of various cities in this country and in Europe; and we offer them to show the correctness of the assertion made concerning the healthy condition of Richmond: Philadelphia loses 1 in 45 every year; Glasgow, 1 in 44; Geneva, 1 in 43; Boston, 1 in 41; London, 1 in 40; New York, 1 in 37; Charleston, 1 in 36; Baltimore, 1 in 35; Paris, 1 in 32; Madrid, 1 in 29; Naples, 1 in 28; Rome, 1 in 25; and Liverpool, 1 in 19. Nearly 600 persons die annually in and about Richmond; and, as there are about an hundred practitioners of medicine in the city, the small average of six deaths to each physician, shows either that the faculty is more humane here, or more skilful, than in other places!

Among other causes of good health in Richmond, may be mentioned its grave-yards; they are out of the city, and carefully managed, so that no injury can result by the decomposition of dead bodies. Badly managed cemeteries are not only places of burial and repose to the dead, but also causes of death to the living; thus making death reproduce itself, and the very means of removing its victims cause others to fall under its influence. Richmond, in this respect, is safe; the absence of those diseases, which emanations from the grave produce, are good proof that its cemeteries are depositaries of the dead only, and not places of pestilence for the living.

Another cause of health, is the want of confidence in any of those murderous systems of quackery that prevail in, and assist to keep down the population of many cities. It has been so much the custom in Virginia, to expect that a man should qualify himself before undertaking any responsible office that their want of success may

be easily explained.

The theories and practices of this class of men, may be considered practical commentaries upon, and themselves ardent though secret advocates of, the doctrines of Malthus, who taught that excess of population is dangerous to a State, and should, by all means, be checked.

Their confident assertions of the power to heal, their unblushing effrontery when exposed, and their vituperative assaults on all who differ from them in opinion, remind us strongly of those religious impostors who have diffused a false creed among sincere, but weak minded men. Requiring belief in the opinions and writings of their founder, exacting fees from all who give them credence, and yet recklessly destroying life, they are more merciless than the followers of the Arabian impostor. With a slight alteration, their war-cry is similar to that which Mohammed and his madmen uttered to the nations they attacked, "The Koran, Tribute and Death."

Disease has never had much sway here; no violent epidemic has ever invaded the city; one or two cases of yellow fever have appeared since its beginning, and the cholera exhibited itself in 1832, and in 1849, yet excited more fear than its actual victims would justify. There is nothing in the geological formations, or in the habits of the people, to make us think that cholera will ever prevail extensively in Richmond. An occasional alarm of it, would be salutary by causing a universal cleansing of houses and streets, and impressing the necessity for care upon the minds of the community.

There is no other epidemic that has had power, except those which affect children. In fact, while it is generally admitted that adults enjoy good health, Richmond is supposed to be very fatal to infants. This mistake arises from the fact, that the diseases incident to children in a healthy place, occur here, and that adults escape such influences, from having been previously seasoned. We allude to those epidemic contagious affections that invade infancy, as scarlet fever, measles, &c., whose fatality appears great when no other disease prevails, and which adults escape by having been once subject to them. By comparison, then, these affections are considered dangerous, because of the absence of other complaints; and they are most likely to invade and destroy infant life because adults are not liable to them.

The summer is the healthiest season of the year in Richmond; the change of season from cold to warm in the spring, and the reverse change in autumn, produce disease chiefly among the aged and the very young. The month of June produces most sickness among the young, after which, good health reigns.

What effect coal smoke in winter, and the abundant dust of summer has on health, is not known; an irritation of the breathing apparatus might be expected, and an aggravation of lung disease might be looked for; yet there is no great abundance of this class of cases met with in practice. Proper care in cleansing the streets and in using coal fires, would prevent even these germs of disease.

Upon the whole, then, apart from the epidemic diseases of children, and this class of affections among adults, Richmond is almost perfectly healthy; and, including them, stands first on the list of cities in point of health. And, as the same causes are continually acting in and around it, we may consider that it has been, is now, and always will be, a place where the Goddess of Health has set up her shrine, and made her place of abode.

(Continuation of Chapter in next number.)

TO MADELINE.

Oh, lady! if until this hour
I've gazed in those bewildering eyes,
Yet never owned their touching power,
But when thou could'st not hear my sighs,
It has not been that love has slept
One single moment in my soul,
Or that on lip or look I kept
A stern and stoical control;
But that I saw, but that I felt,
In every tone and glance of thine,
Whate'er they spoke, where'er they dwelt,
How small, how poor a part was mine,
And that I deeply, dearly knew—
That hidden, hopeless love confessed—
The fatal words would lose me too
Even the weak friendship I possessed.

And so, I masked my secret well;
The very love within my breast
Became the strange but potent spell
By which I forced it into rest.
Yet there were times, I scarce no how,
These eager lips refrained to speak—
Some kindly smile would light thy brow,
And I grew passionate and weak;
The secret sparkled at my eyes
And Love but half repressed its sighs,
Then had I gazed an instant more,
Or dwelt one moment on that brow,
I might have changed the smile it wore
To what perhaps it weareth now,
And spite of all I feared to meet,
Confessed that passion at thy feet.
To save my heart, to spare thine own,
There was one remedy alone—
I fled, I shunned thy very touch;
It cost me much, oh God, how much!
But if some burning tears were shed,
Lady! I let them freely flow,
At least, they left unbreathed, unsaid
A worse and wilder woe.

But now—now that we part indeed,
And that I cannot think as then,

That as I wish, or as I need,
I can return again,—
Now that for months, perhaps for years,
(I see no limit in my fears,)
My home shall be some distant spot
Where thou, where even thy name is not,
And since I shall not see the frown
Such wild, mad language must bring down,
Could I—albeit I might not sue
In hope to bend that steadfast will,
Could I have breathed this word adieu,
And kept my secret still!

Doubtless you know the Hebrew story—
The tale's with me a favorite one—
How Raphael left the Courts of Glory,
And walked with Judah's honored son,
And how the twain together dwelt,
And how they talked upon the road,
How often too they must have knelt
As equals to the same kind God;
And still the mortal never guessed
How much and deeply he was blest.
Till when—the Angel's mission done—
The spell which drew him earthwards riven—
The lover saved—the maiden won—
He plumed again his wings for Heaven—
Oh, Madeline! as unaware,
Thou hast been followed everywhere,
And girt and guarded by a love
As warm, as tender in its care,
As pure, aye, powerful in prayer
As any saint above.
Like the bright inmate of the skies,
It only looked with friendly eyes,
And still had worn th' illusive guise,
And thus at least been half concealed,
But at this parting, painful hour
It spreads its wings, it shows its power,
And stands like Raphaël revealed.

More, Lady, I would wish to speak,
But it were vain and words are weak,
And now that I have bared my breast,
Perchance thou wilt infer the rest.
So, so, farewell! I need not say
I look, I ask for no reply,
The cold and scarcely pitying Nay
I read in that unmelted eye.
Yet one dear favor let me pray—
Days, months—however slow to me—
Must drag at last their length away,
And I return, if not to thee,
At least to breathe the same sweet air
That woos thy lips and waves thy hair:
Oh, then, these daring lines forgot—
Look, speak as thou hadst read them not,
And I had never traced a word
More than would please thee to have heard.
So, dearest, may I still retain
A right I would not lose again
For all that gold or guilt can buy,
Or all that Heaven itself deny—
A right such love deserves to claim
Of seeing thee in friendship's name.
Give me but this, and still at whiles
A portion of thy faintest smiles,
It were enough to bless:
I may not, dare not ask for more
Than boon so rich and yet so poor,
But I should die with less.

AGLAUS.

FROM OUR PARIS CORRESPONDENT.

PARIS, March, 1852.

Your correspondent in his letter of June 1851, published in the July number of the *Messenger*, commenced with an expression of surprise that twelve months had elapsed without another violent commotion from which France would issue with new political and perhaps social institutions. The political portion of the same letter ended with the prophecy that "a *Coup d'Etat* would take place as soon as M. Bonaparte believed, that by a discreet use of his executive power, he had placed in all the important posts of the army of Paris, officers devoted to himself."

These extracts show two things. 1st. That your correspondent had no faith whatever in the stability of French institutions as then organized and administered. 2nd. That he anticipated another revolution to be accomplished by a *Coup d'Etat* on the part of Louis Napoleon. You need not be informed that the events of the 2nd of December last have justified his opinions and fulfilled his prophecy. Without going too minutely into particulars already familiar to every intelligent reader on both sides of the Atlantic, it is sufficient to state that the Republic of 1848 ceased to exist, *de facto*, from the moment that Louis Napoleon Bonaparte was elected to the presidency. It had, indeed, before that event, been fatally "wounded in the house of its friends." The insane attack of the Red Republicans upon the National Assembly on the 15th of May, in violation of every principle of liberty and law, and in worse than despotic contempt of universal suffrage—though nominally in behalf of freedom—was, of itself, a blow from which the Republic never recovered. But the "unkindest," deadliest "cut of all" was when these same Red Republicans, offended with the Assembly for having disorganized the National workshops, met together on the 23rd of June, and, "in the dead waste and middle of the night" vowed, though all France should swim in blood, to enter at once upon full civil war. We all know the result of that vow. The thought of it is enough

"To make a grin of fiendish glee
Run round and round through hell."

We all know that for four days and nights, Paris, gay, beautiful Paris, glittering like a crystal among the cities of the earth, was torn asunder and drenched in its own blood. We know that the poor paralyzed Republic had to be delivered over, body and soul, into the hands of a military dictator; and we know, too, that after the insurrection was quelled, and the blood staunch, and the very stones of the street were crying out for vengeance, thousands of the ignorant, deluded insurgents were torn away from their homes, and without even the show of a trial transported for life, and, finally, we know that the cruel though perhaps necessary dictatorship of Cavaignac ceased only by the voluntary election on the part of the people of another dictator a thousand fold more detestable than the first, in the present *Chef de l'Etat*. I say another dictator, because from the moment of Louis Napoleon's election, he resolved to be not only the head of the State, but the State itself. He was subjected, it is true, from time to time, to various checks; he was at last refused even the money which he demanded for his private purse; but this availed nothing. He knew how to "labor and to wait," if not how to "suffer and be strong." He knew in fact the secret of a "masterly inactivity." But if he were inactive not so his consociates. Quietly, without observation, the immense centralized power of

the government was steadily at work Napoleonizing the whole country. Prefects, sub-prefects, mayors, schoolmasters, and sub-schoolmasters even, were removed by the score; and every corps of the National Guard which was so much as suspected of disaffection was instantly dissolved. Meanwhile nearly a third of France was kept in a state of siege; and as for the numerous ministries they led a Kilkennian life with often enough a Kilkennian result. Change followed change; cabinet followed cabinet; general replaced general; the Cavaignacs, and Thiers, and Berryers, and Montalamberts, and Lamoricières, and Lamartines, and Larochejaquelins,—Orleanists, Legitimists, Socialists, Jesuits,—were left to plot and quarrel at their leisure; while Louis Napoleon, keeping, for the most part, his own counsel, remained coiled away in his hole like a cunning spider, watching his various enemies as one by one they became entangled in the web which was spread, like a net, over the whole land, until, at last, when they were all involved together in one mass of inextricable confusion, he pounced upon them in an instant and with a single *coup* put an end (at least for the moment) to their political existence, and grasped the falling reins of government in his own hands.

The dispersal of the National Assembly by an armed force and the illegal arrest, imprisonment and subsequent exile of many of its leaders were acts which in themselves excited but little feeling. The people saw that the country was being recklessly sacrificed between the Napoleonist and anti-Napoleonist parties of the Assembly, and when the wretched body was resolved into its elements, and dust was returned to dust, there was nobody in France so poor as to do it homage. The blackest thing in the whole transaction of the President, was the deliberate and wilful violation of his oath. But such is the low moral standard of France that this was comparatively unthought of; political corruption being generally looked upon here more as a disease than a crime and often more as a necessity than either. It was something to make the Anglo-Saxon blood glow with pride, under these circumstances, to see that the moment the President's perjury became known, the British press broke out in an almost unanimous protest against the villany; and that the American minister, true to his convictions, and faithful to his mission, declined all intercourse with the Perjurer till a new election had made him once more the legal Executive of the country.

But it is not my object to discuss nor even to detail the events of the last three months. The time for their full appreciation has not arrived. We must wait until another leaf is turned over in this sad history, and meanwhile let this one dry. The great fact of the moment is that the French Republic has passed to its grave "with scarce a show of dying," and we are now in the full honeymoon of what the Government papers call "our new institutions." The name of the Republic is retained for the moment, but that, too, will pass away, and France, whose prospects—or, rather, whose hopes were lately so brilliant—will settle down into the veriest despotism of Europe. The tri-colored banner still floats in the air, but the tri-une creed of the Republic, *Liberté, Égalité, Fraternité*, no longer insults the passer-by as before, but is effaced from every public building—though, let us hope, not from every private heart—in France. It has not even been left upon *La Morgue*, within whose silent walls there is still "equality," if not "liberty and fraternity."

The Government of the present moment cannot well be defined. It shrinks from analysis. In one sense, at least, it is a democracy; for it sprung directly from the people. But for all intents and purposes it is an Empire; and since scarcely any thing true can be said of France

without asserting a paradox, we may as well call it at once a Democratic Empire. Yet why bother ourselves about names? Democracy, Empire, Republic, Monarchy, Kingdom—call it what we will, the naked, disgusting fact remains, that the Government of France at this moment is the Government of Louis Napoleon Bonaparte. *Voilà tout!* It is he, the "Prince-President," who, by the express terms of the Constitution, originates, sanctions, and promulgates all laws. It is he who declares war, and makes treaties of peace and alliance; and it is he who is commander-in-chief of the Army and the Navy. There are Ministers, it is true; but they are "dependent only on the Executive Power." There is a Senate; but it must be convoked by the President, and can be prorogued at his will. There is a Legislative Body, but it can only discuss and vote without having any power of initiative, and can be dissolved by the President at his own good pleasure. There are Councillors of State, but they are appointed and removed by the President. There is a High Court of Justice, but it can only act by Executive decree. Thus all the branches of the government are but so many wheels—I had almost committed a bull and said so many fifth wheels—of the imperial chariot. It would be as well to say, perhaps, that Louis Napoleon's idea of a Government, is that of Jack Downing. "one big wheel, and that a smasher." That the chief of the state cares little about the subordinate departments is evident not only from the spirit of the man and the terms of his new Constitution, but above all from the fact that from the hour of the *Coup d'Etat*, to the hour that now is—without waiting, at first, for the vote of the people to which he had appealed, nor since, for the organization of the Government which he created,—he has manifested the most indecent haste in performing whatever acts and establishing whatever laws please his fancy, by special decree. Among the most notable instances of this absolutism, are his infamous decrees touching the Orleans property, and the decree scarcely less infamous concerning the Press. The former was received with a cry of indignation throughout the country, as violating the first principles of honesty; while the latter, placing the press at the mercy of Executive caprice, and depriving its conductors of the right of trial by jury, is looked upon by all enlightened men as an insult to the age in which we live. A decree equally arbitrary has since been published depriving *all* political offenders of the right of trial by jury. It is probable that all these things would have been done even had the Government been fully organized; but they certainly could not have been done without discussion, and it is possible that in each instance the decrees would have been, at least, modified. But let no man deceive himself; Louis Napoleon has no idea of having any of his plans modified. He permits discussion and has instituted a *Corps Legislatif* for that ostensible purpose; but, in the first place the discussion must never be published, nor even reported; and, in the next place, it must never lead to anything. The country has been told, distinctly enough, many times, that the President wants nobody in his councils who does not fully agree with him in opinion. He has no idea of hearing both sides; so that, at best, the debates of the new assembly will be but a mockery and a farce, and the body itself a solemnly constituted imposture. In fact, instead of being a *Corps Legislatif*, it will be a Legislative Corpse. It is probable that such statements may seem to you somewhat exaggerated. But alas! they fall short of the truth. I cannot offer you better proof than is afforded by the President and his satellites in respect to the late election of members of the aforesaid *Corps*. You are aware that the Constitution, following the initiative of the *Coup d'Etat*, reestablished universal suffrage. This is certainly a "great fact," if not

what is called in America a "fixed fact." It gleams through the surrounding darkness,

"Fair as a star when only one
Is shining in the sky."

But though the suffrage is universal, it is far from free. It is exercised everywhere with fear and trembling. In fact, throughout France a ballot is almost as dangerous to handle as a bullet. Every elector is marked and numbered. If he votes for the *Powers that be*—or to speak more accurately, since all authority is vested in one man—for the *Power that is*, he is safe; if not, if being Republican, and living in a nominal Republic, he ventures to cast a republican vote, he is at once registered among the *suspect*. The spies which swarm over the land like locusts, take note of him, and one of these fine mornings, if he is not more careful, he will find himself booked and ticketed for Cayenne. As soon as the day was appointed for the election of the *Corps Legislatif*, intimation was thrown out in the servile *Patrie* that in order to secure the unity and permanence of "our new Institutions," the Government, actuated by the most paternal and patriotic sentiments, would kindly take the nomination of candidates upon itself. The audacity of this suggestion surprised even those who had been accustomed to look upon the President as Audacity itself. But surprises were the order of the day, and had the suggestion been that every candidate should qualify himself for eligibility by kissing the great toe of the political Pope, I am not sure that any one would have seriously resisted it.

In due time the electoral event, which had so considerably cast its shadow before, took place, and every district in France was notified that the Honorable *Monsieur So-and-so*, or the distinguished Count *Such-an-one* was the patent Government candidate for those parts, and must be supported by all the united influence of the Prefects, Sub-Prefects, Mayors, and what not, there and thereabouts. Although resistance to such officious interference with private duties must have been the first instinct of every honest and independent mind in the country, the people were informed by the semi-official press that in the present case any such resistance would be considered as an act of hostility to the Government:—and hostility to the present Government is no joke. The *official* announcement of the Executive contained no threat, but merely appealed to the patriotism of the people. But some of the provincial Prefects, resolved to out-Napoleon Napoleon, put the insolent threat of the press into official shape and frightened a large portion of the electors, if not out of their wits, at least out of their votes. One of the Prefects classed those who should vote independently with those who should vote fraudently, and threatened both parties with the same wrath to come. The result of all this wretched bullying and chicanery is, that in the country but five or six opposition candidates have been elected; and even in Paris, where the threats were but semi-official, the Government has been defeated but in one instance. What shall be said of such facts? They contain a confession of weakness, and want of confidence, on the part of the Prince-President, which is most significant. Restoring universal suffrage to the people after a *Coup d'Etat* more remarkable than any other which has occurred in the history of any country, was an act of courage and confidence worthy of the great Napoleon himself: and I believe that if the *Chef de l'Etat* had, in the spirit of this act, allowed the suffrage, thus fully restored, to be freely exercised, he would still have been supported by almost the whole people. Such a course, moreover, would have entitled him to a certain degree of respect throughout the world. I incline to think, moreover, that

it might have attracted to his counsels a class of men far superior to those who now environ him. But of this last point I am by no means sure. Honest men are scarce every where, and Louis Napoleon is no Diogenes to find or even to seek for them. Some one remarked lately that every man in France past forty years of age was corrupt. There is too much truth in the remark. It is certainly impossible to find a political man of any note in the country, whose robes are not darkened by some foul stain. The whole atmosphere is thick with a corruption which seems to have been exhaled from every inch of the soil, and through every period of the country's history. The nation is steeped in iniquity, its "blood" seems to have "crept through scoundrels ever since the flood." The old monarchy was corrupt; the first Republic was corrupt; the Restoration was corrupt; Louis Philippe was corrupt; the late Republic was corrupt; and the mongrel government of to-day is based upon corruption. What the nation needs is moral regeneration. It has no lack of intelligence, no lack of talent, no lack of industry, no lack of material resources, to form the basis of a truly great country; but it has lack, fearful, fatal lack of the one thing needful—integrity. And while this is the state of things no sound, durable government is possible. The miserable Napoleonocracy which to-day arrogates to itself the name of Government, may, and probably will, last for a few sad struggling years; but the worm of destruction is even now in its sceptre, and death, violent death, stares it in the face.

And now, after painting this gloomy sketch of the political state of France, by what art may I transport either your attention or my own, to the gay scenes of the late Carnival? It is plain, I must first supply my *palette* with brighter colours. Well, the task is not an unpleasant one; for, though the gilded fooleries of the season have little to interest, and nothing to fascinate me, they nevertheless, do afford some relief to the sombre masquerade of politics. And, after all, but for the fact that the great dissolving picture of society changed thus often

"From grave to gay, from lively to severe."

human life would be but one long insupportable *ennui*. I am disposed, therefore, to accept these changes, however extreme; and if sometimes the passing scenes are not particularly adapted to elevate or ennoble the mind, to console myself with the poet's hope that "There's a good time coming," when mankind will be at once more rational and more cheerful.

The first indication of Carnival time in Paris, is the sudden appearance, about six weeks before Lent, at the doors and windows of innumerable shops, of an endless variety of grotesque costumes. The love of the French for the purely fantastic and ridiculous, which seems to be a national passion, finds here ample scope and verge enough. This taste is plainly enough indicated the year through, in their toy and print-shops; but, the extent to which it is displayed during the season, devoted *par excellence* to its development, is incredible. The whole fun of the thing, is found in its absurdity. In passing from shop to shop, and examining the various masques intended to conceal the human face divine, I could see none which indicated either imagination, wit, or genuine humour. There was enough and to spare of the merely incongruous and absurd, and not a little of the absolutely disgusting; but nothing, absolutely nothing of any artistic or even historic interest. A little round mask with a long red nose running out from it, like a gib-boom, and asserting its entire independence of the other features; a distorted countenance enclosed, as in a parenthesis, between two donkey's ears; an immense pointed hat, making the wearer look as if he had

mistaken himself for a candle, and was about to extinguish himself; fancy bob-tailed coats and tight trowsers, making a man appear like an imperfect link between the turkey and the ourang-outang; blue satin trowsers with greenish trimmings, in remote imitation of blue-bottomed flies; crimson jackets with bright yellow buttons sparkling all over them like fireworks; enormous shirt collars intended to flank one's cheeks as with a brace of barricades: these, and an infinite variety of similar extravagancies, were to be seen at almost every corner. The season having blossomed in this way, soon began to display its fruits. The walls of the metropolis were placarded in every direction with attractive bills, announcing the opening of the Mask Balls. The Valentino, The Casino, The Prado, The Paganini, The "Wauxhall," and about a hundred other establishments, including the great Opera itself, and the *Opera Comique*, set their houses in order for a golden harvest. Commencing their revels at midnight, and continuing them till six o'clock in the morning, they offered temptations to "fast young men," to "advanced" young women, and especially to hopeful young students, which were irresistible. As a general rule, Paris is as quiet after midnight, as a country town. *Roués* from London—and even from New York and New Orleans—complain of this as being behind the age. The consecration of the whole night to frolic, is interesting in Paris, therefore, both as a novelty, and as furnishing Young France, and to a certain extent, Young England and Young America, a rare opportunity of development. Be sure, the opportunity is embraced; and every quarter of Paris, within and without the Barriers, presents a new and unaccustomed aspect. During the early part of evening, the shops of the *costumiers* are crowded with impatient customers, trying every article of disguise which they can lay hands on, and tormenting the poor undisguised showman, and the fussy little wife, who has rushed to his assistance, until they wish themselves in the middle of *Lent*. From 10 o'clock to midnight, groups of masquers are found rollicking through the principal streets, blowing penny trumpets, and making all kinds of hideous noises, in imitation of bird and beast; dancing improvised polkas and waltzes on the pavement; clustering together in friendly wine-shops; rushing out again to salute if not to embrace the first passer-by; (so that he be not a *gendarme*;) and finally chartering a lot of cabs and coaches, and, some of the creatures inside and some out, driving through the streets at a furious rate, and making night hideous with their frightful clamour. No part of Paris contributes more liberally to this rampant, reckless scene of frolic and dissipation, than the *Quartier Latin*.—the quarter of the "Students." These incipient *Savans* enter into the thing with an enthusiasm all their own. Carnival is their red-letter season; not that their studies during the rest of the year are so severe as to call for any such violent reaction, but rather because the constant attendance upon *Prado* during the winter, and the *Chaumière*, and the *Closerie des Lilas*, during the summer, and the *Cafés Concerts* at all seasons, becomes at last wearisome and *ennuyant*,—in fact, becomes too much like work. Contriving, then, to have his quarterly remittance arrive at the right moment to prepare for the numerous expenses of the frolic, the student forgets for the time, his law, his medicine, and his philosophy, and gives himself entirely up to what he calls the "solemnities of the season." Accompanied by his *petite*, whom he tricks out, usually, *en garçon* with pink or blue satin trowsers, and upperworks of embroidered muslin, he flies about from ball to ball, night after night, until the very eve,—or, rather, the very dawn of *Lent*, when you may find him (still supported by his *petite*) standing upright in an open carriage, his hair streaming in the wind, the frost pecking at his nose, and he urging on the driver—

whose eyes, like those of the day, are but half open—to make all haste to be in time for the *Descent from Courtille*.

The most fashionable and the most frequented of the Mask Balls, is the Opera, which is in operation every Saturday night—or, rather, every Sunday morning—of the season. The Opera is the favorite resort of the Cockney. Not that he often hides his proud English face under a mask; that would be condescension indeed! but he likes to be “there to see.” And as the prevailing idea in France is, that the chief component part of an Englishman is gold, he is always welcome. Arrayed in his suit of solemn black, elaborately relieved by a stiff white cravat, a long white vest, and very tight white gloves, he stalks up and down the brilliant saloons, jostled now this way and now that; accosted if not affectionately “saluted” by innumerable *lorettes*; knocked about like a shuttlecock by dancers, who are only too willing to play the part of battledores; compelled to stand coffee, ices, bouquets, sweetmeats and *grog Americain*, to young *danseuses*, whom he never saw before, and having lifted their masks, never wishes to see again; finding everything *trop cher* and nothing *assez bon*: he resolves, nevertheless, not to go home till morning; and when at last morning comes, you may see him crawling down the Boulevards to *Maurice's* or the *Hotel d'Albion*, solitary and alone, the very picture of Charles Matthews' “Used up Man.” As for the figure which an American cuts in such a scene, with his sharp, knowing face, long straight hair, turn-down collar, everlasting gold chain, and go-ahead determination to see all that is to be seen, hear all that is to be heard, drink all that is to be drunk, and do all that is to be done,—I generously leave that for an Englishman to describe. But no pen born of goose or Gillot—diamond pointed or other—can describe the carnival antics of a Frenchman. Here again, he shows his insane passion for the absurd and grotesque. His one aim is to attain the supreme height of the ridiculous; and truth to say he doesn't fall far short of achieving it. He reminds one of the man who “aimed at nothing, and hit it.” The Mask Ball, then, is his element. He revels in it with an *abandon* which is past all conception. He lays out his utmost nature upon it. Here, at any rate, he is free. Here he can “play such fantastic tricks” as please him. Here he may lift the light, fantastic toe—if he only can—to the heavens. Here, there is nobody to say “thus far and no farther.” There are, indeed, a few terrible looking *gendarmes*, who will *not* allow poor Yankees to smoke—(though they do smoke, notwithstanding)—but given the necessary amount of *petits verres*, and they are as quiet as lamp-posts. The genius of the Frenchman, then, has full play, and by the light of a myriad jets, we see it in all its glory. He races, bounding and shrieking from room to room; he pauses, mid-dance, to turn a somersault; he whizzes round upon his heel like a humming-top; he leaps upon the back of his neighbor, and performs feats of imaginary horsemanship; he attempts all kinds of zoological dialects; he forms a procession, and seizing the leader of the Orchestra, carries him shoulder-back, triumphantly round the hall; he tries to throw his feet over the head of his partner; he plays all kinds of tricks upon travellers; and in fine, does every unlikely thing he can think of—and calls it all *fun*. If there were anything artistic in all this; if there were grace in the dance, humour in the disguise, wit in the repartee, drollery in the joke, there would be fun in it even to me. But as it is, either from the force of strong Anglo-American associations, or a wrong appreciation of both art and wit, the thing appears to me not only “unprofitable,” but utterly “stale and flat.”

A word now about the Procession of the Bœuf Gras,

and the Descent from Courtille, and I have done. The grand upshot of the Carnival season was formerly to be seen on *Dimanche* and *Mardi-gras*. The Procession of the Bœuf Gras on those days, used to be a great event. The Bœuf Gras is a great event even now. The rest of the affair has become “small by degrees” and “miserably less.” The immense procession of former times, composed of innumerable masquers in magnificent costume; a brilliant cortege of gilded chariots and private carriages, drawn by full-blooded coursers, and containing, if not the *élite*, much of the wealth and beauty of Paris, and finally, a numerous and brilliant cavalcade, no longer appears. The show of the last *Dimanche* and *Mardi-gras* consisted simply of the Bœuf Gras himself, waddling like a gout-stricken Alderman through the streets, and followed by what was called a symbolical mythological procession, made up of two or three tawdry chariots and a *locomotive bouquet*. This last, however, was really curious, and looked like a small flower garden from the Tuileries, which had become tired of remaining for so many years in one place, and had improved the present occasion to “go out for a walk.”

The *Descent from Courtille* is the name applied to a ceremony which comes off on the morning of Ash Wednesday, and consists in a procession of Masquers from the various balls assembling together, in carriages, in the little village of Belleville, (just outside the Barrier du Temple,) and marching up a long hill in line, and then marching down again. *Courtille* is a French word, signifying a small garden, and was particularly applied, for a long time, to the little pleasure gardens outside the Barrier of Paris. It is probable, that in former years, the revellers, from the Carnival balls, used to meet at some such garden, on the heights of Belleville, at the close of the season, and that their final descent into Paris at day-break, on Ash Wednesday, received the name of the Descent from Courtille.

The number of Maskers at the rendez-vous last Ash Wednesday, was small—not exceeding two or three hundred. But the people were there by the thousand. These last, filled up the middle of the street, while the procession marched up one side and down the other. The chief sport of the thing appeared to be in the exchange of rude gestures, and rude jokes, between the procession and the populace. This noisy, but harmless warfare, was carried on with great spirit; and, as near as I could learn, both parties, (as is often the case in more important contests,) claimed a glorious victory.

STANZAS.

ON THE DEATH OF A FRIEND.

Thou art gone where no ills can beset thee
Where friends re-unite ne'er to part;
Thou art gone! but I ne'er will forget thee,
Thine image is graved on my heart.

Like the warm breath of Springtime, bestowing
New life on the foliage of earth,
So affection within my breast glowing
Sweet musings about thee call forth.

And I see thee in dreams, with bright spirits
Whose rapturous anthems arise
In rich chorus, with saints who inherit
Their promised rewards in the skies.

There the arms of the Saviour enfold thee—
Oh, the thought is a balm for all grief!
And 'tis thus, yes, 'tis thus I behold thee
In visions delightful though brief.

J. M. C.

The Death-bed of William the Conqueror.

AN HISTORIC BALLAD.

BY MARGARET JUNKIN.

Old chroniclers relate, that no sooner had the dying monarch given utterance to his last will, than his two sons, William and Henry—Robert, the eldest, was not present—instantly departed to take possession of their several inheritances; leaving with their father, only a few Priests and Knights, who fleeing in turn, gave up the death-chamber to be rifled by the barbarous attendants.

Within his ducal city, the haughty Norman lay,
To pain, and sickness, and remorse, at length a fearful prey:

The brave, stout heart that fiercely beat beneath its coat
Of mail,

When clashing spear and battle-axe had made the proud-
est quail—

Now sunk beneath an unseen shaft, which all the princely
pride

Of his renowned and knightly skill, was vain to turn
aside;

The liege-men whom his stern, strong will had long com-
pelled to bow,

Behold their lordly conqueror, himself a vassal now.

Rich, royal realms were in his gift, and gold, a treasure'd
hoard,

Wring from his victims at the point of his relentless
sword:

And with obsequious eagerness that scarce could be re-
pressed,

They gathered round the dying King, to hear his last
bequest:

Th' every energy had waned, and life was burning low,
With strange reluctance from his hand he let the sceptre
go;

The booty of a life to which with stormy strength he
clave,

Was only wrested from his grasp, by the all-conquering
grave.

"To him, the fugitive, I leave this fair inheritance—
Fairest and princeliest of all the broad demesnes of
France;

For no desert of his I yield my proud, ancestral claim—
False to his duty and his word, his honor and his name;

But for the sake of solemn oaths I may not disavow,
My ducal coronet should grace a less unworthy brow:

His wild and vain ambition had far other guerdon won—
A rebel to my love and laws,—a traitor—not a son!

"My realm of England,—nay, my sons,—your loving strife
forbear,

Ye press too closely round my couch,—aloof! and give me
air—

My realm of England hold I not by lineal heritage,
But by the sovereign right of war which mine own arm
did wage;

The price of years of blood and toil, do I bequeath to
none—

Yet would I that this golden head might wear the crown I
won:

God prosper thee! and grant thee such dominion to main-
tain,
That so thy heart be spared the sting that gives thy
Father's pain.

"To thee, my youngest-born, I leave treasures, a shining
store,—

Restrain thy too impatient will, and seek not now for
more:

Thine too shall be the sovereignty, the sceptre and the
crown,

And thou shalt purchase for thyself a name whose high
renown

Shall dim thine elder brothers' fame, and be the boast and
pride

Of all who own thy sway, throughout thy kingdoms vast
and wide:

Then curb thy thirst for present power,—thy fiery haste
control,—

Time, soon enough, will lay the weight of empire on thy
soul!"

They waited not with filial care to close their father's
eyes,

But left him midst his dying strife, and flew to seize their
prize.

The mutter'd prayers rose hurriedly, around that bed of
death,

And knight and baron scarce delayed to hear the parting
breath,—

Ere from the royal chamber, where the lifeless monarch
lay,

They tore the jewels, and the gold, and precious things
away;

Stripped of his kingly robes by those who cringed before
his throne,

Was England's mighty conqueror left, dishonored and
alone.

For hours, in ghastly solitude, forsaken there he lay;
Who long o'er iron-hearted men, had held imperious
sway:

He had not striven with bonds of love those natures stern
to bow,

Fear—*Fear* had been the only chain—and *that* was broken
now!

And when with slow, returning shame, they thought upon
their King

Abandoned thus, as though he were a loathed and abject
thing,—

A priestly train with careless rites back to the chamber
stole,

And they who robbed the breathless clay, sang masses
for the soul!

No sorrowing kindred came to weep—no mourning friends
were near—

No loving, loyal subjects pressed around the lonely bier;
None offered from their coffers' store, rich sums to celebrate

His sepulture with pageantry of fitting pomp and state;
And he who held within his grasp, wealth, honor, homage

—all—

Was left with dumb, yet pleading lips, to beg a funeral
pall;

He who such broad domains bestowed, and realm and
kingdom gave,

From strangers' pitying charity was doomed to ask—a
grave!

1852.

Introductory Address, on Opening the Richmond Athenæum.

BY THE HON. JUDGE JOHN ROBERTSON.

(Published at the request of the Athenæum Committee.)

Ladies and Gentlemen:—

The building in which we are assembled was originally designed for the education of youth. Henceforth, still dedicated to the purposes of instruction, it opens its doors to every class of our citizens.

The genius of improvement, the animating spirit of the age, is abroad. Every region of our country attests his presence. Nowhere, perhaps, has his wonder-working power wrought out in as brief a space more striking or happier results than in this our Richmond—and boundless fields still lie before us, promising yet brighter conquests.

Great, indeed, and numerous, are the blessings bestowed by nature and by the hand of enterprise on the favored metropolis of the Old Dominion. Seated at the head of the Atlantic tide, the benificent river, whose banks she adorns, and whose rightful name shall yet be restored, and overshadow that of the Royal Pedant which now disgracefully supplants it, daily and hourly, like a fond parent, heaps his rich gifts upon her. Traversing hundreds of miles a territory abounding in flocks and herds, in corn and wheat, in all manner of useful and highly prized plants, in delicious fruits, in gigantic forests, in fertile fields and grassy meadows, in quarries of lime and slate, and mines of lead and of iron, of copper, and even of gold—approaching her through inexhaustible fields of coal and lofty walls of granite, his descending current pours into her lap the collected treasures of “our own, our native land,”—while his reflux tide surging upwards from the great deep, lays at her feet the still more varied products of every region of the earth. Nor does his bounty stop here; at her command he places his own resistless and magic power, endowing lifeless machinery with more than human energy, and relieving her happy children, her women and even her slaves, from the unremitting toils which elsewhere harass the bodies and the souls of the laboring poor.

Behold again her numerous railways; her magnificent canal, whose still lengthening line has already passed the barrier of our blue mountains; all circulating to and fro in every direction the vital streams of commerce.

Surrounded by a landscape unsurpassed in loveliness; overcanopied by skies bright as those of Italy, but not like them exhaling malignant airs, behold how like an amphitheatre she ranges along the slopes and summits of her sunny hills,

displaying in high relief to the eye of the distant traveller, her commodious and tasteful dwellings, her lofty spires, her majestic capitol—the more majestic for its unpretending simplicity.

Let us enter its spacious portico. Behold! glittering beneath the western sun, how the noble Powhatan, the great chieftain of Virginian rivers, bounds and leaps from rock to rock as with life and joy at the sight of his bright-eyed favorite, ever smiling at his approach.

Cast your eye now towards the Eastern horizon, and see how calmly and majestically he glides on his way to his final home in the broad bosom of the ocean, still winding and winding around as though half-resolved to turn back upon his course; and as one parting from scenes and objects of affection, casts “a longing, lingering look behind.”

Let us descend: we reach the broad area of the Capitoline hill. What friend of our Union or of Liberty—what Virginian above all, will ever approach without a mingled feeling of veneration and pride, the monument now rising on its summit to Virginia's noblest son? A fond and durable token indeed of her love; a needless tribute to his fame; for as soon shall the time-defying granite which records it crumble into dust as his name or his virtues fade from her heart.

But commercial advantages, aptitude for every employment of skill and labor, tasteful embellishments and enchanting scenery, though ours to an extent which leaves us little to ask, are by no means all that is worthy the solicitude of an enlightened community. Sensible of this our city authorities have of late turned their attention to subjects of a different, but certainly not less interesting character. Seeing us abundantly supplied with fountains of wholesome water—Heaven's own life sustaining, health preserving gift—they would now minister to that generous thirst which rises in our bosoms with the first consciousness of life, by opening for us the fresh and ever-flowing springs of knowledge. Beholding the constellated lights, which, spangling the black overhanging curtain of night, render our city if not more brilliant by the contrast, more attractive than in the sunniest day, they would now hold up the broad lamp of learning; not to shine alone on the elevated mansions of the rich, but to gladden with its beams the humblest huts of poverty and ignorance.

My allusion, you will readily perceive, is to the recent ordinance “providing farther for the education of indigent children, and making provision for public lectures and libraries.”

By this ordinance an annual appropriation is made for the elementary education of indigent children, and for the advancement to a higher school, of such as may be selected for their pro-

iciency and good conduct. This building is converted into an Athenæum; provision made for the delivery of public lectures; and for the gradual acquisition of a scientific library and apparatus. The use of the upper story is given to the Virginia Historical Society and the Richmond Library Company, and a donation of a small sum made to each annually; on condition, however, that their respective libraries shall be open to every citizen of Richmond.

None, it is presumed, will question the importance of education in general; nor that it is the duty of every community—for charity is the greatest of duties—to provide food for the minds as well as the bodies of those who are unable to provide for themselves. Nor will any doubt the utility of public lectures as a means of diffusing information, who reflect on the influence exerted in that way by the philosophers of antiquity; the great reformers of a more modern date; or the teachers, scientific, moral, and divine, of every age and country. Libraries accessible to the public—less intense, perhaps, in their primary effect—subserve the same great purpose, and affording the means of frequent and leisurely recurrence often, make more permanent impressions.

I will do no citizens of Richmond the injustice to suppose that they can complain of the small expenditure contemplated by the ordinance. This would be to suppose that they held education and knowledge in small repute indeed, and were not only devoid of charity for others, but of that more selfish charity which begins and ends at home.

I will not weary you with commentaries upon the special provisions of the ordinance. My purpose is to deal not so much with the measure itself, as with the great objects it is designed to promote—mental and moral culture: objects it must be conceded of the deepest interest to all;—to woman as well as to man; to the young equally with the old; to the poor far more than to the rich. Not only are they of universal interest; they present a theme of universal extent: not alone the entire circle of the sciences, and the boundless fields of literature; not only this “great globe itself, and all which it inherit,” nor the myriad worlds above, around, still more stupendous;—some

Whose unfading light
Has traversed the profound six thousand years,
Nor yet arrived in sight of mortal things,

themselves mere specks compared with the transparent, shoreless, and measureless expanse in whose immensity they float and sparkle: not alone the material universe itself, in all its sublimity; but the vast and mighty empires of the mind—that viewless spirit which, stretching its sceptre over all created things, would soar through

time and space—would sound the fathomless abyss beyond the grave to find out its own future and eternal destiny; nay would strain its daring eye to view the unapproachable, the uncreated Power whose bright effulgence none of mortal mould can look upon and live.

The limits of an introductory address having reference to a theme like this, would not permit, had I the rashness to attempt, a full development of its minutest branch. Farsimpler is the task I propose to myself of endeavoring to present a rapid sketch of some of the most prominent advantages accruing from the cultivation of the mind; to show *what knowledge has done for man*. In approaching this task, deeply conscious how inadequate are my humble powers to do it justice I beg to bespeak your kind indulgence; I bespeak it for myself—but more for my cause—for it is the cause of moral and intellectual improvement; of individual happiness and social security; of wisdom and of virtue; of the mind and of the heart.

Can a nobler aspiration rise in the heart of man than to perfect so far as his grosser elements will allow that portion of his nature, which distinguishes him from the brute; which elevates him, on the wings of the mind, towards the Father of the universe—though still as remote as earth from heaven: which many, perhaps vain-gloriously, regard as a mysterious emanation from the Divine mind; or at least as holding with it some undefined affinity, or mysterious communion; and which the humblest and the wisest may well believe to be a separate and spiritual being, doomed for a season to a probationary union with the body; susceptible of impressions, and exposed to temptations through the medium of the senses, yet endued with capacity to comprehend good and evil, free to choose between them, and destined according to its deserts to an immortality of happiness or misery.

We are told by a sage of old—one young in years, but wiser than his elders—himself, as he believed under this divine and uncontrollable influence, that

“There is a spirit in man, and the inspiration of the Almighty giveth them understanding.”

Addison makes his beathen moralist affirm in his famed soliloquy, that, “’Tis the Divinity that stirs within us;” and Akenside, in a poem replete with noble sentiments and splendid imagery, distinctly traces the lineage of all minds from that “Ancient Mind” which he beautifully apostrophises as the Deity himself.

Altogether imperfect is our knowledge of our own nature; utterly inadequate our faculties to comprehend, our language to express, the perfections of the Most high. Yet piety and philosophy concur in describing him as a being essentially, purely, intellectual—not a mere combina-

tion—nor personification even of divine qualities: that would be to substitute the attributes for the Deity; the rays for the luminary:—by an incongruous metaphor to endow ideal abstractions with substantial reality—and life—and thought. Not as an embodiment, nor incarnation: for the very terms smack of mortality; they are “of the earth earthy?” No, they define him as an actual, self-existent and eternal spirit, possessed of supreme wisdom, and—hence, of necessity is it not?—of infinite power and goodness.

Of infinite power; for as was happily said by one of the wisest philosophers, “knowledge is power”—and supreme wisdom must therefore be infinite power:—

And of infinite goodness; for to suppose the contrary would be to conceive—not a God but a monster—an impossible monster; combining divine perfections with human frailty, or fiend-like perverseness. Even human reason, tempest-tost by passions, and beset by temptations, struggles often successfully against evil; nor is lost, but when deceived by some delusive pleasure, or imaginary good. A Being inaccessible to temptation, unmoved by passion, supremely wise, must be as incapable of moral obliquity as of mental error. No!—supreme wisdom—this primary attribute must be the source of truth, and good: “for truth and good are one.”

Mind, mind alone (bear witness Earth and Heaven)
The living fountains in itself contains
Of beauties and sublime.

Let us recur to the aphorism of Bacon. Be it a thousand and a thousand times reiterated in the ear, until it shall reach the heart, and be imprinted on the memory, that “knowledge is power.” Archimedes declared that he could move the earth were there another planet near whereon to erect his machinery. He had found the principle, the motive power; all he wanted was space for its action.

Well it is that Divine wisdom left not within human reach the means to mar that perfect order which keeps the adamant spheres

Wheeling unshaken through the void immense,

else ere now rash hands had jostled them from their orbits, and brought back the reign of Chaos and Old Night.

However this may be, the Syracusan, it is said by his ingenious inventions, defended his city from the attacks of the Roman fleet—to that extent at least his knowledge was power: And is it not obvious that the more numerous in comparison with others, and the more important, the objects any man's knowledge enables him to accomplish, the more is he superior to his fellow men? the more has he the power to serve himself

and them? Were any man wise enough to find the principles or rules whereby all things might be accomplished, that man, in power at least, would be a God.

Without knowledge what can mere physical strength achieve? What has it ever achieved? Behold the brute! The elephant and the lion, the horse and the buffalo, far exceed man in strength; yet man subdues them to his will.

Without knowledge what were man himself? Behold the savage! Consider the privations and sufferings of untutored barbarians, half clad in the skins of animals, dwelling in huts and caves, feeding on acorns and raw flesh; think of their brutal and ungoverned passions, their cruel usages and customs, the insecurity of property, and even of life among them: Compare these with the comforts and enjoyments, peace and security of well-ordered civilized communities. Contrast the mental imbecility of an untutored Hottentot for example, or Esquimaux, with the spiritual activity, the God-like comprehension of a Galileo or a Newton, and say, does not a wider space separate them than separates the former from the higher order of brutes?

Burke has exhausted all the arguments which can be urged in vindication of natural society—all the defences of ignorance; but it is perhaps needless to say he was no proselyte to the doctrine his overpowering irony was in truth designed to demolish, and was himself indeed one of the brightest illustrations of the power and influence of a cultivated intellect.

Patrick Henry it is said regarded learning as of little value. In his own quaint language—for he seemed desirous of placing himself in the category of the uneducated by adopting the language of the most illiterate, he is reported to have said “*Naiteral* parts is worth all the book-larning on the face of the yearth.” It would hardly be just to judge this great orator and statesman, for such he was, by a remark made in cautiously or without serious deliberation. A good capacity may certainly do much without the aid of books or any regular instruction. But the man who should depend solely upon his own resources would stand on very disadvantageous ground in any pursuit or employment of life, compared with him who had treasured up the accumulated experience of ages. Patrick Henry himself had never won the fame and distinction he acquired both as a statesman and professional advocate, had he not studied and deeply too, the institutions, laws and usages of other countries as well as of his own. Newton, who was distinguished for close and patient observation, also, we are told, devoted himself with unusual ardor to the study of books. Had he neglected them—had he been

born, as has been well observed by a learned author, in the wilds of Africa, in all probability his mind would never have ranged through the celestial regions. His natural parts might have been the same, but neither his nor any other untutored mind, although the simple fact which led to the discovery—the fall of an apple—had for all time been known to all, would probably have ever discovered the law of the planetary system, while that system shall continue to revolve.

History, in many a page, records the momentous consequences of knowledge and of ignorance upon the fate of nations.

Remember how Rome—a fragment of Italy—her empire growing with her intellectual progress—subdued one by one all the nations within her reach, and came at last “in her most high and palmy state,” to be the mistress of the globe.

Look to the world of Columbus. When first discovered, peopled by numerous tribes, possessing in one of its grand divisions cultivated fields and populous cities, and mines of gold the richest of all the earth; in the other, roaming through their primeval forests, wild as their native deer, free as the God of heaven had made them and spurning the yoke of their victors—all finally circumvented by the artifices of a few traders, land pirates and military adventurers; themselves, their treasures, their country, of fourfold greater magnitude than all Europe, the spoil of comparatively petty states of that distant continent; the very names of their rivers, their mountains and their plains changed and supplanted to feed the vanity of their conquerors; and their race now rapidly disappearing from the face of the earth.

England doubly illustrates the proposition I am now urging, in her opposite phases of barbarism and civilization. Her first inhabitants, the ancient Britons, described as ignorant and idolatrous savages, were twice conquered by the forces of Caesar—far inferior in number. At a subsequent period utterly subjugated by other Generals of Rome, their country became a province of that remote empire, and so continued for four centuries. Rome at length relaxed her grasp. But the Britons now enervated, as we are told, by long submission, cowered before the neighboring Picts and Scots—more savage than themselves,—and were twice saved from impending ruin by their former masters, whom they supplicated for aid. A single legion from Rome sufficed to rout their despicable foes. Again threatened, their ambassadors again made humiliating appeals to Rome. But Rome herself pressed hard at home, turned a deaf ear to “the groans of the Britons;” they then invited the aid of the piratical Saxons, and obtained it—and now was verified the fable of the Horse,

the Stag, and the Man. Worse—the Saxons joined their enemies after having conquered them—and the poor Britons—or rather the small portion saved from expulsion, or utter extermination, who had so long endured the vassalage of Rome, and the spoliation of Picts and Scots, now bridled and saddled by their allies, were reduced to the worse condition of Saxon villenage.

But mark the sequel: England, in her rightful domain little more than the half of an island—the whole of which would be measured four times over in the Territory of Oregon, or the States of Texas and California—a mere speck upon the map of the world:—England, for which for many centuries contending races had fought upon her own soil, became at length the prize of the Norman Conqueror; by whom, in turn, the Saxons were regarded, and not without reason, as mere barbarians. Peace followed, and undisputed Norman dominion. The original Britons—and all the various races and their descendants who at any time had obtained the mastery—the Romans, the Picts and Scots, Danes, Saxons and Normans, with languages as diverse as the tongues of Babel,—gradually united and became compounded into one. England prospering in trade and commerce, rapidly advanced in wealth and numbers, in arts and arms. At length she claimed dominion over the seas as absolute as Rome had ever maintained over the earth; exacting for centuries deference and submission to her “*meteor flag*” and boasting that

Her march was o’er the mountain wave,
Her home was on the deep,

till her own unyoked descendants proclaimed and maintained the common right of all to the common highway of nations.

Having by a forced union added to her own power that of Scotland and Ireland, she extended her domain over large portions of Asia and America, and to this day holds in subjection on those continents a territory more than twentyfold larger than Great Britain and Ireland together; and a population in India alone exceeding by about one hundred millions that of her native subjects.

In all these instances what difference do we find between the victors and the vanquished to account for the results, but that between knowledge on the one hand and ignorance on the other?

The small and disciplined armies of Rome easily reduced to submission the comparatively numerous forces of those whom she contemptuously denominated barbarians.

The ignorance of the American savages of iron, and of the art of ship-building, are of themselves sufficient to account for their fate. They could make no head by water with canoes form-

ed from trees, which cost the labor of months to fell, and a full year to hollow out with hatchets of stone, against the armed batteries of European ships, nor by land with stone-pointed or copper-pointed arrows, against the terrifying thunder of European artillery. Panic-struck at its death-dealing explosions, the South American tribes, who, compared with those of the North, were not only more numerous and concentrated, but greatly advanced in civilization, readily regarded with superstitious idolatry the "White Gods,"—as they termed the inhuman monsters who robbed and massacred them in the name of Christianity—and Cortes and Pizarro, with a few hundred desperate adventurers successively entered the populous capitals of Mexico and Peru, seized on their monarchs, and put one of them to an ignominious death in the midst of his millions.

In Hindostan, England had to contend with a race still more advanced in civilization than the South American Indians. The Hindostanese had carried many of the arts indeed to high perfection; those, especially, of spinning and weaving. Still, their machinery was of the rudest kind, and though they wrought textures of exquisite fineness, they effected this rather by patience and numbers and manual dexterity, than by any high degree of intelligence. They excelled also in dancing, in jugglery, in all exercises requiring sleight of hand, or of foot,—but were deficient in energy and activity of mind, and like the "children of the sun," immersed in idolatry and superstition. They believed in the transmigration of souls into the bodies of brutes. Their customs, many of which have prevailed for thousands of years—for it is the nature of self-satisfied ignorance to be stationary—as it is of knowledge to be progressive, were in the highest degree absurd and cruel. Suicide and infanticide they regarded as meritorious; they voluntarily threw themselves beneath the car of their Idol to be crushed to death; and widows in the bloom of youth and beauty were forced or permitted to perish on the funeral pyres of their husbands.

It may be objected that there are instances of conquest by barbarous over civilized nations not to be attributed to superior numbers. The victories of the Picts and Scots over the Britons, for example, and those of the barbarians who conquered their Roman conquerors. Conceding the fact, other causes operated to account for these results, without bringing in question the superiority of knowledge over ignorance.

The Britons by centuries of submission to the Romans, had become, as already seen, insensible of the value of liberty, or indisposed to peril life or ease in its defence.

Rome, spurred on by ambition, had sought to concentrate all power in her capital. In place of admitting her conquered subjects to participate, she converted their countries into provinces under Proconsuls and Prætors, who practised every species of oppression. Her conquests were often attended with a barbarity exceeding that of her foes. Numantia—a populous city of Spain—sooner than fall into the power of Scipio, suffered all the horrors of a siege, and when at length the victor entered, he found the city a desert, and the wolf and the vulture feasting on the bodies of his famished victims.

But the wrongs which convert cowards into slaves, rouse the brave to revolt. Rome found at last that there were limits to human endurance—and that,

—as her yoke

She laid upon the neck of prostrate nations,
Her own proud spirit they inhaled,
And learned to feel its weight.

Instigated by revenge and despair, the Spanish peasants, converting their crooks into spears, rose against their oppressors—

And Rome's proud legions fled aghast, as flees
The panic-stricken lamb before the wolf.

It was not then that ignorance, other things being equal, could cope with knowledge. No—knowledge is power. But the race is not always to the swift, nor the battle to the strong. The napping hare may be outstripped by the tortoise. A slumbering giant may be overcome by the weakest adversary. Samson had never been slain by the Philistines had he not betrayed himself; nor would the monster Polyphemus, had he not first been subdued by wine and sleep, have fallen beneath the arm of the wily Ulysses. So is it with intellectual strength. The Britons had lost their courage—not their comparative knowledge. They sunk under the moral paralysis of voluntary slavery. The Romans listened to the seductions of ambition and luxury, and turned a deaf ear to the voice of wisdom. They wilfully became intoxicated with the fumes of that very power she gave them for their defence; and laying aside their armor—slumbering when they should have watched—met from the fierce desperation of those whom they had wronged, the fate they deserved. Knowledge had given them power. They abused the precious gift and converted it into the means of self-destruction.

But let us turn from the history of warlike nations, and consider the power and beneficent influence of knowledge in the peaceful pursuits of life. And here it may be remarked that the greatest triumphs of art and science, as well as the most wonderful phenomena of nature, when

daily familiar to our eyes cease to attract our notice. What more surprising than the operations of a common grain mill—such as those erected in our city; where the labor of a few persons, which unassisted would scarcely suffice to crush grain for their own consumption, aided by machinery, daily supplies the daily bread of hundreds of thousands; rolling out their precious cargoes to bear off the palm for Richmond in distant markets?

As illustrating the same remark, may I not point your attention to our iron foundries whose furnaces melt and mould the solid ore into forms for human use, and whose ponderous hammers, huge shears, as though wielded by unseen hands, beat it out into thin plates, or clip it in pieces, as a girl would clip paper with her scissors:—

To our cotton and woollen factories whose complex machinery, set in motion by women and children, and obedient as the mutes of a Sultan, performs more than the labors of a Hercules, or the hundred-handed Briareus.

Is it not a triumph of science, that the beneficent stream which passes our doors, whose head-springs gush from the gelid caves of our mountains, is made to flow through subterranean channels, and rising contrary to the law of its nature, to spout forth again in our yards and very dwellings, to give us a luxury whose loss not all the drinks ever compounded by the art of man could compensate, and to keep in subjection the fiery element which was wont to appal and devastate our city?

Is it not a triumph of science, that Night has been, as it were, banished from among us, and our streets irradiated by a new light drawn from a pitchy mineral, causing the stars to “hide their diminished heads,” and vying with the moon in silvery brightness; but not like that capricious luminary, dimmed by clouds and vapors, nor subject to waning eclipse or absence,—not only promoting social intercourse, but scaring away the midnight thief and incendiary, heretofore enconced beside our thresholds?

Must I not, in passing, notice the newly invented portrait-painter—the Daguerreotype,—which, without hands or eyes, colors or brush, presents the lineaments of the human face with a truth and exactitude unattainable by the human hand; fixing, *solidifying*, if I may use the expression, as though congealed, the very reflected image itself, with all its lights and shades? Why, will it not come to pass, that our own “counterfeit presentments,” shadowy and evanescent as they are, shall by some yet undiscovered process be made to flit from behind the mirror, attend us wherever we go, and mock all our motions?

Reflect on the changes wrought in the condi-

tion of the world, by the diversified uses of steam; whereby ships without sails, and coaches without horses outstrip the fabulous steed of Pegasus, or the wings of Æolus.

Most astounding of all behold the feats of the Genius of the Magnet! Surpassing the winged messenger of Jove, equalled only by the fabled Slave of the Lamp, or Heaven’s own bolt, he bears our words, our thoughts, our wishes through the air and under the seas, bringing us as it were to converse with our friends thousands of miles distant, as though they sat beside our hearths. I confess I have not yet recovered from the astonishment experienced at the first credible account of this true but hardly credible invention, and musing on its wonders, almost begin to doubt if there are any bounds to the discoveries and conquests of the human intellect.

Such are some few of the triumphs of knowledge; most of them achieved within the memory of the existing generation. If one could now rise from the grave who died without having been an eyewitness of their truth, and should be told that an errand could be sent and an answer returned between Paris and London, *under the ocean*, or between New York and New-Orleans in less than four minutes, would he not be as incredulous as if told that a line of telegraphs had been established between the earth and the moon, or some mysterious communication realized with the world of spirits? At least he would believe that his narrator designed to practice on his credulity with tales stranger than Arabian fictions, and went a bow-shot beyond Manchausen, that liar of the first magnitude.

I might refer to the mariner’s compass, pointing out the ocean’s pathways through starless nights; the telescope, opening to our view wonders before invisible to the human eye; the common watch we carry about us, telling us the place of the sun when hidden by clouds: to numerous other inventions daily and hourly ministering to our wants and pleasures, and speeding commerce, agriculture, and the mechanic arts on their march to perfection; but already I fear I weary you with what may be justly thought trite illustrations. For offering any such, my apology must be the nature of the theme suggested, or rather imposed, by the occasion on which I venture to address you:—exceeded by none in importance, it has more than all others perhaps in all ages exercised the thoughts and the pens of the profoundest intellects. Every mind will doubtless have its peculiar views; but whoever, in the idle effort at originality, on a subject like this, should think to offer no argument but his own, and resolve to omit the more obvious and prominent illustrations, would leave the subject itself in its original darkness,—

or furnish but just light enough to make that darkness visible. On the other hand, it would be as vain as it would be tedious, to enumerate the countless conquests of the human mind. It is enough to know that knowledge enables man gradually to reduce all other animals that roam the earth,—the whole mineral and vegetable kingdoms—the elements themselves, armed as they are for destruction—under his dominion: to tame even the wrathful lightning into an obedient slave to fetch and carry at his command; and heedless of “whirlwinds and the northern blast,” to ride, like a God, fearlessly above the raging seas. Truly, most truly, knowledge is power.

[To be concluded in our next.]

THE DEAD.

BY MRS E. H. EVANS.

I.

The DEAD!—the still-remembered Dead.
Where roam their disembodied souls?
What scenes attract?—what law controls
The immortal state to which they're wed?

II.

Reach they at once the Central Throne,
Uplifted by Angelic wings?
And strike they now the quivering strings
Once touched by Cherub hands alone?

III.

Or dwell they in some higher sphere,
Lit by our Sun!—and silvery moons,
What time the Night her state assumes
Of splendor only dreamed of here?

IV.

Wear they ethereal forms that keep
Some semblance to the mortal frame;
And should we know them, if they came
To smile upon us as we weep?

V.

Then whence this strange, o'erpowering dread,
That chills us, when we stand beside
Her who was late our joy and pride,
Now robed in vestments of the dead!

VI.

She was so soft—so mild—so fair!
So loving to the lowliest thing
That shared with her life's blossoming;
Withal so timid:—all our care

VII.

For her seemed needed; wintry storms
Blew not upon her budding grace,
Nor Summer suns might leave their trace
Too rudely on her blushing charms.

VIII.

So quickly swelled her throbbing heart,

So filled with sudden tears her eyes
At others' woe—we hushed our sighs
And kept from her each grief apart.

IX.

And how it roused our wildest mirth,
And waked her dimpling smiles to hear
That any living thing had fear
Of her, so gentle from her birth.

X.

Yet now she resteth cold and white
With solemn brow, and rigid lips,
And 'neath the veiling lids' eclipse,
There seems to lurk intensest night.

XI.

There is an air of grandeur cast
O'er all her form—a solemn state
Invests this closing scene of fate,
The strangest—as it is the last.

XII.

What! This our flower! our petted Dove!
Our childlike, gentle-hearted friend!
So Queenly cold!—ah, fatal end
Of hope, and all the dreams of love.

XIII.

The walls' still drapery—smooth and fair,
The mirror veiled by careful hands—
The whispered words—the stealthy bands
Of friends that mount the winding stair;

XIV.

All strike a terror, words are faint
To utter, in the soul dismayed
We start at our own steps, afraid,
And shudder at each smothered plaint.

XV.

The Veil we fear to put aside,
She's passed within. She feels and knows,
The mysteries its folds enclose;—
Knows what earth's mightiest has defied.

XVI.

One kiss upon her icy brow
And on her lifeless hands, that rest
Like sculptured ivory on her breast,—
Then for long hours of lonely woe.

XVII.

The vacant room;—The empty chair!
The book left open where she read
On the last day of health,—the bed
Unpressed! One lock of sunny hair

XVIII.

Alone we keep above the ground,
Of all the beauty and the grace
That made these halls their dwelling-place,
And cast a radiant halo round.

XIX.

The DEAD! The ever cherished DEAD!
Where roams HER disembodied soul?
What scenes are dear? What laws control
The immortal state to which SHE'S wed?

POETRY AND RELIGION.

No. IX.

*(Same subject continued.)*THE VITAL HARMONY OF TRUTH; DEFECTS OF
BYRON'S POETRY; SELF-COMMUNION; PRAYER.

IV. Another high advantage derived from christian faith consists in the fact, that it *enables the soul to comprehend and realize the vital harmony of truth.* If, as the poet sings,

"A thing of beauty is a joy forever,"

in itself considered; if truth shines with radiant levelness, even in its fragmentary forms; surely truth is more attractive, and beauty is more divine, when seen associated in the fair proportion and symmetry of a consistent plan. A solitary feature may be fair, but how much fairer does it appear, in the full expression of a living countenance, beaming in the light, and varied by the emotions of an indwelling spirit! Music may be sweet in the fall of a single note; but how much sweeter in the prolonged melody of the mighty anthem, uttering the high raptures of the soul, and lifting the thoughts in adoration and praise! A lonely and broken pillar, standing amid a scene of ruins, may be beautiful in itself; but how much more beautiful when joined in just proportion, and fitted to exact symmetry, it rises in its place to form a part of some glorious temple! To a mind destitute of faith, truth appears in detached and fragmentary forms. A dismal chaos prevails around. Wandering lights are seen flitting here and there, crossing and recrossing in strange confusion. Inarticulate sounds, plaintive or gay, fall at intervals on his distracted ear, without concord and without significance. Nature, providence and human life, in their changing aspects, move around him in bewildering perplexity; and he comprehends not their combined import—he feels not their united inspiration. Faith collects these scattered lights into a starry firmament of truth—arranges these stray notes in the scale of a harmonious system—and builds, from the confused materials of the present scene, a mighty phantom for the worship and hopes of mankind.

Doubt, perplexity, unsatisfying conjecture, and unceasing contrariety, must necessarily characterize the mind, whose views of the present system of things conform not to the gospel economy. To every mind intent on the attainment of knowledge, but especially to the poet, whose genius seeks sympathy with the deeper elements of life, and holds communion with the mighty heart of nature; such a state of darkness and discord

must be disastrous in the extreme. Bound on a fruitless voyage of discovery, drifting over an unknown sea, without chart, or compass, or anchor, the sport of every wave, "tossed to and fro, and carried about by every wind of doctrine;" and uncertain as to what final haven shall be gained; it is not surprising that the soul should grow weary in its restless course, or sink in utter shipwreck amid the wild war of conflicting elements. There is no sublime satisfaction in surveying the present. There is no immortal hope in anticipating the future. Yet these conditions are essential to the healthful exercise of every earnest, truth-seeking spirit. In vain do we speak of the inspiration of truth and the love of nature; when truth is not found in the harmony of a connected system, and nature is not known in its high and hidden import.

Human reason has pretended to construct for itself system after system.—such as deism, pantheism and the like, with endless variation—to answer the eager questionings of an immortal mind, and to interpret the conflicting voices of nature and providence. But discord still reigned around. Darkness still hung over the destiny of man. And the soul, sighing amid its unavailing conjectures, and recoiling from the dreary visions of unbelief, has sought, but never found *peace* in the order and harmony of its faith and hope, in the brightness and glory of its prospects, until it lifts its joyful eye and exclaims *eureka! eureka!* at the cross of Christ! There "mercy and truth meet together, and righteousness and peace embrace each other." There "life and immortality are brought to light." There "peace on earth, good will to men, and glory to God in the highest" becomes the chorus of awakened nature. There we find a key to the hidden harmonies of the universe—an index to the manifold mysteries of life! The high and holy *doctrines* of the gospel explain the varied aspects of nature and providence. The pure, humble and benevolent *virtues* of the gospel secure the order of society and the harmony of human life. Now we are enabled to answer these thrilling questions. Whence the origin of this stupendous and variegated scene of being? What the import of the conflicting aspects of things around us—of storm, and darkness, and tempest blended with sunshine and tranquil peace and smiling beauty—of affliction and tears mingled with consolation and joys—of severity interchanged with goodness? What the high import of life? What the hidden meaning of death? What our sacred mission here? What our final destiny hereafter? God is the creator and preserver of all things that exist—the moral governor of the universe. Man is a fallen being. Sin prevails over the race; having "brought death into the world, with all our

woe." Life is a scene of probation and discipline, where the judgments of Heaven fall as parental chastisements, and where mercy bends over the wandering to woo them back to the confidence and love of our reconciled Father—where holy aspirations are fostered, evil tendencies restrained, and patient deeds of charity performed; while death is but a dark doorway into the mansions of immortal light. What other system so consistent in itself, so accordant with the realities of nature and life, so harmonizing in its interpretation of surrounding mysteries, so satisfying in its adaptation to the wants of man's nature, and so cheering in the prospects which it unfolds in the future, can be found as a substitute for this? Shall a poet adopt the dark creed which disowns the author of the universe? Or that shallow system, scarcely less dark, which denies a Saviour to the guilty? Shall he hold that man walks upright in moral innocence, and expatiates in joy over a scene framed and fitted up as his final residence—that here he finds supreme delight in gratifying the earthly instincts of his nature—with no element of gratitude in his joys—with no cup of consolation in his sorrows—with no noble purpose in life—with no sustaining hope in death—with no home of blessedness in Heaven? Alas! for the poet whose inspiration is derived from fountains of feeling no deeper, and whose verse is moulded by a spirit of harmony no higher than comports with a creed so shallow and so conflicting! Well may he exclaim in the bitter contradiction of his own experience as a mighty but miserable poet of such a creed has exclaimed,

"Our life is a false nature—'tis not in
The harmony of things!"

He may affect much rapture in swelling phrase over the mystery of life and the spirit of nature; but he knows nothing of either. He may exhibit the sudden impulses of wayward passion. He may depict fragmentary images of beauty and sublimity. He may manifest the fitful elements of a lawless power. But he is a stranger to the beautiful symmetry of accordant truth; and his unbelieving ear has never caught the sustained spiritual harmony of nature and life. Passing visions of the tempest, the earthquake and the fire have flitted by him in their bewildering power, and at once he has gone forth to prophesy in his madness, without waiting to hear "the still small voice of God," whispering in the secret harmony of all things; but audible only to the quickened ear of christian faith.

If the spirit of poetry bears any affinity to its outward form, it is essentially a spirit of harmony. Hence it "moves harmonious numbers." But the poet without faith, however gifted in the capa-

cities of genius, rebels against the laws of moral harmony in his inward experience, and inhabits intellectually a region of discord and confusion. Such a poet therefore must inevitably labor under a twofold defect—first, in the nature of his inspiration, and secondly in the structure of his works. The sentiments of his heart and the visions of his mind are not conformed to the laws of eternal harmony. And the materials with which he "builds the lofty verse" are not hewn from the quarry of truth, nor squared to the beautiful symmetry and sublime proportion displayed in the great temple of nature. The inspiration of such a genius is discordant, fitful and self-conflicting. And whatever monument he may rear in verse is fragmentary, disproportionate and insecure. We are aware that many of our distinguished poets have been of this description. But great as they were, these defects so far obscured their genius and marred their productions. They were great in spite of these defects. They would have been greater without them.

Perhaps Lord Byron was the most noted example of this class. His was undoubtedly a mind of extraordinary power, but fearfully perverted and sadly eclipsed. Even before the close of his brief career, his mental energies were visibly on the decline, sinking dimly under self-consuming decay. His works have acquired an adventitious popularity partly from causes independent of their intrinsic poetical merit. That popularity is gradually growing less as the world advances in moral purity. And the time may come when, if Byron be not entirely forgotten, he will be remembered only as the monster product of a past age. The spirit that breathes in his works is uncongenial with the purer tastes and loftier moods of the human mind. To sympathize with that spirit the soul must be at war with itself—at war with society—at war with nature—at war with God! The reader rises from under the spell of his wandlike pen not a wiser and a better man, prepared to encounter patiently and cheerfully the realities of life; but with a scowl on his brow—with bitterness in his heart—with darkness on the face of all things around him! If ever there was, by special designation, a poet of discord and darkness, that poet was Byron. Endowed originally with superior genius and generous susceptibilities, joined with an indomitable pride and an insubordinate will; when, finding his youthful visions of paradise unrealized in nature and his sanguine dreams of perfection unfulfilled in human life, the disappointment, instead of serving to chasten and purify, served only to exasperate and poison,—the discovery, instead of including the guilty defect of his own nature and leading him to bow in

humble penitence at the footstool of divine mercy, while his faith was transferred from man to God, and his hopes from earth to heaven, prompted his proud spirit, blind in its impotent rage to feel itself aggrieved and injured in its doom. His rebel will, disowning the subordination of a creature, cast defiance in the face of the Creator. Because his capricious demands had not been consulted in the arrangement of the universe, with the fury of a fretted child he rejected every advance, spurned every compromise, and renounced faith in all things! His wounded spirit recoiled inwardly to prey upon itself. And with towering pride and dark defiant will he went forth to mock and deride every thing held sacred in the hearts of men. Here was the great defect in Byron's character, and corresponding to this we find the radical defect of his poetry. He had no faith in man, in nature, or in God. Not that he was an avowed atheist like Shelley; but unlike Shelley, with a more faithful inconsistency he cherished a spirit of utter and universal unbelief. He looked abroad with a scowling, scoffing scorn on all things in earth and heaven! He consequently had no *definite poetical creed*. He had no cherished image of purity and loveliness enshrined within his heart, the exemplification of which, in nature or life, called forth his sympathy and admiration. He had no bright beautiful ideal of perfection presiding over the creations of his genius, and moulding in conformity to its standard the visions unfolded in his works. His poetry contains nothing consistent, complete, or accordant with itself. No clear continuous stream of thought and sentiment flows in his verse. But, like some witch's caldron, it is filled with contradictory and conflicting elements, fermenting in dire confusion over which presides some dark spirit of discord and defiance. The only consistent element in his works is that of storm and darkness. Their only definite result is the majesty of moral disorder—the triumph of universal desolation! He could discern what was false and hollow, but he had no conception of the opposite beautiful and good. He could *hate* but he could not *admire*! With no perennial fountain of love, sympathy, or admiration flowing from his heart, there could be no pure and healthful inspiration in his poetry. Most he has written may be characterized as extravagant common-place, or admired disorder. The beauties of Byron are his inconsistencies—his subtilities are his contradictions. These inconsistencies and contradictions are manifested, occurring on almost every page. They lie deeper than mere variations of language. They are contrarieties of sentiment—tergiversations of the soul itself, proving either a pitiable pliability of

principle, or a more pitiable state of insincerity and affectation.

At one time he strikes his harp in honour of the hero and the patriot. He hovers in lofty meditation over ancient battle fields, and describes the deeds of heroism there achieved. But when he paints his living hero, and brings to view his model patriot, what is the image he portrays? Some roving exile—or some ruffian bandit—or some ruthless corsair! A patriot, without home or country—an Ishmaelitic hero, with his hand against every man, and every man's hand against him!

At another time, he sings the praise of nature, and describes her scenes of beauty and sublimity. But forthwith he introduces some dark, malignant spirit, at variance with the order of nature, and a rebel against the throne of God—some guilty Cain, who hates the earth because it testifies of his brother's blood, and who shudders at nature because it reveals the presence of an Almighty Avenger. Some moody misanthrope, without complacency and without sympathy in aught that exists, visible or invisible, whose will, if it had the power, would spread darkness and desolation over the universe!

Again, he essays to portray the tenderness and devotion of human love. He paints a passionate and romantic picture. But underneath he writes in scorn—“*Love is lust, beastly and base.*” In heartless mockery, he sports with the sacred ties of wedlock; and revels, with exultation, in the vile arts of adultery. Anon, he depicts images of female beauty. The colours glow and melt under his magic touch. Life-like forms of radiant loveliness shine upon the canvass. But while we gaze, lo! with sudden and startling transformation, instead of virgin purity and delicacy of spirit veiled in its appropriate outward drapery, we behold images of gross, carnal, corrupt fascination—the *tainted beauties of a harem*!

Thus we perceive the union of antagonistic and conflicting qualities to be the grand characteristic of Byron's poetry. Its elements have no congenial affinity; but discordantly associated, they are mutually repellant and destructive. The direct tendency of this unnatural combination, was to destroy all interest and all inspiration—to consume the very life and soul of poetry—and cause genius itself to sicken with disgust at its own triumphs. This was the actual result in Byron's experience;

“ His godless nature, wooed, embraced, enjoyed,
Fell from his arms abhorr'd. His passions died—
Died, all but dreary, solitary pride,
And all his sympathies in being died.”

But Byron was a poet in spite of himself. His mighty genius was imprisoned by a proud heart

and perverted will in an element of moral darkness. Yet it emitted lurid flashes of glory that startle with their vividness, and cause us to lament the doom by which it was so fatally eclipsed. Its light burned in an unhealthy atmosphere, agitated by incessant gusts and infected by deadly gases. His disordered moral sentiments, his dark, religious views, and his loose, irregular habits, were so many traitors to his genius. They poisoned the fountains of his inspiration, crippled his faculties, perverted their exercise, and gradually undermined their very existence. Evidences of this fact abound in his works. Whatever traces of fitful and startling power they may exhibit, they are deficient in the higher elements of true poetry. *They are destitute of sustained and elevated spiritual harmony.*

How then, it will be asked, do we account for the popularity of Byron? In answering this question, we are led to the discovery of a mournful secret in our common nature. We have already intimated that the popularity of Byron was, to a great extent, owing to causes, independent of his poetical merit. These consist in the dark and corrupt moral sympathies of the poet, which are disguised under the enticing charms of his poetry. These too readily find an echo in the human heart. The perverted nature of man, in too many instances, contains within itself the same conflicting and discordant elements that we find united in the poetry of Byron. Even the purest characters may relapse into occasional moods of congeniality, (or at least there have been such moods in their former experience, which may be remembered,) so as to enable them to sympathize, for a time, with such unworthy elements. But with the impure and the vicious, the sympathy is entire, and the fascination is complete.

"Thou speak'st to me of things that oft have swam
In visions through my thought."

But in the poetry of Byron, the impure elements of our common nature appear redeemed from their inherent debasement. Low and lustful appetites are disguised under a veil of florid beauty. Dark and malignant tempers of mind are sustained by lofty genius, and arrayed in brilliant colours of poetry. "The unclean spirit," which, at one time raves in rags and madness among the tombs, and, at another, enters even a herd of swine, here lays aside its appropriate forms of degradation, and appears "transformed into an angel of light." Hence, the double charm of a sympathy, which flatters, while it corrupts.

But while the power of Byron's genius is confessedly great, and in a certain sense, peculiar, in conjunction with these impure moral sym-

thies, who can fail to perceive, that they were an incumbrance to his faculties? The same, nay, we believe, far greater poetical power might have been displayed, if joined with pure moral antipathies, instead of corrupt moral sympathies, in delineating the dark pictures displayed in his works. Milton has portrayed the image of a proud and fallen spirit—the prototype of that, which, identified with the personal sympathies of the author, appears under a human form, in the poetry of Byron. But the picture, as drawn by Milton, exercises no dangerous fascination over our sympathy.

We admit an immoral poet may become more congenial, and consequently more popular, with a certain class of admirers; by associating his impure personal sympathies with the images unfolded in his poetry. But we do contend, that these personal sympathies confer no new gift of genius; neither do they quicken or exalt the gifts already possessed by the poet. A failure to discriminate at this point has given rise to many absurd notions, as to the characteristic features of poetic genius. We were sorry to find in a recent work of great originality and power,* that the author, in alluding to Byron, has failed to exercise his usual discrimination, and has sanctioned a sentiment which we believe to be both false and pernicious—"We think," says he, "it should be admitted in all these cases, that we could not have the one set of qualities without the other—the genius and the feeling *in the particular form*, without the previous history, the disordered temperament and the melancholy experience. We could not have had these throes, so indicative of strength, without the accompanying fever." We have italicised a phrase in the above extract, because the author there admits a qualification, which destroys the entire force of his remark. If we could not have the genius and the feeling "*in that particular form*," might we not have them in a higher and better form? Might we not have the strength, without the fever—the poetry without the vice? Both the idea and the illustration are based on delusion. It is not true, either physically or intellectually, that disease is stronger than health. There may be throes, indicative of strength, in fever; but, in its most convulsive spasm—in its most frantic paroxysm, disease can never rise to the towering strength displayed in a state of health, when nerved by a determined will, and inspired by heroic courage, the body puts forth all its energies, in some deed of high achievement. Nay, the very existence of fever presupposes a deranged organization and an enfeebled system. But even were it capable of putting forth superior strength, it could

* "Method of Divine Government, Physical and Moral," by Rev. J. McCosh.

be only during one brief spasm—the first in a descending series. For at every succeeding reaction, the system grows feebler and still feebler, until it sinks in death. The healthful exercise of the system, on the contrary, develops its powers and enlarges its capacity for vigorous action. What is the policy of those who make physical strength an object of pride or ambition? What was the policy pursued by the ancient Athlete? Did they stimulate and excite the system to feverish action? Or, by sobriety and temperance, by nourishing diet, and manly exercise, did they mature and maintain those mighty energies of frame, which, when put forth in contest on the public arena, elicited the acclamations of admiring crowds? But the analogy holds true in a much higher sense, when applied to the powers of the mind. It is indeed high time that genius had found the true policy, and adopted the proper regimen in maturing its sublime energies. Let it not madly seek to develop its strength by stimulating with deadly poisons; or to achieve its triumphs by exulting in the violence of disordered passions! For even this pitiable pretext is denied to perverted genius; when prostituting its powers, and polluting society by its pestilential breath, it indulges the mad hope of achieving, by this means, some original and peculiar triumph in the department of poetry. Let the poet drink invigorating inspiration from the pure fountains of truth. Let him guide his life, and tune his harp in accordance with the laws of eternal harmony.

We have thus far considered some of the prominent features of Christian piety, in their connection with the interests of poetry. In addition to these, there are what may be termed, *the peculiar habits of piety*, which exercise a propitious influence in the development of poetic genius.

First, piety implies *a habit of self communion*. "Commune with thine own heart and be still," is at the same time a dictate of Christian duty and a trait of poetic genius. Indeed it is, to some extent, an attribute of every earnest and lofty spirit, conscious of the hidden treasures of its own nature. The heart can be known only by a process of introspection. In human intercourse its intricate labyrinths are often disguised by artifice and darkened by concealment. Nature has hung a veil over that inner sanctuary, and no man voluntarily draws that veil entirely aside, or permits it to be lifted by others. We admit special friends to closer degrees of intimacy in our confidence. But that veil still hangs over an inviolable recess within. The heart of man resembles the sacred temple of the Jews. In its front there is an open area, where the promiscuous multitude are permitted to assemble,

and to gaze on the public spectacles that were intended to meet their view. Back of this, there is another and more sacred apartment, where a *few attending priests* are permitted to enter; but still back of this, there is yet another apartment more sacred than all, "the holy of holies," where no profane eye can penetrate—where no unhallowed footstep can intrude: "the great high priest," the man himself, alone enters it: and there, in the awful presence of God, he communes with his own nature and the mysteries around him!

He who is a stranger to such habits of self-communion, must continue ignorant of his own nature. The fountains of poetic inspiration remain sealed and smothered in his experience. But such habits cannot be faithfully maintained, unless conducted in a frame of piety and an attitude of devotion. He who enters within that holy place, must bow adoringly before the glorious Shekinah, which shines there on the altar, between the cherubim. Thus piety not only purifies and elevates the sentiments of the heart;—it not only creates a new class of refined and rapturous emotions peculiar to itself; but by fostering a habit of self-communion, it produces a conscious familiarity with the inward workings of the soul, which endows the poet with an apt facility in the exercise of his art. He is thus enabled to catch the tuneful key of his own spirit, and to touch aright the latent chords which yield the richest music in the hearts of others. But besides the ready command over the sources of human sympathy, thus required, the fountains of poetic inspiration are opened and flow forth in deeper and stronger currents, under the silent influence of self communion. The inner world of emotional experience remains formless and void, when no such habit is indulged. But light, order and harmony pervade the scene, when the soul broods in quickening meditation over the mysteries of its own nature. The true poet derives much of the inspiration and many elements of his verse, from the secret fountains of his own heart. It is said of such,

"They learn in suffering what they teach in song."

But it is only by means of silent self-communion that these elements are rendered available. The language of the inspired Psalmist describes the origin of those happier moods of conception and utterance, as experienced at times by every genuine poet—"While I was musing the fire burned: then spake I with my tongue."

We shall conclude the present article by adverting to another peculiar habit of piety, as intimately connected with poetic inspiration—the *habit of prayer*. We can readily imagine the smile of derision with which this proposition will

be met, by many a flippant devotee of fashionable literature. But their derision, even if rational, is certainly not wisely directed. It does not strike at the vulnerable point. It should fall on the principles which give rise to the habit. The absurdity lies, if any where, in the system of faith, which gives encouragement to prayer, and enjoins it as a duty. But if that system be rational and true, the habit is perfectly consistent and legitimate. We suggest then to our flippant scoffers, that their ridicule comes too late. It should have been excited sooner. They must go back to the first principles of the Christian faith, and prove them to be absurd and contemptible, before they affect to make light of this sacred privilege, which every earnest and honest spirit, that has tested its efficacy, will pronounce to be the very highest it can claim on earth. But leaving out of view the principles on which prayer is founded, it is surely as rational and dignified an exercise of mind in the poet who seeks inspiration, to implore humbly the quickening influence of divine energy, as to invoke a propitious afflatus from some visionary muse after the approved poetic fashion?

Prayer is prompted by conscious dependence. It is sanctioned by the revealed will of God. We are taught to believe, "not only that He is, but that He is a rewarder of all who diligently seek Him." If God has the will, He surely has the power to interpose in answer to prayer. It is reasonable to conclude, that He who originally formed the human mind, and furnished all its wonderful faculties, is capable of influencing, quickening, or inspiring that mind, in the sense in which the poet seeks inspiration. Every poet is conscious of peculiar states or moods of mind, which are propitious to the exercise of his genius. These are affected by a variety of external causes. Why may they not be induced directly by that invisible, divine influence, which works in and through all things, and brings events to pass according to its sovereign will? We seek that influence, in its moral efficacy, why not also, in its mental invigoration? We seek it to quicken and purify the heart, why not also to enlighten and exalt the mind? We bow before the altar, and plead for an interest in atoning blood and propitiatory incense, why not ask also the application of "a live coal from the altar," like that

"Which touched Isaiah's hallowed lips with fire?"

Milton has furnished both an illustration and a proof of the efficacy of prayer, in securing the noblest poetic inspiration. His sublime invocation of the spirit of God stands as a suitable introduction to the most sublime poem in the English language:

"And chiefly thou, O Spirit; that dost prefer
Before all temples the upright heart and pure,
Instruct me.

* * * * * What in me is dark
Illumine. What is low raise and support;
That to the height of this great argument,
I may assert eternal providence,
And justify the ways of God to men!"

W. C. S.

PEN PORTRAITS.

KATE.

Light and gay, sad and tearful,
Hopeful, hopeless, gloomy, cheerful,
Now all joyless, sadly singing;
Then all joy, her sweet laugh ringing;
Now all pensive, soon all smiling;
Ev'ry heart to mirth beguiling;
Be her mood, or gloom, or gladness,
All must love her—love to madness.
Thus we see in April weather,
Rain and sunshine, both together;
Pleasant both, when they come single;
But perplexing, when they mingle;
Still, I love both shine and shower,
Though the cloud may darkly lower,
For when rain and sun are given,
Then, the rainbow glows in heaven.

ANN.

Silent, sad, and melancholy,
Hope within her heart is dead;
Resignation pure, and holy,
Marks the face whence joy has fled.
If perchance, a song she waken,
'Tis not one of careless mirth,
But like some sweet dove forsaken,
Mourneth she to flee from earth.
Her's is a sad voice of sighing,
Springing from a wounded soul;
Like the swan's sweet notes when dying,
Floats the strain she can't control.
She is a fair, fragile flower,
Meekly bending to the blast;
May she bloom in that bright bower,
Twined by angel hands at last.

VIRGINIA.

Ever gay, sad thoughts can never
Find a dwelling in her heart;
On her brow there fall no shadows,
She, and sorrow, dwell apart.
Storm-clouds never gather o'er her,
Bright and sunny are her skies,
On her face, bright hopes sit smiling;
Tears dim not her laughing eyes,
And her voice is like the warbling
Of the birds, in spring's bright hours,
Cheering hearts with sorrow laden;
As the dew cheers drooping flowers,
Gloom abides not where she dwelleth—
Sadness fleeth at her voice—
Sunlike, she all clouds dispelleth,
And bids all around rejoice.

MARTHA.

Calm and serene as summer's morn,
 Methinks I see her now;
 Dark passions dwell not in her heart;
 Or clothe in frowns her brow.
 Though calm, and deemed by many cold,
 Her soul dwells in her eyes;
 And love within their deep, clear depths,
 In sweet concealment lies.
 She like some ancient vestal seems,
 Whose pure, sweet thoughts, are given
 In matin songs and vesper hymns,
 Like incense sweet, to heaven.
 As deeper streams no murmur give—
 So you can never trace
 The thoughts, the dearest to her heart,
 On her calm, thoughtful face.

AZIM.

Scenes Beyond the Western Border.

WRITTEN ON THE PRAIRIE.

BY A CAPTAIN OF U. S. DRAGOONS.

1845. A right pleasant company we are! All bent joyously upon scaling the crest of the broad continent; leading and protecting those pioneers and missionaries of civilization, the Oregon emigrants; the rude founders of a state. Self-exiled and led by a human instinct—inspired, and superior to reason; neither pilgrims nor of broken fortunes, but unconscious workers of National Human Destiny, they seek the perfect independence of savage life, aided by some invented powers of civilized art.

They scorn all royal paper claims to this virgin world of ours! The best diplomatists of us all, they would conquer the land as easily as Adam lost Paradise.

Such military expeditions as ours will sufficiently protect this migration of families; intermediate posts—unnecessary at best—could be maintained only at an immensely disproportioned expenditure: for nature has furnished no facilities for transportation through this wilderness.

On a bright May morning, turning our backs upon lovely Fort Leavenworth, we set forth to march 2,400 miles before we shall return. Duty, by the excitements of enterprise, change and novelty, shall strew our path with flowers. We followed for two days the trails of previous marches, guiding us through the intricate and broken, but picturesque grounds which border the Missouri. Right beautiful scenery it is; with its winding green vales, its irregular but grassy hills, all dotted and relieved by dark oaks and

cedars; in the distance some bold, blue highland of the great river, or itself revealed in far off silvery sheen. The third day we struck out boldly into the almost untrodden prairies, bearing quite to the west. The sixth day—having marched about ninety miles—we turned toward the south, crossing a vast, elevated and nearly level plain extending between two branches of the Blue river: thus, without an obstacle for fifteen miles, we reached and encamped upon its bank. We had the company of an afternoon rain, which lasted the night. Thus “to sleep” *wet* is “perchance to dream, for young campaigners. In the morning something was heard of the joke of “seeing the elephant;” but an amateur, whose horse had disappeared in the night, was understood to have expressed the opinion that it was a poor one.

We had fortunately struck the Blue, where it was fordable; and the pioneer soon prepared a way for the wagons. This is a serious undertaking, to lead three hundred heavily armed men beyond communications for three or four months. It is not thus the European marches, or goes to war. Foresight and experience is necessary; and we are encumbered with seventeen wagons, although the rations are shortened, cattle driven, and some dependence put upon buffalo.

The seventh day, leaving the Blue, and turning to the north-west, between two tributaries from that direction, we soon espied on a distant ridge, the white wagon-tops of the emigrants—dim white spots, like sails at sea. Gradually converging, in a few hours we met.

Here was a great thoroughfare—broad and well-worn—the longest and best natural road perhaps in the world. Endless seemed the procession of wagons; mostly very light, and laden only with children and provisions, and the most necessary articles for families; and drawn generally by two yokes of oxen; some three hundred wagons or families, they said, were in advance. Here was some cause to tremble for our sole resource for forage; for the grass is backward and scanty, and these foster children of the Missouri bear, as we know, like all partially civilized nomades, are accompanied by herds of cattle; and we cannot, like Abraham and Lot, take different courses.

Having marched about twenty miles we turned off for water and a camp, to a small branch of the Blue, where we found our friends ahead had made their mark. There we had a frost.

That little stream had made a section of about twenty feet through a bed of yellow adhesive clay; at the base was found a mammoth tooth; there can be little doubt of the skeleton being near—of the grinder being—to borrow a mineralogical expression—nearly in situ.

On the 26th we were off betimes, highly desirous to "head" the very leading "captain" of this vast migration, for we found that, worse than the myriads of locusts we saw east of the Blue, they would make a clean sweep of the grass near all the spots where it is necessary to encamp for water. After a very long march a camp-ground was sought at a small branch—fringed as usual by a few trees—which seldom indeed deceive the water-seeker upon prairies. But the grass was consumed, and we were forced to retrace our steps for a half mile. Then had the soldiers weary with the long, slow march, in addition to the usual toils of tending horses, unloading wagons, pitching tents, cooking, &c., &c., (making their extemporaneous settlement in the wilderness) to go a-foot this long half mile and return burthened with wood and water. Such is a peace campaign; but cheerfulness makes all light. We had halted at noon at one of those crystal streamlets which, in meandering, protect and foster little green islands in prairie seas, sweet groves, where every shrub, and vine, and flower seem to seek refuge, and joyously to flourish, in defiance of the flame-storms which subdue all around:—like fairy bowers they are in summer season; their cool recesses are vocal with happy birds; they refresh and charm every sense which fatigue and privation make keenly alive to enjoyment. An hour—almost of happiness—passes, and we take up our burdens and part forever! Our camp mayhap will be an inhospitable waste, and such is the type of a soldier's life. Indeed it gives it all its zest: the excitements of change and uncertainties; the unlooked-for pleasure, and the difficulty overcome.

I. F. "Never was there such an escape! In fact you did not quite escape, and nearly spoiled your honest but faint description of natural beauties by a lamer flight. Your 'almost happiness!'—and 'burden,' of life did you mean? for I never saw one lighter mounted on a finer horse! But I really congratulate you on arriving so safely in a sober 'camp' in the midst of this very flat earth."

C. "Amigo Mio! Didn't you desert me on the eve of a snow storm, like many another friend of so honest mouthing! And is a touch of poetry a bad companion in difficulty and trial? Never a bit; it was the boon of a God—*Wisdom* was ever feminine."

I. F. "Phew! The fit is on! Sorry I said a word! I supposed frost and starved horses—the sight of poor women to-day trudging the weary road—the driving poor beef instead of the spirit striving chase, would have tempered you to the philosophy of a very materialist, (male or female.)"

C. "Poor women indeed! Three weeks ago

they parted from every comfort—severed ties of kindred, even of country, and their journey is scarce begun—a short 150 miles with 1800 more before them! What privations are here; what exposure to bad weather, cooking unsheltered; they must unsex themselves and struggle with all the sterner toils which civilization happily casts upon the harder and rougher male."

I. F. "Is it possible that many of them willingly follow thus their life's partners for all the 'worse?'"

C. "Heaven knows! We passed an old lady of sixty whom I have often seen kindly dispensing a comfortable hospitality, and I cannot believe that she is content to give up the repose which her years, her virtues, and her sex entitle her to; but strange! she wore a cheerful smile, and said her health improved."

I. F. "And that child—that poor little boy, who, barefooted, limped along, holding to the wagon, how pitiable he seemed."

C. "Ah! but he may one day be the 'gentleman from Oregon,' who arrived in last night's cars and to-day takes his seat in his arm chair in the Capitol."

I. F. "Did you hear of the wedding last night?"

C. "Between three days' acquaintances! a fine girl she for a new country! Such are our best diplomatists for Great Britain."

I. F. "But how cool you are; I thought it would kindle your romance. I'll wager my meerschau to those Sioux mocasins, that you make a goose-quill flight of it yet. We shall read of a wild and wilful—a bright-eyed nut brown maid of the prairies, and her loves' with a bold horseman of the mountains,—of the eagle-feather nobility, whose love-tokens are scalplocks—perhaps a dusky rival."

C. "Hold! I accept the wager; hand me the ink-horn; here goes for the *poetry of matrimony*; (*writes*) 'Marriage on the Prairies—A driver of Oxen—a homespun matter-of-fool lad—not a leather-stocking,' but clad in dirty woollens,—having for some time observed with longing eyes a fair friend of the company—that is, for three nights they had made their solitary beds on the banks of the same streams,—and that she was the possessor of a red blanket, an extra blanket; and he, the wretch, all cheerless, and cold o' nights (and that accursed frost!) with nothing between him and the damp earth but a worn and well-singed rug; forlorn and tempted by such splendid attractions, and struck too with the obvious truth that two can sleep warmer than one, bluntly proposed; the kind she consented and their fates (and blankets) were united? As usual, a *marriage de convenance*, and I defy you, friend critic, to make more or less of it.'"

I. F. "Well done! But I can make more of it; did you not hear the sequel?"

C. "Upon my word I have not; it is rather soon."

I. F. "Pshaw! This actually occurred. It seems they had no taste for 'stars for nuptial torches,' and had no 'cave for bed,' and so, unluckily converted a wagon into a marriage chamber. Well, they had hardly composed themselves to rest, as when they found the wagon in motion!—faster!—faster!—which, all in the dark, threatened a crisis; and sure enough down it went, all topsyturvy into a great hollow. A scurvy trick that of the young Oregonians!"

May 26th. We quitted early our camp-ground and soon approached the western and longest branch of the Blue, which seems to fulfil its destiny in leading the Missourians by its hospitable waters and fuel in the direct route of their new West; and, having ministered to their necessities, turns them over—the "divide"—to the like friendly offices of the great Platte.

The muddy and shallow waters and treacherous quicksands of this river are apt types of the political hacks of a late day who would make it, under its better Indian name, Nebraska, god-father to an iniquitous new territory; hastening without a shadow of the excuses of "destiny," necessity, &c., to break all the last and most binding pledges of their country's faith, her voluntary and most solemn and plain obligations to the congregated remnants of many defenceless tribes of Indians, who own in *fee simple* every acre of its arable land.

We were struck with the beauty of this other Blue; its bold hills are indented deeply with narrow vales of a thousand forms, their soft green pleasantly relieved by oaks. This, by way of introduction—for the road led us hastily away again to a high plain, where we were for hours out of sight of all of earth but its grass. But we did overtake a long line of wagons, and a great herd of cattle; passing as rapidly as we might, we learned that several such companies were still in advance. The cattle were grazing like buffalo on the prairie, and by estimate I hit upon their real number, of one thousand; and then, by comparison, was assured that I had seen at once many hundreds of thousands of buffaloes. We descended at evening into the wide savannas of the Blue to make our night-camp.

A few hours after I had written the last sentence, a hurricane passed over us:—it was midnight, and intensely dark, the rain falling in torrents; there was an unceasing and strange roar of thunder; and the furious wind, rioting with the wet canvass of many tents, sounded a deafening accord. The sublime does not fright-

en, and I was filled with a joyful excitement. I imagined mammoth and mastodon revived, and rushing to repel the invasion of their ancient haunts,—exciting to madness by their roars attendant multitudes of buffaloes and wild horses.

Next morning a warm sun set us to rights by 9 o'clock. We still ascended this western Blue; crossing now and then the feet of the hills protruding into the bottoms;—at times, winding through some great ravine or sand gully, washed by the rains of ages. The bottoms are sensibly lessening, but still a fourth of a mile wide; the grass is still deficient from drought;—but at evening, turning short down from a high bluff, we found a sweet little valley, of which we seemed the first discoverers; and which with its grove, was fresh and beautiful from the night's rain.

May 29. To-day—as yesterday—we marched some 22 miles, following the stream, and passed near night, an emigrant company. A cool wind has blown from the north; pure and invigorating; such, as it is a pleasure to breathe. The hills are diluvial—mere sand—with a soil that scarcely supports their sod. As the hills break off near the river, they are washed into many singular shapes; and being white, stand in bold relief; bright green generally prevailing. Many slopes beyond the stream still show their old growth of grass strongly resembling ripe wheat; adjoining are weed stubbles and dead trees, which together are the picture of corn fields in new clearings. These surround green meadows, and hills, with groves and shrubbery which we easily imagine conceal tasteful dwellings. Such beauties to be seen on the stream in a day's ride, must deceive no one; for beyond, all is barren; and the vast territory between the frontier and the mountains has scarce a tree to the square mile; and much of it is little better than a sand desert; even game is seldom found.

Marching rather late next morning, with no expectation of parting from the pleasant guidance of our little river, we found after a few miles that we were ascending very gradually a high plain; the "divide" of the Blue and the Platte; no water was then to be found for 23 miles, unless pools of the late rain. We found such a pool at mid-day—and an emigrant party: this, for a specimen, was ascertained to be composed of thirty-one men, thirty-two women, and sixty-one children; 24 wagons and 212 cattle.

We also met, on the ridge, Pawnees with some 200 horseloads of dried buffalo flesh, which they were conducting to their village, perhaps 70 miles lower, on the Platte. This is a temporary supply. After getting their corn fairly growing, the whole tribe moves off on their summer hunt. On the summit a rather singular incident happened to me. I fired a pistol at a troublesome

dog which was then chasing some loose mules : it *resented* this attempt on its life in a quiet, but ferocious manner ; absolutely fastening its teeth in the ham of the horse I rode ; of course he kicked and plunged with great violence ; taking me by surprise,—for I did not know at the moment the cause—and very nearly throwing me : I then fired again and killed the brute. It happened that the head of the long column was then about to meet the Pawnees ; and a report was just received of their having robbed and maltreated some straggling emigrants ; altogether, they had a technical “alarm,” of which—with the excitement of my pitched battle with the dog—we in the rear were profoundly ignorant ; and a little while after I was astonished at a rebuke for my contribution to it, of the two shots ; the Colonel being equally ignorant of my reasonable excuse, and of our private *émence*.

We arrived, near sun down, on the hills of sand bordering the remarkable valley of the Platte. Between us and the river lay two miles of level green savannas ; the wide expanse of the great river was in part concealed by Grand Island, and its woods. It was a beautiful sight!—the squadrons were gliding, two a-breast, along gentle curves, over the fresh green grass, which was brilliant in the slant rays of a clear sun. The horses have a gallant bearing ;—fifty blacks led ; fifty grays followed ; then fifty bays ; next fifty chestnuts—and fifty more blacks closed the procession : the arms glittered ; the horses' shoes shone twinkling on the moving feet. It was a gay picture, set in emeralds. Just then a hare, of the large, black-eared species, bounded away from the front, pursued by a swift dog ; it was a beautiful chase for a mile over the green sward, which we insensibly halted to witness.

The broad bottoms of the Platte are nearly level, and but from two to six feet higher than the water ; they are composed of sand through which the river expands to its level from bluff to bluff,—often ten or fifteen miles. There is no rising above the universal flatness ; and it resembles the ocean mouths of most great rivers. You have a horizon of green meadows, and sometimes of water.

We encamped on the bank. We had in twelve days marched two hundred and fifty miles ; and partly as explorers.

May 31. The trumpet sounds of reveille, called us forth this morning, as usual, under arms ; and we instantly witnessed a scene of beauty and of sublimity, which the wanderer over the earth sees now and then when least expected. Above the river, and the unlimited plain to the west, dotted with white wagon tops and vast herds grazing, densely black clouds, driven by a strong wind, came thundering on wrathfully ;

the lightnings crashing from mass to mass ; from beneath, the muddy and troubled waves almost black with shadow, seemed rushing on in league with the Storm-Power, to overwhelm us. But turn to the east ! The sun is rising over a glittering expanse of water, and dispensing a rosy glory to the fleecy cloud-mists of his calm hemisphere ; but the rebellious West, from amid intenser shadows, gives but a reflection of baleful hue ! It seemed a rebellion of the Powers of Darkness against the Spirit of Light. As if to interpose, three hundred men in arms then rose up in the very midst.

This was a wondrous reality, breaking, all unprepared, on eyes that had been closed the still night long, and minds suddenly aroused from dreams of quiet home-scenes.

How singular, that *now*, as I write on the same spot, we have this scene reversed ! The sun is sinking serenely on the western wave ; while in the east a black cloud mutters a menace of its power in the coming night. Sad types of the world's doings, and ever varying but unceasing warfare of good and evil.

MICHAEL BONHAM :

OR, THE FALL OF BEXAR.

A TALE OF TEXAS. IN FIVE PARTS.

BY A SOUTHRON.

PART III.—SCENE I.

An apartment in the palace of the Governor. He appears busy among numerous masks and dominos.

Esteban, [solus.] This is a matter to employ all a man's genius were it ever so fertile. But I can never doubt for a moment what I should wear myself. There ! Oh ! Bald headed Cæsar—laurel-tufted and trophied Roman—there ! let it gratify thy awful shade, that I prefer your semblance to that of any other hero. [*Lays aside the war costume of a Roman Captain.*] Ha ! who's there ! What, my fair niece, my dove. [*Enter Donna Maria de Molina as from a journey.*] My antelope ! Welcome ! Better late than never. How came you so late ? I had quite given you up for the *Bal Masqué*.

Maria. *Bal Masqué*, dear uncle, and when ?

Esteban. To-night. This very night.

Maria. Then I am still in time. I would not have lost it for the world. And how's my dearest Olivia : and you, how do you sleep now—better ?

Esteban. Famously. Like a Bell bird of Brazil, with a tremendous ringing in all my ears.

Maria. How terrible ! A ringing in your ears ?

Esteban. Delightful rather. It is the ringing of all the bells of Mexico that I hear, and have heard for the last three nights in honor of my victory.

Maria. Victory ! What victory ? Over whom ?

Esteban. The rebels,—the Texians; these runagate Anglo-Americans—the degenerate sons of Washington.

Maria. What, have you beaten them?

Esteban. Into powder. They are dispersed forever. 'Twas a prodigious affair. I operated upon them in two ways, but chiefly by stratagem.

Maria. How I rejoice.

Esteban. You may well. You may now travel to Santa Fé without an escort.

Maria. You forget the Camanches, uncle, and the scene at the rancho of Loro.

Esteban. No, indeed; and let me tell you that there is at this very moment, and in these very walls, the very cavalier to whom you owed your rescue on that occasion.

Maria, [with curiosity and doubt.] Ah!

Esteban. So!

Maria. Possible!

Esteban. That very cavalier.

Maria. This very moment!

Esteban. In this very house.

Maria. And—

Esteban. With Olivia.

Maria. Dear Olivia, let me fly and embrace her.

Esteban. Stop. Hark a moment before you go. I have a little stratagem. The idea takes me suddenly. Quite an inspiration. I have it now.

Maria. Have what?

Esteban. Look you, Maria—do you remember this cavalier? Had you strength and courage in the moment of danger, to open your eyes and see who it was to whom you owed life and honor?

Maria, [hesitating.] I am not sure; and yet I think I did see him. I have some notion that he was a person—a sort of a man.

Esteban. A person! a sort of a man! Very good, very definite and particular. Well, you shall see him. He will make you open your eyes. A person—a sort of a man. And this of one of the bravest looking of all the cavaliers of the country.

Maria, [aside.] As if I knew not that!

Esteban. You shall see him. You shall say then. It may be that I may then let you into my new stratagem—may possibly ask you to assist a little in the scheme.

Maria. Again—another stratagem? Always a stratagem, uncle.

Esteban. And why not? What is life itself but a stratagem—a great bundle of stratagems running on from seven years to seventy. We rise with the dawn to plan, to set snares, dig pitfalls, scheme, trap and take the prey, all of us—man and woman alike: man for the conquest of the world, and woman for the conquest of the conqueror! Have you no stratagems, wench?

Maria. Me! Stratagems. Blessed mother, what a question. What sort of stratagems do you think such a head as mine could carry?

Esteban. Simple ones enough, doubtless, unless the heart takes a share in the business, and then a woman is nothing but a stratagem. It may be that mine at present will become yours. We shall see.

Maria. Tell me only—does it concern this cavalier?

Esteban. Yes.

Maria. Must it concern me, too, uncle?

Esteban. Come! come! That is asking quite too much at one time. I must surprise you with it. I like surprises above all things; a passion that proves my military propensities. One of them, by the way—one of the greatest is about to ripen. This very night, girl—hark you, the mine is to be sprung under Olivia, and she will be in the skies when she least expects it.

Maria. Oh, horrible! What a dreadful design. In the skies when she least expects it. Why, uncle, what

can you mean? What has Olivia done to incur such a fate. This is a sort of gunpowder business. Blow up! What a horrible idea.

Esteban. Delightful rather. What should I mean by sending her to the skies, but sending her to heaven?

Maria. But what if she don't want to go to heaven at this early warning.

Esteban. But my process will make her quite happy:

Maria. She does not say so. What if she prefers her own time for it, and by a different process. One doesn't like to be hurried, uncle, even on the high road to happiness.

Esteban. A good phrase that. I like it. The High-road to Happiness. Silly creature, what should be a young girl's idea of the skies and heaven and happiness?

Maria. I'm sure I don't know. I never thought much of either.

Esteban. Oh, what a simpleton you are. Why, what should be a young girl's idea of happiness but marriage; of heaven but a husband; of the skies but a region where all day long she might be catching the sweetest rose-colored loves, and boxing them up for winter. Heaven is only the marriage state under good regulations.

Maria. What! and you are going to marry Olivia to this strange cavalier? Ah—

Esteban. No, indeed. She must find her happiness from another quarter. You know our kinsman Don Pedro de—

Maria, [eagerly.] Zavalo. Is he the man?

Esteban. The same.

Maria, [curiously.] Will she marry him?

Esteban. Doubtless. But I have yet to surprise her with the arrangement. In that consists my stratagem. The explosion takes place to-night: Scene, the *bal masque*; time, midnight. 'Twill be a most famous *coup de theatre*.

Maria. I rejoice that I am in season for it. I feel relieved. I had begun to tremble for my stranger cavalier. *[Aside.]*

Esteban. What think you of my plan.

Maria. Excellent. Don Pedro is just the person for Olivia.

Esteban. Is he not? So brave.

Maria. So handsome.

Esteban. With so much spirit.

Maria. And so much money.

Esteban. He will cover his family with honour.

Maria. He will cover his bride with jewels.

Esteban. He fences splendidly.

Maria. And waltzes like Myrtillo.

Esteban. Has so much talent.

Maria. And such a lovely hacienda.

Esteban. Is such an adroit diplomatist.

Maria. And wears such a beautiful moustache.

Esteban. Is it not a charming prospect? Was there ever such a plot? What a joyful surprise for Olivia.

Maria. It should make her very happy.

Esteban. Should it not? Ah, you puss. But, hark you, this is all secret. Mum's the word; and, when all's over—then, hey! for my other stratagem.

Maria, [indifferently.] That concerns the stranger.

Esteban. Yes, indeed. And another of my acquaintance of the other sex. How ignorant and innocent the creature looks. She little dreams my purpose to blow her up also—send her to the skies after the fashion of Olivia. *[Aside.]*

Maria, [aside.] He is transparent enough, Heaven knows. Well, Heaven prosper it. I am prepared for a blow up, in such company, at a moment's warning.

Esteban. And now, Maria, for Olivia, with whom you

will see this strange cavalier—this person, this sort of a man. Ha! ha! ha! Such a description of Don Amador—

Maria. Don Amador: is that his name?

Esteban. Don Amador de Aguilar; as brave a looking gentleman as comes from Mexico. Come. But mum! Remember—not a word to Olivia. My hand, that prepared the mine, must fire the train. [*Exit Esteban.*]

Maria, [following.] To all my hopes auspicious, grant it, Blessed

Maria; for since I've seen this man, I see

No other. [*Exit Maria.*]

SCENE II.

A Saloon in the Governor's Palace. Bonham and Olivia discovered.

Olivia. You will come fashioned like a monk.

Bonham. And you?

Olivia. A nun in solemn sables; on my arm 'This antique cross, a relique of my mother, Will teach you to distinguish me from others In a like habit.

Bonham. 'Twill not need, Olivia; That shape, that air; I shall not fail to know you Among a thousand nuns all dress'd in sable.

Olivia. Ah!

Bonham. Hark! those voices!

Enter Esteban and Maria.

Maria, [running to Olivia.] My dear Olivia.

Olivia. Dearest cousin, welcome.

Esteban. Don Amador, you see here another damsel who owes her safety to your valour. My niece, Donna Maria de Molina, of the Molinas who came in with the conqueror. The family is as old as your own. An old tree, but with precious fine fruit upon it yet.

Maria, [to Bonham.] My brave deliverer! Oh, how many thanks My heart holds for you.

Esteban. Let it empty them. Don Amador is such a modest man, that you cannot say too much to encourage him. He is the person, the sort of man, you know.

[*Half aside to Maria.*]

Maria. Oh, fie, sir. Hush, this is no stratagem.

Esteban. I have half a mind to tell, but I spare you. I leave you with him that your acquaintance may ripen. I have all the world to attend to. The *Bal Masqué* to-night is enough to give me a week's employment. And then; but mum! [*Looking significantly to Maria and whispering,*] not a word. Don Amador, I kiss your hands. Ladies a thousand. [*Exit Governor.*]

Maria, [to Bonham.] So soon your flight after your gallant service, We had no time for thanks.

Bonham. Good service in the cause of youth and beauty, Brings its own tribute, lady.

Maria. But the duty Is not the less of those, who win the service, To yield the grateful homage of their hearts: Senor, pray honor me by wearing this Poor token of my bosom's gratitude, Upon the bosom whose impulsive valor, Deserves a nobler tribute. [*Giving a jewel.*]

Bonham. Dearest lady, Reward or token of acknowledgment My service needs not: I will wear this jewel, Not as the proof of virtue in my bosom, But generous worth in thine.

Maria.

Senor, nay,

Disparage not the gallantry which makes The woman's heart do homage; all her pride Forgotten, and no feeling in her soul, Save as it tends to worship. Do not shame With much too humble estimate the gift, Which heaven makes doubly precious in success.

Olivia, [aside] How charmingly she looks; how earnestly

Eye, lip and brow according. Should he see Her loveliness as I do.

Bonham, [to Maria.] To hear more Were to grow vain of common properties: The common strength of man, skill in his weapon, And the spontaneous impulses which drive him To use them for the succour of the feeble By brutal might oppress'd.

Maria, [earnestly and with subdued tones.] How much I envy

The better fortunes of my lovely cousin, To have known you so much longer. To have seen you, And so much better to have shown the feeling Both hearts must own forever.

Bonham. You but pain me, By such too lavish bounty of your praise, That mocks my service. 'Twas a happy fortune That led me to the humblest deed of manhood. The meanest boor of Mexico had striven, With heart and hand like mine, were the occasion So dear to him as mine.

Maria.

'Tis all in vain,

Don Amador, you undervalue service, We value not enough. We know too well The boors of Mexico, to look for succour, So measureless as thine. The age of valor, That generous passion, which, in search of glory, Seeks evermore the paths of strife and danger, Heedless of any recompense, but only Smiles of the lovely, praises of the good, Is of rare finding now. We must not lose it When in our sight it walks. Pray let me know you, When other cares will suffer, and the smiles Of our dear cousin here, will grant you absence; My father. Don Fernando de Molina, Will joy to show, in welcome that he gives you, How much he loves his daughter.

Olivia, [aside.] How well she speaks.

Bonham, [to Maria.] A not unnatural love. Believe me, lady,

'Twill make me proud to know him. [*Prepares to go.*]

Olivia, [timidly.] You leave us, Senor?

Bonham, [aside to Olivia.] Oh, how unwillingly!

Olivia, [aside to Bonham.] One word more— Beware of Don Zavalo. For my sake Seek him not, Amador.

Bonham, [aside to Olivia] Fear nothing, my beloved.

Maria, [aside.] They whisper! O, my jealous soul, I tremble

Lest they should love! I hate her! How I hate her!

Bonham, [approaching Maria.] Thanks, lady, for your kindness. It will gladden To make me useful in your future service: Command my sword and honor.

Maria, [in low tones musingly.] Alas! for woman, Senor,

That cannot well believe, yet dare not doubt.

Bonham. Ladies, farewell: we meet again to-night.

[*Exit Bonham.*]

Maria.

To-night!

Olivia.

To-night!

Maria. You echo me, dear cousin.

Olivia. Methought it was Don Amador that said,
To-night.

Maria, [aside.] Even as I feared, she loves him!—
Why so he did; and so did both of us.
You seem bewildered cousin. As you live,
You scarce have bid me welcome.

Olivia. Sure I have.
I feel a thousand welcomes, my Maria.

Maria. Art sure?

Olivia. You cannot doubt, but tell me, my Maria,
What think you of Don Amador?

Maria. What think you?

Olivia. I fear to tell you.

Maria, [quickly.] Tell me not you love him!

Olivia. Wherefore?

Maria. 'Twere your misfortune, cousin.

Olivia. Wherefore, still?

Maria. Come with me to your chamber; I have
something

To pour into your ear, of such strong power,
Shall either make you very sad or merry,
Shall lift you into happiness, or sink
Your baffled heart and hope, as low from hope,
As hell can be from heaven.

Olivia. You affright me!
Give me this fearful secret; speak your tidings,
Lest in my terror I conceive them worse
Than human wo can make them.

Maria. Love not this man!

Olivia. Amador!

Maria. Oh, feeble heart—
Caught at a glance, snared by the passing vision,
Without a hope to cling to. To the chamber—
Oh, cousin—wherefore—

Olivia. Mock me not thus, Maria. Oh! my heart,
One moment,—now—speak out and do not trifle;
You do not sport with me,—you cannot, cousin.

Maria. Look on me, dear Olivia—do mine eyes
Lighten with merry thoughts—upon my cheek,
See'st thou the laughing spirit of mischief there—
Eager in malice, or thoughtlessness to revel,
In the sweet misery of a sister's heart.

Olivia. Oh, no! I will not doubt thee. 'Tis in
earnest;

Those eyes now fill with tears—those words now falter:
Come with me to my chamber. There!

[*Exit Olivia.*]

Maria, [following.] Ay, cousin—

And there I'll cozen thee with such a tale,
Shall make thy head to ache, thy heart to ail.

[*Exit Maria.*]

SCENE III.

*A Wild and Mountainous region. The Texian army
in movement. Groups pass over the stage, partisan
fashion, and in picturesque costume. Enter Spar-
row, Davies and other Texians in the foreground.*

Sparrow. Though a man of some bulk, I am yet a
man of movement. I have no passion for a quiet life.
I'm for action, whether the object for assault be foe or food,
soldier or supper. I have a large territory to endanger, as
well as to supply; but that makes me no more cautious
than if I were a Calvin Edson. Let the battle come when
it pleases. The sooner the better. This city of San An-
tonio de Bexar, they tell me, is a sort of little Mexico,
where the gold may be had for the gathering.

Davis. You are too old a bird, Sparrow, to be sea-
soned by that salt. For my part I never yet found more

gold in one place than another, and I think with the preach-
er, that gold is the root of all evil.

Sparrow. Indeed! I would I had many such roots to
set out in my garden. The cotton crop might go hang
for me, and the Liverpool market along with it. The
preachers, too,—but let them say what they will, I never
yet found one of them who found his salary clogged with
too many such roots. They were never too numerous for
his religion.

Davis. This is rather dull talk, Sparrow, just as we
are about to have cracked crowns and broken noses. Can't
we change the music in some manner, and hurra for some-
thing.

Sparrow. Ay! You may. We will hurra! Here
goes! Hurra for nothing! Will that suit? Change the
music, to be sure; but do you see the singer in my vis-
age? Do I sing small like a woman. That's not my vo-
cation, Davis. Look about you as the boys come by and
get a singer; but the Anglo-Norman breed is better at
shouting than singing. Of our three hundred now, not
ten of us can turn a ballad, but not one of us that can't
scare a Mexican's soul out of his breeches by one hallo!

Davis. Here's the very man, Joe Kennedy, from Ala-
bama. He sings famously, and makes his own songs as
he goes.

Sparrow. Such a fellow has his uses, even as a singer.
I can understand him. Let him make us something now
to warm the fellows for a brush.

Enter Kennedy and Texians.

Davis. In season, Joe. A song to shorten the jour-
ney. We have been talking here about that root of all
evils, gold; which we are to gather here in this little
Mexico, San Antonio, until, somehow, we've got the dole-
fuls. Give us something fine and fiery.

Kennedy. I heard you! Get your ears ready and
your hands. If I am to sing, I must be clapped, mark
you, just as they clap your theatre fellows who sing well,
as all theatre fellows would sing, were they—

Davis. What?

Kennedy. Joe Kennedy.

Sparrow. Put your spirit into your song, my lad, and
blaze away.

Kennedy, [sings.]

1.

My banner to the breeze,
And my bowie at my side—
My barque upon the seas,
And the single star my guide;
I shall lay the oyster bare,
To pluck forth its precious fruit,
And these evils that ye fear,
I will gather at the root.
And the evils, &c. [bis.]

2.

We are soldiers of the north,
And we know like men to fight;
We have gone to battle forth.
With old England in her might;
We have spirits born to dare,
We can smite and we can shoot,
And the evils that ye fear,
We will gather from the root.
And the evils, &c. [bis.]

3.

Do you speak of coming hours,
When to battle we must go;

We are ready, by the powers,
To awaken any foe ;
We shall teach them that the bold,
Still inherit all the fruits,
And their moustaches and gold,
We shall pluck up by the roots.
And their moustaches, &c. [bis.

Sparrow. Good I say. Three cheers for amateur Kennedy. He has done the thing famously. Such a song as that would give a fellow an appetite for any thing, eating or fighting. It meets our case exactly. Kennedy, your hands. I shall think well of you forever after, and whenever an extra delicacy offers—a sleek tongue of a young buffalo bull,—you shall be in for a slice. A good chorus that. [Sings.

“And their moustaches and gold,
We shall pluck up by the roots.”

My fingers feel as if they were at it already. [Sings.

“Their moustaches and gold
We shall pluck up by the roots ;
We shall pluck.”

Davis. Stop your hurraing—here’s the Colonel, boys.
Enter Milam and others.

Milam. Ye loiter men. Ye should be on the march ;
By midnight we must be at Bexar’s gates,
If we would find them open. Ye must haste.
Ye have no wealth, no gold, no cumbrous baggage
To weigh your shoulders down—your rifles only,
And you will lighten them at every shot,
That brings an enemy down. Away, our friends
Are busy now in Bexar. ’Tis my hope
That we shall win the spoils of yonder town,
With scarce a struggle—follow fast, my lads.
[Exit Milam and aids.

Sparrow. Talk of a struggle with these Mexicans !
Fellows that never tasted British beef,
Know nothing of a steak, and *à la mode*,
Have never in their wildest fancies dreamed of.
Tortillas are but poor provocatives,
And all the *chile* in Chili could not warm them
To a death struggle with a beef-fed soldier.
Where are their limbs and sinews ?

Davis. Eyes to shoot,
A rifle, or the dexterity to use
The knife Jim Bowie gave us.

Sparrow. I could eat
A dozen for my supper,—with a dressing,
Made up of all their thirteen thousand generals,
From the Napoleon of the west himself,
To Senor Ampudia. I feel wolfish,
With cannibal convictions. On, away,
We’ll think of supper as we smite and slay.
[Exit Sparrow, Davis, &c.

Chorus of Texans as they march off.

“We shall teach them that the bold
Still inherit all the fruits
And their moustaches and gold,
We shall pluck up by the roots.”

Enter R. Harris and E. Harris.

R. Harris. They’re on the march, and battle is at hand

A desperate struggle. Something tells me now,
My hour is near at last. The fate’s at hand
Shall lay me in the silence I have sought.
I have had warning of it. Hither, boy, [To E. Harris.
I somehow like you. You have hung about me

More than I wished. I could not quarrel with you,
For, as I tell you, something in your face,
It may be, in your voice, has made me like you !
My head ached and you chafed it. I was lonesome ;
You sat beside me, and you talked with me,—
Albeit you talked of subjects foreign to me,
Of God, repentance, hope, lessons too late,
For one so old a learner as myself.

Your voice was pleasant to me. It had something,
That minded me of other times and persons,
I never more shall see. Come closer, boy.

E. Harris. What would you with me, sir.

R. Harris. A kindness only—

I have not often done them, but, to you,
I would not have you perish.

E. Harris. What mean you, sir.

R. Harris. A battle is at hand.

E. Harris. Ah.

R. Harris. A fearful one perchance. You are no soldier ;

You’ll prove, I’m sure, a coward in the action,
And that were dreadful. You must stay behind.

E. Harris. Stay behind ! I cannot.

R. Harris. Can you fight then ?

E. Harris. I know not. I have never fought before,—
Never took life, never as I remember,
Hurt hair on human head ; but—

R. Harris. Well—and what.

E. Harris. Sooner than not go on. Sooner than leave you,
I’ll try to kill.

R. Harris. You haven’t soul for it.

Your lips belie your tongue. Your very tones
Betray your terrors. You are not the creature
For such wild doings. You must stay behind
In silence, while the troop is on the march ;

The night will favor you, and with this money—[Offers purse.

E. Harris. I cannot take your money, sir.

R. Harris. [fiercely.] You must.

E. Harris. [firmly.] Never.

R. Harris. What ! not remain behind, nor take the money.

E. Harris. No, though I perish, though I prove the coward

You hold me, and I sadly think myself,
I must go forward. It may be my arm
Will shrink from doing hurt to human foe,
But I can stand and suffer. I’ll not fly,
But perish where you place me.

R. Harris. What good in that ?

In battle to stand idle, is worse danger
Than cowardice and flight. You must not go.

E. Harris. I must. If in your heart a warning voice
Tells you of coming death, in mine another,
Compels me to encounter any peril
Sooner than leave my comrades.

R. Harris. You are foolish.

You have no comrades. I’m the only man,
That you have mixed with.

E. Harris. You’re my comrade then.

R. Harris. And do I not assure that for me
Death even now stands waiting.

E. Harris. I’ll see you die.

R. Harris. You’re obstinate, boy.

E. Harris. Oh, firm sir, nothing more.

R. Harris. Poor lad. I pity you. You little dream
The dangers that await you—little guess
The shock, the carnage, bleeding men and blood,
Hoarse cries of hate, and vengeance, and of pain—
Here, take the money, linger in some cabin,

Such as you'll find among these hellow dales,
And there await the action.

E. Harris. Sir, forgive me.
But I must seek and see it; all the peril
Which you incur I share in. In this purpose
My soul, though feebler, fearfuller than any
In all our little army, still is firm.
I go with you.

R. Harris. On then, in heaven's name, on;
We may delay no longer. Follow close.

[*Exit R. Harris.*

E. Harris. In heaven's name be it, for I dare not think,
Heaven will not shelter us on danger's brink.

[*Exit.*

SCENE IV.

*The groves near the convent of La Guayra. The walls
of the convent shining white from the hills in the dis-
tance.*

Enter Don Pedro.

Pedro. He comes not. Curses on him. Should he
fail me.

Let him not hope to 'scape me. I will slay him
Without remorse, though grasping on the altar,
He called upon the Blessed Host for succor.
My dearest hope he perils. All my heart
Is full of her perfections, and her's only.
And shall he rob me of them? Have I lived
And toiled, nor seemed to seek, and loved at distance,
Still unpresuming lest I should endanger
The precious gift I coveted, for this?
But no. It shall not. I will to the palace
And drag him from her presence, though she pleaded
With all the eloquence of love and beauty,
And—but it needs not. My impatient spirit
Behush'd. He comes, mine enemy comes, to perish.

Enter Bonham.

Oh! you are here at last. I've waited long
And somewhat dreaded lest my hints, too guarded,
Had failed to touch your valor. 'Twas my fear,
That I should have to press upon your pleasure,
Disturb you in the presence of your mistress,
And goad you by impatient word and buffet
To do your weapon justice.

Bonham, [coolly.] Angry, Señor?

Pedro. I am. I hate you.

Bonham. Wherefore?

Pedro. Enough. I hate.

Hate to destroy.

Bonham. Nay! Nay! I trust not, Señor;
I'm in no mood to perish at this moment.
Now when the sun shines brightly on my future
That never shone before. What angers you?

Pedro. My answer's in my sword.

Bonham. To fight you now
Were only to assail you at advantage—
You're feverish now, scarce master of your weapon,
Let us forbear a season while you tell me,
Wherefore your wrath.

Pedro. Enough! It is my humor.

Bonham. That's not enough for me. Why should I
fight

To gratify your humours? You must show me
Some cause of provocation.

Pedro. Will a blow do it.

Bonham. Nay 'twill not need! If you're so desperate,
You force the fight. I will not be dishonored;
Will fight you when you please.

Pedro. Be it now then.

Bonham. Be it so; and yet I would 'twere other-
wise.

My cue is not for fighting. On this weapon
Hangs fifty times the value of your life.

Pedro. Dost mock me?

Bonham. Such madness might deserve my utmost
scorn.

Most like I do.

Pedro. My taunt shall break thy teeth. Come on.
Come on,

And hear me Señor,—such is my conviction,
That you are in my path, the deadliest foe
That ever fate rear'd up against my fortunes,
That I have sworn, by all I prize the most,
To slay you without pity, even as the hunter,
Spears the wild boar that griding on his weapon,
In death betrays the malice of a passion
That death alone defeats.

Bonham. Child fury, Señor,
Unworthy of a man. Your oath is idle,
If you rely on such. We are apt to fight,
If right I read your anger, for the favor
Of the fair lady in the palace here.

Pedro. And if the prize be precious in your sight,
As still it is to mine, I challenge you
Fight like a man.

Bonham. I have been thought a man;
Will fight as one, but not one blow to prove
My love for her. I will not wrong her beauty
To make her youth, her charms, her innocence,
The prize of ruffian strife. 'Tis for your humor
That I make bare my weapon. I am ready—
Now stand we point and foot to foot,
And play your game as all your wealth were on it—
Your blood upon your head.

Pedro. The blood of both,
If need be, but no words.

Bonham. Let the steel speak. [*They fight.*]
It makes a merry music—

Might touch with fear the maids in yonder convent
Could they but see our danger, and know farther,
That we are young, both bachelors and fighting,
Because there still are beauties in the land,
And love is not an exile.

[*This is spoken merrily, in broken sentences as the play
of the duel will allow. Bonham being quite playful, while
Pedro becomes more and more furious.*]

Pedro. [*Fight and pause.*] Scha! is this fighting?

Bonham. It is the mode I use when the mood suits
me;

You are too angry, Señor, for a swordsman,
Your play is rash and wild. In cooler moments
Your weapon were a good one.

Pedro. You laugh at me.

Bonham. I can't do else. You are no match for me.

Pedro. Demonios! We shall see. [*Resumes the fight
more desperately and Bonham disarms him.*]

Bonham. The day is mine.
Your life is at my mercy.

Pedro. Take it then.

Bonham. Away! You are a madman.

Pedro. I shall be

'Till I have vengeance. [*Draws a dagger and rushes on
Bonham.*]

Bonham. Fool. [*flings him off and wrests the dagger
from him.*]

For this too, as you see, I am prepared.

Pedro. Hell's curses on thee. We shall meet again.
[*Exit Pedro.*]

Bonham. [Solus—putting up his sword.]
 'Tis well the time is short. A few more hours
 And we may laugh to scorn the single danger
 Of one man's jealous rage. Yet 'twas a risk
 I did not idly covet—did not seek.
 Upon the safety of this single life
 Hangs the best hope of Texas—hangs the fate
 Of San Antonio. Bexar, to her fall,
 Nods at my signal. The Alamo's walls
 That now frown darkly on the distant plain,
 Shall, in a few brief hours, obey my voice
 Or silence me forever in her keeps.
 How heavy grows this silence. As if night
 Were burden'd with its weight of doom already.
 Would it were over. Be but Milam true
 And I grow happy in the loves I win,
 Or tremble with the doubts of love no more.
 The hour awaits the man, and he is here.

[Exit Bonham.]

[END OF PART III.]

Albert, Prince Consort, of England.

The four married Queens regnant who have sat upon the English throne, have all had husbands who were not Englishmen. Mary I. was married to Philip of Spain, Mary II. to William, Prince of Orange; Anne to Prince George, brother to Christian V. of Denmark, and Victoria to Albert, second son of the reigning Duke of Saxe-Coburg Gotha. It seems strange that a people so national, and so nationally supercilious, as the English have always been, should endure a ruler not of themselves. There have always been English nobles, who have thought, and with good reason too, that in blood, in wealth, and almost in power, they were the peers of kings, and the common people have always recognized their claims as undoubtingly as that of their monarchs. And yet they allowed Mary I. to select as her husband the haughty and offensive Philip of Spain, and permitted Guilford Dudley to be executed. Mary, the wife of William, and Anne, were married before their accession to the throne, but as the crown was conferred upon both of them by the act of the people to the exclusion of the next heirs, it would have been competent to have passed them over for the very reason that they were married to foreigners. Her Majesty, Queen Victoria, like the first Mary, ascended the throne unmarried, and being young and attractive, the whole world was before her and her counsellors, without any impediment as to the choice of her partner. And inasmuch as with many an English nobleman in the realm, worthy of her hand, they passed over seas for a husband, we must suppose that the nation chooses to be under the *sub-modo* rule of a foreigner,

rather than of an Englishman. Now this seems strange to us in this country. The idea of sending abroad for a President, Vice-President, or Cabinet officer, or even of permitting a foreigner to hold a place of high trust, would be the signal for the dissolution of our Government. It is true that there is not much formal power entrusted to the King Consort. Yet Philip shared with Mary the royal titles and prerogatives, and William, while in title, merely joint sovereign with his wife, was in fact sole ruler, as the administration was entrusted undivided to him alone. A party had endeavoured to induce him to accept the crown upon terms which would have placed him upon grounds not so high, but he refused saying, "That he esteemed the Princess as much as it was possible for man to esteem woman; but not even from her would he accept a subordinate and a precarious place in the government. The English were then in a condition which seemed to make it indispensable that William should be at the head of affairs, and he was therefore able to dictate his own terms. But whether the husband is, or is not, by law invested with equal authority with his Queen, it is obvious that if the Queen has any power or influence, he must be virtually a large sharer of it. Indeed the argument which the English use to justify a foreign alliance shows, if they are sincere, that they do in fact believe that no inconsiderable power belongs to the Prince Consort. A writer in one of the magazines says, "The Queen might have given her hand to a British nobleman or commoner; but it is obvious that any individual having sufficient pretension to entitle him to such distinction, must have occupied a place so conspicuous with one great political party or the other, that from thenceforth the Queen's name would have been a tower of strength to Whig or Tory." Now a place which would be so dangerous in the hands of a nobleman or commoner, cannot be without its influence when occupied by any man who is the Queen's husband. And the precise wonder is, that Englishmen are willing to see this power in the hands of a foreigner. But is the argument sound in itself? The husband of the Queen would exercise too much influence with one or the other of the great parties. But ought not the head of the Government to have an acting part? Suppose the Whig party or the Tory advocates the system of most real advantage, ought not the chief magistrate of the nation to take part for the best?—and ought he not to be capable of deciding which is the best? It is said that the monarch reserves his power to be used in great emergencies, and to restrain any party that has attained an eminence dangerous to the country. But it is easy to see how unphilosoph-

ical it is, to expect deliverance in times of real difficulty from those who are not believed to have a sufficient amount of ability and prudence, for the virtual administration of ordinary affairs. But the real truth is, that the English intend to reduce to a minimum, (and they have nearly accomplished their purpose,) the power of the monarchy, whether composed of King merely, or King and Queen, or Queen and Prince Consort. The English are not a very quick people, but they are very sensible, and have not failed to learn the great lessons taught by history. And if there is one truth which is settled more firmly than any other by the widest induction of particulars, it is that kings are not to be trusted. There is hardly any thing that the world has known so long and so well as kings, and they have been in the crucible with such various conditions of experiment, that we may rest assured that we have ascertained the stuff they are made of. And the perfectly well-established result is, that they are not to be trusted. Here and there may be found one who cared more for his people than for himself, and more frequently it has happened that the interest of the monarch was identical with that of the people. And so carbon is occasionally found in the shape of diamond, but nevertheless we think of it only as coal. The great business of kings as a class, has been to aggrandize themselves and their families at the expense of the people, and he would be mad enough to fight like Sisera against the stars in their courses, who would count upon anything else. It is a conceded thing that kings are *per se* nuisances, and their advocates hardly go further than to endeavour to prove that they are necessary, because the people cannot govern themselves. The English people are too practical to be unaware of the danger of regal power, and therefore, as I have said, they have been endeavouring to reduce it to its minimum, as an algebraist labours to make his formula result in zero. By their recognized, though unwritten Constitution and Common Law, their free parliaments, the responsibility of their ministers, and the steadily increasing influence allowed to popular sentiment, they have rendered powerless for harm, and almost inoperative for good, the royal power in the hands even of their *man-monarchs*, and when grasped by a lady-sovereign, young, unexperienced, and unambitious, the sceptre and the crown are graceful and costly ornaments, but are scarcely emblematic of any thing. This exactly suits the English idea of Royalty. The wonder is, that as they have brought down the monarchy to next to nothing, they do not work on at their formula, and get the true result, zero. It is ridiculous to see a great manly nation that has earned substantial freedom for itself, afraid

to cast off the livery of dependence, and assume Freedom's garb.

With the policy of maintaining a monarchy, which would be hardly more than nominal, except in its cost to the nation, it was well advised, perhaps, not to take as Prince Consort, an Englishman, who might have been stimulated by ambition, or family influence, or party feeling, to attempt to emerge from his appropriate condition of regal passivity. And therefore the Queen's counsellors looked abroad for a husband, and the young Queen had a pair of pretty eyes that were likewise on the alert. She and her cousin Albert had played together as children in Kensington Gardens, and had frequently met afterwards, and it was the old story. Ah, it matters not whether it is in palace or cottage, in a kingdom, or among the hills and vales of Old Virginia,—put two young and handsome cousins together, and if love is a sin, then he is sure to have much to answer for, who exposed them to the temptation. I have heard it said that another match was proposed to Victoria by her diplomatists; but however proper the copula might have been, the subject was a small, insignificant, homely chap, and she would not stand as predicate; or to drop a grammarian's metaphor, she would have none of him. If this is true, she showed herself a spirited girl, and well deserved the handsome some husband she got. Prince Albert is tall and well formed, with a handsome face, of scholarly expression, and a deportment marked by its composure and gentlemanly cast. He is not florid and full-chested like the English, nor is he square-shouldered and heavy looking like the Germans, but has, (at least it seemed so in my eyes,) an American look, though I am unable to say wherein it consists. He is a few months younger than the Queen, and at the time proposals were made to him, he was a student at Bonn University, and a gentleman told me that he had acquired there a very desirable reputation for ability, proficiency, (especially in the sciences,) and correct deportment. He was living at the University on, perhaps, a thousand pounds a year, and when in the course of the negotiation, he was asked what he thought would be sufficient for an allowance when he should become his cousin's husband, he replied five thousand pounds, (\$25,000.) Doubtless he thought that this, together with the Queen's million and a half or more, would support very comfortably two young people just married. But the plenipotentiary answered, "Pshaw!" and said the husband of their Queen must have at least thirty thousand pounds, or \$150,000 a year. Albert of course was content, though the Queen, after her marriage, was urgent with Parliament to raise the allowance to fifty thousand pounds, and was

in quite a pretty passion when she was refused. Huzza for the generous and spirited young Queen and wife, who would fain have her young Bonn student held at higher appreciation;—and huzza too for the prudent and independent council of the realm, who thought that they had done enough for the second son of the Duke of Saxe Coburg Gotha, in giving him an allowance of thirty thousand, and a wife with a million and a half of dollars a year, to say nothing of her being the Queen of three realms. The Queen, however, did all in her power to obviate the parsimony of her Parliament, by appointing Prince Albert Field-Marshal, and by throwing in his way other perquisites, so as to make his total allowance mount up, as I was told, to something more than forty thousand pounds, or \$200,000.

All things considered, it is plain that it behoved Albert to make a loving husband to his fair cousin, and so by all account she does. Herein Victoria is more fortunate than were her predecessors, the two Marys; for Philip was a cold, cross-grained, harsh-tempered ungentlemanly fellow, and William III., though almost as great a hero as Macaulay paints him, was in some respects no better than he should be. But Prince Albert is in all respects a model husband, and as assiduous in his attentions as a lover. A gentleman told me that he had frequently hunted hares in Windsor Park with Prince Albert, and that no matter what might be the state of the sport, the Royal Consort always abandoned it in time to lunch with the Queen, at two o'clock precisely. The gentleman was mentioning this to me as an instance of her Majesty's fond exertions, but it serves as well to illustrate the complaisance of the husband, who is doubtless admirably adapted to domestic life. As is well known, the happy royal pair are blessed with a numerous and interesting family, in the management of which, it is said their father displays great skill. I heard the following anecdote related as a sample of his system. The young Prince of Wales behaved one day in a refractory manner towards his governess, who threatened him with the displeasure of his father. The prince, however, was not disposed to yield, and went so far as to reply, that he knew he would one day be king, and that he would not suffer any one to control him. This was reported to his father, who thereupon entered the nursery with a Bible in his hand, and after reading to him the most striking and easily understood passages relating to the duties of children, said to his son, that he hoped that he had made him see how improper his conduct had been, and how it was the duty of his father to govern him. Whereupon he proceeded to follow up reproof with

correction, and as there is no royal road to discipline any more than there is to mathematics, we may infer that Solomon's prescription was the one which was used on this occasion. I afterwards heard it stated on the authority of the physician of the royal household, that the Queen's nursery was one of the best regulated within the range of his practice; and I could well believe it, having had experience enough of my own to know that such a course of discipline as the above would be efficacious, whether with young republicans, or young heirs apparent. Still, things seem to be a little awry and out of place, when we see the husband stilling a tumult in the nursery, and the mother reading a speech to the Lords and Commons in Parliament assembled. But after all, the anomaly is more seeming than real, for it requires far more ability to regulate properly a household, than it does to read a speech. The absurdity is with the people who are willing to pay so high a price for a reader of a set speech. It must be evident to every one that the position of Prince Albert is one of great delicacy and difficulty, and the best eulogium upon him is, that he has so conducted himself as to gain the respect and sincere esteem of the English people. As the husband of the Queen, he is, in rank, the second person in the realm, and yet he has no share whatever in the prerogatives of the Queen, nor has he the direct political functions that belong to every nobleman of the land. The English, when they called him to be Prince Consort, did not bestow any of these powers upon him, nor did they intend he should exercise any of them. He accepted his position upon these terms well understood, and good faith demanded that he should not usurp powers not granted, nor, indeed, seek to exercise directly an influence which as far as they could, they had withheld from him. His integrity in this particular has been remarkable. He has kept so entirely aloof from politics, that he has never by a single act excited the jealousy of the English. It is true, that this course was not only the one which alone was consistent with perfect integrity, but at the same time, that also most conducive to his happiness, since the opposite would have so embroiled him with the nobles, the representatives of the people, and the people themselves, that he would have been infinitely harassed by a conflict in which at last he must have been defeated. But how seldom is it that ambition is restrained by considerations even of self-interest? And how many men in the situation of Prince Albert, would have maintained a fretting struggle to become in some sort, at least the equal of his wife, rather than secure happiness by being content with what he had agreed to accept as his portion. Supposing, however, that

aware of the difficulty of forcing himself out of his adjusted political position, he had sought pre-eminence as a man of pleasure and extravagant tastes, the way was open to him. The nation would have furnished the means of indulgence, and it is a thing so usual to see royal persons lead unrestrained lives, that little would have been said against him if he had kept within any tolerable bounds. Or, finally, if his moral principles secured him against a career of lawless pleasure, he might have sunk down into slothful inactivity, and have been nothing but the husband of the Queen. But Prince Albert has actually done none of these things, as he ought not to have done any of them. He has not interfered out of his province with politics—he is a model of propriety—and he is not a nobody by any means. The people regard him with admiration and personal respect, and the Queen not only loves him, but is proud of him. His escape from temptation, and his complete success, for so we may call it, in his trying situation, is to be attributed to his having diligently cultivated his mind when he was a student. There is nothing like education for prince or peasant. Listen, all ye young men at our colleges—study well—you will be repaid for your efforts, if hereafter you should marry Queens, and just as certainly if you should not, and this covers all possible contingencies, and, therefore, study! Prince Albert's special turn is, I believe, for the experimental sciences, particularly in their application to practical purposes. His farms at Windsor and at Hampton, are noted for their admirable management, and he is a zealous supporter of Agricultural Fairs, and not unfrequently a successful competitor for prizes. A late English paper giving an account of the Smithfield Club Cattle Show, says—"The Prince Consort carries away several prizes in cattle; but his pigs, in which he has usually come out strong, are not this year so successful." It is to be presumed that the judges are impartial, as in several instances the Prince comes out only second best. The Prince is also well acquainted, it is said, with the principles of machinery, and was a close examiner of that department of the Exhibition. He has likewise directed his attention to the amelioration of the poor, especially as it regards their dwellings, and he caused to be erected in Hyde Park, near the Crystal Palace, a model building, of hollow brick, for small families, and its arrangements are very complete. He has also interested himself in other movements for the poor, and has delivered some speeches, of which a writer says, "His public appearances have not been numerous, but they have always been successful. His speeches at the meeting of the Society for Propagating Christian Knowledge, and at the Servant's Institution,

were models of what addresses of the kind ought to be."

But that which in England has more than any thing else awakened admiration for Prince Albert, and given him too a just celebrity among foreign nations, is what he accomplished for the characteristic thing of the age, the Great Exhibition in the Crystal Palace. As the nature of his connexion with it may not be well understood by some of your readers, I will dwell upon it a little. To the French is to be given the credit of having originated Industrial Exhibitions, and of having developed them from a local to a truly national character. Indeed, in 1846, a proposal was made by M. Buffet, minister of Agriculture and Commerce, to the chamber of commerce of France, that specimens of skill in agriculture and manufactures from *neighboring nations* should be admitted into their approaching exposition. This suggestion, to make *international*, the exhibitions which before had been merely national, was not adopted by France. It was, however, immediately taken up in England by the Society of Arts, of which Prince Albert is President. The chief object of this society is to promote the arts, manufactures and commerce of the kingdom; and this they attempt to do by giving honorary or pecuniary rewards, as may be best adapted to the case, for all useful inventions, discoveries and improvements tending to that purpose. Prince Albert took the matter of the exhibition under his personal superintendence, and with his lead, the society digested the plan of proceeding, and became responsible for its expenses for more than \$350,000. A royal commission or charter was next secured, and a place in Hyde Park for the erection of the building. A committee was then appointed to endeavor to arouse public feeling throughout the kingdom in favor of the scheme. More than sixty places were visited, nearly five hundred influential persons gave in their names as supporters of the proposed exhibition, and nearly \$400,000 of public subscription had been secured. For let it be remembered that the Government contributed nothing to the expenses of the Great Exhibition. It was the greatest thing of the age, and the people have the credit of having done it. No monarch could have accomplished it. When was any thing stupendous ever accomplished, and not by the people? When will the world learn the power of the people?

That the real efficient leader, however, in this truly national and popular movement was Prince Albert, there can be no doubt. A late writer says: "and we do not say it in the spirit of sycophancy, because he is a prince, but in honest admiration of his manly conduct, to Prince Albert, by far the greatest share of honor will be

found due. To him more than to any one else, we owe the adoption of the idea from the French minister, its generous and enlightened enlargement, and that courageous and persevering conduct in all that related to the exhibition, which has overcome every obstacle. Indeed but for his great intelligence, his habits as a man of business, his indomitable perseverance, and the enormous influence he wielded from his high position, the plan would inevitably have failed." Let me quote from the Westminster Review as bearing upon this a rather brilliant extravaganza. The writer is speaking of progress. "And at last came Prince Albert to proclaim that England should no longer be misunderstood—Prince Albert! royal artist—prince among merchants—universal patron of Europe's future metropolis—shunner of the Fields of Cloth of Gold—scorner of Eglinton tournaments—Haroun Al-rashid of the universal bazaar—Il Bondocani of the revolutionary ruin, bidding beauty rise, and chasing away gloom and despair—genius of the modern day—hero of the hundred embraces, and hater of the hundred fights; from the hearts of all high-souled men, will well up loyalty to this royal progress." Certainly the Prince Consort is not all this, nor is it desirable that he should be, were it possible; but he is a gentleman of fine natural abilities which have been well cultivated, of good principles and great energy. This would be praise if said of any man; when said of a prince it is enhanced many fold, because it is so rare a thing to find these qualities in princes, and so common to find their opposites. The English people as I have said, speak of him at once with respect and affection. In the Crystal Palace were a great many representations of various sorts, of her majesty, and I think that her husband always appears with her, except that the fine bronze equestrian statue of the Queen was sole, and perhaps there was one marble group in which Prince Albert is not seen. The royal figures always attracted the attention of the people. One day as I was looking at a spirited representation (in electrotypes I think) of a group of the feudal times, the principal figure of which is a lady sallying forth with a hawking party, two women came up to where I was standing, and one said to the other, "see here! here is the Queen riding out, and there is Prince Aubert," (many of the common people pronounce the name in this way) "and the children." On another occasion I heard a woman speak reverently of a marble statue of a young mother nursing her infant, supposing that it was her blessed majesty who was represented as discharging this interesting maternal function. By the way allow me to say *pro re nata*, that it was not only from marble breasts that infants drew the pearly

stream in the Crystal Palace. I saw there more than one mother who did not hesitate to sit down in the great nave, on the pedestal it may be of some noble statue and in the view of fifty thousand people, nobles and commons, men, women, and children, deliberately afford to her child the solace of the breast. Did I blame her? no, not I. Children must have nourishment, and *honi soit qui mal y pense*. But how would Mrs. Trollope or Mr. Dickens have exclaimed against transatlantic barbarism, and the want of a police to keep things in order, had they witnessed a like spectacle in any public assembly with us. Speaking of mistakes as to statuary reminds me of another. I was looking at the famous bronze group of the Amazon on horseback attacked by a tiger, and two men coming up were puzzled to know what it meant until one exclaimed, "oh it is *St. George and the Dragon*!" and both were entirely satisfied with the explanation. As I have said, the statues of the Queen and the Royal Consort are quite abundant. It struck me that perhaps there was a little violation of good taste in the frequency and conspicuousness of these things in the Crystal Palace, which might be considered as the Reception Room of a great international fête, at which England's Queen presided as hostess. She was worthy to preside. There is no crowned head in the world that could compete with her for the honor; but being the hostess, ought her own picture to have been so often repeated? If we should have a World's Fair at New York, and should represent Mr. Filmore because he is President, and Secretary Stuart because he is remarkably handsome, a dozen times or so, on horseback and on foot, singly and in pairs, in bronze, marble, plaster of Paris, or glass, and Sevres Porcelain and Gobelin Tapestry, and finally in miniature in diamonds, would not some people laugh at what would be called *American vanity*? And yet the President of the United States occupies a more important place than the Queen of England, and Secretary Stuart is, to say the least, as good-looking as Prince Albert. The poorest likeness of the Royal Pair are two statues which are found in a most conspicuous place, and upon which we may suppose the most pains were bestowed. But this is sure to be the case with the English in matters of taste—the greater the effort the greater the failure. The higher they raise a column the more they make it look like a shot-tower, or the chimney of a glass-house; and the more conspicuous the equestrian statue, the more you cannot help laughing at the long ears, heavy neck, dray-horse quarters, and old broom-like tail of the animal. For illustration of this remark we refer to all the columns from the London Monument down to the

attempts at fountains, which an English writer calls, "our own unhappy performances in Trafalgar-square, the rival of a soda-water bottle yet the work of a people of boundless wealth, and the first machinists in the world," and to all the statues on horseback and on foot, from that which fronts, or affronts, graces, or disgraces Apsley House, to the funny representation of the death of Nelson, to be seen in Liverpool, in which death is represented as stretching from under a shroud, a long skeleton hand, which rests over the heart of the hero. Marble allegories are worse than those headstrong ones on the banks of the Nile, spoken of by Mrs. Malaprop. How different is the case in the French Capital? The Arc de Triomphe is as unique in its way as Bonaparte was in his—and the Place de la Concorde—ah, there is but one in the world—and see on the Vendome column in what perfect truth Napoleon stands surmounting that faultless pillar composed of the brass of cannon captured in his victories. And the column of July on the spot where stood the old Bastille—would any other than French taste venture to surmount a column 154 feet high, with a gilt angelic figure representing the Genius of Liberty standing on one foot, with wings expanded as if in the act of taking flight? Could any but French talent have so executed the conception, that it should appear not an extravagant puerility, but a worthy and impressive emblem? The French seem unable to construct a government, but that they can erect monuments is not to be denied.

The Statues of the Queen and Prince Albert which have occasioned this digression, are those in the Royal Exchange. We can hardly forbear comparing the Exchange with the Bourse in Paris, which for classic unity, is worthy to be mentioned with the Pantheon and the Madeleine—but the fear of another digression restrains me. The statue of the Queen is the dominant work of art, at the Exchange, standing exposed in the court of the building. It is badly executed, and characterised by an unfortunate exaggeration of the peculiarity of her mouth which is the worst feature in her majesty's face. As a likeness it is not by any means as much flattered as the various ones in the Crystal Palace. The artist has put into one hand a globe surmounted by a cross, looking just like a chain-shot, and in the other a black stick for a sceptre. The work is, however, by Clough. In a hall above is a marble statue of Prince Albert, better done than that of the Queen, but injured in the effect by a mixture of modes. The face, with fashionable whiskers, is modern, as is also the military collar around the neck—the drapery is a modern cloak disposed after the antique, while

the legs of the statue are of such doubtful presentation, that it is uncertain whether they are to be considered as naked or encased in skin-tight breeches, and the feet are covered with shoes with great roses on them. In all the pictures of the Royal Pair, Prince Albert is placed on the left hand, and the artists have generally contrived to give to his countenance a slightly deferential expression. It certainly is an awkward position to be the husband of one's sovereign, and the father of a lad of ten years or so, to whom, upon the death of his mother, the allegiance of his father would be due. Of course these lesser anomalies do not strike the people of England who are insensible of the greatest anomaly of all, that namely of a free people yielding to the superstition that their freedom is inseparably connected with the effigy of royalty, as the fate of Troy was with a wooden Minerva.

The people admire and respect Prince Albert, but of course certain classes take liberties with his name. In London there is a man, (there may be a hundred of them for aught I know, but I am now thinking of a particular one that I saw one night on High Holborn) who sells his wares as our celebrated razor-strop man disposes of his strops, by pouring out with much volubility, a great deal of wit, original and borrowed. One of his conundrums, I recollect, was, why is Prince Albert but little better off than the poorest man in the kingdom? D'ye give it up? Because he aint got but *one sovereign* and can't *change that*.

With the fortune and almost the position of a king, the domestic felicity of private life, the mind and attainments of a scholar, the temper of a philosopher, and (as it is understood) the faith of a christian, Prince Albert ought to be a happy man, and that he is so every one is ready to believe who looks upon his handsome features characterised by an expression of dignified repose. And he deserves to be among the admired men of the times. Elevated to a giddy height, at an age when the brains of most young men are whirling with the intoxication of mere youth, he became a model of propriety. Having entered into certain implied engagements, if not positive stipulations with the English nation he has kept untarnished his integrity, not allowing himself to be seduced by the proximity of power, to stretch forth an unlawful hand towards it—and, a lover of science, he has cultivated it in a royal way, ever endeavoring to make it in its royal applications, serviceable to progress, in the most important interests of the nation. It seems that the approbation of all good men is the just reward for conduct so virtuous. Upon a just estimate, how far he is above Louis Napoleon, the French usurper. This latter spent his

youth in wild, and foolish, and sometimes criminal enterprises, and having most unexpectedly arrived at the head of the Republic, he successfully essayed to overthrow the form of government that he had solemnly sworn to uphold. Ambition of a guilty sort fills his heart, perjury has stained his lips, and his hands are dyed in blood. He has treated his country as he has done his mistress—sought her favors to betray her. But his doom is to come, he cannot escape it. If the great Napoleon was stricken down, how can the little Napoleon stand? And when he falls, no tears will bedew his bier, no tongue will move to defend his name. The nation that he betrayed will spurn his dead body, the friends of murdered thousands will utter vengeful imprecations on his soul, and the press that now he has chained up in slavish silence will raise a black column of obloquy to his memory. And history that will delight to pay an appropriate tribute to Prince Albert for his domestic virtues, and his civic usefulness, will utter her irreversible sentence upon Bonaparte who has displayed abilities far greater than his friends believed he possessed, only to accomplish such wickedness as his enemies did not suppose him capable of.

I will close this article with one brief suggestion, which if not wise, is at least original. In an article upon Queen Victoria, I suggested that if the English nation ever meant to deliver themselves from the costliness of an unnecessary throne (to say no more) a better opportunity would never be afforded than at the death of the Queen. (*Sero in cælum redeat.*) Now suppose Prince Albert survives her. Let me, as an American, who, of course, know better than any Englishman can do, what sort of stuff is good to make a President of, having assisted at the making of many a one—let me take the liberty of nominating, through the columns of the Messenger, for the first President of the British Isles,—Prince Albert. And what if he should be made President for life? The English are fond of doing important things gradually, and a President for life would be a good intermediate between a constitutional monarch, and an elective President of the right sort. My nominee, I am persuaded, would not abuse his powers and would, by his diligence, prudence and skill, set a most admirable example for all succeeding Presidents of the British Republic.

S. L. C.

Bon Gaultier in his Eastern Serenade thus hits off the introduction of Oriental phrases into English verse—

"The jewelled amoun of thy zemzem is bare,
And the folds of thy palampore wave in the air.
Come, rest on the bosom that loves thee so well,
My dove! my phingari! my gentle gazelle!"

THE VIOLET: A ROMAUNT.

BY ALTON.

INSCRIBED TO FANNY.

I.

It was the hour when Cynthia's zone
Endymion's trembling heart inflamed,
That lithe Titania, from her throne,
This sacred mandate thus proclaimed:
Ye Fays and Sprites, extend your wings,
And where, amid the shady dells,
The blooming realm of Flora springs,
Exert your most enchanting spells.

II.

There breathe to all this fond command,
Committed to your trusty powers:—
Titania, with her fairy hand,
Would now create a Queen-of-Flowers;
And bids the humblest of the fen
Its presence to our care intrust,
That all within her smiling glen,
The choice may see and deem it just.

III.

Scarce was the gentle mandate made,
When on the wing her subjects whirled,
And instantly, within the glade,
The claim of every Flower was heard:
There blushed the Rose in conscious pride
Of beauty none might dare deny,
The while the Lily, at her side,
Reposed in cold security.

IV.

Thus every Rival, in its turn,
Believed 'twas destined for the crown,
And, in its vanity, would spurn
The claims of all who sought the throne.
But when the whole expectant train
Had passed before Titania's eyes,
And each, at length, beheld how vain
Their several hopes to win the Prize;

V.

The Fairy's brow in sadness fell,
As thus she spoke in anxious phrase:
One plant hath lingered in the dell—
The VIOLET hath not met my gaze.
Just at this moment, from beneath
A shelving leaf that none had seen,
The modest Violet, o'er the heath,
Had looked to see what flower was Queen.

VI.

But in that single glance was all
That could the Fairy's heart inspire,
As thus her voice was heard to call
The culprit with dissembled ire:—
What ho, thou disobedient one!
Would'st thou provoke Titania's frown?
Receive the gem thy charms have won,
For modesty is Beauty's crown.

VII.

As when amid Arcadian bowers,
 Blithe Eurus stirs the rustling leaves :
 A sweet applause, from all the flowers,
 Titania's just decree receives.
 And each with each there nimbly vies
 Their warm approval to confess,
 The while she yields the glittering Prize
 To unassuming Loveliness.

* * * *

VIII.

What need I tell thee, gentle one,—
 Unless 'twere part of courteous duty,—
 That, of the Flowers of all this zone,
 Thou art the VIOLET OF BEAUTY :
 And who that once hath fondly been
 Enchanted by thy guileless art,
 But e'er would proudly wish to win
 And press that Violet to his heart!

RALPH WALDO EMERSON---HISTORY.*

We do not pretend to show a novelty, in setting at the head of our sheet the name of Emerson, the mystic essayist of Concord, Massachusetts. We believe it is some twelve or fifteen years since the first of these three volumes of *Essays* of his was issued from the Boston press. There are hardly any American books which are more inviting than they are, on the first glance. There may be readers to whom they have continued to be attractive long after the first glance. And we freely admit that the taste of such readers is as much entitled to respect, for its own sake, as is our own widely different taste. A few years before the advent of Emerson, the works of SAMUEL TAYLOR COLERIDGE made their appearance, in fair type and binding, in those departments of the booksellers' shops which are devoted to rich and rare novelties. These works were *The Friend*, *The Aids to Reflection*, and the *Statesman's Manual*. They were admired in their early day by many ambitious schoolboys of the metaphysical turn of mind. They may have been admired by some grown men : we will not pretend to deny it. But we venture to surmise that the number of the admirers of Coleridge in the whole American Union, among full grown men, did not much exceed the number of the present House of Representatives, that is, about one for every seventy thousand of the population of the country. The Coleridgeites said he was rejected because he was profound and the public taste was superficial or shallow. The No-Coleridgeites said he was muddy and obscure, and that his thoughts were, after all, not worth the trouble of the in-

terpretation. The suit is yet pending. And we think that many epochs of New Constitutions will pass away, before a judge shall be found on the bench in the Republic of Letters, who shall have retained a due impartiality in the case, while he was acquiring the information necessary to decide it. In every nation of readers, there will always be some whose intellectual life is set, more or less, on the key of *omne ignotum pro mirifico*. There will always be some whose appetites demand a seasoning so keen, that clearness, connexion, and sobriety of thought will seem but weary dulness. Things which are small things, or even nothings, when reduced to their adequate terms of expression, have often been made to appear great things, by being thrown loosely out, in florid, and mystic, and deep-sounding sentences, with a scrap of Greek in the frontispiece, after the manner of Coleridge and Bulwer, or a few lines of wild, enigmatical English verse, after the manner of Waldo Emerson. There will always be some readers to whom what are called *suggestive* books are most acceptable ; that is, books which do not *express* things, but lead their reader into gorgeous realms of bewilderment, and because his mind is not occupied with the thoughts of the author, he is thereby compelled by very intellectual hunger to shape out dreams and visions of his own.

Readers of this class liked Coleridge greatly. Readers of this class certainly, and it may be others too—we pretend not to say—will like the *Essays* of Ralph Waldo Emerson.

Mr. Emerson has attained to the honour of a laudatory review in *Blackwood's Magazine*, an honour to which very few American writers have attained. In that article, he is commended as being decidedly American in tone and spirit. "We are quite sure that no French or German critic could read the speculations of Emerson, without tracing in them the spirit of the nation to which this writer belongs." "The spirit of the New World, and of a self-confident democracy could not be more faithfully translated into the language of a high and abstract philosophy than it is here." Such is the opinion of the foreign critic. And without the slightest intention of satire, we fully admit that an Englishman may be a better judge of what is American, in this respect, than we are. And yet in this case we venture to think that the English critic has widely erred as to the main spirit of Emerson's writings. We are at best no great admirer of that often heard phrase, *American Literature*. What does it mean ? Does not all expression of human thought in an artistic manner, in true and fitting words, depend on the individual circumstances of a writer more than on his political condition ? Climate, scenery, personal de-

* *ESSAYS*. By *Ralph Waldo Emerson*. Boston : *Monroe & Co.*

pendence or independence, joyousness or gloom, these have certainly much to do with the utterance of thought in written words. Yet there is no such intelligible thing as an American climate. The girdle of seasons, and the panorama of gorges, changing cloud and sky, which pass annually over Louisiana and Texas, are as much the American climate as are the grand artillery of winter, and the brief, bright summer days, around the shores of Lake Michigan. The face of nature looks very differently at Rockfish Gap on the Blue Ridge of mountains in Virginia, from what it does at Franconia in the Notch of the White Mountains in New Hampshire; and very differently at either of these places from what it does in some vast cypress plain in Louisiana, where the palmetto stands everywhere like giants' hands struggling up from the earth, and the thick-set cane is around you, and the wild birds enliven the whole air. And yet all who look closely into the subject tell us that these things have much to do with literature, and we respectfully suggest that a Northern literature, a Southern literature, a Western literature, an Atlantic literature, are much more intelligible expressions than an American literature. The latter expression seems to us totally "void for indefiniteness," with an exception which will be presently mentioned. And so it would be any where in a geographical area as large as ours. If a man who speaks good sense, speaks of European literature, he means an aggregate mass of intellectual productions, and certainly he does not mean any one definite thing. The writings of Hungarians, and the writings of Irishmen, would both be European literature; and might probably at this time, breathe much the same political spirit, and come from men not dissimilarly situated; yet they would be distinguishable productions. The literature of Russia, and that of Naples, would hardly be found similar, though both countries are in Europe, and both peoples are under the heel of despotism. French literature and English literature are far from being the same article, though nothing but "a narrow frith divides" the two nations.

But the writer in Blackwood seems to think that Emerson's writings are American in their spirit, because they breathe the spirit of "a self-confident democracy"—using the words in that broad sense in which our government is distinguished from the monarchies and despotisms of Europe, and not in the partisan sense in which they are employed here. Here we admit that there may be such a thing on the one hand, as a republican spirit in literature, and on the other hand, there may be such a thing as a monarchical and despotic spirit in literature. This we

admit to be an exceptional case in which the phrase, "American literature," may have some definite meaning. In this case it may mean a literature breathing the spirit of republican liberty. In this sense the writings of Ralph Waldo Emerson may be very American. We had not discovered it. Very probably the writer in Blackwood had. Yet we do not believe that this is the best meaning, or probably the correct meaning, to attach to the indefinite phrase. By American literature our countrymen do not probably mean a literature which shall breathe the spirit of our government, so much as a literature which shall hallow the localities of our land, and throw the charm of genius around the spots where the ashes of our fathers sleep. A native literature ought to do for Massachusetts, or for Virginia, or for Louisiana, what Burns and Walter Scott have done for Scotland; Miss Edgeworth and Charles Lever for Ireland; Shakspeare and Wordsworth for England; that is, cause every one whom its pages have charmed to desire to see, and incline to love and gloat over, the localities which came to the mental vision while the spell of genius was upon it. Writers who would do this for the American States, hallowing the country and producing a love of the local soil in the bosoms of the people, and stopping the tide of restless, roving emigration, ever thirsting for new scenes, and new lands, and new skies, would do what is worthy to be done, and what would deserve the name of native literature. Mr. Ralph Waldo Emerson is an idealist of the most transcendent wing and of the highest cloud. We do not intend to approach very near to the verge of the abyss of metaphysics to fetch thence the definition of an idealist. Emerson's panegyrist in Blackwood, says of him, that he "has denied the substantial, independent existence of a material world, but he does not deny the existence of a phenomenal world." He dreameth the dreams of Germany. He is the younger brother of Kant, and Fichte, and Schelling, and Hegel. They say that the German mind was so repulsed from outward things, by the civil despotism prevailing around it, that it flew inwards into its own dark depths, and entered thus upon these minute self-analyses and self-deifications. But these are not American dreams. We cannot expect that a mind thus involved, and believing that the material world is at best but an appearance, but a drama of successive phenomena, should encircle American scenery with halos of the enchantment of genius, or do much else to draw our hearts to the local objects of the land in which we live. Let the men of Prussia and of Austria dream thus. But why should an American? Is not the world of manly thought and healthy action open to him? We are not sur-

prised when a prisoner, confined for long years in a dungeon, tames the flies and spiders, makes companions of the frogs and mice, and scrawls adages and ditties upon the stones of his prison-walls. But we are surprised at such things in one who has the clear, free sky above him, and the wide world around him.

We must beg the reader's indulgence for a few words on another point—not so much for the importance of its bearing on our estimate of Mr. Emerson, as for the intrinsic and substantive importance which it seems to us to possess. We have been speaking of American modes of thought. But is there not such a thing also as an American mode of expression? It seems to us that there is. We are by no means without excellent models of a style of expression in language, which is thoroughly American. Take the productions of John Randolph, of John Quincy Adams, of John Caldwell Calhoun, of Daniel Webster. The literary world knows, or ought to know, something of them all. The casts of their political opinions, the circumstances of their education, the places in which they were reared, were all different—some of them very widely different. We believe that if one phrase would comprehend them all on any subject whatever, it would be as to the style of their language. Nervous simplicity, directness, freshness, clearness, are terms which approach very near to comprehending them all. And from the circle of the meaning of those terms there are not many writers, of any age or land, who lie farther remote, as we humbly think, than Mr. Ralph Waldo Emerson. This, then, is our critical estimate of these volumes: Considered in reference to their subject matter, they might almost as well have borne on their title-page to have been written by *English Coleridge*, or by *German Kant*, or by *Jew Spinoza*, or by *Erigena Scotus*, or by *Thomas Aquinas*, as by Emerson, the *American*. Considered as to their style, very few, if any, books have ever been published on this side of the Atlantic, which contained so much straining after the hot-house wonders and paradoxes of expression peculiar to the mystical writers of Europe and of ancient ages. We never saw any books written in America, hardly excepting the “*Key of Heaven*,” and the “*Garden of the Soul*,” which to us savoured so decidedly of the monastery and of dream-life. We never saw any books, from any side of the Atlantic, except, probably, some of Coleridge's worst, and some of the most German of German books, which contained so little of that peculiar and pleasant mode of American expression, in which words stand flatly and clearly for things, for facts, for realities, and not for mere notions, visions, dreams, gleams, species, antitypes of meaning. Strict

justice requires that it should be added, that we have seen few books of any description, from which, it seems to us, less that is really valuable may be derived.

The title of the first of these Essays is: *HISTORY*. On the first passage of the fly-leaf preceding it are the following words:

“There is no great and no small
To the soul that maketh all,
And where it cometh all things are;
And it cometh every where.”

Happily we do not think the reader will hold us bound to tell him what these sybilline words mean. On the second page of the fly-leaf occur the following lines—

“I am owner of the sphere,
Of the seven stars and the solar year,
Of Cæsar's hand, and Plato's brain.
Of Lord Christ's heart, and Shakespeare's strain.”

These verses are attachés not of the volume, but of the essay on history, with which we have now more directly to do. And for that reason they are quoted just as they stand. There can be few readers of the *Messenger* upon whom the last four lines will not produce a decidedly unpleasant impression, and most justly. It may be that the peculiar and most singular views of the author, as developed further on, will excuse him from the wild and reckless, maniac vanity, which these words seem at first view to carry on their face. And we do not discuss the question now, further than to suggest that they are probably intended only as a bold, short expression of the philosophical opinion upon which he chiefly dwells in the succeeding essay. He makes a more distinct announcement of the philosophical principle on which he thinks history is to be studied, in the following sentence which introduces the essay itself:

“There is one mind common to all individual men. Every man is an inlet to the same and to all of the same. He that is once admitted to the right of reason is made a freeman of the whole estate. What Plato has thought he may think; what a saint has felt he may feel; what at any time has befallen any man he can understand. Who hath access to this universal mind is a party to all that is or can be done, for this is the only and sovereign agent. Of the works of this mind history is the record.”

It is especially necessary to my present purpose to put the reader in possession of Mr. Emerson's views of the nature of History as clearly as may be. Even to those who have before them his essay on the subject, the main point of his meaning may be almost as clearly conveyed, in the extracts now to be given, as in the whole

piece itself. We do not look regularly at his meaning, but merely get glimpse after glimpse, as one standing in the front yard of some large and gloomy building might occasionally see one piece and another of its furniture, as a torch on the hearth by turns flamed up and yielded to darkness, and flamed up and yielded again. Much of the essay seems to us to be composed of the intervals of darkness when the torch shines not. The following passages seem, taken in connection with what have already been given, about as fully to convey his peculiar view of the relation between individual man and history as can be done in a limited space:

"A man is the whole encyclopedia of facts. The creation of a thousand forests is in one acorn, and Egypt, Greece, Rome, Gaul, Britain, America, lie folded already in the first man. Epoch after epoch, camp, kingdom, empire, republic, democracy, are merely the application of his manifold spirit to the manifold world."—p. 1.

"Of the universal mind each individual man is one more incarnation. All its properties consist in him. Each new fact in his private experience flashes a light on what great bodies of men have done, and the crises of his life refer to national crises."—*Ibid.*

"Each new law and political movement has meaning for you. Stand before each of its tablets and say, 'Under this mask did my Proteus nature hide itself.'"—p. 5.

"All that Shakspeare says of a king, yonder slip of a boy that reads in a corner feels to be true of himself."—p. 6.

"I have no expectation that any man will read history aright, who thinks that what was done in a remote age, by men whose names have resounded far, has any deeper sense than what he is doing to-day. The world exists for the education of each man. There is no age or state of society or mode of action in history, to which there is not somewhat corresponding in his life."—p. 7.

"I can find Greece, Asia, Italy, Spain, and the Islands—the genius and creative principle of each and of all eras in my own mind."—p. 9.

"Civil and natural history, the history of art and of literature, must be explained from an individual history, or must remain words. There is nothing but is related to us, nothing that does not interest us,—kingdom, college, tree, horse, or iron shoe, (!) the roots of all things are in man. Santa Croce and the Dome of St. Peters are lame copies after a divine model. Strasburg Cathedral is a material counterpart of the soul of Erwin of Steinbach. The true poem is the poet's mind; the true ship is the ship-builder."—p. 16.

"The primeval world—the Fore-World as the Germans say—I can dive to it in myself as well

as grope for it with researching fingers in catacombs, libraries, and the broken reliefs and torsees of ruined villas."—p. 21.

And the author proceeds in the latter part of the essay to give the meaning of several of the old Greek fables, and some even of more recent works of fiction, as interpreted in reference to individual man. The story of Prometheus, that of Antæus, of Tantalus, of the Sphinx, and of Helen; and the romances of Perceforest, Amadis de Gaul, and the Bride of Lammermoor, (!) are then explained as symbols of things in man's individual life. And so history is to be understood! "All public facts are to be individualized, all private facts are to be generalized."

In these extracts the observant reader will find some things of which he may be inclined to dispute the accuracy in point of fact. Other things he will see, whose claim to be admitted to the honors of sense and reason he will be strongly disposed to dispute. But Mr. Emerson is not a common man; he is an Idealist. Shall he be held subject to the laws which are made for and by such coarse and common spirits as a Locke, a Reid, or a Paley? "Will a courser of the sun work softly in the harness of a dray-horse? His hoofs are of fire, and his path is through the heavens; will he lumber on mud highways, dragging ale for earthly appetites, from door to door?"

There is one thought, however, which can hardly be forbore to be indulged in reference to Mr. Emerson's principal maxim of philosophy, that there is "one mind common to all individual men." We do not see how he can gratulate himself that he is one and the same mind with Plato, with any more propriety than that with which he must lament that he is one and the same mind with that Herostratus who burnt the temple of Diana. Why should he follow his principles when they make him identical with the good and great, and not when they equally legitimately make him identical with others. If he is possessor of "Plato's brain," he is also on the same principle, possessor of the brain of Thersites. If he has "Cæsar's hand" he has also the hand of Cinna the poor poet whom the mob killed for his bad verses. If he has "Shakspeare's strain," he is just as truly the singer of the songs of Bavius, of Mevius, and of the mighty hero of the Dunciad. This is probably an oversight of Mr. Emerson. It is certainly an omission. To supply it we propose the following variation of the poetic lines we have quoted above, from the second page of the fly-leaf:

I walk upon the very foot,
Of the famous Lord John Bute;
The very hand now on the paper,
Once obeyed Sir William Draper;

I have the very self-same ear,
 With which King George the Third did hear;
 I too possess the very skull,
 That once with Horne Tooke's brains was full;
 I have John Wilkes's thinking art,
 With Lord George Gordon's noble heart.

Truly, as Mr. Emerson says, "the transmigration of souls is no fable."

One man is *like* another as one apple or one peach is like another. "As in water face answereth to face, so the heart of man to man." But one man is not the *same* as another, nor does one man possess the moral or intellectual faculties of another, any more than one apple or one peach has the same saccharine juice, or the same seeds, as another. Human beings are all of a kindred nature with each other, and have therefore common resemblances, like the successive crops of apples which grow upon the same tree. From nice sympathies of nature which are set in harmony by the Divine Hand which made them, the impulses, motives, principles, and aspirations of one are intelligible to another. This is far, very far from being a new truth. Yet it is all we can make of the grand maxim, that "there is one mind common to all individual men."

But if not, if there be more in it than this poor residuum of ours, if Mr. Emerson, being an Idealist, has seen by the aid of "Plato's brain," what we, ungifted thus, and fettered to an earthly sphere, have not seen and cannot see, then the star of Mesmer must "pale its ineffemal fires" before the crescent of Emerson with its "lunar horns." Mesmer professed only to establish, by magnetic power, such a connection between two minds that the thoughts and senses of one were also the common property of the other. But that connection the seer of Concord discovers to have been long ago established, even from of old, between all human minds that ever were, or ever will be, without the aid of the magnetic fluid. How magnificent are the powers of an Idealist!

Our author's interpretations of the old mythological fables of Greece, as allegories which have meaning for individual life:—that the story of Antæus means that both "the body and the mind of man are invigorated by habits of conversation with nature;" that the riddle of Orpheus shows the power of music to "unfix, and as it were to clap wings to solid nature;" that "Tantalus means the impossibility of drinking the waters of thought which are always gleaming and waving in sight of the soul"—are not novelties in the history of Grecian learning. We suppose in fact that such a mode of interpretation has occurred to every thoughtful student, in his school days, as he has perused the notes, so rich

in classic romance, which the learned Ludovicus Desprez has attached to the Delphin edition of Horace. Whoever has at hand a copy of Anthon's *Lempriere*, and will turn to the articles: PROMETHEUS, ALOIDES, IO, EUROPA, and twenty others, which might be mentioned if it was of any use to take the time to mention them, will see at once that this mode of interpretation was no unrevealed mystery at the time when that not very exhaustive, or very complete, or very accurate work was published. And whoever has gotten hold of *Creutzer's Symbolik*, a German book, of which Anthon makes, with great propriety, a good deal of use in that department of his work, will see that whole books have been written on the subject of the symbolical interpretation of the Greek fables. We do not pretend to say that a book in so general circulation as *Æsop's Fables*, with the common Croxall appendage of a moral to each one, is a familiar instance of Mr. Emerson's discovery already in extensive use. No less an authority, however, than Joseph Addison has spoken of them (in the *Spectator*, No. 183) as compositions of a similar kind to the allegorical fables of the Greeks. Yet they are not exactly fair instances in the present case, because the things spoken and done, of which they give account, have not always human agents, but agents belonging to the brute creation, as the Cock and Fox, the Cat and the Mice, the Country Mouse and the City Mouse, the Ass in the Lion's skin, the vain Jackdaw, besides numbers of ants, grasshoppers, geese, cranes, larks, kites, eagles, and heathen deities. Mr. Emerson's great maxim, that "all public facts are to be individualized, all private facts are to be generalized," and that he "can dive into himself and find the primeval world," does not therefore meet with an exact and full accomplishment in *Æsop's Fables*, because most of those fables are things said and done by the lower order of animals, and he seems to have intended that things said and done by man in history should be used as segments and revelations of the nature of individual men. This defence is made for our author. He could only make a moiety of it for himself, in consistency with another great truth which he has uttered on the 29th page of this same essay on History. "The transmigration of souls is no fable. I would it were; but men and women are only half human. Every animal of the barn-yard, the field, and the forest, of the earth and of the waters that are under the earth, has contrived to get a footing and to leave the print of its features and form in some one or other of these upright, heaven-facing speakers." So it seems that the conversations which old Phrygian *Æsop* has reported, between animals of the barn-yard, and field, and forest

are, at last, not so far out of the line of the application of Mr. Emerson's great principle as he himself interprets it. It would seem that, on principles of public utility, he would better advance the other moiety also, and make his principle fairly embrace the Fables of Æsop as well as those of Prometheus, and Orpheus and Tantalus. For it can hardly be questioned, that by so doing, he would comprehend a class of beautiful allegories, more useful and instructive, and strange as it may seem to him, teaching more of human nature than that class of very beautiful fables which he has applied himself more expressly to interpret. Nor are all of Æsop's Fables made up of the fabulous *res gestæ* of the brute creatures. It is hard to see how Mr. E. can decline to admit that he has been fairly anticipated in the discovery of the symbolical interpretation of ancient fable, probably by the Athenians and Romans themselves, but certainly by Lestrangé and Dr. Croxall, in reference to such fables as Æsop at Play, Cæsar and the Slave, the master and his scholar, the Travelers, the Trumpeter taken prisoner, and others, in which no beast, bird or fish speaks, and no impossible things are said or done. Some of the ancient critics, of whom Addison tells us, in the before cited paper of the Spectator, attempted to turn the whole Iliad and Odyssey of Homer into allegorical representations with application to individual men and the qualities of our personal nature, making Achilles represent anger, Pallas wisdom, and so of other characters. And it is certain that Mr. Emerson was anticipated in his principle of giving an allegorical interpretation to the Myths of the Greeks, by Prodicus, as early as 390 years before the christian era, who invented the famous fable of the choice of Hercules, and secured himself a welcome wherever he travelled among the cities of Greece, by the narration of it.

With all this high authority for spoiling the romance of early Greece, we cannot see wherefore it is desirable. We shall speak presently of that mode of interpreting history with which it is attempted to be connected. If this mode of understanding the mythology be defended on the ground that it makes those early and beautiful conceptions of the Grecian mind more instructive, we reply, that it is very common-place instruction, and easily had in purer forms from other sources. Upon the whole the myth is injured by the interpretation; for it loses more in the beauty and clearness of its dramatic form than it gains in significancy. If the fact be brought forward that the Greeks themselves attached an allegorical meaning to some of their own beautiful romances, it may be replied that where they did so, we may do so, where they

did not do so, we have no authority to do so. This seems to us to be the safe and clear principle of criticism on the whole subject. If this be not so, then one critic may make Prometheus and Orpheus and Tantalus mean one thing, and another critic may make them mean another thing, according to the higher or lower developments of Idealism in the minds of the critics. For ourselves we frankly confess we would rather have the old than the new. We would rather have Homer's Orpheus and Tantalus, with the dramatic interest of the scenery and the persons, and the grand, wild light of romance around them, than the Orpheus and Tantalus of Creutzer and of Emerson, representing qualities of one individual person. We would rather have Livy's Romulus and Remus than Niebuhr's Romulus and Remus, if he leaves such characters standing at all in the realms of probability. We would rather have Scott's Bride of Lammermoor, standing as nature and the author put it, representing a whole group of human characters, acting as men and women did act, or might have acted, and may act again, than Emerson's Bride of Lammermoor, with Sir William Ashton standing for "vulgar temptation," and Lucy Ashton for "fidelity" and Ravenswood Castle for "proud poverty."

The method of interpreting history propounded in this essay of Mr. E., is but a consistent carrying on of that by which he reads the riddles of the mythology, with the slight variation that, here, both the type in the historical event, and the antitype in man's mental nature, are supposed to be facts. History is but a grand drama of that spiritual nature which is in every man, which the events of the world are enacting before his face, to demonstrate to him what is within himself. "Of the universal mind each individual is one more incarnation. All its properties consist in him." History is but a perpetual series of charades to exhibit faculties, principles, capacities and aspirations in each individual man. It is but the delineation of human nature in an eternal series of Mexican picture-writing. The rise and fall of empires, the discovery of new continents, all great acts of statesmen, all progress of arts, sciences, commerce and refinements, all battles and sieges, all revolutions and reactions, all heroism and all tyranny, are but as the flights of birds before the Roman augurs; they are but as the answers of Delphi and Dodona to the Greeks, telling the qualities of man's individual nature. There is much that is imposing in this theory, as there are not a few splendidly beautiful fragments in the language in which it is stated. Yet every one feels at once that there is a fallacy in it somewhere, and that of a sweeping extent. We believe that it lies

palpably on the surface. All men have more or less of the kindred nature, of common resemblance, of family likeness. But with this family likeness, it is a fact as familiar as household words, that there are endless diversities both of body and mind. No two men are exactly alike in the face, and there are probably more numerous diversities of mind than of body. It is therefore not exactly sound to reason from Greek history to American history. The senators of a certain city of early Greece acted thus and thus, therefore the city-fathers of Concord, of Cambridge, of Boston, or of Salem, would do the same thing, is not exactly sound. Still less is it sound to reason from masses of men, whole cities and kingdoms, to individual human nature. Though Mr. Emerson says he can find Greece, Asia, Spain and Italy in his own mind, we hope and believe that he cannot find the revolt at Coreyra, the Jacquerie, the massacre of St. Bartholomew, and the Reign of Terror, in his own mind, however deeply he may dive into it. It may be replied that these terrible chapters of history had their origin in human nature, that human nature is responsible for them, that they are pictures of human nature. True, but it is not the human nature of every individual man. Circumstances of birth, education and life, exert very great influence, no doubt, upon human character; but it is yet a truism, doubtless discussed warmly by most of us when Sophomores in college, and which will not be discussed here because it seems very little less than self-evident, that there are original, native differences between different individual men. So far then from any individual in the United States to-day being able to see himself depicted in Greek or Egyptian or Roman history, it is probable that no individual man can see himself accurately depicted in the biography of the man nearest in his circumstances of all that have lived, or in all biographies together which have ever been written. Idealism makes men mere bundles of qualities, successive incarnations of the same thing. God makes men living souls, complete persons, each like himself, and incommensurable by any earthly philosophy. The whole edifice of the theory seems to have been built upon a figure of speech. It is true that history exhibits the capabilities of human nature. But it is human nature in the aggregate. All human nature is not in every individual man. Every man is not Plato. Every woman is not Helen. Every man is not Robespierre. Every woman is not Lucretia Borgia. If these short plain propositions are true, then this theory of history is not true. It affirms of every man what is only true of all men taken together.

The Idealist method of interpreting history

may be brought to a fair test in another way. If it be true that every man "dive into himself" and find a department of his nature corresponding to the Grecian period of history, and another department within himself corresponding to the Roman period of history, and another department corresponding to the French, and another to the English period of history, if each "man is the whole encyclopedia of facts," if each man "is the compend of time," if each "man is a bundle of relations, a knot of roots, whose flower and fruitage is the world" as Mr. Emerson so repeatedly asserts, then a wise man, well skilled in reading himself ought to be able to certify us concerning those periods whose records are of doubtful authenticity. If, having the history given, he is so readily able to find within himself the correlative department of individual nature, then, on the other hand, having himself given, he ought also to be able to tell whether any supposed chapter of history is fabulous, or whether it is a veritable piece of that great image which all history draws of individual man. If the two things are so clearly correlative then a philosopher at least, if no other man, ought to be able to find out the history from his own nature, as well as to find out his own nature from the history.

M. Bailly, an accomplished historian of Astronomy, who was put to death by Robespierre, came to the conclusion from tracing the history of that science among the Chaldeans, Egyptians, Persians, Indians, and Chinese at very early periods, that there must have been a very ancient and highly cultivated people of Asia long before historic Nineveh, of whose memory every trace is now extinct, who were the instructors of the nation around them in astronomy. It seemed to him very probable that the sun, moon and star worship of the Chaldeans was not the cause of their astronomical discoveries, but that their astronomy, or that of their ancestors, or that of some neighboring nation from whom they borrowed it, laid the foundation for their peculiar religion. We are informed of the settlement of the valley of the Tigris and the Euphrates, and the erection of seven cities in that neighborhood, at a very early period of sacred history. There is then almost silence concerning that region of the world for about 1,500 years according to the common chronology; after which we are suddenly presented with the city of Nineveh as a very great and populous city, exhibiting marks of decline and age in the ripeness of the vices of luxury among its people. From the time of Nimrod the hunter to the time of Jonah the prophet, was a longer period of time than has elapsed from the Saxon conquest of England to the present day. From the slight

incidental notices which we have of the east, in the meantime, showing some knowledge of the arts, from the going out of similar gigantic styles of architecture into Egypt and into India as if from some common centre, as well as from the traces of astronomy, there is some reason to believe that a civilized nation lived, and grew, and declined, and perished in that region, in this unwritten period of time, either around Nineveh or some other of the seven cities, as its centre and capital. Yet history is dumb in relation to the life of that nation. Even the recent discoveries of Mr. Layard, of hoary and grand antiquity as they are, extend back only to the epoch where that lost period terminates. Can Mr. Emerson dive into himself and certify us whether the conjecture of Bailly, that there was a civilized nation there, whose records are lost, is true or false? Can he ascertain, from gazing into the mirror of his own pure and amiable ideal nature what was the nature of that lost history?—how that lost nationality differed from the recorded Assyrian or Egyptian or Grecian national life?

Again. Plato gives us (in his *Timæus*) a tradition which he shows to have been regularly handed down to his day from Solon, and which Solon professed to have heard from the priests of *Lais* in Egypt, that there was once a very large island in the Atlantic ocean far west of the pillars of Hercules, and fronting the mouth of that strait; that this Atlantic Island was as large as Asia and Libya together; and that there was once a powerful league of kings upon it, reigning over people of considerable civilization and refinement, who pushed their conquests over the whole north of Africa and in Europe as far as Etruria. It is a well-known bone of contention among antiquarians. Some regard the whole story as a fable. Others have been inclined to accept it as true, and to regard it as a dim tradition of America, wafted across the ocean, like the floating canoes which long afterwards led Columbus to the New World. Can Mr. Emerson look into the "encyclopedia of facts" which he finds in his own ideal nature, and tell us whether or not there was once a high civilization in those Atlantic Isles, long before the time of the Athenian Solon, or whether the whole affair is but a fable of the Egyptian priests of *Lais*?

What advantage will the reading world gain by this theory of history? Suppose it to be accepted. Then George Washington, on the page of history will be but an anatomy of the integrity and firmness which each of us carries in his own bosom. The history of Alexander, of Cæsar, of Cromwell, of Napoleon, will be but an ethical account of our ambition. The stories of Helen, of Cleopatra, and of Mary, Queen of

Scots will become only elegant and allegorical ways of describing to fair ladies what the power of beauty is. The grand annals of Pericles, of Tully, of Richelieu, of Pitt, of Jefferson, of Webster, and of Calhoun, will be converted into ethical sections of individual statesmanship! Kid, Blue Beard and the Red Rover will be fierce and bold acquisitiveness set sailing upon the high seas. Othello will become African jealousy; Hamlet will be a fine but feeble soul overtaken by destiny; Antonio will mean the generosity which is in each of us; Bassanio, our success; and Shylock, our avarice. It is a retrograde process. It is a leap from Laputa into Lilliput. It is a transmutation of the philosopher's stone into dust and ashes. In what respect would the great dark volumes of ethical abstractions into which history would thus be turned, be more valuable, more instructive, more pleasing than the fresh, and clear, and living volumes that they now are?

Contrary to the socialist theory, on the one hand, man has an individual being, and nature has provided him with faculties adapted to it, and imposed on him duties incident to it. Not that we are to say to him, with Montaigne: "Cut loose from society, you and a companion are enough for each other, or you for yourself"—but there ought to be a part of his life strictly sacred and individual. He has individual rights. He has individual wants. He has individual duties. He must learn them by his own practical sense, judging of the demands of his nature so far as it is not soiled, and by the records of the lives of other individuals.

But contrary to the Idealist theory on the other hand, man has also social rights, social wants and social duties. They do not interfere with his individual wants, rights and duties. A sound individualism is the only safe basis of a sound socialism. We mean simply to say that good citizenship is as far from monkery or idealism on the one hand as it is from the phalanx of the Fourierite on the other hand. And for fear of being charged by the good sense of the reader, with multiplying words to point out that middle way in which it is best and safest to go, when there are so few yet among us who doubt or object to it, we leave the point with this mere suggestion of the principle which seems to lie at the foundation of all well-organized society. Among those parts of human history which are social, and not individual, and can have little or no meaning when looked at in the light of the idealist parallelism, are the constitution of a state or, as we may say, the mode and principle of its legislation; then its legislation itself, or the way of declaring the will of the sovereign authority, including the established means of public educa-

tion, the regulations of trade and commerce and all other municipal regulations; its treaty making power or its way of covenanting with other nations; and other things of the kind too obvious to be mentioned, which are builded on a foundation broader than individual man, which grow out of qualities in man that have no meaning except in society; and without which individual men could not enjoy sufficient liberty to do things worth recording, or to study the records of what others have done.

We have not pretended to much more, in the preceding pages, than to suggest some hints of the abundant and manifold argument by which this idealist scheme of interpreting history may be refuted, when its mystical darkness shall settle upon us, if that time should ever arrive, in a thicker cloud than it has yet done. Mr. Emerson has as yet not a great many followers in the United States. Practical thinking, contact with the realities of life, and nervous good sense will probably separate from his school some of those who now temporarily adhere to it. His views are said not always to have escaped, even in the streets of Boston, that good-humored sneer which is the natural appendix of an enthusiasm so transcendental that it soars out of common sight, so amiable that nobody could persecute it, and so grotesque that few are found to follow it. There are other peculiarities about the school of thought which he seems endeavoring to found, to which a future occasion may afford us the pleasure of a reference.

J. H. B.

Notices of New Works.

ESSAYS FROM THE LONDON TIMES: *A Collection of Personal and Historical Sketches.* New York. D. Appleton & Company, 200 Broadway, 1852.

This is the first volume, published in a very neat and attractive style, of a series, which the Appletons propose to issue, under the title of "Popular Library of the Best Authors." The enterprise is a laudable one, and will doubtless meet with great success. Certainly half-a-dollar could not be expended to more advantage than in procuring the excellent little work now before us.

The question will arise in the minds of many who read these essays and admire their point and perspicuity—who writes them? That there has been great labor and patient study expended in their preparation, is evident in almost every sentence. That pen must have been well-trained which could write such nervous and elegant English. But the articles were given to the world through the columns of a daily newspaper, with seemingly the hope of no other reward than the guineas which were received for them;—the whole credit of the authorship attaching to that wonderful personage of paper and printer's ink—the London Times. The flesh and blood authors who have thus ministered to the delight and instruction of the public, meanwhile, are busily engaged

in their drudge-work of daily literary composition, unknown by their readers and unblessed by the incense of popular applause. One of these days, perhaps, when the life of some one of them, who has written himself into a widely recognized fame, shall come to be prepared, we may have a story of toil and endeavor, of neglect and suffering, to point a chapter for a future Disraeli.

One of the pleasantest Essays in the volume, to our taste, is that on the "*Amours of Dean Swift*," which impressed us so much, on reading it in the Times, that we transferred it at once to the pages of the Messenger. It has much of the rhetorical fervour and critical analysis of Macaulay. "The Drama of the French Revolution" is a masterly historical summary, and "The Life of John Keats" is written in a strain of exalted sympathy and high poetic appreciation.

This work may be found at the bookstore of A. Morris.

A RHYMING, SPELLING AND PRONOUNCING DICTIONARY of the English Language. By J. WALKER. A New and Revised Edition. Philadelphia: Lindsay and Blakiston.

We believe it has been generally conceded, that when Mr. Walker undertook to facilitate the labors of Grub Street, and make versifying easy—thus causing many innocent young gentlemen to poetize who might else have engrossed—he should have been interrupted by the sheriff and punished for his offence against society by fine and imprisonment. Now, we have great respect for Messrs. Lindsay and Blakiston, who have before this entitled themselves to public favor, by issuing many excellent works at fair prices, but we are of opinion, that in reprinting the Rhyming Dictionary, they have committed a high misdemeanor, for which summary punishment should be inflicted. For, who shall calculate the number of hopeful youths that will sit down, in a small frenzy, with a copy of the work at hand, to write themselves out of elbows and into poetic fame? Who shall determine the amount of paper to be destroyed—the quantity of time to be wasted—the headaches and heartaches, and the thousand natural shocks that bards inherit, to be occasioned, by this poetical labor-saving machine? We say nothing of the inevitable consequences to the poetasters themselves—the poverty that such dribblings must necessarily entail and its attendant miseries. But think of these, oh, misguided votaries of the modern muse—

What reams of foolscap, while your brains ye rack,
Ye mar to make again! for sure, ere long,
Condemn'd to tread the bard's time-sanctioned track,
Ye all shall join the bailiff-haunted throng,
And reproduce in rags the rags ye blot in song.

As a matter therefore of sound policy to the State and as a measure of humanity to our fellow creatures, we would discountenance all attempts at removing the difficulties in the way of the rhymster. We want no macadamized highway to Parnassus. On the contrary, we would environ it with all the hindrances that could be devised, feeling satisfied that such as the gods design to dwell there, will soar towards its radiant summit with a strong and steady wing, and with the majestic sweep of genius.

One thing must be said in praise of the work before us, and this it gives us pleasure to say. Attached to each word in the dictionary is its proper signification, so that if the poet follow the directions faithfully, he will not fail to express his meaning, however drearily he may versify. How much of our newly-made poetry would have been better for an observance of this simple rule of composition!

This Dictionary is neatly printed and may be obtained of Nash & Woodhouse.

WHIMSICALITIES. By *Thomas Hood*. With Illustrations.

WALKS AND TALKS of an American Farmer in England. With Illustrations. New York: George P. Putnam. 155 Broadway. 1852.

Mr. Putnam's punctuality in the publication of his Semi Monthly Library is highly to be commended, and if he continues to furnish as good books as those now under our eye, he will really prove a public benefactor. "*The Whimsicalities*" we read with a mournful feeling of regret for the unhappy fate of poor Hood, that child of sensibility, whose most mirth-provoking sallies were wrung from the saddened heart beating in the tortured and writhing body. An exquisite little poem, "To my Daughter, on her birth day," which finds a place in the present collection, embodies the author's views of life in a single phrase—

The greatest proof of happiness
Was this—I wept.

"Walks and Talks of an American Farmer" is not an agricultural work as its title would imply, but an unpretending and delightful narrative of a journey over the beautifully undulating surface of old England, by a man who rambled to observe, and who knows how to record his observations.

West & Brother and J. W. Randolph have these books for sale.

THE WORKS OF SIR THOMAS BROWNE. Edited by *Simon Wilkin*, F. L. S. Volume 1. Containing Four Books of *Vulgar Errors*. London: Henry G. Bohn, York Street, Covent Garden. 1852.

The quaint old physician of Norfolk has long been among our especial literary favorites, and we therefore welcome his Vandyck features in the frontispiece of this new edition of his writings. The present volume contains the *Pseudodoxia Epidemica*, or Enquiries into Vulgar Errors, in which the peculiarities of our author's style—its striking metaphors, its vigorous expressions, its frequent commanding sweep and its occasional pedantry—are conspicuously displayed. These curious speculations are to be read as one reads Burton, at odd times for amusement. No one, however, we are free to say, who has not become acquainted with Sir Thomas Browne, has fully appreciated the literature of England during the 17th century. Dr. Johnson said of him that by his employment of uncommon words he "augmented our philosophical diction," and there are to be found in his "Urn Burial" passages unsurpassed for felicity of language by any writer of his time. We shall hail the appearance of the succeeding volumes of this edition with interest.

The present volume has been sent to us by Bangs, Brothers & Co. of New York, but it may be found at the bookstores of J. W. Randolph, A. Morris and G. M. West & Brother.

THE SNOW-IMAGE and other Twice-Told Tales. By *NATHANIEL HAWTHORNE*. Boston: Ticknor, Reed, and Fields. 1852.

These pleasing stories are all characteristic of Hawthorne, and abound with the most charming passages of his peculiar style of quiet and fanciful description. Fiction, in his hands, subserves its highest purpose of making virtue seem to the common perception the holy and lofty thing it is, while his gentle humor continually delights us. We hope Hawthorne may live long to write such "Tales" and Fields to publish them.

The book is for sale by A. Morris.

THE LIFE AND WORKS OF ROBERT BURNS. Edited by *Robert Chambers*. In Four Volumes. Vol. 1. New York: Harper & Brothers, 82 Cliff Street. 1852.

The plan pursued by Mr. Chambers in the compilation of this work is a novel one. It consists in interweaving with the thread of the biography, the poems of the subject in the order of their production; thus embroidering, as it were, the variegated tissue—now gay, now sombre—of the poet's life, with the rare flowers of his exuberant fancy. The effect is very pleasing. Indeed, the work will be preferred, we think, when issued in a complete form to any life of the noble and gifted bard of Mossiel that has yet been published. The Harpers have not given us for months a more valuable publication, and the neat and cheap style in which has been issued will commend it to general favor.

It may be found at the bookstore of A. Morris.

A HAND BOOK OF THE ENGLISH LANGUAGE, for the use of Students, &c. By *R. G. LATHAM, &c., &c.* New York: D. Appleton & Co. 200 Broadway. 1852.

We are of opinion that there are few subjects of which English students are so generally ignorant as the English language. Many who would pass muster respectably in Greek or German write very badly in their vernacular. Any effort, therefore, which aims at a reform in this particular, is to be commended. Professor Latham's book is an excellent one and seems to us the very thing that is wanted. We are surprised that it has not been sooner reprinted from the English edition, and feel indebted to the Appletons for placing it before the American public.

J. W. Randolph has it for sale.

Three Addresses of far more than ordinary excellence have been recently sent to us by their authors. The first of these is a "Discourse delivered before the Virginia Historical Society at their Annual Meeting, January 17th 1852, By H. A. Washington." The subject of this admirable paper is "The Virginia Constitution of 1776," and the author has discussed it in a truly philosophical spirit, and in a most agreeable and luminous style. Our readers of some years standing cannot have forgotten the able article, written for the *Messenger* in 1848, by Mr. Washington, on the "Social System of Virginia," which placed him at once, by common consent, among the first thinkers and scholars of the South. We shall endeavor at an early day to find room in our magazine for a republication entire of Mr. Washington's present discourse and we therefore defer further comment upon it.

Another of the Addresses to which we have alluded was delivered by the Hon. John P. Kennedy before the Maryland Institute on the 21st of October last. We need scarcely say that this is a graceful and valuable composition—the name of Mr. Kennedy as author is a sufficient earnest of its merits. The author passes in historical review the rise and progress of the city of Baltimore, and concludes with an eloquent summary of the present condition of the mechanic arts. The Address is printed with a beauty of typographical execution eminently worthy of its value as a literary effort, and is embellished with a quaint lithograph of "Baltimore Town in 1752."

The third Address which has so much pleased us is one *apropos* of the recent anniversary of Washington's Birthday, by the Rev. Dr. Boardman of the Tenth Presbyterian Church of Philadelphia. It is a strong exposition of the folly of the modern doctrine of Intervention as taught by Kossuth.

SOUTHERN LITERARY MESSENGER.

PUBLISHED MONTHLY AT FIVE DOLLARS PER ANNUM—JNO. R. THOMPSON, EDITOR AND PROPRIETOR.

VOL. XVIII.

RICHMOND, MAY, 1852.

NO. 5.

Notes and Commentaries, on a Voyage to China.

CHAPTER VI.

General Quarters; All hands overboard; Sharks; How Fishes breathe air; Varieties of Sharks; Fish Stories; A Sail at night; Sketch of a sailor; Pursers' names; A man may have no shadow; Punishment; A case stated and examined; A word in favor of flogging; Penal starvation—May cause disease; Infliction of Punishment should not depend upon the opinion of a surgeon; Usage of the sea-service.

April 4th, Lat. 19°44' north: Long. 48°44' west. We have a calm, summer sea; the temperature of the air in the shade is 81°F. Since sailing from Norfolk, now almost a month, this is the first day that a table could be set without fixtures to secure plates and dishes upon it. All the ports on the gun deck were open; the guns were run in, and the deck was dry for the first time in the course of the voyage.

The opportunity was seized upon for "exercise at general quarters," for an hour.

While the drum "beat to quarters," the wind sails were drawn up, and the several hatchways covered with gratings, except a space about two feet square, in each which was left open for the passage of cartridges from the magazine below to the battery. The galley fire was extinguished, and candles in lanterns lighted on the berth-deck. There is considerable bustle and noise during the minute or two occupied in making these preparations and from the men hurrying to their assigned stations. Then there is a moment of almost profound silence. The medical officers and their assistants are stationed on the berth-deck in sloops, in the cock-pit on board of frigates, and on the orlop deck of ships of the line, prepared to minister to those wounded who may require surgical aid immediately. Humanity, as well as other considerations, has led to the selection of the least exposed situations, for the accommodation of the wounded during battle, but it must not be supposed that even in frigates, the wounded, and those whose duty is to succour them, are entirely beyond the reach of hostile missiles. Instances have occurred, of wounded men being killed in the cock-pit by shot

from the enemy. A late surgeon in the navy, saw two men killed by round shot while he was dressing their previously received wounds. It may be readily imagined that to be useful during an engagement at sea, medical officers must possess coolness and self-possession in a high degree; without such qualities they would be unable to determine upon the use of the knife, or to employ it amidst the din of battle, by candle-light, in a very imperfectly ventilated apartment. It is sometimes necessary that medical officers should render assistance to those on deck who may be wounded.

The first sounds which reach us below, proceed from the mustering of the privates in their several "divisions." The ship's company is divided into "divisions," each under the immediate command of a lieutenant. A division in the navy is equivalent to a company of artillery in the army. The marines are commonly assembled on the spar-deck under their appropriate officers. After the privates have answered to the roll-call, the lieutenants report their "divisions" respectively to the senior lieutenant on the quarter-deck, where he is stationed in company with the commander and sailing-master. A very important division or company of privates is stationed on the berth-deck, which is usually under the immediate command of the purser. The men are arrayed in lines, at convenient distances, extending from the magazine and shot lockers to the several hatches. They are employed in passing shot and cartridges from below to the battery.

It is an invariable usage on board men of war, to load the guns immediately after leaving port, that they may be in readiness to resist attack without delay. The unprovoked and unexpected attack of the British frigate *Leopard* on the *Chesapeake*, in June, 1807, just after sailing from Hampton Roads, shows the necessity of being ever ready. That lesson will never be forgotten.*

The tackling of the great guns was cast loose. The lieutenants gave the order, "right abeam; take good aim; fire!" and then as if the order had been obeyed, the men pulled in the gun. Then came the mingled cries of the commanders of the several divisions—"in vent and sponge; cartridge, wad; one round shot, wad; ram home." The completion of these several acts was announced by the captains of the guns in a prolonged cry of, "Home." Then came the

* See Cooper's Naval History.

order to "run out," "elevate for a long shot," "fire;" and thus continued the din of running in and out of guns by the different "divisions" without observance of time with each other, and the irregular alternation of "run out," "shot," "home!" "stand of grape," "wad," "in vent and sponge," for nearly an hour. It seemed all confusion; but it was all in perfect order, as an enemy will ever find when our mimic fight is changed to earnest. Now the exercise suddenly changed. The sail-trimmers were called from the guns; then came a stentorian shout, "Away, first and second division of boarders; to the lee bow." Next an alarm of fire was given, and the firemen rushed to the make-believe point of conflagration, armed with buckets of water; but the gravity of this part of the exercise generally gave way to a temptation to empty the buckets on each other. In a word, every situation and condition which can occur in a fight are supposed, and the necessary evolution to meet it performed. In the end, the drum sounds a retreat, and all is restored to the *statu quo ante bellum*. What a relief it is to get off the gratings from the hatches, and have the windsails pouring down streams of fresh air upon those confined below, for a hot hour in a stifling atmosphere. To fully understand this, one must be convinced that man lives upon air, and upon nothing else. There never has been a more absurd or falser sophism than that contained in the assertion—"Man can't live upon air." The author of that saying had no experience in "the black hole of Calcutta;" if he had, he would have spoken of air as an ingredient of bodily nutrition in a more respectful tone—he would know that air is the substantial, essential part of diet, and that the various viands and vegetables are to be regarded as so many piquant sauces to help one devour largely of the main dish. Stop a man's allowance of air, and you find he has no relish for beef or bread, or even for grog.

Exercise at "general quarters" involves a great deal of muscular effort, and consumes a good deal of nerve-force, especially on a hot day, if we may judge by the consequent fatigue. But it is in this way that men are drilled and prepared for conflict; and to omit "exercise at general quarters," is to omit a most important act. The exercise of men in the "Division drill" is preliminary, elementary to the first; but cannot be safely relied on as a substitute for it.

Experiments were satisfactorily made with the explosive shot invented by Paixhan.

The day being calm and warm, a sail was spread a few feet under water, alongside of the ship, and the boatswain piped "all hands to jump overboard." Most of the men gladly availed themselves of the opportunity of a sea-bath; in

a few minutes, as many as fifty men were swimming over the submerged sail. The temperature of the water was 76°F. The blacks were special objects of attention, particularly those who were reluctant to come in contact with the briny element. One or two were seized, stripped of their clothes, a rope tied round the waist, and then thrown overboard, in a state of alarm not easy to describe, though it afforded great mirth to the beholders of the scene. I believe that all were improved by the immersion.

While the men were in the water, there appeared at no very great distance, a slender, dark-looking rod, rising several inches perpendicularly above the surface, moving swiftly and noiselessly towards us. Every one of experience recognized the dorsal fin of a shark, but his proximity was not sufficient to excite alarm for the safety of the swimmers, although his approach was not unheeded.

This animal is unreservedly detested by all sailors and sea-faring people. No sooner is one caught than he is precipitately attacked, knife in hand, by as many as can come near enough to deal a blow. I have been often present at the capture of sharks, by men-of-war sailors, but I have never yet had the good fortune to see one of those voracious fishes on a ship's deck before is was wounded or mutilated.

The family of sharks, (*Squalidæ*.) is constituted of a number of genera and species, and belongs to the order of Cartilaginous fishes, so named from the peculiar nature of the skeleton of these animals. Though fishes breathe air, they have no lungs like mammals, but in place of those essential organs, are supplied with an apparatus, found on the sides of the head, called gills, through means of which the process of respiration is carried on. The quantity of atmospheric air, which exists mingled in water every where, is sufficient to supply the quantity of oxygen necessary to maintain life in fishes and animals of less complicated structure, which exist beneath the sea. The arrangement of fishes' gills is not uniform throughout; naturalists have, therefore, found it convenient to take their peculiarities as some of the characteristics for classification. One order of fishes is characterised by having the gills fixed at their extremities to the outer-sides of the gill cavity, and having a series of holes or apertures, through which the water that enters the mouth passes out, instead of the free and open arrangement seen in a shad or perch. Fishes which have a breathing apparatus of this kind, constitute a group or assemblage named the order of cartilaginous fishes with fixed gills; or, in the more precise, though less familiar language of classic writers on natural history, *Chondropterygii branchiis fixis*. And under this not

very euphoniouſly named order, the family of ſharks is deſcribed—a family of incalculable antiquity, as is clearly proven in the record of it, contained in what geologiſts call the tertiary ſtrata of the earth. In the tertiary beds of Malta, foſſil teeth of ſharks four and a half inches long have been found, from which fact the organic degeneration of the race may be inferred. There are ſtill, however, very reſpectable repreſentatives of the family in exiſtence; reſpectable for ſize, and for their rapacious, bloodthirſty propenſities. Of the whole, perhaps the White Shark, (*Carcharias vulgaris*,) is the moſt dreaded; it may be regarded as the tiger of the deep. When full grown, the body attains a length exceeding twenty feet, and its enormous jaws, armed with a very great number of triangular teeth, arranged in rows, are capable of ſufficient expansion to ſwallow a man. The Blue Shark, (*Carcharias glaucus*,) rarely exceeds ſeven feet in length. The Fox Shark, or Threſher, (*Carcharias vulpes*,) is from ten to twelve feet in length, and is diſtinguiſhed by the unequal ſize of the lobes of the tail, the upper one being two or three times the longeſt. The name Threſher is derived from the ſuppoſed propenſity the animal poſſeſſes to attack whales, which are always ſaid to be moſt cruelly threſhed; and when the ſword-fiſh joins in the combat, the whale is almoſt always killed. The threſher is ſaid to throw himſelf high out of water and fall upon the whale, who, to eſcape his antagonist, dives into the depths of the ſea, to be driven again to the ſurface by a lunge of the ſword-fiſh from below. My own experience does not enable me to confirm, or to contradict theſe notions. The Shovel-nose Shark, called alſo the Balance-fiſh, the Sea-mallet, and Hammer-headed Shark, (*Zygæna vulgaris*,) is about nine feet in length. The head, viewed from above, is ſomewhat in form of a parallelogram, ſet tranſverſely to the body of the animal, ſo that in large ſpecimens the eyes are at leaſt two feet aſunder. But the largeſt animal of the name, is the Basking Shark, or Whalebone Shark, (*Selache maximus*,) which is ſaid to attain a length of nearly forty feet. This animal is leſs rapacious than others of the race; it is ſuppoſed, from the length and peculiar arrangement of the digeſtive organs, to feed chiefly on vegetable ſubſtances. It is aſſerted, that the liver alone of one of theſe ſharks has been aſcertained to weigh a thouſand pounds.*

The noſe of the ſhark projects far in advance of the mouth, which, from this circumſtance, opens nearly under the middle of the head. In attacking, therefore, the animal ſettles down-

wards over his prey when favorably ſituated, or otherwiſe turns upon his ſide or back, with the jaws expanding in readineſs to gulp down his victim. Expert ſwimmers, ſuch as are found among divers engaged in the pearl fisheries, and the natives of ſome of the Pacific Iſlands, ſucceſſfully engage in combat with ſharks, ſtabbing them with knives.

Dr. J. V. C. Smith relates that a gold watch, chain and ſeals were found in the ſtomach of a captured ſhark, which were recognized by a gentleman, as a gift he had made to a nephew who had been drowned a ſhort time previously on his paſſage to Jamaica. The ſame author ſtates that, in the harbour of Boſton, ſometime during the year 1831, a ſhark attacked a man in his boat, overcame and devoured him.

Mr. Leſueur has deſcribed, (in the Journal of the Academy of Natural Sciences of Philadelphia,) a ſhark, (*Squalus elephas*,) taken on the coaſt of New Jerſey, which measured thirty-two feet, ten inches in length and eighteen feet in circumference. By forcibly expanding them, there was ſpace enough betwixt the jaws to permit a man to ſit upright in a chair within their graſp. Müller ſpeaks of a ſhark which weighed 4,500 pounds; and it has been authoritatively aſſerted, that the entire, unmutilated body of a man has been found, more than once, in the ſtomach of a ſhark.

A conſiderable number of years have paſſed ſince I made the following notes, while on the eaſtern coaſt of Africa:

“One calm afternoon, ſeveral of thoſe huge animals of the deep were ſeen ſailing, ſeveral feet below the ſurface, through the transparent ocean. A large hook was immediately armed with two or three pounds of ſalt pork, and thrown overboard. To prevent the ſhark from carrying off the bait in triumph, two or three feet of an iron chain connected the hook to the line. In a few minutes one of thoſe ſea-pirates made his appearance, urging himſelf gracefully through the water by an occaſional impulse of his tail, after which his whole body ſhot along without giving any ſign of life. Preſently he ſpied the pork, and, with a ſingle effort, darted forward thirty or forty yards, then rolling upon his ſide, ſeized the fatal hook; and the fiſherman at the ſame inſtant jerked the line.

“The taffrail, at the time, was crowded, both by officers and men, to ſee the ſport, for the moſt incorrigible animosity ſeems to hold againſt theſe creatures. When the fiſherman jerked the line, a dozen voices cried, ‘You’ve got him—you’ve got him;’ and the ſhark was dragged under the ſhip’s quarter, where his head was raiſed above water. Then thoſe on board looked down in triumph upon their enemy, who glared

* See Natural Hiſtory of the Fiſhes of Maſſachuſetts. By Jerome V. C. Smith, M. D. Boſton. 1833. p. 105.

his great eyes upon them, with a look rather betokening distress than fierceness, but no one was mollified sufficiently to propose to let the poor devil go.

"The next operation was to slip a noose over his head, which was not so easily accomplished, for whenever the rope touched him, the shark became nervous and made violent efforts to escape, and thus endangered tearing out, or breaking the hook. At last, after several fruitless attempts, the noose was secured, and the prisoner brought on board. Scarcely was he 'landed on deck,' as the sailors say, before an axe had severed the tail from the body, and Jack's knife became familiar with his bowels. In a very few minutes the heart lay palpitating upon the fluke of an anchor, and his flesh, while yet quick with life, was conveyed to the frying-pan of the cook, leaving the tail, which was nailed up as a trophy, figuring in the eyes of sportsmen, after the style of a fox's brush, or a deer's antlers, (or perhaps a white man's scalp in an Indian wig-wam,) and the back-bone and jaws, which two or three sailors industriously set to work to scrape clean to make natural curiosities for some marine museum.

"The size of our prize did not exceed twelve feet in length; it was not large, if we are to credit the stories of sharks caught with whole horses in their stomachs. Talking about sharks—I heard an officer tell that one was caught while cruising in the West-Indies, where they are very numerous, of most enormous dimensions. Indeed, if I had not heard the story with my own ears, I do not know whether I should be able to believe it, much less repeat it with any expectation of credence: in fact, I doubt whether print could have rendered it credible. This West-India shark had been observed following the vessel for several days, and the minds of the sailors were filled with consternation; for there is a superstitious belief amongst them, that a shark following a ship so many days, portends the death of some one on board. Therefore, to avert a catastrophe so melancholy, it was determined to destroy the spectre thus haunting them. Fifteen or twenty pounds of pork were secured to a large hook, almost as large as a boat's anchor, and thrown overboard. In a few minutes the fish voraciously seized the bait, and was fairly caught and brought alongside. There he was, slung in several nooses of rope, and by aid of a tackle on the main yard, hoisted on board. Axes and knives were, as usual, set to work, and in a short time the animal was disembowelled, and, 'What do you think was found inside of him?' asked the narrator, after pausing long enough to afford all present an opportunity to answer, he

added—'A sentry-box, with the door wide-open, and a soldier on post with fixed bayonet!'

"'I do not doubt it,' said a very grave gentleman, who was present, 'for I have witnessed something in the way of sharks almost as incredible as that—and as the preacher says, I will tell you what it was. You are all aware of the animosity of sailors against the whole tribe. Well, a shark, almost as large as that West-Indian of yours, was caught on board a ship not far from Trincomalee, and, according to custom, the crew began the attack as soon as he was on deck. One of the men came forward, I think he was one of the carpenters's gang, armed with a broad-axe, and with all his strength struck a blow at the animal's head. At the same instant the shark sprang forward and seized the axe between his teeth, and when it was wrenched out, which was not easily done, by the united force of many men, so strong was the grasp of the jaws, that the axe was split into filaments or teeth, and bore a strong resemblance to a fine tooth comb.'

"Although I am not exactly prepared to believe this last story, I have seen, in my short period of sea service, so many strange things, that I cannot exactly doubt its authenticity. Besides, I think, my doubting it, might not make it untrue, and I should run the risk of involving myself in a duel with the gentleman; but as you are not acquainted with him you may express any opinion you please on the subject, for, although I think he intimated he could produce the broad-axe to corroborate his statement, I do not recollect that he named the carpenter who struck the blow. Let me recommend one caution, however; scepticism on subjects of natural history is very dangerous; I have seen more than I dare tell with any hope of being believed."

The flesh of the shark is not very savory, whether stewed, fried or boiled; but may be eaten in preference to beef which has been steeped three years in salt, and become, through chemical reaction, as hard and almost as tasteless as mahogany. But the Chinese find in sharks' fins a delicacy, which they seek under a belief that they exert a rejuvenating influence, in some way opposed to the theories of Malthus.

April 5th. Lat. 19°35' north; Long. 49°04' west: temperature 82°F.

Last evening we saw the new moon, just twelve hours after the change; and the southern Cross was visible about fifteen degrees above the horizon, the whole circle of which was piled up with ash-colored clouds, said to be peculiar to the region of the north-east trade winds.

The first part of the night was very pleasant, a clear sky, a gentle breeze, and a smooth sea. Several officers were walking the deck, some were lounging on the taffrail, and the whole

watch seemed engaged in a pleasant conversation. In an instant the tranquillity of the scene was broken, by a cry from one of the cat-heads. "Light, ho!"

"Where away?" demanded the officer of the deck.

"Right ahead, sir," replied the look-out.

"Keep her away, a point, Quarter Master."

In a moment all were peering into the distance, to discover the light, which proved to be borne by a vessel steering nearly in our track, but in an opposite direction, with studding-sails set. We conjectured she was from Brazil, bound to the United States; and this conjecture made us regret that we had not met in the day, because we possibly might have put letters on board of her. She kept on her way; and disappeared in our wake, under the shadow of clouds which under-hung the new-moon.

April 7th. Lat. $16^{\circ}04'$ north; Long. $45^{\circ}53'$ west. To-night we gaze in admiration on a tropical sky; a brilliant new moon and bright, twinkling stars set in an azure field. The Southern Cross and Great Bear are both in sight; but in a few days, the north star will be lost to our view.

Soon after I joined the ship at New York, I was very cordially grasped by the hand and welcomed by a sailor, whose form and features were very familiar to me. My friend, whose name I did not at the instant recollect, soon made me understand we had been shipmates before; and that he remained grateful for some kindness which I had forgotten. I was unable to associate this man with his present name; but a little reflection connected him with small events of a former cruise in India, and these brought fresh to my memory the name then belonging to this individual. Standing close to him on deck the other day, I said, "Sutton, what made you change your name? When we sailed together fifteen years ago, your name was Sutton."

"Yes, sir! but that was not my right name; that was my Purser's name; I did not change it for any rascality. You see, I've got decent relations, and I got to drinking badly, and it distressed 'em so much, I ran away and shipped; and to save 'em the trouble of looking for me, I took a Purser's name, and called myself John Sutton. Then when we got home, I went to see my folks, and they were so glad to see me, I thought, as I did nothing to disgrace myself by being in the service, I would ship again by my right name, John Griffin. You see it was all done in a bit of a frolic, and no harm has come of it to any body."

A day or two since, Griffin, who holds the office of ship's painter, was engaged in renewing the paint on the iron work of a gun carriage,

near which I was standing. His countenance told me he was inclined to talk, and to indulge his inclination I remarked, "Well, Sutton, do you drink as much as ever; you know you were a pretty hard boy."

"Why, sir, I do not drink so often now; but, somehow, I can't give it up. You see, I have tried very hard; and cried over it as much as any poor devil you ever heard of, but it's no use. You see, there's two kinds of people born in this world; one kind is born to be drunkards, and one is not, and it's God's will, and there's no use of trying agin it."

"But, Griffin, you do God great injustice by supposing he designs to make you a miserable drunkard, in spite of your own sense. We are all free agents, and God has made us all equal in this respect. He has given out that all men are born free and equal; that is, every man may use his ability without hindrance, as long as he does not harm his neighbors."

"Well," said Sutton, turning a quid of tobacco in his cheek, "may be, God has Yankee notions on this subject; but I only get drunk now and then; you know, when I am sober, I am a good man, and harmless as a lamb."

This conversation, quaint enough in its way, reminded me that this man was ill at Bombay, of a fever, which at the same time, had prostrated a large number of the ship's company. An application of leeches, which are in that place very large and active, had been directed. I sat not far from the patient at night—out of sight—resting against a gun. Presently, I heard the well known voice of the Surgeon's Steward, who had just applied the leeches, in a tone that proved him to be drunk, say—Sutton—Sut—Sutton; I am under—your cot: if, you faint, Sutton; call me, Sutton; I say, Sutton, my boy, do you hear?"

Poor Sutton! At a subsequent period of the present cruise, he was aloft, when his head was unsteady from too strong potations, and he fell to the deck. He died a few days afterwards from the effects of the injuries he had received.

April 10th. Lat. $9^{\circ}39'$ north; long. $41^{\circ}37'$ west; thermometer 80° F; weather sultry. The wind does not favor us. There is reason to fear a long passage; we may not be able to get far enough to the eastward to enable the ship to pass Cape St. Roque without tacking and beating against the wind, which will require time. There are Mother Carey's Chickens and two or three Portuguese men-of-war around the ship; and the "tide rips" on the surface, caused by what seamen name the "equatorial currents" which are setting us to the westward at a rate of more than a mile an hour, and out of our course.

Strange are the wonders of the world. Phe-

nomena whose causes are not recognizable by men, are wonders; what is plain to the educated and instructed, may astonish or even terrify the ignorant. To-day we are without a shadow; the sun is vertical, and therefore, we have none. I once related to an eager listener, among the remarkable things which had fallen in my way, that I had been in the sunshine when my body cast no shadow. The effect was, to make him discredit all my statements. "It is impossible," said he, "for a man to stand in the sunshine and not make a shadow, unless he is possessed of the devil."

Seamen find great entertainment in speculating on the origin of currents. To them it is of great interest to ascertain, because there is a notion it would enable them to counteract the influence which currents exert upon the course of a ship in making her way over the trackless waste of waters.

April 12th. Lat. $6^{\circ}17'$ north; long. $37^{\circ}58'$ west; thermometer 81° F. The crew was exercised at "general quarters."

"All hands" were called "to witness punishment." The subjects of it were negroes, two servants; one stout, of athletic proportions and remarkable for his strength; the other smaller, slender, and in no respect above mediocrity in corporal power. Peter, the smaller one, had been drawn into a dispute with John, who struck him a blow which was promptly returned; in a word, a fight came off between them. John had been charged with stealing a pair of boots and selling them to one of the sailors. The charge was admitted by the accused, who acknowledged that he had stolen raisins, &c., on a former occasion. Several articles had been missed from the Ward-room, and for this reason the senior Lieutenant suggested that "an example" should be made of John.

This case falls under the provisions of certain articles of the law of 1800:

"ARTICLE 14. No officer or private in the Navy, shall disobey the lawful orders of his superior officer, or strike him, or draw, or offer to draw, or raise, any weapon against him, while in the execution of the duties of his office, on pain of death, or such other punishment as a court-martial shall inflict."

"ARTICLE 15. No person in the Navy shall quarrel with any other person in the Navy, nor use provoking or reproachful words, gestures, or menaces, on pain of such punishment as a court-martial shall adjudge."

But it is believed that personal quarrels with or without fisty-cuffs, between privates, are rarely, if ever, brought before a court-martial in the Navy, for investigation. The authority assigned to courts-martial by these two articles, as far

as relates to privates, is commonly assumed by the commander, who, for the occasion, constitutes himself a court of *oyer-et-terminer* of summary proceeding. Indeed, a little reflection will lead to the conclusion that the petty quarrels ending in a boxing-match between privates, although worthy of notice and punishment, are not sufficiently grave, to require the interference of a court of the highest degree, known in military law. Such a court, for the sake of its own dignity, if nothing else, would be prone to award a much higher degree of castigation than such petty misbehavior merits; therefore, in disregarding the law thus far, and assuming authority in the premises, the commander pays respect to humanity and good sense.

"ARTICLE 26. Any theft, not exceeding twenty dollars, may be punished at the discretion of the Captain, and above that sum, as a court-martial shall direct."

The statute authorises the Commander, in such a case as that stated above, to punish for the theft according to his own discretion; but, for the quarrel, it gives him no power to chastise the culprits. For the reasons stated, it would be unjust to censure a commander for a seeming disregard of law, in punishing privates who may engage in personal quarrels. Although assault and battery does not constitute a criminal offence, it is probable, all such assumptions of authority, could be defended under the following:

"ARTICLE 32. All crimes committed by persons belonging to the Navy, which are not specified in the foregoing articles, shall be punished according to the laws and customs in such cases at sea."

When all hands were assembled, the marines drawn up in line on the quarter deck, and the officers armed with drawn swords, the two negroes were brought to the gangway by the master-at-arms. They were stripped of every article of dress except the trowsers, and a cat-o'-nine-tails placed in the hands of each. No reason was assigned publicly for this proceeding. The commander addressed them this pithy speech:—"You wanted to fight; now go to work and lick each other."

John, the big negro, used his "cat" pretty sharply, but Peter did not return the blows, until the commander exclaimed: "Why the—, don't you use your cat?" Thus encouraged, he struck irregularly and without much effect. Presently, John seized Peter's "cat," and held it in one hand while he plyed his own "cat" with the other. After a few rounds, to the great amusement of the spectators, who testified their approbation by shouts of laughter, the commander said: "That will do: now, when you want to fight again, apply to me."

A "grating" of wood, used to cover the hatchways, was now placed on the deck, near the side of the ship, and John stood upon it, stretching up his arms at length, to the hammock-rail above his head, where his hands were lashed, while his feet were secured to the grating by stout cords. The master-at-arms covered the shoulders and back of the culprit with his shirt; and a boatswain's mate stood at a convenient distance, without his hat, armed with the "cat," ready to act in obedience to orders.

The commander remarked: "I suppose you know what you are to be licked for?" John replied affirmatively.

"Go on with him, boatswain's mate," rejoined the commander.

At the word, the master-at-arms lifted the shirt and stepped back with it, beyond the reach of the instrument of punishment, and the boatswain's mate, "according to the custom in such cases at sea," cleared his "cat" and laid its weight fairly across the jetty shoulders. The sharp crack of the thongs broke the silence, and instantly the master-at-arms said in a clear tone of voice, "one." The blows were repeated in quick succession, and the count was kept audibly until the legal dozen was reached, when the commander again interrupted: "That will do;" and turning to the first-lieutenant, continued: "You can pipe down, Sir."

In the mean time, the master-at-arms covered the culprit's back with his shirt; and John was speedily released from his uncomfortable position. He did not flinch under the infliction; or in the language of his shipmates, "he bore his flogging like a man," and, in their eyes, suffered no disgrace or degradation, either in consequence of the theft or the punishment.

Such cases never suffer enough to require medical or surgical treatment; for, however, severely the skin may smart and burn for an hour or two after this kind of stimulant, the sufferers always are too dignified to complain. Though John, in respect to public opinion, kept his dorsal sensations a profound secret, it is conjectured he would not risk having them renewed for the value of a pair of boots, added to several handfuls of raisins. All his subsequent pilferings, if indeed, he again ever indulged in such propensities at any subsequent period of the cruise, were doubtlessly conducted with the greatest circumspection, in fearful remembrance of the "cat."

It cannot be denied that this flogging a fellow is a revolting sight, and for the time, no doubt, efficiently painful; but, is it not better for the individual, and also for the community of which he constitutes a part, than to force him to expiate the offence by confinement in irons for thirty days on bread and water diet exclusively. It must not

be forgotten, that a flogging to the extent of a dozen lashes, well laid on, does not impair the vigor of a healthy man; he is in a condition for the discharge of his duty, the next hour after the infliction. But the problem is to be solved, what length of time, after a diet of bread and water for thirty days, must elapse before the culprit will be able to earn his pay: or how far such treatment may permanently injure the healthy condition of a subject possessed of what is termed a lymphatic temperament, in which the powers of nutrition and assimilation are naturally sluggish. Men of damaged constitutions, though seemingly in sound health; men who inherit a predisposition to consumption of the lungs, to scrofula and the like, or who have any tendency to scurvy, would have developed those diseases, in all probability as a consequence of such a penitential diet continued during a month. The laws which govern the animal functions cannot be infringed with impunity. Legislators should devise their modes of treating crime in full view of this fact; and not attempt to shift the responsibility of hazarding health and life in any one of their fellow-citizens, by imposing upon a medical officer the duty of deciding how long a man may be tortured by starvation without damage to his health. It is unjust to make a medical officer the arbiter between law and its victim. While respect to the law demands that the slow punishment should continue till the end of the allotted period, humanity requires that the prisoner should be rescued from the chances of long protracted disease terminating in premature death. To make these chances depend upon the judgment or conjecture of the medical officer, is to make him in fact an executioner, whose duty is to superintend slow torture, to watch its progress, and determine when it should be arrested to protect the health of the prisoner. It will be found no easy question to solve; how long may a man, with predisposition to consumption, be starved without developing the disease; yet, it seems probable, legislators will impose this question very frequently to medical officers of the navy. But it is still to be hoped, that the medical officers of the navy, should such an odious duty be imposed upon them, will have courage enough to force the legislators, in the slang phrase sometimes used in legislative halls, "to face the music," by forbearing to interfere, with the operation of the law in any case, until the very last moment. Let sailors and soldiers be starved into incurable disease, on a theory of humanity; but do not hold medical men responsible for the result. It would be humane to enact a law on the subject which cannot operate unequally through the benevolence or the erroneous judgment of any medical officer. There

should be no escape of punishment on the ground that the health of the culprit will suffer by the infliction; immunity should not be provided for evil-doers of bad or damaged physical constitution.

The law which confers power on an individual to starve a man for thirty days arbitrarily, is inconsistent with humanity, with our institutions, and opens a door to greater cruelty and abuse than was ever inflicted under the barbarous law of the year 1800. There is no comparison between the severity of thirty days starvation and a dozen lashes well laid on; there is surely no difference in the degradation of the two modes of punishment; disgrace should inure to crime, not to the castigation. Who will contend that the infamy of murder is contingent upon the gibbet and the executioner? The headsman's axe never inflicted disgrace upon an innocent victim. It may be asked, why should the guilty escape punishment through a lackadaisical apprehension that it will disgrace or degrade them? Why should the restraining influence which a fear of disgrace or degradation, which the transcendently benevolent tell us inures to punishment, be removed from those who might be, without such influence, prone to offend against the community? Must effectual modes of punishment be abandoned on a theory that it is essential, in view of humanity, to preserve the guilty and innocent equal in character and respectability? It is believed no civil court could be restrained from awarding sentence of the law on a burglar, on a plea that a man cannot be confined in a penitentiary at labor without injury to his reputation in the community.

The combat between the two negroes armed with "cats," which took place in presence of the assembled crew, was not generally approved: but it was, most probably, in the opinion of the commander, in conformity to the usage of the sea-service, and therefore, legal, although no other officer on board had ever witnessed precisely such an exhibition. I feel well assured, however, that the commander acted on a conviction that he was doing the best for the preservation of the discipline of the ship. But, it is probable the example was not beneficial; because the scene seemed to possess the same kind of interest for the crew, as may be observed in an audience at a bull-bait, or a prize-fight between boxers.

This might be cited among many instances, to show the evils which may arise from indefinite penal law. It is not necessary that any offence should be punishable according to the usage of the sea-service, which means, in fact, according to the habit or usage observed by the commander whose duty it is to adjudicate the case. If closely

investigated, it would be probably ascertained, that there is no uniformity of view among commanders upon any one point, connect with this most indefinite of all laws, the usage or custom of the sea-service; the term should find no place in any statute devised for observance in the navy. It will be a fruitful source of evil, of injustice and complaint, as long as it is permitted to remain.

To "Feather" on her Birth-Day.

The flowers of April gem the grass
And tender buds on every tree,
And waving herbage on the lea
Of Spring, and little clouds that pass,

Steeping a moment in their shade
The beauteous face of nature, tell
That we have bid the snows farewell,
That Winter and his ghost are laid!

The Spring, a smiling angel, bright
With violets and primrose sweet,
Stands crowned, the Storm-King at her feet,
And in her eyes a heavenly light.

Twelve years ago, she stood as now,
Each year her form has graced the earth
As bright as now; and all her mirth
And joy fell on my darling's brow.

Twelve years ago, as fair a morn
As this came far across the wave,
Joy-heralded, with colors brave
As those by wandering Maïa worn.

Twelve years ago, a little child
Began to clap her tiny hands
And laugh and crow, while all the lands
With fair mid-April blushed and smiled.

And now she is my little pet.—
A maiden bright in childhood's joy,
With whose young happy life the alloy
Of sorrow scarce has mingled yet.

And may it mingle never, dear!
But all be April's sunny grace!
And may my darling's smiling face
Beam ever, never pale with care.

Heaven grant that she may find this life
The portal to a happier land!
And as when on the wave-lashed strand
The sunshine falls with clouds at strife

See on the shore of earth, before
That loudly-sounding mighty sea,
Glimpses of brighter things to be,
Of joys that live forevermore!

A sage of other days rejoiced
That heaven had sent him to the world,
When Spring her golden flag unfurled,
And rung with songsters many-voiced

In every grove—that those who smiled
At the babe's graces in those hours
Might, on his cradle scattering flowers
So bless the future of the child.

May such young flowers still typify
My darling, and her life go on
Like golden arrows from the dawn
Scattered upon the clouds that lie

Upon the skies of life : and bright
Dawn all her birth-days here below,
'Till her all happy earth-time go
To the land, blind with dazzling light.

15 April, 1852.

HISTORY OF RICHMOND.

CHAPTER ELEVENTH. (CONTINUED.)

Every community holds within itself many other communities, which, like the hidden wheels in a perfect watch, determine, themselves unseen, the movements that appear upon its face; and by their regular or irregular action, make its motion perfect or imperfect. We will consider some of them. The religious societies or churches of Richmond are numerous and flourishing. The houses of worship are, many of them, handsome structures, and all seem generally well attended; making, in this respect, a marked difference between the present and the former city of Richmond. There are all the various denominations, Protestant and Catholic, Unitarian, Jew and Quaker, in this city; the members of these churches form a large part of the population, and by their number, exercise a controlling influence over the community. Necessarily they are friends of law and order; and it is partly owing to their influence, added to that native love of order which characterizes the Virginia people, that we have never seen a mob in Richmond. In a city of the size, and with the mixed population, it is rare to have the city proceedings carried on with the regularity, and with the observance of good order, that we find here.

For a city, or a nation, that State pride in the love of law and order which we possess, has far more influence, and is, for the mass of people, a safer guide, than religious influence; because the one influences but a small number of persons in reality, and those the most quiet of our citizens; while the other affects men in the mass, and even the most angry and headstrong, come under its sway. The one strives to prevent evil; the other directs and controls it, so as to limit its action.

Another class of communities, are the various

secret societies that flourish in Richmond. The Masons have several Lodges, and possess some of the most influential citizens in their number; the Odd Fellows, the Druids, the Sons of Temperance, and the Rechabites, are large and firmly united bodies of men. The principles of brotherhood, or fellowship, of secrecy and of benevolence to the poor and afflicted, have caused the existence of some, and the flourishing condition of all. In fact, leaving out Masonry, which dates from a period so distant, that man's records do not reach its origin, they seem to have arisen from a desire to counteract the selfishness inherent in our nature, which would make us neglect the sick, and look upon all men as enemies or rivals. Where religion has no influence, (and the mass of men have it not,) these benevolent orders produce friendly feelings; and by the sanctity of their obligation, require that the sick should be attended and provision made for doing good. The necessity that produced them keeps them in existence, by a continual demand for the exercise of their peculiar laws; their secrecy is a cloak of protection against impostors, and is also a bond of union among the members.

The last two mentioned bodies have more influence on society than the others; their peculiar principle, of abstinence from intoxicating drinks, has already worked decidedly in reforming the community, and much more may be expected from a body of 1,000 men, pledged by precept and example to carry out the principles of their society. Such a body, so laboring for the good of the community, deserves at least the praise of disinterested patriotism; and should be encouraged by all who think that the permanence of our institutions depends on the virtue of our citizens.

There are several other benevolent societies, for the purpose of distributing bibles, tracts, attending the poor when sick, and giving them work when well, managing orphan asylums, &c., &c., which are in active operation in the city; they belong more or less to the churches, and may be considered so many fruit-bearing branches of different religious denominations.

The military spirit exhibits itself in forming and keeping up various volunteer companies in Richmond. Artillery, cavalry and infantry may be seen on a fair turn out among the city companies. The Richmond Light Infantry Blues, one of the oldest companies in the country, takes the lead; and, beside others, the German, the Irish, and the Scotch, have each their own national company. Add to these the well-drilled Public Guard, under Capt. Dimmock, and Richmond possesses ten efficient companies of armed men, besides a numerous though untrained militia, and a large store of arms in the arsenal. She is thus admirably

qualified to resist foreign invasion, or to put down intestinal war.

Among the benevolent societies of the city, should have been mentioned the Fire Companies. They deserve notice from their usefulness and from their peculiar organization. There are seven engines, all under the control of one association, and this forms a Fire Insurance Company: every member of a fire company must possess at least one share of stock, that thus his own interest may coincide with that of the insurance company, in preventing and putting out fires. The city being divided into three wards, and being of a very hilly character, the engines of one extremity of the city are not permitted to go farther than the middle ward; while those of the middle ward go to either side in case of fire. This prevents crowding to fires, and consequent quarrelling for place; and is necessary in so rough and extensive a city, lest fire might show itself in one ward, when every engine and fireman was away in a distant part of the city, with steep hills to climb in returning. The companies are very efficient, being well-manned and officered; their duty is well done, without riot or disturbance. The firemen are exempt from serving on juries, and this exemption strengthens the companies; as it is far more easy and more pleasant too to drown the fire in a neighbor's house, than to put an end to strife and quench the flames of discord between man and man.

Societies of all kinds flourish here, and companies are formed to carry out their objects. Insurance against loss by fire, insurance of lives are provided for; health agencies exist, and associations for almost every purpose are easily brought into being. Yet there is one enterprise that seems to have languished for want of a just appreciation by the citizens. Some public spirited men had organized a company, and purchased, and laid out a handsome cemetery upon the river bank. This scheme has met with neglect and opposition from many of the citizens, instead of being gladly seized on as providing a beautiful place of promenade for the living, and of ornamental repose for the dead. No cemetery in this country combines such beauty of situation or of view, as this one, except Mount Auburn. It is to be hoped that the absurd objections against this place of sepulture, are losing ground in the opinions of the community; and that Richmond, like other large cities, will possess in Hollywood a Cemetery suitable to its rank and increasing importance.

Education is well provided for in Richmond, by its numerous and well-appointed schools and academies. The Lancasterian school is supported partly by the funds of the town, and partly by voluntary subscription; by it the benefits of

a good education are brought to all who will take them. The mass of the children are taught in private, or in denominational schools; where the ability of the teachers, and the wisdom of the managers, are shown in the prosperity of the establishment. The Baptists have a College for the instruction of their own people; the Roman Catholics another; and there are many other schools in the city under the influence of other religious doctrines. The female seminary of the Rev. Mr. Hoge, is under the influence of the Presbyterians, and that of Mrs. Mead is similarly attached to the Episcopalian church. It is better to place education under church influence, than under that of the State; and by leaving the whole matter to the activity and emulation, as well as to the real learning and sanctified wisdom, of the leading men of the various denominations, a better system of education must result, than does now from the abortive effort made by the State to educate its sons and daughters. The government cannot, itself, educate the community; it can only act by a cloud of irresponsible and ignorant school-masters; nor would it be right for it to exercise the power, if it possessed the ability of imparting a good education. It is no more a part of government to provide education to the people, than it is to provide labour and wages; nor is it right to tax one section of a community to educate the other. Another objection is, that State education must be an irreligious education; if the effort be made by a State to educate religiously its people, it either fails totally, or else a tyrannical union of Church and State results.

A splendid system of State education may look well on paper, and excite the praises of superficial minds; yet, as in many of our northern States, where so much boast is made of the common school system, it has proved a splendid failure, or has been a source of continual wrangling and dispute in regard to religious teaching. Nor do we find those communities, said to be best educated there, most remarkable for good order and for that obedience to law, which constitutes the glory of a State. Educated intelligence, without refinement or religion, must lead man to error; and a government, so based, tends to misrule. Schools originated and sustained by private, or denominational enterprise, are best; of such kinds are the schools in Richmond.

Much has been said, and many desponding expressions used, in reference to the degeneracy of Virginia, and the amount of ignorance among her population. And, if we believe the assertions of some, all that is wanted to make every man, woman and child in the State learned, wise and happy, is to build up school houses every where, and teach every one to read, write and

cipher. Such a plan we consider impracticable in our thinly settled country, impossible to carry out, unless attendance is made compulsory by law, improper and tyrannical if such forced attendance is required, and inefficient to accomplish good proportioned to the expense and trouble necessary. It might produce a herd of spelling-book philosophers and primmer literati; but could hardly afford even the means of a good education, in the right sense of that term. For the least part of education is that acquired in the walls of a school room.

The State should afford to all its youth, so far as it can without oppressive taxation, the means, not of a common school education, but of obtaining the very best and most concentrated knowledge. And to do this she should bring together Libraries, and endow Colleges; access to which, and to the stores of information and means of acquiring knowledge, which they possess, should be opened at merely nominal prices to all Virginians. We would wish to see the University of Virginia containing, not 400 students, as at present, but 4,000; and a Library proportioned in extent to the number of its students. Knowledge, like heat and light, must come from above. Great ideas, important improvements in science and art, come not from the collected atoms of the mass of minds—they are the godlike emanations of individual men, and flash out from some high point of intellect to illumine and enliven, as the rays of the sun do, all beneath them. We have enough of common minds in Virginia; we have enough of half-educated men; what we need, is an opportunity of thorough cultivation to all who are capable of, and desire it. It has been computed, that if all the lamps, candles, and other means of producing light, which are nightly used on the dark half of the earth, were collected in one mass, there would be produced a light and heat equal to that of the sun in its full shining. Yet, being scattered, they cannot overcome the darkness of the shadow of the earth, and appear insignificant when compared with the bright god of day. A similar comparison might be made between such farthing rush-lights as the common schools, and the concentrated intelligence, deep and thorough culture, and decided mental impression found in and made by a well-endowed and justly constituted University.

In 1838, the Medical Department of Hampden Sydney College was transferred to Richmond, and has been slowly gathering reputation, and increasing its number of students ever since. A handsome building has been erected on College street, in the rear of the Monumental Church; it is 100 feet long and 60 broad, and is of the Egyptian style of architecture, being one of the

very few specimens of that mode of building in this country. It is well built, well arranged for all the purposes of a Medical College, and well situated. From being placed, however, in rather an out of the way spot, it adds but little ornament to the city. The same consideration that makes us wish Richmond to be the concentrated intelligence and great city of our State, would lead us to encourage this school. No good medical school has ever flourished out of a great city; for none other can afford sufficient material to maintain one. The increase of Richmond will benefit the school, and its increased attendance, by men from all parts of our State and Southern country, must benefit our city. Some two hundred students annually go from Virginia alone, to Northern medical colleges, and probably between six and seven hundred from the Southern States. Their estimated expenses, amounting to something like half a million a year, is thus borne off to the Northern cities by Southern students. It surely is our interest, so to build up our city, and our Medical College, that we may prevent this emigration of men and money, and thus make Richmond the Medical capital of Virginia and of the South. There can be no doubt that much trade flows into Philadelphia through her medical students, and that indirectly they benefit that city. The various trades that belong to medicine, the very commerce that is carried on in drugs, and the money paid for the medical journals in such a city as Philadelphia; with the sums expended by medical students, and by the patients that follow in the wake of the great medical reputations there, make up a sum almost, if not entirely, equal to the trade of Richmond. And most of this comes from the South.

By improving and building up our school, we effect another purpose; not only is there increase of wealth and reputation, but we also raise the intellectual character of the profession throughout the State; and by concentrating, as in a focus, the scattered rays of intellect and of genius, the fame of Virginia will burn brighter and her light shine farther. To do this several things are necessary: we must have both additions and changes before our standard of medical education can be raised to its proper height. There should be a school of Pharmacy in Richmond, to afford every advantage for the study of the various drugs and articles used in the practice of medicine; this is the more necessary, as there is no school of the kind in the whole South, and none nearer than Philadelphia. It is hoped that some of our physicians and druggists will take interest enough in this matter to form such a school. We have already a State Medical Society holding its meetings here; in it, essays are read and discussions are carried on upon diseases and their

treatment. It is well attended, and mutual benefit results from its meetings. Branch societies exist in different parts of the State, and a more general interest is now felt in regard to medical science.

Recently a medical journal, the *Stethoscope*, has been established. It is the first and only one of the kind in Virginia; and certainly is very much needed. For if properly supported by the profession, it will, without doubt, be a valuable mean of collecting information, and of stimulating the medical mind of the State. No pains will be spared by its able editor, Dr. Gooch, assisted by the faculty generally of the city, to render it an excellent Virginia medical journal. This Medical Society, it is hoped and intended, will become eventually a College of Physicians, similar in aim and principle to that of London; and this journal serves as its organ, and as the voice of the profession in the State and in the South.

Some change should also be made in the medical schools of the State. The one in the University is more thorough in its course than any other school in this country, yet from its being in a small town, must ever remain a miniature school. It will be necessary, in order to form one good medical college, to combine the school of the University and the school of Richmond; retaining the course of instruction of the one, and the city advantages of the other. We should thus have the best men of both schools, and the most perfect course of instruction, with all other advantages. Then, again, to keep this up as a superior institution, the system of "conours" should be adopted in filling vacancies; that is, whenever a chair is vacant, let it be advertised, and let him who can prove himself, before competent examiners, the best informed physician, and the most able instructor, receive the chair as reward of merit. It is this system which makes the French schools of medicine superior to all others, and it is besides better suited to our republican principles than the present one.

Let these, or similar changes be made, and the Virginia school of Medicine will acquire greater reputation, and attract a larger number of students. We must make it not only good;—it must be superior; for thus only can we overcome the reputation that bears off so many Virginia students to Northern colleges. It is not just to blame any man for going out of Virginia to obtain a superior education. One must be perfectly selfish in getting an education; and go wherever it can be obtained best and cheapest. Patriotism has nothing to do with obtaining knowledge; and to excuse a bad education because one was too patriotic to get a better one, is the extreme of folly. Learning has no country or

climate; it owns no political limits; but is free to all countries as the winds that sweep over them, and universal in its benefits as the air we breathe.

We wish and hope that the Legislature of Virginia would take this matter into consideration, so that Richmond may become important to Virginia and to the South generally as a school of Medicine. They have already assisted the College here existing; yet by extending judicious and abundant aid, and by wise legislation on the subject of medical instruction, they may enable the faculty to build up and perpetuate a great State school of medicine.

Although there are many men in Richmond and in Virginia who have highly cultivated minds, and possess great acuteness of intellect, few or none have ever devoted themselves to scientific pursuits with ardour. There has been no demand for such men by the public, and in consequence the few Virginians who have cultivated deeply the sciences, have sought fame and appreciation in other States. With every material to make a scientific people, Virginia has allowed the talent within her to lie idle, and made no steady effort to develop her resources by the scientific observation of her sons. It only requires the same time that is wasted in politics, and the same energy that has given her the lead in other things, to give her superiority in scientific pursuits, or in the arts that adorn the old age of nations. In the South men study the sciences for amusement, or as an accomplishment; they have no ulterior end in view. Whereas in those countries, in which scientific knowledge abounds, those who cultivate it, have in view the emoluments and the fame which knowledge brings; they expect to lecture or to publish; to fill professors' chairs, or to improve the arts. Consequently their scientific knowledge is thorough, and the pursuit of it ardent. Thus we in the South, pursuing that as an amusement, which the men of the North follow as an employment, have not equalled them in the completeness or thoroughness of our scientific attainments. The same observation and comparison holds good in literature; for we possess both sufficient intellect and insufficient industry.

The Historical Society is the nearest approach to any thing of this kind in Virginia, and it has but a galvanized existence. The meetings are held in this city, and the annual address attracts attention. William C. Rives, now Minister to France, is its President. The public have not taken much interests in its objects; and have neglected the periodical published by its Secretary, William Maxwell. This is an able little journal; devoted, of course, to the history and antiquities of Virginia, and called *The Virginia*

Historical Register; it deserves more notice at the hands of the public than it has yet received. The editor designs it to be a storehouse of facts in relation to our early history; and if properly aided by those who have opportunity of collecting such facts, or of making antiquarian researches, will render it a valuable collection of historical records.

It would scarcely be proper in writing the history of any place of importance, to omit some account and description of its press. In fact, the corp of editors, form the most influential body in every country where the press is free; and well deserve the name of *The Fourth Estate*. In our day and country, they represent the communities among which they live, they are mouth-pieces for the silent masses, and possess more effective influence than any number of the most eloquent orators. They speak to men of all ages and in all places, they give information to the deaf, who cannot hear the orator, and bring persuasion to the contentious partizan, who will not listen to the words of an opponent. The press not only represents, it also forms public opinion, and either elevates or depraves the sentiments and the character of a people. He was a wise man, who said, in olden time: "Let me make the songs, and I care not who writes the laws of the nation." Had he lived in these times, he would have said: "Let me direct the press, and I care not who makes the laws or the songs, or even writes the books, or directs the government of the people." His knowledge is, indeed, power, who manages an influential press; for, he not only puts thoughts into the mind, and excites emotions in the heart, but also brings words to the lips, and arms that mighty weapon, the tongue, with its most powerful means of assault and defence. It may fairly be asserted, that the substance of almost the whole conversation of an entire community, for a whole day, may be found in the morning papers of that day. The newspaper press of a city, is, in fact, so many brain-points for that city. And, our great boast, as a people, is, not that we can bring three million of bayonets into the field to meet an invading foe; not that we live in a country where equal rights are extended to every class of citizens, and where the will of the people is the law of the land; it is, that we are a people who possess twenty-eight hundred newspapers, with an aggregate circulation of 5,000,000. A free press is at once the symbol and the cause of liberty in a people. It is not necessary to inform the Richmond public, that their papers indicate a high order of talent; and, that their influence, throughout the State, is more powerful, than the press of any other city in any other State. The political character of Virginia, has been very

much formed and kept in existence, by the intellect and energy that has marked the political papers of this city. And this character of the press has resulted from the fact, that Richmond has not only been the Capital of the State, but also the place of holding great Conventions, where great men have gathered together, and have sent forth resolutions and opinions, that have ruled the Commonwealth. It is, in fact, the political heart of Virginia; and, by its press, has pulsated through the whole State. Within a few years past, several new papers have been added to the number of those already existing: a greater stimulus has thus been given; a more extended and varied amount of knowledge required, and a higher grade of intellect exhibited in the press now, than in former years. In its influential press, Richmond is, beyond all question, the capital city of Virginia.

Richmond is admirably suited for trade and for manufactures. Her position was chosen, as formerly mentioned, under the Indian Rule, from its facilities as a place of trade, and it is now realizing the justice of its selection. Placed in the centre of Eastern Virginia, at the head of tide-water navigation, having a fine, large, tobacco producing back country, with extensive coal fields on each side of it, and minerals and metals in abundance in the regions above it, connected by its canal, with the wheat growing upper country, and with Railroads extending their arms in every direction around, she draws, necessarily, heavy trade from Virginia, East and West, and from North Carolina.

By carrying out her present schemes of improvement, she will connect herself with the Ohio river, and with the Mississippi, and thus will gather much Western trade and travel unto herself. Her merchants are very active in these schemes, and are pursuing an enlightened policy, that will very much benefit their city.

For manufacturing purposes, Richmond has a situation equal to any other place in this country; its water power is certainly unsurpassed, and is sufficient to make her another Lowell. The population might be increased 50,000 persons, employed in and about her manufactories, without making full use of her immense power; which seems, indeed, sufficient to put in action machinery of all kinds for all purposes.

Some account of those already in existence, may be found in the Richmond Directory, published by William L. Montague, which contains much interesting matter relating to this city.

Richmond might become the great manufacturing city of the South. It has around it, and in parts of Virginia accessible to it, treasures of metals that would give great scope to manufacturing enterprise. Virginia has lead enough to

furnish shot to the whole country, yet her mines are not worked, nor is there a single shot-tower in Richmond, or in the State. Her mountain caves yield saltpetre, and sulphur is abundantly found, yet she buys foreign gunpowder, and relies on other States for the very materials of self-defence. With abundance of copper ore, she has no smelting establishment in Richmond, to encourage the working or to afford a market for the produce of the mines. She possesses a single factory for making nails to drive down her floors, and none to make a sheet of lead or zinc to cover her roofs. She is dependent on other States for her manufactures, and instead of making locomotives* in this age of progress, is still rearing race horses!

It may be said, that these require capital and skill, to undertake and carry them on with success, and therefore, are unlikely to succeed here. Yet, the same may be said of manufacturing tobacco; although large quantities of that article are manufactured in Richmond, and its value very much increased in the process.

There can be no doubt, that more than half the tobacco crop of the State is worked up, and the value increased, by the labour bestowed on it, a hundred per cent. It would be good policy to export none but manufactured tobacco, thus employing our own labour in enhancing the value of our ancient staple.

Again, much of the imperfect and refuse article, is sent to foreign countries, there manufactured, and comes back to us in the form of snuff. It may not be out of place to suggest, that it is not impossible to make snuff in Richmond. James River would probably furnish water power to turn a snuff mill without interfering with its other employments; and the good people of Richmond could go to mill with their boxes, or have a snuff cart perambulating the streets to supply customers. The coarse tobacco, the stems picked out of the leaves, and all the refuse parts, are sold for this purpose; and the difference in value, between the unmanufactured and the manufactured article, is indicated by the price at which one is sold and the other bought. The stems are bought for from two to four cents a pound; the foreign snuff sells here for three dollars, and the northern have half a dollar to a quarter per pound. The expense of the Atlantic voyage, in going and returning, the manufacturers' profits, and the exorbitant Custom House duties in foreign countries, make this price so heavy. Yet, the profits necessarily made in this manufacture, by the men of the North, should stimu-

late us to take in our own hands, this entire business. There are about 45,000 hogsheads of tobacco, annually made in Virginia, estimated at \$5,000,000 value. Of this, from 25,000 to 30,000 hogsheads are manufactured; and the rest, with the stems, taken from the leaf, previous to manufacture, are sold to foreign countries, or in the North. The manufactured article is increased more than an hundred per cent in value; and the stems, &c., which constitute one-fourth of the leaf, are also sold for their specific purpose and price. Consequently, if the whole was worked up, as it should be, the tobacco crop of the State would be then worth at least \$10,000,000 in the manufactured article alone. And if the one-fourth or one-fifth part of which the entire consists, were ground and compounded into snuff, it would set the whole world sneezing; inasmuch as there would result some 21,600,000 pounds of snuff, (one pound of tobacco, making, by the mixture used, two pounds of this titillating powder.) Truly, Virginia would make a noise in the world, if this was put to use!

We know that manufactured tobacco cannot be entered in the European ports, and that these calculations could not be realized. We have made them simply to show a neglected source of wealth; in the creation of which, slave labour can be largely employed, and which becomes an important subject of consideration, when we consider the increasing commercial importance of our position as a State; as the trade with and from South America, and that of Asia, will soon pass along our coast or through our territory.

There is another branch of industry, which does not require much skill or capital, which may be, without trouble, extended as it proves profitable, and which has never been cultivated in the Old Dominion. We allude to Gold Beating. The Gold Mines of Virginia, should be a source of wealth to the State; they are, instead, a means of impoverishing it. We produce the raw material, and send it off to the Mint. In digging the gold, we do little more than pay for the labour employed, and we ruin the soil, utterly; no real benefit results from gold mines, to the community in which they are found. Yet, no substance is so valuable, when manufactured; the king of metals repays its labourer in a kingly manner. Let any sum in gold be manufactured into jewelry; its value is increased at least four hundred per cent. The gold pen, the simplest form of manufactured gold, will sell for from four to eight times the value of the metal. And so of every other form of manufacture. In making the gold leaf, for the dentist or the gilder, the metal is first rolled out thinly, and then beaten with heavy hammers, to reduce it to the requisite degree of tenuity. The hammers are

* We deem it just to our manufacturers to state, that the finest Locomotives are built in our City by Mr. J. R. Anderson and Talbot & Brother.—ED. MESS.

changed as the gold becomes thinner; and to render the work uniform, as well as to prevent waste, the metal is placed between layers of animal membrane; and of these, the best are made of the membrane that surrounds the heart of the ox, or from parts of the intestines. By this process, an ounce of gold (a doubloon) may be made to cover a space equal to 160 square feet; it will take 232,000 such sheets, to make the thickness of an inch; and it is so thin, that light will shine through it, yet is its continuity perfect. To do this, requires the hammer, the anvil, the membranes, and the hand to use them. Care is taken, that no loss occurs, by daily washing the bodies of the workmen, and collecting the dust of the shop; all which passes through the crucible, and the scattered or adherent particles, are thus collected.

The quantity of gold from Virginia, coined in the United States Mint, during the year 1849, was valued at \$129,382; from the quantity bought up by jewelers, or sold in other ways, it may be estimated that 150,000 pennyweights of gold were dug in Virginia alone, during that year. And since the year 1824, when gold was first found in one or two spots, up to the present time, (1850) with very little more than surface workings in a few counties of the State, more than two million dollars worth of gold, has been found in Virginia. If this amount had been beaten out into gold leaf, it would have covered over, with thin gold, a farm of 500 acres; and would have been increased in value, by the manufacture, to five or six millions. If made into gold pens, it would have furnished from six to seven million pens, valued and sold at a dollar for each; thus enhancing the value of the article three hundred per cent. Again, if manufactured into jewelry, while the expense of working and the skill necessary, would be much greater than is required in either of these modes of manufacture, the proportionate increase in value, would far exceed either the beaten leaf or the manufactured pen. Much depends on the fashion of jewelry; and probably one-fourth or one-third the cost of such ornaments, arises from the fashion of the time. This, added to the alloy used, and the workman's skill employed in the manufacture, would render an hundred dollars of gold capable of being worked into jewelry, sold for ten times that sum. The gold of Virginia, is but a small part of her annual products, yet, it is sent from her unmanufactured; whereas, large numbers of her people could be employed in the various kinds of work resulting from its use, and her wealth materially enhanced by such manufactures.

It was, at one time expected, that the silk-worm and the mulberry would be largely cultivated in Virginia, and that Richmond would be-

come a market for silk, and a place of manufacture for its beautiful fabrics. As when rightly looked at, the handsome houses and the extended streets, the wealth and the commerce of Lyons, in France, were built up by the insignificant silk work, (so that not inappropriately, it may be termed, one vast cocoon.) a similar cause acting here, would produce similar and equal results. Such anticipations have been disappointed, by the entire absence of the silk culture in Virginia; although it may be demonstrated that the worm flourishes here, that it can be made profitable, that such a staple is well adapted to our climate, and that for the cultivation of staple crops, our slave population is peculiarly fitted. Yet, it is thought better by our farmers to impoverish their lands, and to make a bare support for themselves and their slaves, by the present system of cultivation; while the trash gang, as it is called, consisting of the women and children, could attend silk worms enough to pay all expenses, and to enrich their owner.

It is no new thing in Virginia, to raise silk; attention was early paid here to its cultivation, and the coronation robe of Charles Second of England, was made from silk raised and spun in the county of Gloucester.

Again, of another article, we believe that the great staple of China can be raised in Virginia; it remains to be shown with what success, and at what profit. Tea is a saleable article, its use increasing, and becoming universal, its effect on man a good one, and its price great. These are inducements to cultivate it. An effort is now making, to introduce it in South Carolina, with every prospect of success. Lower Virginia, in its relation to the ocean, and its prevailing winds, in its numerous rivers, intersecting and rendering unhealthy the country, in the tendency to malaria, &c., closely resembles China. We have too, a large population, (as was said in speaking of silk, another product of China.) that from exhaustion of the soil, and the absence of staple crops, do not support themselves by their labour; who grow up and are sold off, to pay the expense of bringing them up, and to support those who stay behind. The cultivation of the tea plant, as of the silk worm, would give profitable employment to this class; and thus prevent that constant sending off of slaves to the Southern States, which is rapidly depriving Virginia of her labouring population.

Again, in tea drinking, and tea producing countries, there is but little malarious influence; it is probable that the bad air, bad water, and abundant malaria of China, compelled the use of this plant; some skilful physician discovered its properties, and made its use universal. Now, the malarious tendencies of our lower country, are

well known; and in this point of view, perhaps, the cultivation of the health-giving tea plant, may be thought worthy of consideration.

Wine making is another occupation that has never flourished in this State. Although we are opposed to its use; yet, as the mass of men will ever drink, it is better that fermented liquors should take the place of distilled spirits; wine is certainly less hurtful than whiskey, and it is more patriotic as well as more wholesome, to drink the pure wines of our own country, than foreign adulterated mixtures. Wine drinking countries, are temperate countries; a drunken man is a rare sight in the lands where the vine grows freely. The same cannot be said of a whiskey, and rum drinking community. The vine can be raised with profit on our soil, and its fruit may become a profitable source of commerce. The very blackberry that covers our worn out soils, will yield a wine, equal in strength, and similar and superior in medicinal properties, to the best Port wine.

In the tea making, wine producing, and silk growing countries, we find wealth and commerce to exist, and that the condition of the people improves. They may be called agricultural manufactures; and their tendency is to disseminate wealth throughout a community; as well as by creating commerce, to build up its cities. No nation can rise to eminence, and retain it, if her people follow only one occupation, or pursue only one road to reputation. Agriculture has been our only employment, and political renown our only pursuit. Both are worthy of being followed; for, the science of government, and the culture of the earth, are occupations fit for freemen. Yet, we may pursue either improperly, and to an excess; our agriculture has worn out our soil, and our mad pursuit of political honour, has impoverished our State; the one pursuit is as barren as the other; and to enrich Virginia, we must turn our energies into other channels also. Agriculture to produce, manufactures to increase the value of those products, and commerce to disseminate the manufactured articles, and enhance their price, make the wealth of a State, and form a triple cord, that binds society into an active and mutually dependent body. In Virginia, we have no commerce, scarcely any manufactures, and an imperfect and murderous system of agriculture. Richmond affords facilities of the best kind for trade and for manufactures; as the great city, and place where everything is centering in the State, it furnishes every advantage, to employ the rich agricultural and mineral resources of the old Dominion. When the lines of communication, now making, shall terminate here, and all the improvements contemplated, be finished; when the James River shall be so cleared out, that vessels can sail above the bar,

and enter the dock; when foreign commerce shall pour its treasures into our store-houses; and trade, having its beginnings in the distant California, shall come on the rivers and through the States of the West to our doors; when the spirit of manufacturing shall spread among her citizens, and the immense water power be used in developing and increasing the resources brought in by this trade, creating commerce, and enlivening and enriching our State; then will Richmond take the place which, from her position and natural advantages she was designed to occupy, as the great commercial manufacturing city of Virginia and the South.

THE STYGIAN RIVER.

BY GEORGE E. SENSENEY.

Across the Stygian river
The boatman Charon rows;
Right to and fro for ever,
No holiday he knows.
In vain we would discover,
With mortal eyes, the track,
Though myriads pass over,
There never one came back.

Along the margin dreary,
Beneath the cypress cold,
Stand many, sad and weary,
Holding no boughs of gold.
Why should they look so sombre,
Beside the waters black?
From all the countless number,
There never one came back.

The lover and the maiden,
The olden and the young,
The soul with sorrow laden,
Beauty idolized and sung:
They come, they throng together,
Awe-hushed, demoniac,
They go, they know not whither,
There never one came back.

Across the Stygian river
The boatman Charon rows;
Right to and fro for ever,
No holiday he knows.
His heart hath high pulsations,
His will doth never lack,
His oar hath ferried nations
Where never one came back.

A DAY OR TWO IN IRELAND.

(COPIED FROM MY JOURNAL.)

Monday, Sept. 1, 1851. Here is the Fall. I left home the last week of Spring, and so have been absent an entire season. The summer, with its harvest, its fruits and flowers, is over. The grain that I left growing is housed; the corn that was hardly above the ground is matured, and its heavy ears will be hanging from the stalks when I return; the grass fields will be brown—the early falling leaves will be beginning to drop—the evening of the year will be coming on, and nature will be looking forward to the repose of winter. These changes I can anticipate; but what are the changes that will surprise me when I see them? How much, oh, how much that is precious to me, does that home contain! Is it now, as it was when I left it? Wife, and dear children, and friends? No: every thing is not the same. The world has its being in vicissitude, and doubtless some change has occurred in the circle most important to me. I had this morning a shade of trouble to pass across my breast. I felt as if my nest of young ones was invaded, and as if their mother was struggling to defend them, and was calling aloud for me. Oh, that I had the unwearied wings of an eagle, to clear the space that separates me from my loved ones: and if these, what then? Suppose you found the dearest of them all, stretched upon a bed of sickness, with the wing of the Death-Angel shadowing the pale brow—what, weak man, couldst thou do? What, but pray! and that thou mayst do, as well, as earnestly, and as efficiently here as there—and therefore pray. Ah, have I ever forgotten to invoke for the loved of my heart, the blessings of that Providence that has been so gracious to me.

At 7½ we left Belfast for Dublin. We travelled some distance by railway to Portadown, then about 18 miles by coach to Newry, and thence by railway again, passing Drogheda, (the Irish pronunciation of this name is inimitably sweet,) to Dublin, which we reached about 3½ P. M. Some of the country through which we passed was picturesque and quite fertile, especially about Belfast, and as we approached Drogheda; but even in the best parts the cultivation is not equal to that which is to be seen in either England or Scotland. The fields are not as clean, nor the enclosures as good, and everything has a more temporary look than in England. This part of Ireland is Protestant, and the State of agriculture is superior by far to that of the South of Ireland, and the condition of the labouring classes is much better. Still, the char-

acteristics of Ireland, the mud cabin, the thatched roof, the dirt floor, were every where to be met with. And so too was to be seen in great abundance. Ireland's bane, licensed grog-shops. I asked if Father Mathew had done much good, and a clergyman sitting beside me, said that his influence, though surprising at first, had proved to be temporary in the main. However, I was told elsewhere, that his efforts had accomplished a great deal for Ireland, and that there is not near as much drinking now as formerly, and as a proof of this, my informant referred to Donnybrook Fair. This fair had been held just the week before we reached Dublin, and it was said that never had one more orderly been seen, and that as compared with what it once was, its character seemed to be entirely changed. However this may be, there is certainly a great deal to do upon this subject. I have no doubt that the money now spent for intoxicating drinks in Ireland, would be sufficient, if properly applied, to relieve all the suffering in it. And all this drinking occurs under the sanction of the British Government. It licenses a vast system of the cruellest slavery on earth, and allows a vast number of men, for their own profit, to catch freemen, and make them slaves for life, and as far as they can, devils for eternity. And all this slavery the British Government might at once break up by refusing to grant licenses to sell, and by directing the innumerable police to see to it that the laws were observed. But will it be said, that to endeavor to force a deliverance of the people from their bondage, in this summary way, would be the height of fanaticism, as being of no value to the persons sought to be benefitted, and fraught with danger to the peace, and it might be to the existence of the Government? This may be true. And cannot England see that the principle is equally true, as applied to the immediate abolishing by America, of a slavery of a different and much less oppressive sort, for which, however, England is still crying out and disturbing herself: not about Ireland, which she understands, and is responsible for, but about America, of which she is greatly ignorant, and with which she has no right to intermeddle?

We had in the cars a very pretty specimen of an Irish beauty. Her colour was bright, her skin transparent, her teeth ivory, and her hair brown and soft. Her full bust was set off to great advantage, by a sort of fur tippet thrown over her shoulders, while her loose sleeves, edged with lace, played prettily around her white arm. Her eye was dark and sparkling, and her mouth mischievous to the last degree. She was speaking contemptuously of some officer who, when his regiment was ordered to the Cape, had sold out

his commission, because, as he said, his mother could not part with him. Surely, thought I, to be called a coward by a pretty woman, is the deepest disgrace than can befall a man. I had frequently heard that the female beauty of Ireland surpassed that of any other country in Europe, and as far as I had an opportunity of observing in England, Scotland, France, Switzerland, Germany and Holland, my observation abundantly verified the remark. It will not be a matter of surprise that I add, that the Irish ladies reminded me more forcibly than any others that I saw, of the fair of our own land. Indeed, all the better classes in Ireland, men and women, looked more American than any other foreign population that I saw. As my companion and myself seated ourselves yesterday in Dr. Cooke's church in Belfast, as soon as we had looked around, we whispered to each other almost simultaneously, how home-like all this seems! It may seem strange, but it is true, that even the elocution of the speakers, brogue and all, was less foreign to my ear, than the tones of the speakers in the English Parliament or pulpit. I could not admire the Irish as I did the English, but my heart's sympathies flowed in a quick, warm stream for them.

We reached Dublin in time to dine out in the evening, in company with two gentlemen from Bedford, Virginia, who had just arrived. We rode over the city, and out to the Park by the mansion of the Lord-Lieutenant. The Park is a very extensive green, on which range many hundred deer. The public buildings of Dublin are fine; among them may be mentioned the Cathedral, the Bank, the former Parliament House, Trinity College, and among several other fine churches, St. George's, at the head of Sackville street. Almost all the buildings of Dublin are of the classic order, and this style is more acceptable to my taste than the Gothic. It possesses the charm of unity. You see at a glance how all the parts make up the whole, and your eye is satisfied; whereas, in looking upon the Gothic, you feel bewildered, and it is only after a continued study, that you attain any tolerable understanding of the whole. The Madeleine and the Pantheon, in Paris!—how they delighted my eye, and how perfectly the beauty of their faultless proportions lingers in my memory, while of the huge piles of the Cathedrals of Strasburg and Cologne, I think rarely and dimly.

Tuesday, Sept 2. We went to visit Trinity College or Dublin University. It is now in vacation. When in term and full, they have about 1600 on the books. There are 36 fellows, 75 scholars, and 45 sizers. The architecture is plain, but the buildings are of such form and arrangement, that they produce a very fine effect. The

best fellowships are worth between one and two thousand pounds, and they range down to £80, which is the lowest. Scholarships are worth £20, and the sizers get a shilling a day. The fellows and scholars have rooms assigned to them, and dinner provided every day. The dining hall is a fine room, with plain furniture, though adorned with pictures and furnished with an organ. The servitor, who was dressed in handsome livery, with knee-breeches and white stockings, told me that dinner was provided every day for a given number of fellows, whether they were present or not—"For example," said he, handing me a bill of fare, "this was yesterday's dinner provided for sixteen, though not one was present." What becomes of the dinner in such case? said I. "It goes to the servants," said he, as a complacent expression stole over his face, at the mention of this handsome perquisite. We were shown the apartments of a fellow. They consisted of two good rooms below, well furnished, with his library in both, two good chambers above and a kitchen. With such rewards for scholarship, a man may well struggle for the preëminence that will secure the prize, and with such facilities for cultivating letters, it would be wonderful if the after lives of those who start with such a capital, did not yield rich fruits. How much we stand in need of something like this in the United States, to encourage men to devote themselves to some other pursuits than those that people will pay money for. And what an opportunity was offered when the Smithsonian fund was to be appropriated, to do something in this way. Even a few fellowships, and these of moderate incomes, established to be gained by open competition, would have done more towards the increase and diffusion of knowledge among men, than many lectures adapted to audiences that will not attend unless they are amused. For every successful candidate, many scholars would have been made in the attempt to secure the prize, and not many years would have passed away, before the fields of science and literature would have made rich returns for the fertilizing rills thus directed upon them.

In the Examination Hall of the University, we saw some valuable portraits; among others, those of Burke, Swift and Bishop Berkeley. The library and museum we could not see.

As I walked along the street, I stepped into a sadler's shop for some little article, and began talking with the foreman. He said that it was very difficult to gain a livelihood, and when I asked of him the question that I have asked of so many here—Why he did not come to America, the answer was the same—that he had not the means to carry him. He said that it would cost about five pounds, and by the blessing of

God he would be in America in another twelve-month, as he had already scraped together one pound, and he hoped to be able by that time to scrape together the other four. In the course of a year, a grown man, with a good trade, hoped to be able to save \$20! He looked pale, as if he worked hard, and watched and was troubled. His shirt bosom, though clean, was well-worn, and his whole appearance, as well as his earnest, sober words, showed me that he was a man who was tasking his powers to the utmost, to enable him to accomplish a purpose that he had set before him. And yet if his zeal should overdo itself, and the pallor on his cheek increase, and sickness come on, then will his hopes be blighted, or at least deferred with heart-sickness, for a single week's illness will consume the savings of half a year, and he will be obliged to commence again to roll to the summit, the stone that has just escaped from his wearied grasp.

We went in a jaunting car, to see something of the country around Dublin. The country we found in some portions very beautiful, and eminently fertile, and some things we saw of uncommon attraction—as the glen of the Dargle, which is the best display of wild nature that I have seen since I left home,—the grounds of Lord Powis court, and the view of Dublin Bay. Our driver was a thorough Irishman in his sentiments, but in his manner was very American. There was not a particle of gaiety about him, nor was there any remarkable quickness in the way of repartee. But there was great earnestness of feeling, and much mental activity directed mainly to one subject—the wrongs of Ireland, and her poor. On this theme he spoke in a manner to command attention, and though one might not, perhaps, approve of his hatred to England, it was hardly to be wondered at. He said that he thought that the land was able to support its people, if they had their rights; and when I urged their intemperance as the main cause of their want, he said that it was not as great as it was represented to be, and that Father Mathew had done much good, and that the poor did not drink, for the very sufficient reason that cheap as was the poison, they were not able to buy it. He spoke of some outrages committed by the peasants upon the land-owners of the South and West; and the way in which he detailed some cases of the murder of oppressive proprietors, or their agents, showed that his sympathies were strong with the oppressed. He said that it was a strife between the rich and the poor, and that difference in religion had nothing to do with it. A Catholic proprietor was not at all more safe, than one who was a Protestant. He deprecated the religious dissensions in Ire-

land, and from any thing that escaped him on this point, it could not be told whether he was Catholic or Protestant, though from the emphatic manner in which he inveighed against persecution for religious opinions, and blessed America because it was unknown there, I took it for granted that he belonged to the oppressed party. It was evident that he attributed the suffering of Ireland to the tyranny of England. "But," said he, "if we ever get them into a snare we'll desave them—it's tached to us as our prayers, and we don't nade any taching at all, for it's what's just natral to us entirely. Many a man in a red coat would be mainly glad to see a fight, and it would'nt be for England that he would shoulther his musket then, but for the dear land to be sure. Many a one wears the uniform now, that's well ashamed of it, and never would have put it on at all, but that bitter want druv him to it." If ever there is a rebellion in Ireland, I am sure that our driver will be knee-deep in it, and I have taken some space to record what I remember of his conversation, because it seemed to me to be a fair illustration of a feeling that was very general among the persons that I heard talk in the public conveyances and at the hotels. To whatever cause we may assign the suffering in Ireland—whether to the Catholic religion, to English misrule, to intemperance, to native unthrift, or to all conjointly, as to the fact that there is great suffering there can be no difference of opinion. The country round about Dublin, is in a condition far more prosperous than that of other parts of Ireland, but a ride of not more than twenty miles from the capital showed me such misery as I had never seen before, and such as one, who has never been out of the United States, finds it hard to realize. It was astonishing to see, as we rode along through several villages, the number of unemployed persons standing about; and the dirt and miserable clothing of the population was quite as noticeable.

In forming, as I travel, an estimate of the social condition of a people, I fix my attention upon the women and children as the best comparative index. Men are slovenly by nature, and many of them are drunkards, but women will clothe themselves and their children decently if they can. The women here are very ragged. They wear, many of them, old cloaks, as the best thing to conceal their persons, but many have to huddle their tattered calico over their bosoms, as the stranger casts his eye upon them. I compared them in my mind again with our slaves, and I am sure, that public sentiment where I live, would not allow negro women to go about in the garb of these Irish. I thought, when crossing the Alps, that the people there were the poorest I had ever met with, but I noticed that

the children who were herding a flock of goats on heights almost inaccessible, were nevertheless comfortably clad; but here the case was far different. As we drove along, we stopped for a moment to look into two hovels by the wayside. In one were two women, mother and daughter, the daughter lying upon straw and dying of consumption—in the other, the sole occupant was a child about three or four years old, who seemed to have been left in charge of the hut, (which, however, was adjoining the other,) while the father and mother went out to work. I could see nothing like furniture in the room, except a cricket and a little iron pot hanging over a peat fire. The only arrangement for sleeping that was visible, was a little straw on the damp mud floor of the cabin. We stopped for refreshment at Iniskeny, a village on the estate of the Earl of Powis-court. While there I stepped across the way to look into a house of an appearance somewhat better than ordinary, but found myself under a thatched roof that had great rents in it, through which the water must come in torrents when it rains. The tenant was a widow, and her means of support seemed to be in hiring out two donkeys that were standing with their heads in the door while the children were caressing them. A donkey, the driver told me, is worth here from two and a half to five dollars. As I stood at the door, a stout-looking man came to ask alms, saying that he had been journeying about all day, and could find no work by which he could gain a mouthful of bread for breakfast. Old women were pressing up to us with baskets of fruit, or without, to ask a trifle for the widow and orphan. A vast number of husbands must have died lately in this locality, if every woman was a widow indeed, who so styled herself. They never call you anything lower than *yer honor*, make a curtesy at every answer, and pray for blessings on you *ad libitum*, if you give them a penny. This scene was repeated at every place the carriage stopped, and many made their applications as it drove along. One lad especially moved my sympathies. We met him as we walked up a hill at the top of which is the gate of entrance into the domain of Lord Powis-court. He was between 17 and 18 years of age. He approached us, and thinking that we were pedestrians, asked if he could serve as a guide to any of the surrounding localities of interest. Having told him that we were in a carriage, and therefore did not need a guide, I asked him if a lad like himself could not get work to do. "And look here, if you please," was his reply; and pulling up the sleeve of a tattered man's coat that he had on, he showed me his wrist all swelled. "It was much worse," said he. "I was in the harvest field some days till yesterday.

I was to get a man's wages if I could keep up a man's row, and I overreached myself in striving to reap more than I could, and my wrist swelled till I could not gather a straw. I have no father—I must support myself and keep my mother, and I can get nothing to do. I asked him if he could read, and he told me that he could not, as he had been always obliged to work, and had never been to school but one week. I asked him what he had to eat at his meals. He said that it depended entirely upon what he could earn—sometimes it was a cup of tea and bread, sometimes *stirabout*, but most times potatoes. I asked him if he did not eat meat. "No, sir, I cannot buy meat." Perhaps you drink whiskey, it is so cheap. "And if it is cheap, sir, it is too dear for me to buy." Well then, said I, why do you not come to America, where every body can get enough to eat. "Because, sir, I have no money to carry me." But could you not save a little. "Save, sir; I must eat something, or I cannot work, and sir, *the bit is always waitin' on the yearnin'*, (meaning that he needed food always before he could earn it,) and then all the ha'pence goes, so that I cannot save any to buy me decent things to put on my back." In fact, an old cast-off coat, and tattered trowsers held together by pins, seemed to be all his raiment.

"Oh, sir," said he, "I wish some gentleman would take me to America, and would'nt I work for him, till I satisfied him for all? I would work till he drove me away!" Ah, England thought I, we have no slavery like this—we are entreating our free blacks to go to a land of plenty and Liberty—we are willing to pay their expenses on the way, to support them for half a year after they arrive at their destination, and to give them a free-hold to live on. And your bondmen, hungering for food that our slaves would reject, are pining because they know that there is a land of Liberty and Plenty, where they would be welcomed, and yet they cannot reach it—and, England, you will do nothing. Before you speak against us, go help that pale tradesman in Dublin,—come take this hungry, half-naked, earnest-spirited lad, who is striving to gain a livelihood for himself and his mother—take him by the hand; but remember that his wrist is grievously swelled by over-work, and therefore, take him gently by the hand, and lift him up from his sorrowful depth, and let the oppressed go free. I say, England, let us look at home, each of us, and endeavor to do what God has set before us, as He shall give us strength; but whatever we do or forbear to do, let there be no casting of stones across the Atlantic. As I have said, we met this lad just at the Porter's Lodge of the estate of Lord Powis-court. The old Lord has been dead for some years, his widow has married

again, and the estate is awaiting the majority of the heir. The driver said that it had been noticed of this family for several generations back, that not one of them had reached the age of 30. He seemed to think the late lord a hard man, and said, among other things, about him, that he would not allow a Catholic chapel to be built in Iniskeny. The family were at this time occupying the mansion, and we could not go over it, but we gave the porter a shilling, and were allowed to drive over the grounds if we kept away from the house. It is an immense property, extending for many miles through the country. The park is very noble. You approach through a wide avenue of the finest beech trees that I had seen since I crossed the Atlantic, and on each side you have the park stretching out of sight over a rolling country—handsome trees are scattered in a picturesque manner over it, except where, for the sake of effect, some acres of clear lawn are shown, with the grass clipped with the greatest nicety. We caught a glimpse of the house through the trees, and it seemed to be, from its site and the style of its ornament, entirely worthy of its uncommonly fine situation. My companion and myself enjoyed our ride very much, but we could not repress the sentiment uttered oftener than once, this is too much property to be in the hands of one man, and this expenditure for scenic effect, however grateful to the taste, is lavish to an excess that is sinful. These feelings were certainly not diminished by the recollection of the beggarly groups that we had left outside the entrance. How unsightly would be the appearance among these ancestral trees, casting their proud shade on velvet grass, of that tattered harvest boy with his swelled wrist, hanging for *the bit that was waiting for the morn'g*. If the lord of the domain, as he rolled along in his carriage over the wide gravelled avenue way, should cast his eye upon such a vision, would it not disquiet him? But there is no danger of his rest being disturbed or his conscience pricked by any such rencontre; for there is a high wall around the Park, and the porters and all servitors know their duty too well to allow want to cast its gaunt shadow over any part of these pleasure grounds. But I will not forget it as an instance of the juxta position of gorged riches and grim want in Ireland—and in England things are in similar disproportion, for if the poverty is less, the wealth is greater. If there ever comes an uptearing revolution in these countries, what booty the mob will have.

I have forgotten to mention a little incident that touched me. Just as we emerged from the Glen of the Dargle, into the highway, a band of supplicants met us, and one of them, hardly more than a child, seeing that we were foreigners, and

guessing that we were from the United States, struck up—that ever I should hear it in the land of the Celt—“*Oh, carry me back to old Virginia's shore.*” The worst of it was, that while my bosom was swelling with feeling, and my eyes suffused with pleasant water, my pockets were absolutely empty, and I had not even a crumb to throw to this robin that had sung to me a note of home—my companion was in no better condition—we had laid in an extra supply in the morning for charity, but all was gone, and we had borrowed all the little that our driver had. If ever any Virginian should hear that song beside the Dargle, I pray him that he would, for my repose, just double his donation.

How pregnant with reflections is even a hasty view of Ireland; but I have no room for reflections in my note-book, and will close for to-day, by making the remark, that since I have been in Ireland, I have talked with a good many men about America, (among the humbler class, however,) and I have not met with one—absolutely not with one—who either does not purpose to go to the United States, or wish to go there, or who at least has not some dear friend there—that is, not one who has not some stake of Home or Love in our heaven-blessed land. S. L. C.

FRAGMENT TO SHELLEY.

BY H. H. CLEMENTS.

The white lips of the murmuring sea
Kissed nature's precious idol in his youth;
Because in his large soul, there seemed to be
For earth, too much of nobleness and truth.
He sank when all the billows were at play,
Banqueting in storms, like his own heart,
Just as the thankless world had learned to say;
Thy work is nobly done, you may depart.
Then to that land, bright as he made our own,
His spirit fled to live anew the dream,
Which glittered in his being like some zone,
Boundless and measureless, but shining still;
A mystery to minds which striving own
It hath no manifest to human skill.
The marble founts of Arcady ne'er gushed
With freer pride, than did thy glorious lay;
And the loud roar of nations shall be hushed
Before its dewy pauses pass away.
His faults were heaven's alone, they are not ours—
The conquering grave dissolved their harshest hue—
There is a poison in the richest flowers
That ever held their cups to catch the dew.
His Genius—symbol of a gracious ill
Made fiery contrast of his purer life—
Came like a tragic minister to fill
The call-boy's quick invasion; but the strife,
Had he but lived until each act's last close
Would have adorned the Drama of his days,
How shall we bless thee, for such happy hours?

How shall we joy in the proud circumstance,
Which made thy language and thy feeling ours?
How shall I praise thee for thy strange romance;—
For portraits, drawn of the returnless dead—
For forms, as fresh from the consuming grave?
For sunshine over present darkness spread?
For strange excitements that the Cenci gave?
These offspring of thy mourning spirit live
The guardians of my being—to our days
The fulness of a fruitful essence give;
Dissolve the anguish of emotion pent
In the o'erburdened heart, and save perchance
A perpetration of the woes they paint.
The pale, but lasting marble shall enhance
The immortality of such a dower—
The palaces of earthly beauty shine
In joyful recognition of thy power;
The beautiful records of the world shall wear
Impress of that melodious string,
That quivered in the thronged and charmed air,
And frenzied fire of thy imagining.
Like a bright bird that singeth all its spring,
And dieth when the virgin season dies;
Mourning its life away, because its wing
Soars not beyond the bound'ries of the skies;
So pined thy lofty spirit to absorb,
The mystery to which the future clings,
And soar beyond our planet's poised orb,
To school the soul in doubt's insensate things.
'Tis thus the daring thought, will ever climb,
Where ruin beckons from its ghastly throne,
Cleaving the formless shore of ancient Time
In search of vistas to the vast unknown.
Such Poet, dawning on our darkened years,
Is like the sight of a new firmament,
When a new constellation first appears.
The garniture of equatorial night,
Or the remotest skirt of Southern zone;
Give no such rapture to the mental sight,
As he along his field of thought hath sown.
The zenith of our hopes is brighter far,—
Pleasures, like Pleiads, light our gleaming way,
Filling the spaces of life's little star
With joys as huge as scattered nebulae.
Should common evil shroud his restless lyre,
'Tis but the lifting of a warning voice
In accusation of its own base fire,
Giving the appetite her liberal choice;
And like the doleful cry of ominous bird
From plague-afflicted Islands, turns away or keeps
The voyager to the danger, as preferred.

Scenes and Incidents of the Old Dominion.

NO. 1.

READING PRAYERS FOR THE KING!

"Duty! my child, duty!" said the venerable clergyman.

"Nay, but, father, these angry and infuriated people aim at thy life!"

"Give me the pistols, then, and in God's name I will go forth, and if needs be, defend his cause by violence. These be the sons of Belial, my daughter; and it would ill become thine old

father to shrink from duty, now that duty has become dangerous."

And with a resolute hand, this stout-hearted servant of the church and of the king thrust a pair of pistols into his bosom, and with a single kiss upon the fair brow of his weeping daughter, mounted his horse and departed from the parsonage.

* * * * *

Robert Manly was an English Clergyman—a gentleman of the old school—who had charge of the parish of St — as rector, in one of the counties of Eastern Virginia. He had, some twenty years before, brought over from the pleasant shores of his native land, a large family of sons and daughters, to settle with him in the "wilderness" of America. One by one, however, had these all fallen from his embraces, and now lay gathered together in the quiet churchyard of the parish where he ministered. His wife, too, the aged partner of his sorrows, was recently departed also; and now none were left around the family hearth save one, the lovely Edith, a tall, fair-haired maiden, just growing to beauteous womanhood, and who, as has already been perceived, was engaged in a fruitless intercession with her stern father, to forbear from an attendance upon the usual services of the Sabbath. For the times were troublesome ones, and a loyal subject of George the king, was endangered, both as to life and estate.

It was early in the spring of 1777, that the events of our present sketch open. The winter, which had been more than usually severe, was now at last over, and the budding spring-time had been ushered in. The early birds sang their accustomed notes, and nature seemed disposed to wear her annual garb of cheerfulness and beauty; but the flowers bloomed in vain, and in vain did the birds sing. Around the mansion of Robert Manly, there was noise and discord, and the din of horrid war: and even within the portals of that once joyous abode dwelt sorrow and heaviness; and there was mourning and lamentation for the absence of those loved ones who had gone hence to return no more. The war of the Revolution was in progress,—it had been going on for a couple of years, and had become irreversible in its results. The decision of the Congress, which then sat in Philadelphia, had changed the aspect of the whole affair, and from an ill-concerted rebellion, the attitude of the people of the revolted Colonies, was now that of "revolutionists,"—a new-born nation, indeed, fighting for her separate and independent existence. As in all hotly contested periods of public emergency, the *party lines* had become drawn, and men were either one thing or the other. They were for law and order,—for the majesty

of the king, and for his tyrannical sway, upon the one hand;—as they were for the resistance of oppression, for the upholding of the strong hand of the people, and for the levelling of regal power and dominion, upon the other. Throughout the length and breadth of the land the dismal tidings had gone forth, and the summons had penetrated to every fireside, to join either with the friends or with the enemies of the American Congress.

Among the older and more aristocratic families of Virginia, there were numerous adherents to the British crown; and perhaps no class of the community embodied a larger proportion of "loyalty" than the clergy of the established church. There were many reasons why they should be so: and we, in the present day and generation, when the prejudices of men are no longer so keenly alive to the subject, may look back, and canvass with entire freedom the motives and principles of those who, in revolutionary times, were content, nay, who were proud to be considered as "loyalists." One such was Robert Manly, himself descended from a sturdy cavalier stock, and whose family tree, in all its honored branches, could be traced back through the vexed period of the Commonwealth, into the eventful times of Elizabeth, and so on to the days of the fourth Edward, ever true and steadfast to the throne. Thus, therefore, there were family pride, and the lofty pulsations of an old English heart within the breast of the reverend Rector of St. ——'s parish. And besides, he had received his ordination abroad—his Diocese was the Bishop of London,—and morning and evening, for many revolving years, he had been accustomed to read prayers for the Sovereign. He had ever felt as an alien from home; that home was the home of his fathers; and if there was any other home that he thought of as worthy of his aspirations and affections, it was an heavenly one! As to politics, he knew but little, and he cared to know less. His own life was dedicated to his God and to his king; and although the distractions of the Colonies for the five or six years last previous were not unknown to him, still there was no sympathy in his breast for what was deemed to be oppression;—a quiet spectator of the scene he remained steadfast and loyal, even as his fathers had been before him.

It was among the very first acts of the republican legislature of Virginia, to repeal all laws of parliament constraining men in the matter of religion. From the earliest period in the history of the Colony, there had been upon the Statute books, penal laws for the protection and support of "His Majesty's" form of religious observance, and it was by means of the strong arm of law

that the Church of England was implanted upon the soil of the Old Dominion. That these laws were, in latter times, enforced with as much rigor as they once had been, no one pretends to say, but still every individual, whatever may have been his creed or the complexion of his faith, was subjected to a tax for the support of the parish clergyman. And whenever a church edifice was required to be erected, there was a *pro rata* assessment upon "all and sundry the white inhabitants of the parish" for the carrying on of the work. Many of these church edifices—and they were substantial ones too—built long ago in the Colonial times, are still standing, and the traveler may even now visit them, and may stand at the desk, or may climb into the lofty pulpit where prayers were offered, a century ago, for kings and princes, and "all the royal family." It was in regard to this ancient, and in some degree oppressive system, that the Virginia Legislature, after the dissolution of the royal assembly in 1777, first set to work in the necessary business of reform. Ninety-five parishes were included within the ample bounds of "His Majesty's Colony of Virginia," and these were supplied by some ninety clergymen. After the war was over, and efforts began to be made to gather up the fragments of Episcopacy, but seventy-two parishes could anywhere be found, and only eight and twenty clergymen of the Church of England remained to minister in holy things. Such were the immediate, and indeed, somewhat disastrous results of a measure, wholesome in itself, and rendered indispensable by the declaration of American independence. In the present day, when men's feelings are no longer personally interested, and when the support of the families of a considerable class of the community do not hang upon the issue, we may leisurely survey the wreck of things then existing, and deem the subject a fair one for the pen of historic research: of flocks scattered and driven without a shepherd—of church edifices ruined and falling into decay: of a starving clergy expelled from their livings, and left to wander and pick up a scanty support by teaching school, or as they best were able to procure bread. Some went home to England, some "went over to the Dissenters," as the phrase then was, and some few, the instances being distinctly recorded,—entered the army as officers, and became "soldiers militant," indeed.

The blow fell more heavily upon some parishes than upon others. To the parish of St. —— there was a glebe of one hundred acres attached; and the provisions of the new law were such, that glebe-lands, already purchased and paid for, were secured for the benefit of the incumbent. But, besides this, the Rev. Robert Manly possessed a considerable inherited estate in England, and was

in circumstances above a condition of want, such as had driven asunder so many of his suffering brethren in the ministry. Himself careless as to the political movements of the day, his heart never swerved for a moment in its loyalty to the king; but neither, except in one particular which we have to notice, did he render himself personally obnoxious to the "Whigs."

And as to this one particular :

When other churches were closed, and when other pulpits and reading desks were deserted in consequence of the popular indignation against the Clergy of the "Church," this stern old man, a worthy descendant of the stout-hearted cavaliers of king Charles' time, remained steadfast and true to his principles. Nay, furthermore, although the American Congress had, the year before, declared these States to be "free and independent," and had "absolved themselves from all allegiance to the British crown," yet would Robert Manly still persist in reading prayers for the king, in defiance of popular outcry against him, and in utter disregard of what others considered as law; but which he, with all the unyielding pertinacity of his nature, stigmatized as a "most sinful rebellion."

Many of the incumbents of well provided parishes—for some few such there were—abstained from the offensive formula,—they omitted "prayer for the king;" and although they were thoroughly loyalist in principles, yet they would fain act prudently, and so shelter themselves and their families from the enkindled anger of "the people." Not so, however, "Parson Manly;" he was made of stern stuff, as we have said; and neither admonitions nor threats, such as had had the effect of frightening off so many others from their pulpits, upon the accustomed services of the Sabbath day, were of any avail in deterring him from his post.

"Fear!" he would say, when importuned upon the subject, "when was it ever known that a Manly proved recreant to his trust, or faithless to his king! And would he now flee to England only because the times were troubled ones: would he forsake the consecrated spot where lay so many of his gathered kindred, and where he himself too, hoped, in God's well appointed time, to be joined to those buried ones in the last and final union of the grave: would he see the sacred portals of the temple of God desecrated, and the profane feet of armed men to tread its sounding aisles; and would he permit those hallowed walls to echo to the bacchanalian songs of a God-forgetting generation of levellers who would fain prostrate the fair daughter of Zion, together with all the time-honored associations of the past, into the dust together! No, he would resist to the death were such extremi-

ties needful; and he would only require that they should bury his body in the grave with his sleeping children, when they should have taken away his life—that life being yielded up to the call of a duty which he owed both to his king and to his God!"

More recent developments had made known the fact of a conspiracy against the parsons, and it might be against the lives of those clergy, who in defiance of public indignation continued to officiate in their churches as in times past. The parish of St. — was known also to be adverse to the Revolution, and its more wealthy and "aristocratic" citizens were avowed "tories." But the neighbourhood roundabout, and especially those who were opposed to the Communion of the Church, were by no means inactive as friends and favorers of the popular cause. In fact, spies were abroad, and were disseminated among the "disaffected" throughout the parish: oftentimes they were those of a man's own household, although he knew it not. A loyalist who remained quietly at home, and who took no part in public affairs, was permitted to rest in peace; but even he had a spy upon his actions. Those, on the other hand, who were noisy in their demonstrations of opposition, or who secretly favored the royal foe, soon felt the violence of popular indignation poured out against them; houses burnt, property destroyed, perhaps their persons treated with insult and indignity, either by tarring and feathering, or by ducking in a horse-pond, or by enticing them from their beds at night, and seizing them, and scourging them with inhuman severity in the forest, and, in some instances, even by assassination itself. All this was executed by Lynch-law, as we term it in these days. But when the State Government interfered against "meddlesome tories," the heavy retributions of civil law were seen in confiscated estates, in imprisonments, and in severity in whatever way it might legally be exercised. It was, indeed, a period of peril and dismay,—a time that "tried men's souls:" neither was there a family but experienced in a greater or less degree the attendant consequences. In times of peril all share alike as to the apprehension and alarm: and this was most particularly the case in the parish of St. —, where party feeling ran to a wild extreme upon one side or the other of the vexed question of the day; and where none knew in what quarter the blow would next fall, or how soon they themselves might be aroused at midnight by a band of depredators at their door, or how soon the family roof which sheltered their wives and their little ones, would be in flames over their heads.

Parson Manly had been advised to forbear. More than one anonymous letter had reached

him, threatening vengeance if he persisted in offering up public prayer for that "wretched tyrant, King George!" His own people, too, as firm in their loyalty as he himself was, urged him to be silent, and not to press a point upon which the people were so violently indignant. They avowed, 'tis true, a readiness to stand by their beloved pastor in every emergency, yet for his own sake, and his own personal safety, they urged him to omit the obnoxious portion of the Church Service. But it was all in vain; the spirit of a brave line of mettlesome ancestry was strong within him, and neither threats, nor entreaties, nor the tears even of his own fair daughter could avail; and upon the Sabbath morning in question, having armed himself, as we have seen, he kneeled down before setting out, and prayed to the God of battles that he might be strengthened in this his duty, and that, if it was according to His good pleasure, an honorable deliverance might come. The distance was a mile or more from the parsonage; and as he rode slowly on his way, unattended by any one, he was passed by a number of hardy looking fellows, clad in homespun, and bearing conspicuously upon their hats the well-known republican cockade. There were ominous looks and glances over the shoulder at the "Parson," as these suspicious individuals rode by: but no word was spoken—not even the accustomed morning greetings were passed.

Presently there rode up one of a different stamp from these—a man whom our clergyman had formerly known, and had highly esteemed, but from whom, in consequence of the violence of the times, he had become alienated. It was Col. —, himself a member of that same Congress which had, the summer before, passed the irrevocable decree of independence, and who was then at home upon a visit to his family. Having learned of this anticipated violence, that was threatened upon the person of the aged clergyman, he had determined to ride over and ascertain how the thing was, and, if possible, to avert so disgraceful a catastrophe. Upon recognizing each other, a friendly salutation passed between them; and as their horses seemed inclined towards an instinctive companionship, as horses will very often incline, the riders fell into conversation.

"These are troublous times, father Manly," said the colonel, willing to lead the few moments of discourse that might be afforded to them, to a topic uppermost in the minds of both.

"Aye, you have well said," replied the old man, with a sigh, "and as for myself I find that my last days are by no means my best days:—but God's will be done!"

"Men may have an honest difference of senti-

ment, and still be friends: think you not so, good father?" asked the other.

"God forbid that my heart should call any man my foe, however far he may have gone astray from the beaten paths of public honesty," said the blunt minister.

There was a momentary pause here, upon the part of the "rebel" politician, and he felt slightly nettled at the home thrust the clergyman had given him; but his goodness of heart overcame presently his scruples, and he proceeded:

"I suppose there can be no possible accommodation between men occupying positions of sentiment which differ so widely as ours?"

"None!" answered the other.

"And yet prudence, and a desire for peace in all the quieter relationships of life, might require of us to avoid pressing our sentiments when they become obnoxious," observed the colonel in a suggestive tone.

"Why, I am essentially a man of peace, Col. —," said the old gentleman, "and would fain avoid embroiling myself with any one; but where the stern dictates of duty constrain us, then it is that all compromises for the mere sake of peace become weakness and craven-heartedness."

"Have you failed to perceive that there is a falling off in allegiance to George the king, in these latter days," enquired the Congressman?

"Say rather His Majesty," interposed the loyalist.

"No; I'll use no superfluous words, or vain titles," rejoined the other, "'tis plain George the king with me henceforward; but you seem to be unaware of the doings of our Congress, and that a Declaration of Independence has been passed."

"I have heard of it," said Mr. Manly, "but I have continued to regard it as only an item in this same odious act of treason, in which His Majesty's colonies are now so unhappily engaged. May God of his mercy avert the dreadful retributions of offended justice which must follow in the sequel of this foul rebellion."

"I see, my dear sir," observed the colonel, with earnestness, "that you view the whole transaction in an aspect which savors of prejudice on your part. This act of independence has been most deliberately declared, and with a full knowledge too of its weighty consequences. Believe me, Parson Manly, that although you may not live to see it, and even my own life may pay the forfeit to this same "offended justice," as you term it, yet still the cause of liberty will gain ground, and will ultimately triumph in this land. The sword, sir, has been drawn, and the scabbard has been thrown away. Duty may have, and doubtless it has, its different phases,

when regarded by different minds, all of which are equally sincere, but truth is mighty—it is omnipotent—it will, it must, in the end, prevail.”

By this time they had reached the parish church, which was situated upon a hill, and was surrounded by the lofty trees of the then unbroken forest.

Here they parted: the one riding on so as to avoid witnessing an act of open indignity to the laws of the land, and the other sternly intent to fulfil a duty, as he esteemed it to be, to his God, and to his king.

Arriving at the church door, Parson Manly found that an unusual collection of people had already gathered;—not such, however, as had been wont to assemble upon the peaceful Sabbaths of times past. No affectionate greetings of kind “mothers in Israel” met him now;—nor the unladen treasures of coaches and chariots, eager to press forward, and welcome the minister to his post of duty and his “labor of love.” Neither were there any of the humble community of wives and little ones present, such as was usual to throng together upon the “sweet day of rest,” and to accept the proffered hand of Christian fellowship from their revered pastor. No children were seen to

“— follow with endearing wile,
And pluck his gown to share the good man’s smile.”

O, it was sad to see such an exhibition of the grosser parts of human infirmity around so sacred a spot upon so holy a day! Men were there whose faces were not often visible “where prayer was wont to be made;” and an air of sullen determination, perhaps of defiance, sat upon the stern countenances of them all.

Above, the mild sun of a Virginia spring-day, was beaming forth in its accustomed beauty, and shedding a light of unrecognized gladness upon the scene. The joyous throats of the forest birds were in tuneful unison with the season, but not with the occasion, for there was no responding echo from any individual heart of those there collected. The graves, too, of the dead were on this day unvisited by the pious footsteps of those who usually came thither to drop a tear of memory to loved ones who were gone from earth, and were there gathered to their last and long repose. The quietness of a quiet place was broken in upon, and the peaceful solemnity of a peaceful and solemn day was disturbed. There was anticipated violence lurking in the hearts of those rude and unchastened men, who, for this one day in their lives, felt so deep an interest in the services of the sanctuary. Whilst the aged servant of the church was dismounting from his horse, and was making his way, all unattended and alone, to the vestry room, for the purpose of

donning his cassock, his rude congregation of unsanctified worshippers were seen communing together in knots, and in little companies around the sacred edifice. They were no doubt conspiring as to the most fitting time to “drag the old tory from his nest,” and in what manner to proceed in the execution of the vilest indignities upon his person.

The purpose of carrying into execution their sacrilegious design, however rigidly determined as to the measure itself, was by no means so well agreed upon in regard to the mode and manner in which the thing should be done; whether by tarring and feathering, or by ducking in the river, or by personal chastisement by whipping. Some of the more unfeeling of the number were for “hanging the old mule upon the nearest sapling,” and allowing him “to swing there in the wind, robes and all, and under the sky of heaven.” “If he wants to be so conspicuous,” said they, “we’ll elevate him a little higher than perhaps he desires.” Happily such brutal suggestions were not favored except by very few, and milder counsels prevailed with the majority. Nor was there any concert of action agreed upon, up to the very moment of the arrival of their victim. All this was favorable to Mr. Manly; besides, it was one thing to swear stoutly out in the woods of what they would do, and it was quite another thing, as they found it to be, when it came to the point, and they were required to go forward within the rails of that sacred place, and to lay unholy hands upon a minister of Christ—that minister an aged man, and one whom the finger of calumny had never been pointed at;—who had been a faithful servant in warning men from the “error of their ways,” and who was, at this moment, borne down beneath the burden of domestic sorrows and afflictions of his own!

But they all huddled into the church together, and sat themselves down; filling up the remotest pews first, and so on until the house was crammed. No seat was vacant. Not a female was in the assembly; and if there were any of the parson’s friends present, they were not known as such. It would, indeed, have been madness in any one of his most devoted adherents to have been present on such an occasion, as their burnt houses and waste property would but too truly have testified. Even the pug-nosed clerk, who sat beneath the reading-desk in his own appropriate box, such as is still seen in the relics of the olden time,—those ancient edifices of Virginia’s colonial existence:—I mean those old churches built a century ago or more, which are to be found in many parts of the State to this day, untouched by any hand save that of the all-devouring hand of time: even Joel Jenking, the

clerk, was constrained to "fraternize" with the populace upon this same critical Sabbath day; and it was remarked that his responses were carefully timed and modestly delivered, and that his "Amen," which usually were so nasally sonorous, were given forth very softly and quietly, as if in sympathy rather with his own caste than with his master, the parson.

Expedition was upon tiptoe, for as yet the good man had not entered. Many triumphant glances were cast among the "conspirators" at the delay, and even words of satisfaction were whispered that he "dare not come!"

But this triumph was of short continuance, for presently forth came the old gentleman, in his robes, as calmly, and with as much self-possession as usual, and he kneeled long in private prayer to Almighty God for strength in this his time of need, and for support in such an hour of trial and difficulty as that he was now called to go through. He rose and stood at the desk; his long gray locks hanging in glistening masses upon his shoulders, and his countenance beaming with confidence, and trustfulness, and quiet resignation to the will of God. He began: "*The Lord is in his holy temple, let all the earth keep silence before him.*" No one arose to receive the Exhortation, as is customary, nor did any one kneel at the Confession, save only himself and his time-serving clerk, who was evidently in a wail in his anxiety to please his one master, and yet not to offend the other master, who was the mightier just now. There was nothing new occurring in the ordinary service of "Morning Prayer." The Athanasian creed was said, as was the custom in those days, and the Liturgy progressed without interruption of any kind, and yet without assistance, except in the one lone faltering voice of Jenkins in the clerk's box. What, however, there was in the service that was most remarkable,—not a "worshipper" stirred from his seat, not a suppliant knelt at the throne of grace amongst the whole crowd there assembled as the "congregation." Eager eyes were upon that same stout-hearted old priest of God's house, and watchful ears were intent to catch the words of his mouth, and to hear whether he would now "dare" to pronounce the hated formula when dangers awaited him, and when heavy trials with pains and penalties were threatened upon his person should he so proceed.

"Let us pray!" said the clergyman, the Creed being ended.

"O Lord, shew thy mercy upon us."

"And grant us thy salvation," meekly replied the voice of the clerk alone.

"O Lord save the King!" said Parson Manly, in a steady, determined voice.

There was no response to this from the clerk's

box, only there was an ominous rustling in the pews below as of men breathing deeply, and gathering themselves up for some serious encounter.

After the usual collects for "peace" and for "grace," the earnest, solemn, unfaltering voice of the minister was heard to continue:

"O Lord our heavenly Father, high and mighty King of kings and Lord of lords, the only Ruler of princes, who dost from thy throne behold all the dwellers upon earth: Most heartily we beseech thee, with thy favor to behold our most gracious Sovereign Lord King George; and so replenish him with the grace of thy holy spirit, that he may alway incline to thy will and walk in thy way; Endue him plenteously with heavenly gifts; grant him in health and wealth long to live; strengthen him, that he may overcome and vanquish all his enemies; and that finally after this life, he may attain everlasting joy and felicity through Jesus Christ our Lord!"

He paused as usual for the response; but no response came,—only silence, a deep silence succeeded to the last words of the prayer. Still he paused, and no voice was heard throughout the assembly; and then he himself became his own respondent, and pronounced an AMEN! so loud and so emphatic, as left no possibility of doubt upon the minds of any, that he was in earnest in his supplications for royalty. As the last echoing syllable of the word lingered upon the ears of that motley assembly, there was a gazing of men one upon the other, as much as to say—*Now is the time for the attack!* But no man moved. The old parson, himself, as if expecting interruption, did not proceed with the concluding portions of the Ritual for some moments. Interruption, however, there was none. Not a man arose from his seat, but in mute astonishment at such an exhibition of absolute heroism, they all seemed fixed to the benches on which they sat. And after such a momentary pause, as if to invite the "conspirators" to the sacrilegious assault, the voice of the brave old man was again heard at the reading desk in the concluding sentences of the service. The "Morning Prayer" was gone through—the king had been prayed for, as was usual within those walls; and that there should be no incompleteness in the solemn petition made to Almighty God, the priest himself had responded with that same loud and hearty Amen! which made the walls of the old St. —'s church reverberate again; and still there was no assault attempted, nor even a motion towards an outrage of the kind contemplated.

What could all this mean!

Here were men, strong men, men of violent feelings and of embittered prejudices, who had

come together for the avowed purposes of harm. They were all gathered upon the very spot where their victim should be immolated, to appease this overflow of popular indignation and wrath. They were present in numbers far above what would be necessary to execute their unworthy purpose. 'Tis true, the old man did contemplate resistance; that is, he at first contemplated such a course, and, as we have already seen, had prepared himself for the encounter by the pistols which he had taken from his daughter's hands. The belligerent nature of the Manlys of old time had mounted high in the proud bosom of this representative of a once proud family, and for awhile he was bent upon blood—"blood for blood." But after that he was alone, having started upon his way to the church, his spirit became more calm, and took its accustomed attitude of prayer: and then it was that Robert Manly perceived his error, whilst a something whispered in his ear, and echoed in his heart: "*The servant of the Lord must not strive!*" Still a sense of his danger had reassured him, and he had instinctively felt for his weapons to see if they were safe; but again the admonition sounded within him, and was repeated with increased emphasis: "*The servant of the Lord must not strive!*" He thought of his daughter,—of Edith, lonely and now deserted—even her old father has taken his life in his hands and has given it up without a struggle to preserve it;—ruthless men have assaulted him, and he makes no effort to preserve a life so valuable as his must be to an unprotected child,—and again he had felt for his pistols. But the voice of warning was not to be smothered by sinful doubts like these—for sinful they were, seeing that they led him to distrust the hand of that Providence which had ever been his reliance, and which even now gave him convincing assurance that not a hair of his head should suffer harm. "*The servant of the Lord must not strive!*" became again vocal to his conscience, so that his doubts were removed, and his determination was fixed to put his trust in the Lord, and that he should deliver him. And thus resolving, he had drawn the deadly weapons from his bosom, and had cast them into the hedge by the road-side, and so had gone onward unarmed, save by the "*Sword of the Spirit,*" to his appointed scene of trial.

What then was there to hinder that these evil minded men should execute their severe purpose upon the aged servant of God, who in this emergency had felt it equally his duty to be a faithful servant to his king? He was unarmed and helpless, and even without the countenance of friends, and he stood there firm in the spirit of his duty—a duty as he honestly held it to be—and unsha-

ken by any threats of men. And yet they harmed him not.

Perhaps it was that the hearts of these men were overcome by the display of moral courage here manifested. Courage is an elevated feature in human character, which ever adorns and beautifies its possessor; and their minds being full of what they there saw exhibited, it is quite possible that other feelings were for the moment forgotten. No doubt these men did admire the stern and unflinching manner in which the proud old loyalist bore himself upon the occasion, and that they felt for him a sympathy which they themselves were unconscious of having possessed. And that thus their hands were stayed. But, perhaps, also, as we have already intimated, they were not prepared, any of these rude men, to lay the hand of violence upon a priest of God as he ministered at the altar. This was no trifling matter, as they now regarded it. The hard heart of infidelity, and the unboly hands of him who believes that "there is no God," might have essayed to complete the rash enterprise, but not of such were those here congregated. Rude and unlettered men they were, and little observant of the respect due to an aged man,—that man a scholar and a gentleman, but they were not in heart essentially bad. There were political exasperations, it is true, but these were incidental to the times; and it was for a political purpose only that they had met here together on this day, and for the chastisement of a political offender. These men had no idea of insulting the majesty of Heaven, even though their political prejudices and preferences had been assailed and set at naught; nor had they hitherto perceived the enormity of their plans, and the necessary sacrilege that would attend the consummation of them. In a word they hesitated, they held back when it came to the invading the Church of God with unhallowed feet, and with hands and purposes so unsanctified. To burn down and lay waste a "tory's" barns and out-houses, was not so bad, because in this they seemed to be justified on the score of necessity, as the times were themselves violent ones, and outrages had been practised by the adherents of both parties;—but here was a different case altogether, and the religious instincts of even the rude hearts of rude men took the alarm, and rendered hands, otherwise bent upon mischief, harmless and inactive. Such, at least, is a well grounded presumption of the causes which led to the failure of the anticipated assault. Parson Manly had concluded the Morning Service, and had neither omitted nor changed any part or portion of it, even to the "prayer for the king," and still he remained unmolested at his post.

Then he ascended to the lofty pulpit,—which to this day rears itself mid-air, so to speak, in the same old parish church of St. —, and prepared to address his submissive auditory, who sat uneasily in those big, square, old-fashioned pews below. They had not only heard the king prayed for, but they must now perforce open their unwelcome ears to a sermon in the same strain of obnoxious politics. The text was from the psalmist David: “*Why do the heathen rage, and the people imagine a vain thing?*” and it afforded ample scope to the abilities of the speaker, who here took occasion to enlarge upon the virtue and duty of Obedience. This was discussed in a temperate and respectful manner, but firmly and with earnestness. Obedience to law and to order—obedience to church and to king—obedience to the “‘powers that be,’ all of which,” said the venerable minister, “‘are ordained of God!’” This was the strong argument of that day on the part of “king and law,” and there were zealous advocates for it too, and none throughout “his Majesty’s Colonies” had advanced these claims with more tenacity and vigor than the aged man who now raised his voice for the last time in public condemnation of the popular cause. “What is it,” said he, in the conclusion of his remarks, “that I should fear? Shall I who minister at God’s holy altar, and who look for a recompense solely at His hands—shall I fear the face and the mere frowns of men? Or shall I, treading the dark confines of that grave, where lie buried all the fond prospects of a father’s heart, stagger from my duty, and bend with unwilling subservience to these traitorous designs? Shall I, in my old days, with a bare inch of life’s brief candle left to me, now desert the earthly master in whose service I have long lived and labored? Desert him, too, without any inward conviction of conscience that I should do so, and indeed with every feeling of my nature in open repugnance to the foul wrong in which these rebellious Colonies are now engaged! No! my hearers, no! no!—you may despoil the old man of these his robes of sacred office,—you may treat his person with such indignity as best befits your taste and your inclination,—nay, you may shed the poor last remnant of royal blood that trickles along these worn-out veins, but you shall never deter a Manly from his duty, or compel him by threats to prove recreant to his trust. But,” continued he, “I am now too old to war it any more; my energies and my faculties have wasted with my decaying frame, and I cannot strive longer against a useless current. I am compelled to desist now. I have had strength to stand up here to-day, and to declare my solemn protest to these rebellious measures, and I thank God for it. You have

heard my words, and as you hear them now you may remember them. But I yield,—and I yield not to any conviction of wrong, but from the necessities of age and its increasing infirmities. The sound of my voice in this sanctuary shall trouble you no more. I can make no compromises in a matter of duty, so neither shall I choose such selections from the sacred Liturgy as may best suit the time-serving caprices of this unloyal age. I adhere to the land-marks whilst I live, and if, through constraint, I must needs be silent, let all that hear me this day bear testimony that it is in obedience to the wilfulness of violent and unsteady men. I announce, therefore, that this church is now closed for the solemn service of God, during the impending years of this sad contest.”

The old man sat down; and at this signal the assembly arose, and with quiet footsteps left the edifice. They mounted their horses and so dispersed to their homes.

As for Parson Manly, he lived in retirement throughout the whole period of the revolutionary struggle, or until the last year thereof, when quite worn-out with increase of years and ripe for the full harvest of the grave, he died and was buried with his kindred. But although the resounding plaudits were for “independence and freedom” forever, the blessings of which were already beginning to be universally felt, he himself had held out firm to his principles, declaring that he would die as he had lived, loyal both to his church and to his king.

E. K.

THE MAGIC WORD.

BY ALTON.

* * * Our doubts are traitors—
And make us lose the good we oft might win,
By fearing to attempt.—*Shakespeare.*

I.

There is a word—the WORD of words—
To which a charm is lent,
That keeps the universe alive—
That word—Encouragement.
’Tis like a mainspring to the world,
That, with a sovereign sway,
Whene’er the Ball would cease its course,
Impels it on its way.

II.

It bids the wearied Husbandman
Toil cheerfully through care,
Reminding what a rich reward
Attends the Harvest-ear;

By picturing to his happy sight,
Though tempests scourge the earth,
His Boys and Girls, from hunger free,
Around his merry hearth.

III.

It bids the Warrior rally still,
Though all his Comrades, 'round,
Sad victims to the thirsty brand,
Have strewed the bloody ground :
For not the dreadful carnage near
Attracts the fiery eye,—
But dashing wildly on, he sees
Fame—Glory—Victory !

IV.

The noble Sailor scorns to fear,
Though fierce the lightnings flash,
And, roaring through the scowling clouds,
Loud peals the thunder's crash :
For, while he treads the strong ship's deck,
Where bolt nor plank are rent,
Be smiles undaunted on the scene,
And feels—Encouragement!

V.

'Tis this which from the Lover's heart
All sorrow may beguile,
And light that sacred ray of Hope
Which lives upon a smile!—
Inspired by this celestial beam,
For her all things he'll dare :
But break the spell—and lo, how soon
He'll leave the scornful Fair.

VI.

For he who still abjectly kneels,
Despite her cold disdain,
Knows nothing of that nobler love
Which animates my strain :
A manly heart the while it breathes
Devotion deep and true,—
If spurned—will proudly crush each pang,
And scorn again to sue!

VII.

Lo, Genius, o'er whose wasted frame
Disease is sadly stealing,
How, all unmindful, still he toils,
New truth on truth revealing :
Night is for rest, the sun reminds,
Bright setting o'er the hill ;
Midnight her warning gives in vain—
Dawn finds him toiling still.

VIII.

" Oh ! this is madness," cries the friend
" Thy fevered cheek how pale,
When health and happiness are lost
Can empty FAME avail?"
Alas! such words are lost in air,
Who knows what stern control
That Magic word—Encouragement
Hath over such a soul!

IX.

For hearken to his stern reply :
" Oh ! Pleasure's idle son,

Wealth, honor, rank—a world were naught,
If I must die unknown :
Could I believe such were my fate,
Then every fruitless breath
That life condemns my heart to heave,
Would seem a living death! "

X.

The Christian meets with rude repulse
When oft his voice is heard,
But, humbly looking up on high,
He hears the Magic Word ;
And, when it grieves to find his heart
On earthly things intent,
Boldly he braves the Tempter's art,
And feels—Encouragement!

XI.

For hath not He, who made the world,
The Father—Lord of all—
Kindly proclaimed, unknown to him,
A sparrow shall not fall?—
And will He, then, a servant see
Oppressed with grievous care ;
Nor, like a Father, hear his voice,
And give him strength to bear ?

XII.

See how the Conscience-stricken Child,
Who doth his conduct rue,
Will, at his slightest token, kneel,
And sweet forgiveness sue :
For, at its sound, within his breast,
What new emotions rise,
As now, ambitiously, he strives
To win approving eyes.

XIII.

But yet, deprive him of this charm,
And wound his shrinking heart
With cold reproach—and how he writhes
Beneath its cruel smart;—
His noblest feelings withering up,
That self-respect so dear,
Till, crushed with grief, he falls, disgraced,
A Victim to Despair.

XIV.

For ah ! too vain the heart will strive
To mock Adversity,
And, if not aided by this spell,
Soon joy forsakes the eye ;
And soon less frequent on the ear
'The mirthful laugh will rise,
The spirit lose its wonted nerve,
As Hope uncherished dies.

XV.

Then, oh ! let none forget the charm
This simple word hath won,
But bear it with him o'er Life's paths,
To cheer a brother on :
And, as the good Samaritan
His aid the Stranger lent,
So, when a friend beside thee sinks,
Whisper—Encouragement!

The Storming of the Arsenal at Vienna.*

At six o'clock, there was but one place of refuge left in the city for the troops and National Guards who took sides with the government, and that place was the arsenal—famous not only for the immense quantity of arms of all kinds which it contained, but for the valued trophies acquired in the crusades in the Holy Land, in the Turkish wars, and in the French campaigns.

All other places being in their possession, attempts were now made by the mob to carry this point by storm. They first attempted to force the gates, but failing in this, operations were abandoned until after nightfall. They next endeavored to gain entrance from the roofs of the adjoining houses, but this effort was attended with no better success, as the assailants were picked off by the sharp shooters in the arsenal as rapidly as they made their appearance.

At seven o'clock, and as soon as the shades of night afforded some concealment for their manoeuvres, the attack was renewed with great vigor. Two barricades were constructed not far distant from the arsenal, and in both of the streets which met and formed right angles in front of the gate, and the fire was opened from all houses within reach, both in the Renn Gasse and Wiplingher Strasse, while from the barricade on the Hopen Brücke the cannons poured forth their contents against the feeble gate, the concussion in the narrow streets and lofty houses shivering to atoms all the glass of the windows, and drowning all other sounds with its deafening thunder.

Captain Castell, commanding the only company of regulars left for the defence of the arsenal, prudently waited until the enemy's shot had made in the gate an aperture sufficiently large to enable him to point out the only but well-directed cannon which he had, and the effect of a few shots was indescribable—the streets were cleared, and the captain, venturing out with a few men, took the deserted cannon, which had been brought over the barricade for the purpose of attacking the arsenal from a nearer point.

The combat deepened, the garrison swept the Renn Gasse with grape and canister, and killed and disabled a great number of the populace, whose fury increased after each unsuccessful attempt to gain possession of the building. The assailants proceeded to the civic arsenal, and demanded cannon for the loudly expressed purpose of bombarding the military arsenal. With these

they proceeded on the bastions, and attacked the building in the rear.

Parliamentaires were despatched to the arsenal both by the diet and the students, ordering the garrison to surrender, and the combat to cease; but these were shot as fast they approached the building, not by the garrison, but, as was generally believed, by assassins posted in the opposite houses of the Renn Gasse.

At ten o'clock the arsenal was bombarded from four different points. At eleven o'clock, from the discharge of the congreve rockets, the building took fire, and great apprehensions were entertained that the powder magazine would explode; yet the gallant little band, intrusted with its defence, held out undaunted. Some well-disposed citizens attempted to dispatch fire engines to the relief of the arsenal; but the enraged mob interfered, and prevented their departure. The fire fortunately communicated with the wood and coal depôts, and, by the untiring exertions of the garrison was kept under control. Every species of stratagem was resorted to, to obtain possession of the arsenal, but all without effect.

One of these schemes was very near consummation, and had it been carried through would have decided at once the fates both of the garrison and the arsenal. A little after midnight, a great sound of many voices was heard in the Wiplingher Strasse, and a band of mixed persons observed marching up to the arsenal, some bearing white flags and others torches and candles. From afar they proclaimed words of peace and requested a parley, and the garrison was inclined to listen to the most advanced speaker. Two loaded cannon were posted in the gateway and pointed down the street, and Captain Castell, with nearly his entire force of forty grenadiers, advanced toward the doubtful band; and while there listening to their communications, and preventing them from pressing them too closely on the arsenal, the captain happening to cast a look behind, remarked a flash upon the tube of the double loaded cannon. Amazed, he sprang toward the cannon where he perceived a young proletarian searching with a burning match for the touch-hole of the gun, which, in a second more, would have discharged its murderous contents upon the backs of the grenadiers. An instantaneous cry directed the attention of the cannoniers to the youthful assassin, and the next moment one of them, with a rope hammer, struck him speechless to the earth. Incensed at the treachery which was attempted, Captain Castell immediately withdrew his grenadiers, and answered the faithless band by two discharges of grape, which produced great havoc in their ranks, and caused a death-like stillness through the street.

* From a work entitled "Austria in 1848-49." By Hon. William H. Stiles, recently our Charge at Vienna. These interesting and important volumes will appear in elegant style, from the press of Harper and Brothers, New York, in the course of a month.

The attack and defence of the arsenal continued through the entire night. Never was more strikingly exhibited the advantage of skill and discipline over rude masses than occurred that night, when the handful of regular troops held out, with Spartan valor, against all the force which could be brought against them, and never yielded their post until next morning, when summoned to do so by their own commander, Count Anersperg, who had entered into stipulations with the Diet and common council for the surrender.

But the horrors of that awful night—the alarm-bells pealing from all the steeples in the city; the arsenal at times wrapt in flames; the uninterrupted musket fire; the thunder of the heavy cannon, and the streets strewed with the dying and dead, will not soon be forgotten by the quiet and pleasure-loving inhabitant of Vienna.

At eight o'clock next morning, the brave little garrison which, with a scarcity of ammunition, had all night long defended the arsenal, amid fire and flame, surrendered it into the hands of its pledged protectors;* and, marching unmolested through the tumultuous streets of the capital, reached in safety the encampment in the Schwartzberg Garden, amid the enthusiastic cheers of their companions.

Scarcely had they left, when the populace, whose rage could no longer be restrained, rushed into the arsenal from every quarter, some even over the still burning ruins; and when the yard became full to overflowing with human beings, whose horrid faces and grotesque appearance beggared all description, the doors were burst open, and a general plunder commenced. So great was the rush to obtain arms, that, notwithstanding the fire had just again burst out with all its fury, and groups of thousands surrounded it on all sides, not a man could be obtained to assist in extinguishing it, and a number of boys, from twelve to fifteen years of age, could alone be gathered to work the engine; and they really laboured with great constancy until the flames were subdued.

The four long galleries, leading into each other, and surrounding an immense hollow square, were filled with arms and trophies of every description; and so tasteful had been the arrangement of them, that that hall constituted one of the most attractive objects to the eye of the stranger that Vienna afforded.

The two hundred thousand new muskets which it contained soon disappeared; and then followed the trophies, collected by the imperial government through many centuries, from the period

* That the National Guard and Legion would occupy and defend it.

of the crusades to the present day. Some strutted forth in complete suits of ancient armor; others were decorated only with helmets and gloves of mail; some brandished an ancient battle-axe, while others delighted only in a breast-plate and pike; some shouldered a Swedish blunderbuss, captured, perhaps, in the battle of Lutzen; and some waved a Turkish cimeter.

For hours the Arsenal thus poured forth a rabble, in comparison with which Falstaff's regiment would have appeared a noble guard; all delighted with their spoils, and boasting of the havoc they would now make upon the military. The coat of mail of Libussa, the first princess of Bohemia; the buckskin shirt in which Gustavus Adolphus received his death wound; the sword of Eugène of Savoy, of Wurmser, and of Schwartzberg, and thousands of other invaluable relics disappeared.

Some were subsequently purchased for a zwentzinger;* many have been lost forever.

* Twenty cents.

THE SPIRIT OF MY DREAMS.

FROM THE GERMAN.

What beauteous form art thou I ever meet?
When sleep o'ercomes me 'mong the fragrant flowers
Who weavest wreaths for me, of blossoms aweet,
Plucked from the shrubs which circle these bright bowers
Who art thou? Spirit bright I fain would know!
Thy glances fire my soul, I hear thee speak;
And oh! with love unspeakable I glow,
When thy warm hand is pressing on my cheek.

I seek thee near the village linden trees,
I search the city, each romantic spot,
I hear thee sighing on the hollow breeze,
I seek thee, loved one, but I find thee not.
Where'er a lattice opens, there I gaze;
Where'er a veil falls o'er a lofty brow;
Where'er a tongue is heard in beauty's praise,
I seek, and have sought hopelessly, till now.

Come often, then, sweet vision of the night—
Thy form in dreamland, I would often see,
Clad in those maiden robes of spotless white,
In which thy visit was first made to me.
Bring, when thou comest, in thy snowy hand,
Which captive bore my willing heart away,
Sweet violets, fastened with that purple band,
Which round thy swanlike neck was wont to play.

And bring, oh bring, those soft blue eyes of thine,
From which an angel's glances seem to gleam,
And bring that face, which sweetly smiled on mine
When first I met thee in my rapt'rous dream.
Bring then thy rosy mouth where bright smiles bask,
And heaven will open to thy lover's eyes;
Bring all thy charms, beloved, then I ask—
Bring in thy heart, the love of Paradise.

PEONY:

A TALE FOR THE TIMES.

ADDRESSED TO THE FRIENDS AND OPPONENTS OF
FREE SCHOOLS.

BY PEN. INGLETON, ESQ.

I.

PEONY GOES ALONG SINGING.

Peony came down the Blue Ridge merrily singing. First and foremost, let me say, in a few words, how Peony looked. She was a little girl of ten or eleven, with a round ruddy face, curling hair of a dusky auburn, and a jaunty, careless bearing. She was clad in an old, ragged gown, of the coarsest texture, and the torn and dragged skirt scarcely reached to her ankles; below it two little red, unwashed feet, without shoes or stockings, plainly revealed themselves. But what did Peony care for shoes or stockings that beautiful day? The sun was shining very warmly; the tall trees were full of birds' nests—if she could only climb so high!—and the grass felt nice and soft to her feet, and did'nt hurt them like the ugly pebbles and stones of the highway! Therefore she went along singing; but her song, though so merry, was not a pleasant song! No, rather a woful song—so merry was it—as the light in her eyes was a woful light for all its brightness!

On by cottages shrinking back from the road, and tall mansions raising proudly their white walls amid bright waving foliage and flowers: on by the murmuring stream and the little bridge went Peony singing. She went by all carelessly, toward the village where she was to have the black bottle under her arm filled for her father.

Just as she came to the bend in the road, from which the white houses of the town were visible, she heard behind her the hoof-strokes of a horse, and, turning round, saw a tall, elderly-looking traveller, who had just emerged from a by-road, and was leading a horse evidently much fatigued. Peony scarcely complimented the stranger with a second glance, and went on her way again singing like a forest bird.

"My child," said the stranger, in a mild voice, "you sing very merrily."

Peony turned round and stopped. The traveller joined her, and patting her kindly on the head:

"What is your name?" said he.

"Peony," answered the child; "please sir gi' me somethin'."

The old man sighed.

"Give you something, my child?" he said.

"Yes, sir, please. I'm poor and aint had nothin' to eat for—for—ever so long," said Peony, assuming a whining tone, but cunningly glancing from the corners of her eyes to see what effect her eloquence had produced.

"Nothing to eat!" said the stranger, involuntarily putting his hand into his pocket; but suddenly checking himself, he sighed again and shook his head.

"Here, here too!" he muttered, "I am indeed wanted."

"What did you say, sir," said Peony, whining; "did you say you'd give a poor child somethin' to buy some bread to eat?"

And perceiving that the stranger, in his pre-occupation, had not observed the bottle she carried, Peony slipped it dexterously beneath her apron, and assuming an innocent look, glanced again at her companion.

The stranger looked at her attentively and sadly. Deep commiseration was written in his melancholy eyes, and for a moment he appeared to be sunk in thought. Then turning again to the little girl:

"My child," he said mildly, "do you know who made you?"

"No, sir—I dunno."

"Has no one told you this much, even! Are you ignorant wholly of your Maker?"

"What is ignorant?" asked Peony.

The old man bowed his forehead.

"Do you not know, my daughter," he continued, "who made the earth—these trees—the stars in the sky—every thing around us?"

"They growed so, I reckon," said Peony, in her little tinkling voice.

"Have you never heard of your Saviour?"

"Oh, yes!" said Peony, proudly; "yes I have. That was Washin'ton, the saviour of his country. I've heard father say that."

"God pardon us!—and this is Virginia in the nineteenth century! My child, have you no conception—I mean, can you tell me what your life is for—why you are living: tell me not that you are wholly darkened."

"I aint darken'," said Peony, puzzling her brain. "I live to wash dishes, and go to town for father."

"And for nothing else?"

"I dunno. What else am I livin' for? Oh, yes!" she said, struck by a sudden thought, "to hunt birds' nests and make dams in the run."

"Do you know what State this is?"

"Oh, yes, it's Squire ——'s 'state. He lives up there in the big house. I was in it once, beggins, and oh! how rich and fine every thing was! They was all sorts of pretty things on the table, and soft carpets on the floor; and they give me

some nice coffee, and when the readin' time come, they let me kneel down on a *real* mahog-'ny cheer."

Peony seemed carried away by enthusiasm, as she mentioned these wonders.

"And do you not remember, Peony," said the old man, mildly, "the name of Jesus at the reading?"

"Oh, yes—Him that died on a cross; but I disremember where."

"God pardon us," ejaculated the old man again; "surely we can expect nothing but his curse!"

"Curse, sir," interrupted Peony; "did you say they cursed there? No, they don't, though. Oh! Squire — and Miss Annie and all are too rich folks for *that*. Father and we all curse; though for that matter I don't like to, and I tell the boys it's wrong. Oh! *they* don't curse. They live so nice and easy; and have such nice things to eat; and such warm beds; and the fine horses and carriage, and all—*they* hav'nt nothin' to curse for!"

"Yet there is something better than fine meats and beds and carriages, Peony: education, knowledge, and purity of life. If you have these—and God vouchsafe to you these, and more—a change of heart!—the carriages and horses and all, would not make you half so happy."

Peony didn't seem to understand, but shook her head with extreme doubt, whether anything whatever could be half as pleasant as the Squire's rich things.

"Peony," said the old man, "have you never heard of heaven?"

"Yes: that's heaven up there over the trees."

"But have you never heard who live there—exist forever there?"

"The stars, I reckon, does," said Peony, thoughtfully.

"And where do you think you'll go when you die, Peony?"

"Father says we'll all go to hell together," replied the child, gaily.

The old man bent his head.

"Ignorant of her God," he murmured; "ignorant of Jesus and his law—worse than a beast of the field in this, our boasted age of enlightenment and civilization! Oh, yes! they 'perish for lack of knowledge,' and we do not move a hand to preserve *these souls*!—they grow in baneful ignorance from day to day; and this life, which is but a series of coarse gratifications of the senses, we look upon, and let be, still! God grant that here also some good may be done—that my labors may bear fruit, grant me, O Father, zeal and strength!"

Then turning to the child, the old man asked again her name, which he took down in his note-

book, to Peony's profound consternation; and still conversing, they entered the town. At the tavern, the stranger called for pen and paper, and was about to write to the child's father, when Peony informed him that her father could not read. Again the old man sighed; and laying down his pen:

"I will call, my child, and see him then," he said. "Go, and God bless you!"

II.

PEONY RETURNS STILL SINGING.

Peony ascended the Blue Ridge, singing merrily, as when she came down—making, indeed, the forest resound with her clear, birdlike carol. But in that song, there was scarce the degree of *sentiment* discernible in a bird's note—in the robin's, the partridge's, the skylark's. For the robin, when he hops and chirps, and turns his bright head from side to side, seems to be telling the world of his forest travels;—the partridge, perched on some rock which rises above the harvest field, discourses plainly, in his bold, defiant call, of peril from wandering hunters, and of the forest shelter near;—the skylark soaring above the mists, which lie upon the morning earth, means by his clear, sweet note, you may readily imagine, "I but revel here in the bright matin light, to greet the fresh morning, before I sink once more to my nest in the fern below."

But Peony's joy was merest joy from her bounding blood—had in it nought of *sentiment* whatever. It expressed nothing. It was the voice of her exuberant health; her thoughtless mind; her brain—God save her!—which like an empty vessel, resounded loudly at every touch, and all the more for its emptiness and utter vacuity.

As to any effect produced upon her by the questions, and sighs, and pitying glances of the old man—there was no effect whatsoever. His words had fallen on barren—worse, on untilled, rocky—soil, and had not taken root: even so much as impressed the surface, of that unpropitious earth. No cultivation had prepared that soil, no note had even been taken of its existence in the great sum of human things.

Just as Peony reached the path which led directly homeward, she saw gathered around a mossy rock, which raised itself above the slope of the hillock she was ascending, a crowd of boys and girls, who seemed by their boisterous gaiety to derive great and unusual pleasure from some object, which as yet was concealed from the child. These children were of widely different ages—from little tender blossoms of five or six, taking their first lesson in a rude school of animalness and coarse recklessness—to the boys

of sixteen and seventeen, who acted as leaders in all countryside rambles, and were looked upon as worthy of the highest admiration, respect and fear. They were all coarsely clad—the girls in cheap, poor lindseys, which were scarce long enough for decency, and revealed, above, freckled and sunburnt necks; below, stockingless feet: the boys in old, cast off clothes, a world too large or too small, torn straw hats, and ragged, slipshod shoes, which were mere parodies on *real* shoes.

Their freckled faces, half covered with disordered hair, were lit up, as Peony approached, by coarse animal enjoyment; and—alas for her! the poor child went to meet them with a face which was worse to look upon than any there.

III.

THE CAUSE OF THE ASSEMBLAGE.

At sight of Peony they all set up a shout of welcome: for our little heroine, (such for want of a better she must be,) was a great favorite with all the neighborhood—as far as the children went. She was as wild as the wildest boy on all mischief excursions; she scarcely had a rival in bird-nest hunting; and still there was about her at times a softness, and especially a dreamy manner and look, as of struggling wondrous thoughts within, which attracted the boldest, equally with the young and yet unhardened.

Peony advanced into the throng, humming gaily, and closely holding her bottle;—she well knew the penalty of breaking or losing *that*. The cause of all this merriment and uproar was at once apparent to her. The eldest boy of the party had chased a ground-squirrel into a pile of stones, and then assembling his companions, had made them toss one after another all the stones away, until the poor animal, deprived of his refuge, had sprung out. Then the boy in question had struck it heavily with a stick—so heavily, that both hind legs had been broken by the blow. The squirrel lay now writhing on the grass before his tormentors. At times he raised himself and slowly dragged himself along by moving his fore feet, and consequently his hind legs trailed, so to speak, upon the ground. His large, dusky eye, was enough to cause commiseration in the most hardened.

But the party were far from feeling such commiseration—least of all, Peony. She laughed and shouted louder than them all at the poor animal's contortions; and when he turned upward his complaining eyes upon his enemies, Peony liked to have dropped her bottle in the excess of her mirth. Suddenly a project seemed to strike her; this project was suggested by the stripes

upon the animal's back. She would harness him! No sooner said than done; and in a trice a coarse piece of twine was tied round the squirrel's neck, and,—brought along on each side,—placed in the hands of the youngest of the party. Then all collected switches and commenced whipping the squirrel to make him move.

For all the pain, however, he moved but slowly—his wounded legs disabling him completely. Peony grew angry. It was plainly a sham on his part that they should have no fun;—so catching violently the strings from the little child, she drew them tightly around the animal's neck. It writhed, thrust out its tongue and expired.

Peony burst into a roar of laughter.

IV.

PEONY TASTES OF THE FORBIDDEN FRUIT.

With the death of the little animal, all "fun" from that quarter disappeared, and the party began scattering themselves through the woods in search of birds' nests. Some hastily manufactured pin-books to fish for minnows in the stream which gurgled by in the warm, laughing sunlight; others rambled off in search of sloes and berries; none paid the least regard to the beautiful flowers they trod upon at every step, to the fair cloud-shadows which made a fairy-land of valley and river, or to any carol of the sweet-voiced birds, which made the woods and the air vocal with their merry melody. What had they to do with birds, except to kill them and destroy their nests;—with landscape beauties which afforded them no "fun;"—what did it signify to them that God's great wealth of summer flowers was poured out from the lap of nature on every meadow, laughing in the heaven-light; on every streamlet's bank, where they were mirrored clearly in the azure vault below; on every sunny knoll; in forest glade; over the whole earth, hopefully awaking? Flowers were not good to eat, like fruit; or fit to "play with" like squirrels and birds; no sensible person cared for flowers!

So Peony thought, and so thought all. They were bound on far different errands than gathering flowers; and with descriptions of what they were going to do, they endeavored to wile Peony away to go with them. The child felt a powerful, almost irresistible inclination to accompany them: not for a moment would she have hesitated, had she been rid of the bottle. She must, she knew, carry that home at once.

Now Peony was not actuated, in thus resisting the temptation, by any objection to disobedience of her father; not the least in the world! She was afraid of the consequences which bitter ex-

perience had taught her would ensue. She therefore refused to accompany the bird-nesting parties, or the fishing-parties, or any whatsoever, and took her way homeward.

As she went along, Peony began to reflect,—if the word reflection may be applied to any operation of her mind,—on her father's habits. When the bottle is empty, thought Peony, he looks angry and gloomy; he curses and quarrels with mother, and beats us all if we say a word to him. He looks just like a thunder-cloud! But when he has drunk of this, he is changed entirely—he is gentle and affectionate, laughs, and kisses me, and calls me his “dear little daughter,” and seems, oh, so happy! How can the bottle do all this? “I will try for myself,” said Peony aloud.

This was not difficult, as she had the magical bottle under her arm, with no one to see her. Peony looked warily around on every side—everywhere but toward heaven—and the stream was near to supply the water which she knew was necessary. So she took a large leaf and crimped it into a forest-cup, and pouring some whiskey into it, which she mixed with water, drank it. The taste was harsh and burning, and the liquid seemed to have scorched her throat. Her eyes filled with moisture, and she almost dropped the bottle, so dizzy did all things suddenly look. This soon passed, however, and with a draught of pure water, she washed the burning taste from her mouth, and continued her way.

As she approached home it seemed to have changed entirely since her departure early in the morning. It did not look so poverty-stricken and unhappy. She felt in her heart a new and strange sensation, which she could no more have explained, than she could have explained the mist which seemed to wrap everything. She saw her father's face at the door, wrathful and impatient; she put her hand to her head and reeled. She was only conscious after this of dropping the bottle which broke to pieces, and exclaiming “Father, father,” as her mad father struck her; and after this all was a blank to Peony.

V.

PEONY GOES ALONG WEeping.

Since Peony's meeting with the stranger, two years have past. She is now thirteen.

Again, on a beautiful morning, when the grass is green and soft, and the tender flowers look up and smile, and the fair trees wave in the joyful upland breeze, Peony goes down the mountain-side. She is not the Peony she was in those long-past, dimly-remembered days, when we

first saw her one bright morning rambling along and so merrily singing—not that Peony outwardly any more than within. She is clad in a pretty little calico frock, cleanly washed and spotless. It fits beautifully, for did not the Master's wife herself show little Peony how to cut out and baste, and sew and line it, and finally, herself, put the finishing touch to this wonderful, beautiful frock! And does not Peony boast that the trimmings are of her own selection; and the little pocket, from which peep pieces of calico, and scissors, and needle case, and a nice little handkerchief, her own peculiar invention? On her feet are strong, good shoes, which show plainly her neat, white stockings; round her neck is a red riband, confined by a little anthracite brooch, given her by Robert, (he was present by-the-by at the squirrel's death that day;) and a neat school-bonnet covers her curling auburn hair, once so wild and tangled, now falling neat and well-brushed around her face, and on her shoulders below her hood. On her arms swings a satchel woven of waterflag leaves skilfully by Robert, and meant by that young gentleman as a true-love gift;—in her hand, covered with a thread, openwork glove, many-colored, (the Master's wife taught her to knit too,) she carries an open school-book.

Peony was weeping bitterly. So bitterly, that she passed unregarded the sweet-briar she had watched day after day, counting its buds, and rejoicing in each new shoot;—saw not the mossy rock where she was wont to study her lessons in the long, bright afternoons;—heard not the voices of the myriads of bright-winged birds which circled, and darted, and rose and fell upon the air-billows up above her, and seemed to have but one occupation in the wide world,—that, to bear away on every side the perfume of the opening tulip-tree flowers, that it might so be scattered everywhere for Peony and all! Peony neither saw nor heard what usually attracted so strongly her attention. Why was this?

On that morning her father, who had wholly given up his intemperate habits, and grown healthier in mind and body, whether from shame at revelling, as he had been long, in brutal animal excess, before and in the presence of this little, pure child, or other cause, no one can tell—on that morning her father had relapsed into his old ways, and in the fury of intoxication struck little Tommy, and, they thought, much injured the child.

Peony wept for this, and could not refrain from weeping more bitterly the longer she thought of it. She saw ever—it could never pass away—the whole; and not the least part of Peony's grief, were the evil feelings of her own heart, which rose and swole with agitation.

The letters of the book she held were blotted by her tears; and everything around her was as indistinct as on that morning, yonder by the brook: Peony turned aside and hurried by the spot! She came thus toward the school-house alone, but was met suddenly by a merry, laughing boy who, crying "There's Peony!" and gaily holding up a bunch of flowers, ran toward her. She dried her eyes hastily, and covered her face as she met Robert, and they walked on, he merrily talking; she trying to answer his questions without betraying by her agitated voice her secret.

And thus they came to the school-house.

VI.

THE MASTER AND HIS SCHOLARS.

The school house was a small log building in a glade of the woods, with large windows, which, at night, were closed by wooden shutters with leathern hinges. Not far off was the playground, where the children went when school was out, to play; and near by, stood a large birch tree, from which alone, the Master, with a laudable respect for ancient tradition and usage, cut his switches, or more classically, "rods."

As Peony and Robert entered, hand in hand, a busy scene presented itself to their eyes. Ranged on benches round the room, and leaning on the long continuous desk fixed against the wall, the scholars, boy and girl, might be seen, engaged closely at their tasks. Some were fathoming the mysterious depths of arithmetic, with scowling brows, hands buried in and tugging at their hair, and persevering though unconscious attempts to dog-ear still more completely their books: others, with many-colored maps before them, were travelling around the world, stopping at the Sandwich Islands, or sailing by Australia to the Indian ocean: others still, painfully striving to copy the Master's bold heading to their copy-book pages, (hair-stroke up, broad mark down,) and in the effort, were expending an amount of energy, mental and muscular, sufficient to merely compose some new *Novum Organum*. There were exceptions, it is true, to the almost universal industry, and it was observable that these exceptions were either girls who had grown weary over problems in arithmetic that "wouldn't come out right," or gallants who insinuatingly edged themselves toward their sweethearts, only to retreat with precipitation at sight of the Master's eyes turned on them.

The Master sat "proudly eminent" on a rostrum against the wall, a desk at his side, and before him, a class who had no eyes for anything

but the dreadful rod, which they faintly hoped might not descend upon them in requital of their neglect of study.

As Peony and Robert entered, they became conscious that it was long after school hours, and the Master seemed of the same opinion.

"Peony," he said, severely, "you are half an hour after school-time. Why are you so late?"

Peony bent her head, and a burning blush, suffused her whole face. Then her eyes filled with passionate tears.

The Master was a man who divined quickly. He knew—could not but know from his knowledge of Peony—that something had happened, and rising hastily:

"Take your seat!" he said, "and come more punctually to-morrow. Now, Robert," he continued, as Peony went sorrowfully to her seat, "why have you come after school hours again, sir?"

Robert fidgeted, and looked at a flower he had in his hand, as if it was an object of wonderful interest.

"Answer, sir," said the Master.

"I won't tell a lie for it!" the boy suddenly answered, "I went to get some flowers."

"Recollect," said the Master, sternly, "that whoever tells a lie here, will receive the worst and most disgraceful punishment possible. Flowers for whom?"

Robert remained silent.

"Answer, sir," said the Master, looking round him.

The boy only became more sullen, and blushed. The Master saw the flowers in question, blooming from Peony's satchel, and smiled.

"You will remain this evening for one hour after school, for time lost this morning," he said "not for gathering or giving flowers, sir. I object to no one's doing so. It is not in the rules. Next class!"

At luncheon, the Master beckoned to Peony, who was going out with the rest; and, to Robert's great indignation, "went and kept her in all play time," as he expressed it.

Still, for all this keeping in, Peony went home with a lighter heart that evening, blessing the kind good Master.

VII.

FOR A GREAT PAINTER.

Peony felt more sad and lonely, the nearer she drew toward home; home, which should be surely not a place for a little child to shrink from with

a sort of fear! She felt all the baneful effects of that ignorance and vice in which they had grown up—all beside herself and her little brother—as beneath the withering shade of a upas tree, as in the pestilential miasma of a morass which choked the life from out them: worse, annihilated hopelessly in those on whom they were permitted to do their work, the purity, the innocence, the bloom and joy of life forever. She thought now with a sort of shudder of her own life, when the Master met her first, and spoke so pityingly, (which she but laughed at and forgot,) and prayed to God to give him strength to change her unhappy nature. Her whole school life came to her, and this gave her strength to go and meet her father.

He was not there, however. He had gone out with his gun, her mother assured Peony, and said he would not be back that day. Little Tommy was not hurt by the unhappy act of his father, and he was running about now, gleefully, and making letters in the sand as Peony had taught him. He could almost spell sister's name now! and so the night drew on with the child's laughter, and the shadows falling on the sunset, and in Peony's breast a struggling hope.

Her father came back early, and as soon as he saw his Peony, he took her in his arms, (Tommy, too, had got there somehow,) and kissed her, and laid her head upon his breast. Peony burst into tears, and only sobbed her joy at seeing him again the altered man he had been for nearly two years. Since that unhappy time, his whole form had changed for the better, as, indeed, had everything about the house; which was no longer poor and mean and dirty, but cleanly and neat. The father had changed, however, more than all. He was now a hale, strong mountaineer, with muscles as hard as oak; and not the weary, murmuring invalid of the old time, who complained that everything wore him out, and could not walk a mile without fatigue. His eye was bold and bright, his face cheerful and hearty, his long, white beard, and high, clear forehead, gave him the appearance of a patriarch. None so strong as he now! none so looked up to and respected among all the mountaineers!

And Peony had caused this change throughout! Undoubtedly she had! She had lent an attentive ear to the Master's directions, (that worthy Master who saw all,) and gradually the place became changed, as Peony herself, was changed. The house was neat: the ground annexed to it was better tilled: the father had given up his bottle gradually, and at last wholly: a newspaper, borrowed by Peony, might often be seen upon the rude but neat pine table, or in Peony's hands at evening, when all—grouped around her—listened. The whole was changed,

and Peony had done all—a little child, but strong in faith and hope!

After embracing Peony tenderly, and kissing his wife and little son, the father took the bottle and broke it, declaring he would never more touch it or any such. Then pointing to a deer he had brought on his broad, strong shoulder from the woods where he had shot it, he told Peony that they would sell it and buy some good books. Peony rejoiced so much to see her father once more gentle and tender! She felt such a rush of gaiety and joy, that she all at once, proposed that she should give her father a lesson in reading, or rather, spelling! To this, the old man consented with great heartiness and pleasure; and, simple as the child who sat beside him, he betook himself to gravely spelling in a spelling-book which Peony brought at three bounds, from her little room up stairs.

As the fair morning-light of the glad, early summer, burst upon them there, and lit up, as with a golden halo, that little child's pure, innocent face, and bright auburn curls, and happy smile, and sparkling large blue eyes, and white arm, resting on the spelling-book; as it lit up, too, the old mountaineer, his bulky shoulders, large muscular hands, his grey hair, cut close at the temples, and his long white beard, which fell upon his breast;—as the fair morning light fell on them thus, the little child teaching the aged man, and both, so earnestly and simply engaged, they might have afforded to some master-painter a subject which his imagination sought in vain.

Peony changed all—but the FREE SCHOOL changed in all things, Peony! They were two different persons, were they not—the Peony, who shook with mirth at a little animal's suffering, and begged in beggar-garb, upon the highway, and that Peony who, snatched from ignorance and vice, taught her old father there in the glad morning light?

VIII.

A SUMMER RAMBLE.

One Saturday, a merry company of boys and girls spread themselves far and wide along the mountain side, in merry play. The Master was forgotten—he was far, very far, from the thoughts of those jubilant urchins and young maidens, as they ran after birds'-nests, and then pleaded for them that they might remain untouched, just when the excitement of search was over, and that of pillage about to begin; and gathered the tender little wood-flowers, faint and pale—like the rich, blooming, magnificent queens

the meadow yonder; and skirted the merry stream which tripped on gaily; and finally crossing it, on a mossy log, (which gave the little maidens a good opportunity to cry out and be afraid of falling in,) came to the spot selected for their pic-nic!

They were neatly clad, and each had a bunch of flowers—be sure of that—and were busily engaged in making necklaces of the little steeple-crowned-hat-like meadow buds: and breaking honey-suckles to get at the honey; and holding butter-cups under each other's chins; and writing names with pins on sweet-briar rose leaves; and doing a thousand other foolish, happy things, as chasing butterflies, and challenging each other to races, and running like little merry-footed fairies, with bright hair streaming, and bonnets thrown down carelessly on the ground.

These little poor children, no longer rude and coarse and ignorant, but moulded by the worthy Master's hand, delighted now in innocent, gentle play, not in tormenting animals and all unworthy sports. Before, you might have sadly pondered on their fate, and seen them, in imagination, grow up, rude and ignorant—the boys to brawl and drink, and bully on the court house green, till the strong law overtook them—the girls to that precarious position of ignorance, which none can ever feel satisfied, will not ripen into vice. Now you are hopeful for them of a happy, because a cultivated life—mere animals no longer, as to the high attributes of humanity, you see that a moral and pure existence is offered to them here, and a heaven to look to hereafter.

They rambled merrily, after eating the good things in the big basket, and it was evening when they returned homeward. It had been a happy day to all, and as Robert had attended exclusively to little Peony, she could not complain, at least.

Another sort of complaint she did make, however. "She was weak and faint;" Peony, indeed, was ill.

IX.

PEONY GATHERS HER BEAUTIFUL FLOWERS.

The summer waned and faded—for its bloom and joy and glorious splendor could not last, struck by the fresh autumn wind. The radiant morning sun shown on far fewer flowers than he had met with on that happy day when Peony and her companions rambled merrily along the stream, and over the hills, (though not so "far away,") and in the vast old forest. The noon-tide glory streamed through the wood-roof on yellow leaves, already fallen, and the maple had a

fire at his heart which wrinkled and burnt away his foliage. The golden sunset lingered still, but shone not over such fair summer scenes; the glades for happy children; quiet nooks; and streams that gently washed bush, grass-plats, and tall flowers, that went down to their margins to see heaven reflected there, and dream *they* were in heaven!

And Peony waned with the waning summer. Faint and pale as a poor little flower, she lay quiet and resigned upon her bed, only turning her eyes from the landscape, seen through the window, to the Book, which she had so often read from to the Master's wife, on quiet Sabbath mornings, at the Sunday school.

It soon became known through all the country side, that Peony was very sick; and her play-mates in the old days, (those days seemed so far from her now!) sent gifts to her, of pretty books—purchased with miserly savings from little sums they earned: and sweet-scented tender flowers, and carvings, which did honor to the artists, and white plaster mouldings, bought from wandering Italians, of praying children and blooming Coresses, and myriad little things which—tender hearts!—they thought would give her pleasure. Sometimes they came in person, and would sit timidly at her bed-side, watching her fair pale face, round which flowed her long golden hair; only too happy, could they hand her water, or a book, or make her smile, with some neighborhood news, repeated with a subdued, earnest voice, and stolen looks. Robert, Peony's especial cavalier on all occasions, was often there, and many times, Peony had long, pleasant chats with him; and when his voice trembled at the thought of losing her, would give him gentle, hopeful words.

And so the summer waned and faded with its radiant mornings, and its noon-tide glory, and its golden sunset, lingering to the last—and Peony, with her mother's hand in hers, waned with the waning summer.

The Master and his wife came often to see her, and his face was ever a joy and comfort to the child. He talked to her of great hopeful truths, and prayed at her bed-side—all knelt, praying in *their* hearts, too—and supported her with cheery smiles and merry tales. The father seemed borne down, all at once, by age:—his eye was darkened; his cheeks worn away; his lips gave forth but heavy sighs, in answer to his wife, or any one who spoke to him. Peony was never gloomy; her face was rather, at all times, calm and cheerful, and her eyes would often beam with the light and joy of one who wanders in glad thought, over blooming, flowery fields, in the early May.

And so the summer waned, and Peony waned with it. One evening the master came to see her, and taking her little thin, white hand, he talked to her of all the happy scenes of the last two or three years; and read her some hopeful verses, which fell from his lips like jewels in the fairy tale. Anon, he told her of the love all bore her, for her gentle, loving, innocent life, which none could fail to know of. And he pointed to her father, *reading*—so forlornly!—and her mother, trimming prettily, a white gown for her, though the tears would often dim her eye-sight; and anon, the worthy master called little Peony's attention to a crowd of children, who were coming gaily up the mountain side, to see her;—bearing flowers for her.

Peony smiled, and nestled closer, on her pillow, toward the window; and they saw her and set up a shout—a glorious, loud-resounding, a triumphant shout!—that echoed from the hills, and rolled far down into the valley.

“Peony! there's Peony!”

“Dear Peony! as sure as I'm alive!” they cried; and in excess of happiness at seeing her as she ever was to them, smiling, and beautiful for her goodness, they threw up their caps for joy—those merry, laughing children!

“They bring you flowers, my daughter,” said the Master, pointing to Robert, who hastened on amid the foremost—lit up by the fair, bright sunset—and carried in his hand a wreath—for Peony! for Peony! who else!

“Oh how beautiful they are!” said the child, gently and dreamily, “what are the heavenly flowers the angels gather, mother—how lovely they must be?”

The father wrapped his head in the covering of her feet, and pressed his pale lips to them.

“I hope and trust that I shall go to heaven, mother,” she murmured, “I hope and trust I shall, for my Saviour died for me too, with the rest: for me, a little feeble child.”

The golden sunset waned on the mountain and the children: on Robert, who was standing at the chamber door, behind her mother, and father and the Master—and on Peony.

“Beautiful flowers,” said Peony, faintly, moving her head and gazing on them, “everybody is so good to me:—a little child like me.”

He treasured them for evermore, those words! he wore them in his inmost heart through life—he died with them on his lips!

The Master took the wreath from him and laid it on her bosom; then fell upon his knees, and sobbed and prayed. The summer and the sunset and the child, had waned and died away together.

April, 1852.

MICHAEL BONHAM: OR, THE FALL OF BEXAR.

A TALE OF TEXAS. IN FIVE PARTS.

BY A SOUTHRON.

PART IV.—SCENE I.

Night. Within the Ramparts of Bexar. The sentries lie sleeping by the gate. Enter Bonham and Crockett with the keys.

Bonham. The gates are ours, the sentinels asleep—Your work is ended, comrade, barely ended—Milan is on his march. In three hours more Comes the grand struggle. Meanwhile for the mask; You, garb'd as the Camanche, are secure, In silence; but beware of speech to any—Your tongue were fatal to us. You can play, The masker, as a hunter, happily, By signs and action;—but the tongue, the tongue; Keep that in bonds, dear comrade.

Crockett. A needful warning enough, major, to an ex-member of Congress. But if I was Quincy Adams now, you would lecture me in vain. He, poor fellow, can't help his tongue. But the hunter who has properly learned his rifle to make his speeches, knows pretty well when he ought to keep silent himself.

Bonham. Do so, to-night, and all goes as it should. Now to your preparations. Bring your weapons, Be in full costume, as an armed Camanche, The masque will sanction it. Beneath my cassock, I am a Texian. When you hear my bugle, Make answer with your own. 'Twill waken Milan's And the full chorus of our shouting comrades Will waken Bexar, not again to sleep, 'Till she or we are silent, or subdued. Away! 'Tis victory or death to-night.

[*Exit Bonham.*]

Crockett. Well! Who's afraid of victory! Not I, And as for death—we'll call it victory.

[*Exit Crockett.*]

SCENE II.

The chamber of Donna Maria. She is preparing for the Ball, with Jacintha in attendance.

Jacintha. There Señorita, you are ready. Truly you are a princess. The great-princess Papantzin, whose dress you wear, never looked half so beautiful in the times of Montezuma. You will win every heart in Bexar.

Maria. Have you done your best? I tell you, Jacintha, my fate hangs upon this night.

Jacintha. Oh that's what you've said a thousand times before.

Maria. But never 'till now in earnest. On this night I peril all my hope.

Jacintha. What! to a man?

Maria. Ay! but one among a thousand. But go forth,

See if my cousin's ready. I would see her.

See if she's ready! That I know. She is not.

[*Exit Jacintha.*]

And will not be to-night. The blow I've struck,
Will keep her in her chamber. To make certain,
'Twill need another. I will urge upon her
A frank submission to her father's will,
Show her the hopelessness of any struggle,
Dwell loudly on the sinfulness of passion,
That wars with filial duty; and in painting,
Make doubly odious, to her shuddering spirit,
These nuptials that she loathes! Ah! if I err not,
The arrow from my bow, already shot,
Sticks fast and deep, and, humbled in her terror,
She keeps her chamber close. The *Bal Masqué*
Shall be my field of triumph. Do I look
Prepared for conquest? Are my charms displayed,
In happiest fashion? Is there, in my habit,
My glance, the free array of linked beauties,
The smile that smarts, the danger that invites,
The flowing tresses that, in youthful fancies,
Beguile and lead them wanton,—'till the heart
Clings to the one perfection it beholds,
And knows one faith forever? Are these mine?
Look I, indeed, the princess, born for sway
O'er hearts and o'er affections,—prouder sway,
Than sovereigns over subjects?
—Mock me not—[addressing the mirror.]
Thou bright misleader of the weak heart's passion,
That, through the blinding spells of vanity,
Presents a lovelier image to the owner,
Than charms the stranger's eye. Delude me not,
Bright mirror, nor abuse that easy faith
That woman gives thee still. I must believe thee!
This form, these eyes, this port of regal splendor,
Were made for conquest. Shall it be to-night!
I wait not for thy answer.

Re-enter Jacintha.

Speak Jacintha! My cousin?

Jacintha. Why, Señorita, your cousin's not dressed.
And does not mean to dress for the *Bal Masqué*.

Maria. I'll go to her. Auspicious to my prayer,
The field is won—I have no rival there.

[*Exeunt Omnes.*]

SCENE III.

The chamber of Olivia. She sits in a desponding attitude—her hands crossed in her lap—her head drooping upon her bosom. Duenna in attendance.

Duenna. My child, shake off this sadness. Take the counsel of one who honors the world—who loves you dearly, as if she were your mother. You're too quick, to hearken evil tidings.

Olivia. Stay! she comes!

Enter Maria followed by Jacintha.

Maria. Can it be possible, my dear Olivia,
You do not go to-night?

Olivia, [with a sad smile.] You see, my cousin.

Maria. But why this, Olivia?

Olivia, [reproachfully.] Can you ask?

Maria. Ah! but your father's wishes—well, you know
How much his fond designs—his dearest hopes,
The all that he has schemed for, hang upon it.

Olivia. 'Tis for that very reason I remain.

Maria. Surely you will not then oppose your father.

Olivia. I know not—cannot think. I must have time.
Let us not speak of it now. I sent for you
To see your dress. 'Tis very beautiful.
You look the princess. You were born for conquest—
Will conquer. Go, my cousin; I'll not keep you.

Maria. It makes me sad to see you so—to leave you—
It vexes me, I told you.

Olivia. Let it not.

'Twere a worse sadness, cousin, unto me,
To have a suitor forced upon my hand,
In presence of the goodly company,
Against the natural feeling of my heart.

Maria. Surely, my cousin, you do wrong Don Pedro;
He seems to me a proper gentleman—
Well formed and brave—a handsome cavalier.

Olivia. No more, dear cousin—not to theme like this
Can I give ear. Go you to easy conquest
If such as he find favor in your sight—
I doubt not you will conquer where you choose:
You cannot choose but conquer. You were made
For queenly station—brow and eye commanding,
Stately and beautiful.

Maria. You do but flatter, cousin.

Olivia. Alas! I have no heart for flattery—
You may believe me. You are beautiful,
And will be sovereign in all eyes to-night.

Maria. It deepens my regret for your own sake,
You are not there on mine. I'd have you see
My conquests, dear Olivia. What you say
Fills me with hope. I hasten to secure them,
For you must know that, like Don Esteban,
I too have plots and little stratagems,
And,—but you do not hear me,

Well! I leave you.

Good night. Good night.

[*Exeunt Maria and Jacintha.*]

Olivia. Good night. Be prosperous, cousin.

Duenna. You wish against yourself, my child!

Olivia. How so?

Duenna. Your last words to your cousin.

Olivia. And they?

Duenna. Still wish'd she might be prosperous to
night.

Olivia. Do I not wish it?

Duenna. At your own expense?

Olivia. What is it that you mean?

Duenna. Your cousin's not your friend.

Olivia. Fie, mother; Fie.

Duenna. She knows not friendship. Has not, in her
heart,

A single feeling for you; loves herself,
And has her stratagems to help herself;
Why counsel you to give up Amador,
Marry Don Pedro, at your father's bidding,
Without a word of pleading in his ears,
Though well she knows he loves you in his heart,
Above all other objects? 'Tis my notion,
She loves Don Amador herself—

Olivia. Oh, no!

Duenna. Yes, but 'tis very probable, my child.
The cavalier's a noble gentleman,
None like him in all Bexar—just the man,
That she would like to have. Why should she take
This time to tell you of your father's scheme,
But just to keep you from the ball to-night,
To have him to herself.

Olivia, [reusing herself.] You half persuade me.

Duenna. I am sure of it.

Olivia. Such was my own suspicion, swift and sharp
As summer lightning from the cloud unseen,
But that my heart repelled it in its fondness,
Lest I should wrong my cousin. We have slept
On the same couch together fifteen years—
Linked in each other's arms; we've prayed together,
Confessed our mutual cares to one another,—
Our loves, our fears, our hopes, and still I fancied

The early link that knit our hearts in childhood,
Time never could have broken. Could I think it—
Could I believe?—but no! I will not wrong her
By any doubt like this.

Duenna. You do not wrong her.

Olivia. I will not, but I'll baffle her, if wrong
Lurk in her heart to me. Go, dear Ursula,
Get me the gipsy garb I wore at Rosas;
She has not seen it, will not know me in it,
I'll habit me in that;

[*Exit Duenna.*]

I'll watch her movement,
And see the joys I have no heart to share.
Ah! bitterness, to find the colors fade,
The brightness from the day, the balm from night,
Sweet from the evening air, and scent from earth;
The parent heedless—the friend false—the heart,
In peril and dependence, needing succor,
Yet with no faith in him that offers it.
Nay, Amador, I wrong thee, thou shall have it,
My heart, my faith, my hope, my all of being
Unquestioning if thou wilt. Within thy bosom
I'll place the trust, by father and by friend
Equally wronged—that never questions love,
And looks to love and heaven for all its succor.

[*Exit Olivia.*]

SCENE IV.

*Splendid saloon in Governor's Palace for the Bal Masqué.
Individual masques and groups discovered. They en-
gage in the Spanish dance. Enter Governor as Julius
Cæsar, and Don Pedro as the Grand Turk.*

Pedro. You make a famous Roman.

Esteban. The famous Roman—I am Julius Cæsar!

Pedro. You look the hero famously! But she,—
Where's your fair daughter—how does she appear?

Pedro. You'll find her somewhere, as a nun, in sable.

Pedro. I see a dozen such.

Esteban. Then must you try your wits in seeking her.
I've nothing more to tell you.

Pedro. This Don Amador,
Does he come here to night?

Esteban. Be sure of it.

Pedro. How habited?

Esteban. Nay, nay, Don Pedro, you must pardon me,
That is a question out of precedent.

Pedro. Save in particular cases; this is one of them;
Knowing your admiration for him, I desire
To show him marked distinction, as a stranger,
During the progress of the festival.

Esteban. Ah! that indeed. He comes, then, as a
monk,
There—you will find him in yon group,—dost see him,
His head above the others?

[*Exit Esteban.*]

Pedro, [gloomily.] It is he!
The instinct of my hate had taught me truly.
Now will I set a blood-hound on his path,
Who shall not sleep until his fierce pursuit
Avenges my dishonor.

Enter Canales the Bravo, in the garb of a muleteer.

Canales. You see me here.

Pedro. Hist! 'Tis he! Thou'lt do it? [*pointing to
Bonham.*]

Canales. The monk!

Pedro. He is no monk. He is mine enemy,
The dearest to my hate.

Canales. His grave is dug.

Pedro. To-night.

Canales. Ay! When he leaves the palace.

Pedro, [draws him aside.] It cannot be too soon for
my hurt honor;

His shadow chills my path. He stands between
My heart and all its sunshine.

Canales. Take your sleep—

His shadow will be less before to-morrow!
The sun that sets for him, shall rise for you;
He troubles you no longer.

Pedro, [giving money.] Be this the earnest
Of that which follows when the deed is done.

Canales. Account it done.

[*Exit Bravo who is thence seen to hang upon the footsteps
of Bonham.*]

Pedro. Then shall I sleep . . . and thou,
My proud and powerful enemy,—thou too
Shalt take thy sleep in death, accursed foe!
The first to teach me what it is to tremble
With loss of hope in love, and loss of faith,
In mine own weapon. Be the earth upon thee
Before the smiling sunlight blesses earth.

[*Exit Pedro.*]

Bonham Advances.

Bonham. She fails me—and the hours are waning fast:
Should Milam fail me too.

Enter Crockett.

Ah! my dear comrade.

Crockett. Major, this is famous fine. My head is a
swimming fairly in the blaze of glory, jest as it used to
swim when I looked on old Hickory's. It's wonderful
handsome. I never seed the thing better done at the
White House, even in Van's day, when Ogle got fright-
ened at the gold spoons. Lord, what a shine of dresses.
There's gold and silver enough about 'em to build a
church, not leaving out the steeple. And look at the dia-
monds; I reckon, Major, them's the ra'al grit, jest sich as
we'll git out of the gold mines if we ever git into them.

Bonham. In truth, good comrade, there is much to
dazzle

Such simple eyes as ours. But we've a purpose
That must not suffer mind or thought to wander
From the great duty we have here in hand.
Let not the brightness blind you to the loss
Of proper prudence. See, and smile, and idle,
As the mood prompts you; but beware of speech.
You're a Camanche and a warrior comrade—
No more a politician. Let your speeches
Be only in your actions. For the warrior
Blows are the proper language; swords and rifles
The proper parts of speech. Our eloquence
We will deliver, with due voice, in season,
Through our shrill bugles. Once more be counselled;
Keen eyes, even now, are watching us—we must not
Again be seen together, 'till the moment
When we must work together. Now leave me
And keep aloof with caution. If you will speak,
Choose you some uncouth Indian dialect,
Cherokee, Choctaw, Chickasaw, or Creek,
Either will suit the habit that you wear;
Say little even then. Would you make love,
'Tis but to sign with fingers on the lip,
Sigh hoarsely as a savage might, and mutter
With something of a panther's tenderness,
Whom the fit seizes 'twixt his sleep and supper.

Enough! and now let's separate.

Crockett. Right, Major.
You're always right. We'll make different tracks, then,
And hunt our game apart.

[*Exit Crockett.*]

Bonham. [*Solus.*] I see her not. I know not why it is,
But something seems to speak of treachery,
As if a busy tongue beside mine ears
Kept ever more one croaking chaunt of evil.
But who comes here? so gallant in attire,
Like a proud vessel with her full sails set,
And the gay streamers, from her lofty tops,
Coying with heaven's own breezes.

Enter Donna Maria as the princess Papantzin.
[*Bonham recedes at her approach.*]

Maria. You fly me, father.

Bonham. Not so, fair princess. I but shrink in wonder
At such a vision.

Maria. You do injustice
To the most holy vestments that you wear,
To shrink from mortal sovereign.

Bonham. But, if true,
The lesson that were taught me, you are not
A mortal sovereign, Lady. If I err not,
You rank among that royal race, which perish'd
In Mexico three hundred years ago,—
The race of Montezuma.

Maria. You have read
Our story but imperfectly: the race
Of Montezuma perish'd; but one Princess
Survived, in state of trance, and still survives.

Bonham. Princess Papantzin!

Maria. The same, good father;
And, by the virtue of that sacred trance,
Which keeps her spell'd by sleep, alternate seasons,
She reads your secret.

Bonham. What secret, Princess?

Maria. The heart that beats beneath that peaceful habit
Is scarce so peaceful!

Bonham. In your spells alone,
Lies the deep guilt of its inquietude.

Maria. Could I believe it, Señor. 'Neath that cowl
The soldier's front is hid. That garb conceals
The Cavalier, whose brave but callous heart
Could rescue beauty from the savage arm,
Yet fling it from his own.

Bonham. You wrong me, Lady.
You do not know this heart.

Maria. Oh, would I did.

Bonham. And why the wish?

Maria. Ah, vain, cold tyrant, man!
Wouldst force me to confession? Must I bend,
And, spite of maiden modesty and shame,
Lay my fond bosom bare. The simple wish,
Speaks the heart's secret.

Bonham. This habit, noble Princess!
Your royal state—your ancient family—
The wondrous mystery of your own repose,—
Three hundred years in life, yet blessed with youth,
And beauty—as I doubt not—to this hour,—
Are each enough to guard me from the sin
Of the poor vanity, such as, in your thought,
Has triumph'd over mine.

Maria. No more! No more!—
I am no Princess, Amador—and you
No monk! No monk! I am a woman,—fill'd
With all her passions and infirmities—
Loving as woman seldom loves, and freeing,
Before the man she loves, her secret bosom,

As tame and common love could never free it!
Your arm has saved my life; and in that triumph
Achieved another. Look upon your conquest,
And trample on it with your eyes of scorn,
Or lift it with your love. [*Lifts her mask.*]

Bonham. Donna Maria!

Maria. Ay, Señor—

The proudest heart that beat in Mexico,
Until it met with yours.

Bonham. Why do we meet?

Maria. Nay, tell me not you love, and love another!
Say not that to my cousin's feebler beauties,
Her sad and sighing passion, illy suited
To the brave spirit of ambitious valour,
Your heart is yielded. Know, that, if no Princess,
Such as my habit speaks me—in my bosom
There dwells a regal spirit, whose impatience
Brooks not a rival—brooks not that the heart
It seeks, should not, with ardour like its own
Burn to requite its passion.

Bonham. Dearest Lady,
I am not worthy of this high distinction.
You know me not! My home is desolate,
My fortunes overthrown! My name!—my sword—
My honor, and my will, alone, are mine.

Maria. Why speak to me of fortune? Dost thou fancy,
That she who dares, as I have done, thus boldly,
Beyond the solemn state that guards her sex,
And makes each step, without the narrow pale,
A step along the precipice! dost think,
That such as she gives heed to such obstruction—
Shrinks from the form of poverty, and joys
Only in sleek delights and idle passions!
No, Amador! thy name, thy sword, thy honor,
Are wealth enough for me. If that thy will
Be also thine,—thou hast thy answer ready!
I ask thee not to spare me! Speak thy purpose:
I speak to thee as woman cannot speak,
Save, when her heart, filled with one image only,
Forgets the world beside,—its slavish prudence,
And all its worldly policies,—but one.
If thou wilt take me from myself, I am thine!
And, O! believe me, never heart like mine,
Will cling about thy fortunes,—will partake them,
Through scorn, and shame, and grinning poverty,
And smile at all denial—all save thine!
—Speak to me, Amador,—my own speech fails me!

Bonham. Oh! Lady, how you humble me. In vain
Would I essay to answer thee, in language,
Meet in expression, full of thought and feeling,—
Which love like thine deserveth;—but, I cannot!

Maria. I understand thee, Señor. Thy reluctance,
To speak, is my reproach. Thou hast no answer
For burning words like mine! Thou feel'st the shame
That I should feel! Look on my face once more—
Not for its beauties, Señor! See the tide,
Of crimson, that rolls over it. My heart
Feels just such burning billows o'er it now!
My woman nature—maidenhood's deep shame—
For that the desperation of my heart,
Moved one to bare what others would conceal,
Through pangs of fiery torture!—Hear me, Señor—
Thou knowest my secret.

Bonham. It is sacred, Lady.

Maria. It shall be sacred, Señor. Dost thou think,
That I were mad to leave in mortal keeping
Such secret of my shame. Impossible!
It must be razed from out thy memory,
Pluck'd from thy heart;—lest, in thy future hours,
It serve, when nights are dull, and sports grow tame,
To cheer, with provocation to new mirth,

Olivia and her Lord.

Bonham. You wrong me, Lady—
Nor less your cousin—

Maria. Señor, on a cast,
I set my maiden fortunes—all my wealth
Of feminine hope, and heart and confidence,
Love that was like devotion—truth without fear,
Even of the cold world's bitter mockery!
The fates make war upon my luckless cast,
Through thee, their scornful minister! What more!
Cans't thou not read the dread necessity,
That drives me, where I would not—into hate!

Bonham. Why hate!—

Maria. Or hate, or love, or—nothing!

Bonham. Nay!

This is but madness, Lady.

Maria. Amador!

Farewell!—Hereafter, when we chance to meet,
Thou'lt mourn, it may be, that so fond a heart,
So full, to its own sorrow and o'erflow,
Was slighted off so coldly.

[*Going.*]

Bonham. Lady, stay!

Maria. If thou relentest, Amador, but lift
Thy finger; but if not, no words—no words!
Thy hand still keeps thy side. Farewell! Farewell!

[*Exit Maria.*]

Bonham, [solus.] Was ever such a woman! Soul so proud,
And yet so passionate, was never seen!
So prompt at each extreme; in love and hate,
Equally raging; ready with her life,
To prove her heart's devotion; not less ready,
That heart's devotion set at nought or wronged,
Avenging it with life! I pity her,
From my whole soul; would fear her, but that time
Is hurrying onward to that precipice,
Which, overleapt, between her world and ours,
A mighty track of chasm and cloud prevails,
Must separate our steps, forever more!
Give me the gentler heart, who, loving, trembles
With fear, not less than hope; that has no pride
Save in the loved one; whose humility,
Lofty at lowest, with a grace most winning,
Entreating still, where most it may command;
Takes, as a bounty, its best right, and blessing
For favour shown, is favour'd with love's blessing,
With every show of love. But who comes here!

[*Enter Olivia as a Gipsy Girl.*]

Olivia. Shall I read your thoughts, Father!

Bonham. A hard task,
And a sad volume, pretty sooth-sayer.

Olivia. I like to read sad volumes, at merry seasons.
I'm sometimes sad myself. Your palm, good Father.

Bonham. There! Read it quickly, damsel.

Olivia. Do not hurry me!

Oh, Señor, you're no monk!

Bonham. What am I then?

Olivia. A Cavalier! a gallant gentleman!
And what is more, beloved of a fair lady,
The greatest beauty in this gay saloon.

Bonham. Indeed! But one, my damsel.

Olivia. Oh, me! What vanity!

As if 'twere not enough to win from Bexar
Its highest prize, at once of wealth and beauty,
But you must have a score.

Bonham. But who's the lady, damsel?

Olivia. She who wears
The garb of the great Princess of Papantzin,
She who lies tranced at Mexico, they say,
Even to this hour, still young, still beautiful,

Though twice two hundred years have seen her birth:
—She spoke with you but now!

Bonham. You err, my girl!

That lady loves me not.

Olivia. 'Tis you that err,

Through modesty, perchance, your sex's failing;
I know she loves you! By my art, I know it,
And all that live in Bexar will inform you,
How great her loveliness, how vast her wealth:
But you have seen her; have you not?

Bonham. I have!

Olivia. Is she not beautiful?

Bonham. Very beautiful!

Olivia, [mournfully.] Ah! I knew you'd think so!

Bonham. Wherefore do you sigh?

Olivia. At your good fortune, Señor. You will be
The envy of all Bexar! 'Tis not often
A stranger makes such conquest. Doubtless now,
You have forgot some other vows: I know it:
Some other maid, in secret sighs—forsaken,
For your new passion.

Bonham. 'Tis I that am forsaken!

Were you, indeed, the mistress of your art,
You'd know that true to all my bosom's pledges,
The maid I loved, who vow'd to me her heart,
Has failed me, and is false!

Olivia. She is not false!

Bonham. Ha! Speak!

Olivia, [aside.] Ah, me! my soul; she comes again!
—Senor, behold your conquest, where she comes,
Princess Papantzin. On this talisman,
I close your hand. 'Twill keep you to your faith,
If even in your heart the flame of love,
Burned for another.

[*She closes his hand upon the antique cross, and disappears just as Donna Maria enters.*]

Bonham, [seeing it.] Ah! can it be! Olivia!

She's gone! I'll seek her!

[*Is about to go.*]

Maria. Senor, stay!

Bonham. Princess!

Maria. Nay! not another word of mockery!
You know me as the woman that I am,
Most weak when strongest, or I had not come,
Once more, to bare the weakness of a heart,
Already too much scorned!

Bonham. Cruel Lady!

Ungenerous as unjust. Too well you know
Such feeling in this bosom never yet,
Mock'd the fond heart in yours.

Maria. Hear me, Senor!

I said I had your secret. Until now,
I knew not that, beneath this priestly garb,
Other than gallant Cavalier was hid;
But now, indeed, your secret is my own!
You are a traitor here. I know you now,
A Texan rebel; whose position here,
Dooms him to death, a sudden and a sure,
From hands of hate and vengeance!

Bonham. Ha!

Maria. Dost hear!

Your comrade, the Camanche, has betrayed you!

Bonham. How know you this! By whom! How!
Where!

Maria. To me he has betray'd you. Thoughtlessly,
Beguiled to speak, he answered me in English,
A tongue I little know; but in the ears,
Of keen suspicion, wrought upon by passion,
The understanding quickens: a brief sentence,
Fell from his lips; but that sufficed to show me,
Your secret, and his own.

Bonham. What secret, Lady?

Maria. Would you evade,—deny? Are you not then,
A Texan? One, who, found in Bexar's walls,
Stands in the two-fold danger of the spy
As well as rebel!

Bonham. To other ears than yours,
Dear Lady, it were easy to deny
Connexion with the man you deem my comrade.

Maria. Himself declared it!

Bonham. Impossible!

Maria. How Senor: my own ears—

Bonham. Deceived you, Lady.

Maria. Nay, Senor, that were more impossible.
My heart was on his accents, for I knew him
Your comrade. I had seen you both together,
Whispering in seeming confidence. At noon
You were in close communion on the Plaza,
Too close to seem the common chance encounter,
Of unconnected strangers.

Bonham, [aside.] It needs but time!
How must I play the masquer with the heart,
And lull to sleep the vigilance of hers.

Maria. You muse: You meditate!

Bonham. Methinks it needs,
I should not answer rashly. Grant it said,
This person is my comrade. If I err not,
You are not here in simple mockery,
To tell me of the doom, the shot, the scaffold!
You have a purpose!

Maria. I have a purpose, Senor!
Down woman pride; down, swelling heart; be still,
Ye struggling thoughts of shame, that threaten me,
With worst of human scorn—the scorn of him,
Whose love is all I seek. Oh, gaze not, Senor,
While I declare this purpose. I am come
To buy you with your secret.

Bonham. Do I hear?
You cannot mean it, Lady.

Maria. By my shame,
I do! I do! How low this passion sinks me
To what abasement of my soul and feeling
My sex's pride, my maiden modesty,
I need not more describe! Fatal passion,
That flings me, shameless, on unwilling arms!

Bonham. Let me have time to think—to—

Maria. Not an hour!
Speak in your peril, in your hate, your passion;
With all your doubts upon you; all your fears:
—With thought, you will despise me.

Bonham. But one hour!

Maria. Why a moment! The question is your fate
or mine:

—Your safety from a doom—a death of shame:
Mine from a life more full of it.

Bonham. One hour;
Give me one hour for thought.

Maria. Alas! I give it;
But you speak coldly. You will play me false:
You meditate escape! Oh, bitterness!
That I should sink to this.

Bonham. One little hour.

Maria. Be it so. 'Tis now eleven; at twelve!

Bonham. My life then, Lady—

Maria. Your love! Your love! O, Senor,
I cannot now be generous! Do not hate me,
If, to the very moment of your promise,
In my despair, I hold you! *[Exit Maria.]*

Bonham. Be it so.

The hour must find the answer! I have none.

Enter Crockett.

Bonham. Ah, David, you have ruined me: your tongue!

Crockett. Dang the tongue, say I. I've never been
quite the master of it since I went to Congress. But
Lord love you, Major, how could you hear of it? It was
the merest slip; a fag end of speech; a sort of little end
of an argument. The truth is, I was taken in by that
Queen, or Empress, or whatever she is. In the very midst
of her Spanish talk, not a word of which did I understand,
and so warn't bound to answer, you know, what does she
do, but pops out upon me some broken English about you,
and before I could say Jack Robinson, I had said a great
deal more. I hope there's no harm done!

Bonham. Ay, but there is.

Crockett. What shall be done! Suppose I go and
make love to her, out and out—in airnest.

Bonham. Do nothing. Be in readiness. Be prudent.
Let not your tongue be trapp'd again. An hour
Will end your doubts and mine. Away, and leave me;
Be not remote; but keep aloof from me.

Crockett. Dickins! But I wish 'twas well over. I feel
for all the world as if I was walking in the dark, in a
snake country, every step among stings and rattles. *[Go-
ing, but returning.]* Oh, look you, Major, I'm thinking
you're watched rather closely by that sailor looking crit-
ter, yonder; him there by the urn, or vase, or whatever
fine people call that great drenching jug. You see him!
He turns his head away, as I look towards him.

Bonham. He may mean evil. Keep your eye upon him,
And that may save you from a second lapse.
But let us separate, now. *[Exit Bonham.]*

Crockett. Only give me work to do, if you wouldn't
have me in mischief. That sailor's after no good. He
turns just as the Major turns, and now he follows him!
Well, as there's no lady in the business, I'll play a third.
Any hand but Dummy's, which no man can play after he
gets popular. That fellow's after no good. He dogs the
Major mighty close; but I'll be the dog for him. He shall
have teeth, but no tongue! *[Exit Crockett.]*

Enter Olivia. Still as the Gipsy.

Olivia, [aside.] My cousin does not conquer! Her
impatience

Speaks in her gesture. Whither has he gone?
Ah, there she comes, again! She seems to seek him:
I must not meet with her.

[Exit Olivia.]

*[Enter Maria and Jacintha—the latter as a Shep-
herdess.]*

Maria. Can it be true! She here!

Jacintha. True, Senora, every word of it; and there,
as I live, she's going now! This very moment.

Maria. Where!

Jacintha. There!

Maria. What, the Gipsy?

Jacintha. The very same!

Maria. And they have met: these eyes have seen him
with her;

His hand in hers, conversing with their palms.
Oh! Hate! they love. I see his purpose now:
She flies to meet him. Married in an hour,
He will disarm the anger of the father,
By pleading through the daughter. But I'll balk them;
Come vengeance, to thy work. Away from me,
All weaknesses of love. Though scorn'd, though baffled,
Hopeless in heart, exposed to mock and shame,
Revenge shall yet be mine. Hither Jacintha.
Where did you see my uncle?

Jacintha. With Don José and Don Velasquez, at the
Monti tables.

Maria. Auspicious: follow me!

[Exeunt.]

SCENE V.

A gaming apartment. The Governor, with several persons in military guise, at the table. Don Pedro standing against a column, looking on sullenly. Don Velasquez, of the Cavalry, and Col. Don Sanchez, of the Artillery, at the table, with the Governor.

Governor. I shall surprise you, yet! Upon the red!

Velasquez. The black for me! If I have luck at all, 'Tis in that colour.

Sanchez. Colour of luck for me,
Seems in no colour of the cards to-night.
Methinks, Don Pedro frowns upon our sport:
He does not play.

Governor. Ah, my brave son-in-law,
Don Pedro; where's your spirits?

Pedro. In the red;

If that be deep enough to look like blood.

Governor. You're too bloody-minded! Where's the humour

Of savage thoughts like these? Look to the ladies,
Unless you care to play.

Pedro. Is it not time
That you should look to them?

Governor. Ay, very soon: the hour—
Is close upon the signal! There! [*Flinging a card.*]

Velasquez. And there! [*Flinging cards.*]

Sanchez, [flinging cards and money.] And there
am I. The old predicament!

I'll play no more! [*Rises.*]

Velasquez. An hundred ounces gone!

Governor. Ha, ha! my worthy colonel.

Sanchez. Done, sir, done.

Enter Maria suddenly. They all rise but Esteban, who does not see her. She touches his arm.

Maria. Sleeps Cæsar, when conspiracy awakes,
And treason, far apart, with mask and dagger,
Watches the fatal moment when to strike.

Governor. How's this. What's this. Ha! my fair
princess,—you!

What! with your secrets and your stratagems.

Maria. Even so. Away with me: your ears awhile;
I'll ope them with a vengeance.

Governor. What's all this!

[*Exeunt Gov. and Maria. Scene closes.*]

SCENE VI.

As in Scene I. The Bal Masqué. Enter Olivia hurriedly.

Olivia, [solus.] His life! The life of Amador! A
traitor—

A Texian rebel! He, my love—my soul!
Where shall I find—how save him—from this danger?
Oh, cruel cousin, failing to usurp
The love that was mine only, must thou rob
Him of his life and me of all the hope
That made life precious to me? I must find him—
Save him, or perish with him!

Enter Bonham.

Bonham. My life! My love!

Olivia. My Amador! My heart! You are in danger.
You are betrayed! My cousin, to my father,
Reveals your secret. By a happy chance,
Concealed behind a column in the chamber,
I heard her cruel story—saw the passion

Which, in her face and voice, disclosed the fury
Of woman's passion baffled. She has told him
That, by her arts detected, you confess'd
Yourself a Texian rebel—spy in Bexar,—
You and your comrade. Oh, my Amador,
Even now they threaten. Tell me, is it true:
Are you this traitor?

Bonham. What, if I confess?

Olivia. Ah, me, my heart!

Bonham. The foe to Mexico,
But not to you, Olivia. False, perchance,
To all beside but thee.

Olivia. Alas! my Amador,
What is it that you tell me.

Bonham. That I am true to thee.

Olivia. Are you a Texian?

Bonham. I am.

Olivia. But not a Texian rebel.

Bonham. A Texian citizen! The friend of Freedom,
Rebellious 'gainst injustice—born to fight
'Gainst every tyrant that between the sun,
And man, his victim, rears his giant shadow.
This was the earliest lesson of my youth
Taught by rare ancestors. Among the States,
Honored among the empires of the North,
Stand two fair sisters. On the map behold
The Carolinas! She that nearest lies
To your own land, my love, is land of mine.
Upon the hills of Congaree, I first
Drew breath of freedom. Thence I came to succor
Our friends in Texas. Seeking for the foe,
By Loro's springs, in place of him, I found
A trembling fawn, and Love.

Olivia. My Amador!

Bonham. If still I wage the war with Mexico,
I do it with half a heart—with fettered hands,
For love, that takes the place of hate, disarms
My soul of half its fury. Thou know'st at all—
Dost hate me now, Olivia?

Olivia. Hate thee? Oh, no!
How should I hate thee.

Bonham. Hear me, Olivia—
An hour will make me captive to my foes,
Or see my triumph over them. Even now,
Behold, the crowd is stirring. They prepare—
The women disappear. The masques
Survey us from afar. All things declare
For the approaching struggle. Art thou mine?
Wilt thou be mine?—mine only—let the fates
Declare them as they may!

Olivia. Thine—only thine.

Bonham. Then come the foe. Let the wild storm
begin;

I'm cased against its dangers. In my heart,
Whate'er the evil without, sits smiling hope,
Secure in sweet communion with the thoughts
That wait on happy love. But hasten thou,
And, in the costume of the nun, prepare
To mate with me in flight. Away! they come.

[*Exit Olivia.*]

[*Bonham retires to one side of the stage, leans against a column in an indifferent attitude. Enter on the opposite side the Governor, Don Pedro, Don Velasquez, Col. Don Sanchez, the Bravo, and other masques.*]

Pedro, [to Esteban.] What! shall we scruple now!
Hold parley here,
In presence of the spy?

Esteban. He hears us not.

Pedro. But sees us, and that's quite enough for shame!
If we stand gazing at him through our fears,

When that one cry, from fiery hate should be,
Upon him, Braves, at once!

Esteban. You are too rash:
Leave it to me. I'll manage it, my friends,
So that no danger—to the ladies, mark me—

Pedro. They are all gone.

Esteban. Patience! A little stratagem—

Pedro. And where the need of little stratagem
To take or slay one man? We've but to rush—

Esteban. Indeed! and get his bullet in your brains.
No, no. We'll act more wisely. Go you, Sanchez,
And bring a score of men, with muskets ready;
Meanwhile we'll parley with him.

Pedro. Parley with him:
Parley with shame and cowardice!

Esteban. You're but young, Don Pedro, wait the
event,

And see the uses of my stratagem:
I'll show you reasons for it.

[He leads Pedro and the rest up the stage, while Bonham advances, and rests against a column in the foreground. While this takes place, Olivia, in the guise of a nun, has rejoined him; placing herself on the opposite side of the column upon which he leans, and partly behind him.]

Olivia, [whispers him.] I am here, Amador.

Bonham, [with a glad start.] Ah, faithful! You are here.

Olivia. To die with you!

Bonham. Nay, never say to die. We shall not die;
Life is too precious now to me, my girl,
With such a treasure. I have friends at hand;
Have weapons in my grasp. We shall not perish.

Olivia. Harm not my father, Amador.

Bonham. His head
Is sacred in my sight. I will not hurt
A single hair that claims thy love. But hence;
Hide thee within yon niche. They come.

[Exit Olivia.]

Esteban, Pedro and others re-approach.

Pedro. To falter thus,
With but one foe against a score of us.

Esteban. Ah, but the benefits of stratagem.
You are but young, my son; art brave, but lack
The wisdom that still teaches how to venture,
And calculates the blow before it strikes.

Never press closely on a desperate man;

He drives an ugly bargain for his life,

And gains the odds before he loses it:

We'll parley with him.

[Advances to Bonham, slowly followed by the rest. Bonham retains his position.]

Esteban. Most reverend father, I implore your blessing.

Bonham. You have it, son.

Esteban. Most fitly answered—with becoming grace,
And holy unction. But most reverend father,

There are about me those, my counsellors,

Sage, grave, and potent gentlemen, brave chiefs,

Famous in battle, next in great repute

To him, the warrior more than all renowned,

Whom Fame has styled "Napoleon of the West"—

I say there are, who somewhat doubt your zeal,

Who make some question of your holiness,

And strangely do proclaim you nothing better—

Bonham. Than hungry wolf in wool of meeker beast.

Esteban. How excellently said. But, reverend father,

Though not without some curious doubts myself,

methinks they wrong you much; and, with your leave,

I'd ask you certain matters.

Bonham. Cæsar may speak!

Esteban. Full of discernment! Upon your arm, my father,

You bear the holy symbol of your faith,

But do you ever lift it to your lips?

Bonham, [kissing the cross.] Behold!

Esteban, [aside to Pedro.] He could not do it better,
were he the Archbishop

Of Mexico. Tell me that any heretic will kiss

Holy Cross. I know better.

Pedro. Pshaw!

Esteban. Mark the further progress of my stratagem.
Hem!

And now another question, Holy Father.

Bonham. It needs not, Senor. I will spare you
trouble,

Spare you some breath, and answer ere you ask me—

I am suspected, first!

Esteban. No, not exactly, but—

Bonham. 'Tis so. I see it in the eyes of all,
And hear it in your accents.

Esteban. Nay, good father! You are too quick, but
say that something of this sort is the difficulty, and you
will at once see the propriety, and the prudence, and the
necessity, of accepting my protection! My officers, you
perceive, are furious: it will not be possible to restrain
them; they are terrible as lions in rage, and your only
hope of safety is in—

Bonham. There needs no parley, Senors. Your fierce
warriors,

Are not so dreadful in mine eyes, to make me

Seek your protection. You would have my secret.

'Tis yours! Know me a Texian, and your enemy!

[Throws off the monkish disguise, and appears as a Texian warrior, with hunting shirt, bowie-knife, sword and belt with pistols.]

Esteban, [recoiling.] My eyes! Was ever such a
stratagem!

Pedro. Upon the traitor!

Bonham, [presenting a revolving Colt.] Up on him
with what appetite you may!

This little weapon counts a score of lives:

Each ready jaw is open for its victims.

Who first? Is't you—or you—or you? What, none!

[They severally recoil as the pistol is presented.]

What, Cæsar, are these cohorts from Pharsalia?

Pedro. Oh! shame; shall this one traitor mock us
thus.

Upon him, all at once—but one can perish!

Bonham. And you that one! But ere you muster
courage

For deed so brave, I'll summon to the game

An equal set of players.

[Winds his bugle, and that of Crockett's sounds.]

Hear ye that?

And that? *[Another bugle: from the rear.]*

Pedro. Treason is busy!

Esteban. What a stratagem!

Ring the alarm bell. Bring up the troops;

Fly you, Don José, for the cavalry;

Look, Don Velasquez, for the infantry;

Don Sanchez, see to the artillery:

At once unmuzzle! I will take command.

See you, Don Pedro, to Don Amador;

Let him not escape you. Set upon him, fellows—

Do not fear danger. Fly to it as I do!

[Exit Esteban.]

Pedro, [to Canales, the Bravo, aside.]

Get thee behind him. When we charge in front,

Make in upon him, and with shortened dagger

Make the work short!

Bonham. Ye are slow to quarrel!
Ye lack the violent spirit of your chief,
And do not fly to danger.

Pedro, [aside.] He disappears—
Another moment brings him through the chamber,
And the game's ours!
Ho! my brave fellows, must we stand defied
By one foul traitor! Shame upon this baseness;
Give me your hearts and hands. From all your throats
Send up the cry of death—Death to the traitor!

Mexicans. Death to the traitor!

Pedro, [whistle heard.] The signal! He is there.
Upon him now!

[Olivia shrieks from behind.]

Bonham. That voice! That shriek!

Crockett, [from behind.] Hurrah! She's safe!

[Struggle heard, and blows, within.]

There's for you, leather jacket;—

A feather for your cap, or I'm mistaken!

[Bonham is about to turn, when the shout of Crockett re-assures him. The Bravo is driven in, staggering from a wound in the head, at the very moment when the attack is made on Bonham in front. The Bravo passes between him and Pedro, and receives the shot meant for the latter. At this sight, and the entrance of Crockett, the assailants recoil.]

Bonham. What, do ye pause! Is all your courage gone,

With one poor puff of battle? Lo, we stand,
My comrade and myself, awaiting you—
But two to twenty!

Pedro. Were our weapons equal,
I'd mate with you alone.

Bonham. Ha! say you so? .
Upon these dastards, Davy, like the rush,
Of the flame-torrent o'er the prairie's waste;
Sweep them from sight, while I—This gallant seems
More valiant than his comrades; we must hold
Meet conference together; point to point,
In private. Art thou satisfied? *[To Pedro as he puts up his pistol and draws.]*

Pedro. I am!
Look to it! *[Rushes on—they fight.]*

Crockett. You have the best of it, Major; you've the man,
But there! I'm good for any twenty.

[Swings his rifle over his head, and rushing upon them, drives them out.]

Bonham, [while fighting with Pedro.] Bravo, comrade,

You've done your work to shame me. Now for mine!
But fly you to the Alamo. It is ours.
I hear the signal. I will follow you!

[Presses Pedro back.]

Pedro. Hell's curse upon my weakness!

Bonham, [disarming him.] 'Tis already. Behold!
A second time, my mercy

Has suffer'd you to live. Beware the third!

Pedro. Demonios! I am blasted. *[Exit.]*

Bonham. Now for Olivia,—to a place of safety
She must be borne, and then—my life! my love!

Enter Olivia.

Olivia. Art safe?

Bonham. As love could wish.

Olivia. What mean these clamours, Amador?—that shouting.

Bonham. The sound of combat: said I not, Olivia,
That I had friends and arms? We shall not perish.

Olivia. Ah! but my father.

Bonham. We shall care for him.
But let me bear you to a place of safety.

Olivia. Where?

Bonham. The Convent of La Guayra. Come—away!
The moments now are precious: precious lives
Depend upon them. Fear'st thou me, Olivia?
This Texian rebel, traitor, spy!

Olivia. Ah, no more—
I love thee; fear thee not: will fly with thee!

Bonham. We shall be happy! *[Exit.]*

Enter Donna Maria.

Maria. The Convent of La Guayra!
All is not lost to vengeance as to love;
The serpent now must overcome the dove. *[Exit.]*

END OF PART IV.

Introductory Address, on Opening the Richmond Athenæum.

BY THE HON. JUDGE JOHN ROBERTSON.

(Published at the request of the Athenæum Committee.)

[CONCLUDED.]

So far I have considered knowledge as the source of power in nations and individuals—as a mighty means of augmenting our physical enjoyments. Let us, for a moment, regard it in its moral aspects.

I will maintain no extravagant hypothesis, by affirming that knowledge and virtue are indissolubly united. In the Deity, as already said, this must be so. In Him we cannot conceive the possibility of mental or moral error. But the voice of reason is not always heard, nor heeded by man. She may teach us the way we should go; but we may shut our ears if we will, and follow the false illusions of our passions.

We know the right, and we approve it too:
Abhor the wrong, and still the wrong pursue.

The career of civilized nations furnishes but too many proofs, that knowledge and virtue do not always go hand in hand. Instances may also be readily cited of individuals, distinguished for mental attainments, and yet notorious for moral delinquency. The sad example will occur at once to all, of the profound philosopher whose maxim I am endeavoring to enforce, and who has been described as

The wisest, brightest, MEANEST of mankind.

Notwithstanding this, as a general truth, knowledge must be conducive to virtue; and instances to the contrary, strong and striking exceptions as they are, yet are exceptions which

prove the rule. Let us not evade the full force of the objection. Let us admit that there are instances of nations and individuals, highly cultivated, yet steeped in vice and crime; while, on the other hand, every virtue has been often found among the ignorant and illiterate; still, I repeat, the hopes of the moralist must rest mainly upon the illumination of the mind.

If man were born with a knowledge of right and wrong, all instruction, in a moral view, would be evidently superfluous. But Locke, in his searching analysis of the human understanding, long ago exploded the doctrine of innate ideas. Those of virtue and vice, I apprehend, form no exception. [Our moral duties have reference chiefly to our social relations. Ignorant as we are at our birth, of those relations; destitute of the ideas of country, or kindred, or friend,—nay, even of man himself—it must be equally certain we can have no idea of the duties those relations impose. Yet there is a vague belief in many, perhaps, to the contrary; holding, it would seem, the opinion that we have an innate knowledge of what we owe to beings, of whose various relations to us—of whose very existence, indeed, we are ignorant. There are others, who, conceding the want of any knowledge strictly innate, believe in a spontaneous consciousness nearly as miraculous, or in an immediate revelation from Heaven written on the tablets of the heart, pointing out our moral duties as the occasions arise calling for their performance. Nor is this last opinion confined to the pious alone. Byron, sufficiently sceptical on most points of ethical or religious doctrine, strongly urges this:

Yet still there whispers the small voice within
Heard thro' gain's silence and o'er Glory's din:
Whatever creed be taught or land be trod,
Man's CONSCIENCE is the ORACLE of God.]

Many will think Byron's own life and conduct the strongest argument against the truth of his doctrine, or, at least, the sincerity of his faith. Passing this—whatever difference of opinion may prevail of the true origin or function of what we call conscience, none will deny its existence. The universal assent of mankind, in all ages, testifies to a real and feeling consciousness of pleasure or pain consequent upon our actions, according as they do, or do not, conform to our own convictions of right and wrong. Ancient authors forcibly depict the enjoyment of a mind "*sibi conscia recti*"—and still more vividly paint the horrors of a guilty heart. Juvenal tells us these last are more intolerable than the pangs inflicted by the stern Rhadamanthus:

Trust me no tortures which the poets feign,
Can match the fierce, unutterable pain
He feels, who night and day devoid of rest,
Carries his own accuser in his breast.

But that this consciousness is intuitive—or, as Byron expresses it, "the oracle of God," seems at war not only with sound reasoning, but with facts known to us all. Were there such an Oracle in our bosoms, its responses would of necessity be uniform and unerring; the same to infancy and to manhood; to the savage and to the sage. But is this so?]

The infant in the cradle appears to have as faint a notion of moral obligation, as of its A. B. C., or of the planetary system itself. It seizes without the slightest regard to *meum* and *teum*, on whatever strikes its fancy.

As we grow in years, we are not too apt, if left to the desires of our own hearts, to grow in grace. The proneness of boys to mischief was proverbial, probably long before the days of old Æsop. It is only by repeated admonitions, not always as soft as words, that we come to have a proper sense of moral duty.

Savages are notoriously thievish, cruel and remorseless. The horrible usages, which for ages have existed among them, have already been the subject of remark. [I heard Keokuck, in asserting publicly the title of his tribe to lands on the Missouri, exultingly boast that his fathers, in an incursion against the tribe who originally held them, *had not left a man alive.*]

But not by barbarians only, does this innate or spontaneous consciousness, this Divine Oracle, as some regard it, seem unacknowledged or disobeyed. Its monitions—even the accredited revelations of Heaven itself—have proved utterly inefficient, at all times, to restrain mankind from vice and crime; nay, have often been relied on as justification for the exterminating wars, the bloody massacres, the inhuman tortures, which have disgraced nations boasting of their civilization and piety. No one, it is true, will believe that Pizarro and his followers, when with the crucifix in one hand and the sword in the other they pillaged and murdered the Peruvians, were actuated by other than the basest motives. But we may well believe that the persecutions of the Jews by the Christians—of Catholic by Protestant, and Protestant by Catholic—were often, among the great mass who inflicted them, the result of a conscientious conviction. However we may deplore such delusions, we have no reason to doubt the sincerity of the barbarians who offered human blood to their idols; nor of the misguided zealots, of what are termed civilized countries, who consigned to the flames those whom they piously regarded as the enemies of God. It is difficult to suppose they could have thus acted, had they known or believed they thereby incurred the displeasure of that Being whom they professed to serve: and it is wholly incredible, that deeds so monstrous, so inconsistent, not only

in themselves, but with the divine nature, could have been commanded by the revelations or the oracles of one and the same Deity.

But, it may be asked, if the dictates of conscience, the acknowledged revelations of Heaven, be not sufficient to restrain the depravity of man, is not the fact itself a conclusive argument against the moral efficacy of knowledge? Far from it: it proves, at most, what is admitted—that knowledge and virtue are not inseparable: it proves no more. The cruel persecutions just alluded to, it is true, were not prevented by the superior cultivation attributed to the communities in which they occurred: they existed in spite of that cultivation—such as it was; or more correctly speaking, though existing in what are called enlightened communities, were really the fruits of that abject ignorance which prevailed among the great body of the people. Culture to be efficacious in improving public morals, must be extended to the masses; for in them abides the power, which, according as it is directed, results in social good or social evil. It is mainly to Ignorance that Despotism and Superstition owe the long continuance of their gloomy empire. Conscious of this, the tyrant and the bigot would keep the minds of their slaves in a darkness as impervious to the rays of knowledge, as the walls of their holy inquisition to the light of Heaven. Within those walls Galileo was incarcerated for affirming the revolution of the earth; and it can scarcely be doubted, that Locke and Bacon and Milton and Shakspeare, had they come within the grasp of the pious Torquemada, would have been made chief performers in that mild ceremony, called an *Act of Faith*; and their sinful volumes, with their living bodies, consumed to ashes for the benefit of their souls.

To the same cause which filled the dungeons, and fed the flames of the inquisition—the want of general information—may be traced the shocking atrocities of the French Revolution of 1789. In France, it is true, there were at that period men well educated; some profoundly learned. Science and literature no where had made a more rapid progress. But they were confined comparatively to the few. The many were sunk in ignorance. They had groaned for centuries, under the three-fold tyranny of the monarch, the nobility, and the priesthood, when roused by the “trumpet of the Revolution!” Can we wonder at their excesses? They had suffered all manner of cruelty and degradation. They saw no relief—many still insist there was no other—but by guillotining their rulers and abolishing institutions, which conferred mischievous powers and revolting distinctions. Their oppressors had taught them there was a God; a future state. They regarded the conduct of their oppressors

as giving the lie to their doctrines. From the extreme of fanaticism, which had prompted them to burn and torture infidels; nay, even to massacre their brethren of the same faith, differing but by a shade from their own infallible creed, they rushed into the opposite extreme of Atheism. They now proclaimed that death was an eternal sleep; and for the worship of the true God, substituted that of an idol they called REASON.

Never had Reason less sway over the human mind, than when her temple was erected by the murderers and assassins of Paris. The Goddess herself, whom they degraded by a false and disparaging image, had for the moment disappeared from the eyes even of her former votaries—wrecked amid the moral tempest of the revolution; and Folly and Madness ruled the hour.

A greatly disproportionate number of those who partook in the sanguinary scenes of that epoch, were wretches of the lowest character and intellect. Those of a different description were urged on by a momentary madness, or by the terrors of proscription, which self-preservation prompted them in turn to visit upon others; and they repented too late to save themselves from the fate they dreaded and perhaps deserved.

Let not then the atrocities of that day be quoted as an argument against the proposition, which asserts the moral influence of mental improvement. The era itself stands out unexampled in history; and is at most but another exception rather than a refutation of the doctrine. Had education been generally diffused among the people of France and of Spain, mankind had been saved from the massacre of St. Bartholomew's, the frantic butcheries of the revolution of '89, and the more deliberate and fiendish tortures of the inquisition.

It is but too certain that neither wisdom nor virtue is born with us; that conscience itself, without mental instruction, is at best a blind guide—an inefficient restraint. Its sole power consists in the satisfaction or remorse its approval or its upbraidings occasion. But it approves or upbraids our actions only because of their conformity or non-conformity with our judgments. If our judgments err, our consciences follow in the wake. The more unenlightened our minds, the more prone our judgments to error.

Locke, while he denies the existence of any innate knowledge of vice or virtue, distinctly affirms that men are born with a *capacity to know them*. We may, perhaps, go farther and assume that the law of our nature so far *predisposes* us to virtue, that we would seldom do wilful wrong if not impelled by uncontrolled passions or appetites. Even ferocious brutes, it is said, if sup-

plied with food, may be taught to lie down in peace with those they have been wont to slaughter. Man sympathizes with his kind. Feeling pain from the cruelty, and pleasure from the kindness of others, a similar, though fainter emotion, is excited when others experience similar pleasure or pain. But this reflected emotion, this sympathy, will not always suffice when our own selfish gratification seems to stand in the way. The suggestions of self-interest, the love of life, the expectation of immediate pleasure or advantage, often make us regardless of the rights and feelings of others: and these disturbing causes operate with the greatest force on the weakest and least cultivated minds. The passions and the appetites, it is true, may be as strong in the wisest as in the most ignorant: but enlightened reason; knowledge,—the fruit of culture,—teaches men not to extinguish, but to govern them. In the uninstructed mind, they reign fierce and uncontrolled. Such a mind resembles “an unweeded garden—things rank and gross in nature possess it more.” It is only by eradicating the ill weeds which spontaneously infect it, that we may hope to see it produce good fruits. Pope told us long ago,

’Tis education forms the common mind;
Just as the twig is bent, the tree’s inclined.

Moral truths as well as physical, not only are not innate, but are not always obvious. They must consequently be *taught*:—*acquired* by the assiduous culture and exertion of our intellectual faculties. Wisdom delights in truth. It was Wisdom herself, who in the reverend form of Mentor guided the footsteps of the youthful Telemachus, and taught him the lessons of virtue. Such lessons cannot be too often repeated, too earnestly inculcated. It is thus alone that the heart and the understanding are awakened to a perception of the beauty and fitness of virtue; to comprehend fully that unless we do justice to others, we have no reason to expect it will be done to us: that crime, even when successful, ends in misery; in short, that virtue is not only conformable to our own nature and to the will of God, but the indispensable means of insuring our happiness—here and hereafter. An untrained mind may doubtless take these truths upon trust: but as readily may reject them—for ignorance is ever weak and credulous; the victim of unregulated passions; the dupe of error. Rational convictions take root only in minds to some extent previously enlightened.

But I would not rest the proposition, that education tends to promote sound morals, upon abstract arguments alone. Let us appeal to facts: the best test and only sure foundation of just reasoning—and does not experience show that

the obligations of justice, truth and charity, though too often violated, are more respected among civilized men than among savages, among the well-informed than the ignorant? Search the Newgate Calendar; the records of crime in our own and other countries; read the private lives of robbers and pirates, thieves and murderers; visit the inmates of jails and penitentiaries; and you will find that usually the most debased and the most criminal, are the most illiterate; and that but few among them, comparatively, were ever engaged in literary pursuits, or had received a good education. Again, how few comparatively of those who have enjoyed the advantages, of such an education, haunt the receptacles of vice, or unite with the lawless in deeds of violence. Mental culture, even when ineffectual to restrain, seems to mitigate the vices of men, taking from them the ferocity which characterizes ruder natures: *Emollit mores nec sinit esse feros*. The failings of the great philosopher, whose name it were painful to mention in this connexion, have been already alluded to. I would not palliate them: he contaminated his fingers with illicit gains, and “sold the mighty space of his large honors”—for *trash*. Yet, justice to that cause, which, (though his frailties brought upon it, in the eyes of many, a lasting reproach,) no man ever more loved or served—bare justice to *him* requires us to say, that those frailties, dark as they have been painted, degrading as they were to himself, had no tinge of malice towards his fellow man, and were mingled even with generous and redeeming virtues. After all, may we not add, that the amazement and regret of the world at his fall—and never fell a brighter star from the literary firmament—the very frequency with which it is mentioned are speaking proofs of a general belief in the *natural union* of knowledge and virtue; a concession that the catastrophe itself was one as little to have been anticipated as it has ever been deeply deplored.

Reason and experience then concur in proving that mental cultivation at once disseminates the seeds of virtue, and best prepares the mind to receive and mature them. This conceded, the advantages of education must be proportionate to its general diffusion: indeed, greatly more than proportionate. Partial instruction may act beneficially on the individuals who receive it. But the ignorance and consequent immorality of the many must *tend* to demoralize the entire mass; and the best instructed may not always escape the general contagion.

A striking argument to exemplify this may be drawn from the luminous essay, already more than once referred to. Its immortal author, than whom perhaps none ever more thoroughly pen-

etrated the unexplored regions of the human understanding, not content with tracing the origin of ideas, sought out the very head-springs of human conduct, and despite the ridicule and censures of "an erring world," boldly proclaimed his discoveries. He tells us that the laws to which men generally refer their actions, to judge of their rectitude or obliquity are, "the laws of God, whether promulgated by the light of nature, or the voice of revelation; the civil law; and the law of opinion or reputation." To this last he ascribes an influence, greater even than that of the divine law itself. If it be so—if public opinion be the great regulator of morals—how indispensable is it to the welfare of society, that this public opinion should be enlightened? In this view, how important is it, that instruction should be given to the great body of the people! How transcendently important, in this country, above all others, where public opinion not only defines the boundaries of right and wrong, but makes and unmakes the fundamental institutions on which the personal and social rights and security of all must depend.

The desire of knowledge seems as much a law of our nature, and is manifested well nigh as early, as the appetite for food. Repressed or unsatisfied, it may become dormant or extinct. Gratified and encouraged, it grows with our growth, and may glow brightly during life. Let us suppose that due culture has been timely bestowed; the rudiments of knowledge, the first principles of morality inculcated; what powerful aid will not these principles derive from well-directed studies? In the pages of Roman and Grecian history, what models of every noble and manly virtue are placed before the eyes of the ingenuous student. He will read with delight of the stern independence and constancy of Cato; the heroic and patriotic devotion of Curtius and Leonidas. He will be indignant at the exile of Marcellus; the proscription of the inflexible Aristides, whose justice could not be swerved to uphold an act of perfidy, though redounding to the advantage of his own country. Still more will he condemn the ingratitude of Rome to the blind old Belisarius, who had spent his best days in her service. And he will turn with disgust and abhorrence from the cruelty of the Tarquins, the Neros and Caligulas;

For vice is a monster of such hideous mien,
That to be hated needs but to be seen.

We naturally desire to be, or resemble, the characters we admire—to shun the vices and crimes we abhor. To the delightful volumes of Plutarch, the constant companion of Madame Roland, is ascribed her pure and sincere devotion to the cause of human liberty. We may

well believe that our own fathers in their resistance to British oppression, had before their eyes the great examples of Roman and Grecian excellence. And it is no extravagant supposition, that Washington himself, whose character shall serve as a model for all time, of private and public virtue, was encouraged in the noble and generous resolutions of his own heart, by the unselfish ambition of Cincinnatus.

Kossuth, whose name is gall and wormwood to the Great Bear of Russia, and the Lesser Bear of Austria, himself seems as though anxious to be guided by the light of Washington's example. God grant that he may live to see his efforts rewarded by the liberation of his country from the despotism of Cossacks; and that like Andrew Doria and George Washington, he too may merit the venerated title of "Father of his Country, and restorer of its liberties."

How greatly may the beneficent influence, now adverted to, be increased and extended by spreading over our land institutions similar to that whose birth you are now convened to commemorate. You at least may look forward with confidence to the time when this stand shall be occupied by men really qualified to delight and instruct you: when the spacious rooms above us will be filled with literary stores of all eras and countries: a feast for every taste and age and humor.

But let it not be supposed that the advantages of knowledge, are limited to the increase of our physical power, animal comforts, and moral improvement. It is also to be considered as the *perennial source of exquisite mental enjoyment*. With what avidity does the youthful mind listen to the wonders of creation and the tales of fancy? How does the girl's soft heart bleed at the sufferings of Elizabeth, the sweet exile of Siberia; the unsophisticated loves of Paul and Virginia. How does the boy rove in imagination with Sinbad the Sailor; and participate in the wild adventures of Robinson Crusoe, envying him his solitary hut, and above all his faithful and grateful savage. Such is the power of *sympathy*. In youth or maturer years, even in age and exile, in "every ill that flesh is heir to," how vast a resource is found in a cultivated mind! I appeal to those who have acquired in early life a love of books, a fondness for science and literature, whether the wealth of California could tempt them to forego the pleasure it affords?

But if such be the enjoyment of those whose pleasures are derived from the intellectual labors of others, how high the gratification of the mighty intellects whose radiance penetrates the most distant ages and countries:—not like that of the sun, disappearing with the great luminary whence it flows—but long after their mortal forms descend below the horizon of life,

leaving a track of light ever shining with unabated lustre over the earth.

Numerous are the recorded manifestations of exquisite pleasure, experienced by those whose works and discoveries have immortalized their names. When Franklin first brought down, as it were into his hand, the lightning from heaven, it is said he heaved a deep sigh—the sigh of full content and joy—and would at the moment willingly have resigned his life. Pythagoras was so elated at discovering the demonstration of a mathematical problem, that he made an offering of a hecatomb to the gods. Ovid in his exile found a delightful resource in composing his beautiful *Metamorphoses*. On concluding them, with the fervor of a true poet he predicts their immortality. Nearly two thousand years have passed away, and they still remain uninjured by the corroding tooth of time, to verify the prediction and delight the world. Milton was stricken with blindness; but the light of his mind seemed to shine with an increased intensity, and he gave to the world a poem, if ever equalled, never surpassed. Deprived of intellectual resources, how dreary would have been the exile of the Roman poet: how much more wretched a blank the life of the blind bard of England! Darkness of mind added to loss of sight, could have left but one hope—that of speedy death.

Think of the ecstasy that must have been enjoyed by the poet, whose “eye in a fine frenzy rolling,” glanced

From heaven to earth, from earth to heaven.

Fancy him, as *haply* once he

sat upon a promontory,
And heard a mermaid on a dolphin's back,
Uttering such dulcet and harmonious breath,
That the rude sea grew civil at her song.
And certain stars shot madly from their spheres
To hear the sea-maid's music.

See him now enjoying the broad humors of Sir John Falstaff; or the tortures of the surly monster, Caliban; or laughing in his sleeve at the most lamentable comedy and most cruel death of Pyramus and Thisbe; or at the mock-tragedy of the *Mouse-Trap*, “designed to catch the conscience of the king.” Stray with him in his own fairy-land—the companion of Oberon and Titania, of Puck and Ariel; or behold him listening to the incantations of the weird sisters; or “at the witching time of night” summoning from the world of spirits the ghost of the Royal Dane; or of the blood-holtered Banquo; or the horrible phantoms which distil deadly remorse into the heart of the crook-backed murderer. Unlike the mighty Alexander, who wept because he could find no new world to conquer and destroy,

Shakespeare could create worlds at will—not for destruction, but for enjoyment. Were there but one copy extant, of the works alone of the immortal bard, I would not surrender it to the bigot hand which would destroy it, for all the treasures that earth can boast from its surface to its centre.

Is it not a Godlike privilege, knowledge confers on its votaries—that of calling up, as it were, the shades of departed sages, philosophers, and poets, and demanding of them their living thoughts—for their thoughts still live. Consult the wise men of antiquity, and from their pithy answers, you shall collect truths which still “electrify the sage.” We have already enquired of Bacon, what is knowledge? He has replied, *Knowledge is Power*. Ask Shakespeare, what is virtue? He shall tell you, *Virtue is Beauty*. Are not these “mottoes of the heart,” these gems of the mind, treasures, compared with which, mines of gold are but dross, and diamonds but glittering baubles?

Considering the unappreciable importance of education, both socially and individually, it is painful to reflect what an immense proportion of the human race are deprived of its benefits. The public mind is fast awakening to the value of knowledge. It is not enough that we have able orators and statesmen; that a few or even many are well educated. Light, I repeat it, is wanting for the mass. Nowhere is it so necessary as in our American Republics; and in our own State its necessity is now become more indispensable by the recent changes in our fundamental law. Sovereignty—absolute power—must abide somewhere. Nowhere can it be so rightfully and so safely exercised, as by the great body of the people. But absolute power must be better and more safely trusted with an intelligent people, than with one immersed in ignorance. By our law, masters are compelled to give the rudiments of education to their apprentices. What reason is there that every parent and guardian should not be placed under the same obligation. No parent indeed who has the means, should stand in need of legal compulsion: There are stronger motives to urge him on. Let him call to mind the almost innumerable instances in which men in the humblest walks of life—raised in utter indigence—have, with the merest rudiments of education, by dint of resolution and perseverance, risen to great eminence in scientific and literary pursuits, or served their country in the most important offices. Arkwright, the inventor of the spinning machine, was an itinerant barber; Davy, the son of a carver in wood; Burns, a ploughman; Bloomfield, a shoemaker. Had they confined themselves to their handicraft trades—had they not assiduously cultivated their minds, and exercised

its faculties of thought and reflection, they most assuredly had never benefitted or enlightened the world by their works. Franklin might have given us something, doubtless, better than a farthing candle; but he had never held up to our eyes the bright lamp of science; still less taught the fiery bolt of Heaven to play harmlessly over our heads.

I would not be understood as inculcating the idea, that all men should engage in literary pursuits: All men must live, and many, therefore, must toil. Nor can all hope to attain distinction. But there are among the humblest, as well as the haughtiest, minds so active, so indomitable, so persevering, that, aided by an elementary education, and placed in situations to call forth their peculiar talents, they may raise themselves, if not to the most exalted office, as some have already done, in this, our own free and happy land, to the still loftier condition of an *American nobleman*; and pointing, like Franklin, not to the spurious rolls of heraldry, but to virtue and merit—the *only true nobility*—hold up their heads far above kings. Even amid the most engrossing employments, so easily are the means of living obtained, in our country, by moderate industry, and so vast the resources of an active mind, that time may always be found for mental improvement. Under circumstances less advantageous, amid the most laborious avocations, Sir William Jones acquired the knowledge of many languages. It would be easy to cite numerous instances of similar perseverance and success.

And now I have, in a manner—I say it in perfect sincerity—unsatisfactory to myself, and, I fear, tedious and unprofitable to you, gone through the task I had undertaken; not through the theme I have attempted—*of the value of knowledge to man*. We who grope below, from the transient glimpses we catch, may well believe that with every step wider and grander views would open before us. But the glories that surround the topmost summits of science, or blaze in “the highest heaven of invention”—we may have faith indeed to believe; but we must believe them to be divine in their nature; and all but divine, must be the thought to conceive and the lips to describe them. For myself, I appear before you as an humble pioneer, to point out, if I may, the entrance to those paths which I trust, under other and better auspices, may lead you along the steep slopes of science, or the flower-enamelled meads of literature, to the attainment of social prosperity and individual happiness. I confidently appeal to every parent, who would reap the highest gratification of our nature—the consciousness of having done our duty—to furnish his children, hungering for knowledge, the means of obtaining it. I pray you to remember, that Knowledge is

Power. “It is better than strength;” “it is more precious than rubies”—for it is the safest guard, and the companion of virtue. Would you have your children prosper in their pursuits?—placed in a condition not merely to serve themselves, but their fellow-men? *Educate them*. Would you give them a lasting resource and consolation in health or sickness, in prosperity or adversity, in society or in solitude? *Educate them*. Would you fit them to compete with the high intellects of their age and country—to associate hereafter with the mighty dead—to stand foremost with those most worthy to be admitted to the presence of the Most High? the best gift you can give them is—not lands and houses, nor silver and gold—but mental and moral culture—*Education—Education*.

FORGET ME NOT.

Forget me not!

By the pale moon which I have questioned oft,
By its mild rays which fall so still and soft
Upon my brow, while I have prayed its light
To make thy onward pathway pure and bright,
Forget me not.

It seeks thy gaze!

I know thy wondrous eyes to it upturn;
I know that in their depths thy heart-thoughts burn,
That heart, to which I pray may come no fears,
Those eyes, oh God! protect from sorrow's tears,
Forget me not.

Oh think of me!

By the fierce sun's slow pathway through the clouds,
Wrapt in the slight robe of their solemn shrouds,
By my fond prayer to him that he would shine
Not fiercely, on that sacred head of thine,
Remember me.

Forget me not!

By the hushed gloom whose pressure I can feel,
Like human hand upon my eyelids steal,
But its deep pause, God-made, and bringing calm,
By the wrapt sense of Night's delicious balm,
Remember me.

I ask it not

In the cold world's familiar, common way,
But from a heart that knows not love's decay,
By a mysterious feeling strange and deep,
Which never rests e'en in the arms of sleep,
Forget me not.

Lo, in the West

Thou see'st on evening's purple edge a star,
Which smiles serenely in the sky afar,
As thou to it dost lift thy tender gaze,
So I to thee my worship glance do raise,
In homage blind!

By that pndying star,
 And more—by all the future strange, untold,
 By the sweet hopes its silence may enfold,
 By each blest thought that rises clear and sweet,
 By love, by life, by *all*, for we *must* meet—
 Forget me not.

EARLY HISTORY OF LOUISIANA.*

These well-printed volumes are by far the most interesting contributions made to Southern literature within the last few years. The authors have done much to throw light on the colonial history of Louisiana, which, until lately, has been a sealed book to Americans, in consequence of the early colonial records having been sent, on each transfer of that country, either to Paris or Madrid, where they were carefully filed away, and all access to them prohibited by the governments of France and Spain. It has therefore been only since the publication of the works, which head this article, that the public has begun to discover that the colonial records of Louisiana are prolific of interest and of materials for Romance and the drama.

The archives of France, as shown by Mr. French's analytical index of the documents in the marine and colonial departments, at Paris relating to the discovery and colonization of that country, are extremely rich in whatever relates to Louisiana; and if that State had possessed half the patriotism of New York and Massachusetts, she would ere this have caused them to be collected and published. As it regards her colonial records in Spain, it was not until last year, that that jealous country was prevailed upon to allow any access to them. Under the auspices of the Historical Society of Louisiana, the Legislature of that State appropriated two thousand dollars to procure copies of original documents from Spain. The Society employed Señor Gayangos, who commenced his examinations in the city of Seville, whither the colonial archives of Spain relating to America had been transferred from Madrid, in the year 1828. He also made some researches at Madrid, but the obstacles constantly thrown in his way by the

officers of the several departments, almost precluded the possibility of a thorough research. The Duke de Sotomayor positively refused all access to the papers of his father, on the ground that while he was the Minister to the United States, he was concerned in secret correspondence for the separation of a part of the United States. And the Señor Gayangos subsequently states in a letter, that he obtained proof of the intrigue, in which General Wilkinson and others were concerned, to separate the Western from the other States of the Union. Mr. Gayangos has forwarded to Mr. Gayarré copies of very important documents relating to the period when Louisiana was a colony of Spain. And it would be a proof of the good taste of that State to have those documents published without delay.

The merit of first calling the attention of the public to the existence of those documents, and publishing them in an English dress, (the *Memoirs and Journals of La Salle, Tonty and Jontel*.) is due to Mr. French, whose research and enlightened labours in this department deserve the highest praise. They were soon after followed by Mr. Gayarré in his *Histoire de la Louisiane*.

The first volume of the Historical Collections of Louisiana, was published in 1846; and from the number and importance of the original documents it contained, and their bearing upon the Oregon and Texas boundaries, it was frequently quoted as authority, and referred to in the debates of Congress. It clearly appears from these documents, that France always claimed jurisdiction over Texas to the Rio del Norte, and was the first European nation who planted a colony and built a fort there. Among the papers in the volume will be found De la Salle's Memoir, on the discoveries made by him; Tonty and Jontel's Journals of the expedition of De la Salle; and Hennepin's account of the discovery of the Mississippi, and the country adjacent thereto, together with other papers of equal value and importance.

The second volume, published in 1850, contains Marquette's journal of the expedition to discover the Mississippi river in 1673; a narrative of the expedition of Hernando de Soto, by a Gentleman of Elvas, and another by Luis Hernandez de Biedma; an Analytical Index of all the public documents in Paris, relating to the first discovery and settlement of Louisiana, &c.

The third volume, just published by the Messrs. Appleton, contains translations of the MS. Journals of Benard de la Harpe and Sanvole, Charlevoix, Richebourg, and the memorable history of the Expedition of Jean Rebaut, who built the first fort and planted the first colony in Florida, or New France, in the year 1562.

* 1. HISTORICAL COLLECTIONS OF LOUISIANA: Embracing Translations of Rare and Valuable Documents, relating to the Discovery and Settlement of Louisiana, with Historical Notes. By *B. F. French*, Member of the Historical Societies of Louisiana, Pennsylvania, New York, &c. D. Appleton & Co. New York. 1851.

2. LOUISIANA: Its Colonial History and Romance. By *Charles Gayarré*. Harper & Brothers: New York. 1851.

These volumes have been annotated by Mr. French, with numerous historical notes of great value and interest, and extend over a period of more than a century and a half.

Besides these papers, there are others full of historic interest, abounding in bold adventure and incidents of romance, showing the difficulties and dangers that constantly accompanied those pioneers of civilization, and the undaunted resolution, and consummate address with which they met and overcame them.

In the great volume of History, there is nothing either of itself, or in its results, of more magnitude than the discovery and the exploration of North America; and the first adventurers seem to have been specially fitted by Providence for the mighty enterprise. Pizarro and Cortez have written their deeds, in fire and blood, on the tragic records of Peru and Mexico, but they had veteran soldiers and were supported by the chivalry of Spain—then the most renowned country in Europe. It was not thus, however, in this quarter of the New World. While the sovereigns of France were engrossed with sanguinary wars, or dissolute pleasures, and could rarely be importuned to make an adequate outfit for conquest, or even exploration, a few French gentlemen and missionaries, stimulated by love of adventure and religious zeal, at various intervals crossed the stormy ocean in little vessels; penetrated the wilderness, navigated the lakes—Ontario, Erie, Huron, Michigan and Superior; traced the course of mighty rivers; selected with singular sagacity, the most important military and commercial points—butted in the snows of Canada—slept in Indian wigwams, with no covering but the canopy of the heavens; exposed to mortal foes, or still worse, to the damps and dews of an unhealthy climate; bivouacked under the burning suns of Louisiana and Texas, and proselyted the barbarous savage to the Christian faith. Such examples of physical and moral courage, of much suffering, of patience, and of loyal efforts to extend the dominion of France, until it embraced all of Canada, a portion of the Eastern, and most of the Southwestern States, without tarnishing its honor with the blood of an inferior race, are without a parallel in history, and make up a drama of the most thrilling interest.

We understand that it is the intention of both Mr. Gayarré and Mr. French, to publish another volume of their respective works in the course of the spring or summer.

The work of Mr. Gayarré is a pleasing romance of history, which will always find readers. Its pages glow with a poet's imagination. He paints in brilliant colours the incidents of the expeditions of De Soto and Marquette—of La Salle and Hennepin; Saint Denis and Bien-

ville;—but it is not history. It may therefore be doubted whether this volume, so ambitious in style, so redolent in invention, will create the same interest that was accorded to his first work in French, entitled "*Histoire de la Louisiane*," which, with less pretensions as to style, is a valuable compilation of facts, as far as it goes, for history. It cannot be said, although several have attempted it, that any one has yet written even a readable history of that State, for the very obvious reason, that the materials for such a history are not to be found in the United States; and the historian who hopes to succeed must first go to Europe and enter upon the laborious duty of consulting the *authentic* materials in the archives of France and Spain, where they were deposited during its colonial dependency—and from 1803 to the present time in the public offices of that State, and in the State Department, at Washington.

It is not, therefore, safe to rely upon the romance of Mr. Gayarré for facts, as it would be difficult to select the facts from his romance; nor to take the Historical Collection for a full and complete history of Louisiana; although, so far as it goes, it is an interesting collection of authentic materials for history, agreeably diversified with valuable notes even more interesting than the text, which should find a place on the shelves of every library in the United States. In fact, no library can be considered complete without the Historical Collections; and we sincerely hope that the author will continue to give us volume after volume, until he has exhausted his storehouse of historical treasure. S. T. G.

LOVE-LINES.

Translated from Anacreon.

On the Phrygian mountain lone—
Struck with inward grief and pain,
Weeping for her loved ones slain,
Niobe was turned to stone:
And the passionate unrest,
Working wild within the breast
Of the child of Pandion pale,
Changed her to a nightingale.

If the fate were mine to prove
The transforming power of love,
I would be a mirror bright,
Hanging ever in your sight;
I would be the vestment warm,
Clinging round your graceful form;
I would be the limpid wave,
Brow and cheek and lip to lave;
I would be, oh, lady fair!
Precious unguent for your hair;
For your slender waist, a zone;
For your neck a lucent stone;
And the sandal lightly pressed,
Where your dainty foot might rest!

M. J.

Scenes Beyond the Western Border.

WRITTEN ON THE PRAIRIE.

BY A CAPTAIN OF U. S. DRAGOONS.

Having rested a day, the march was resumed up the bank of the Platte. A strange river and country it is! You may ride all day without encountering an object to break its sameness;—not a tributary—a ravine, a tree. To-day the river formed again, a portion of the unbroken horizon;—is this the case with any other inland river in the world?

A South wind—on our left hand—blew so fiercely as to make it difficult for horses to keep the road; nevertheless, we marched 26 miles—hoping to find good grass, but in vain; and there is no fuel nearer than a mile from the camp. At this point it is scarcely—strictly speaking—a “bottom,” for there is a rise of about 4 feet in a 1,000, from the water’s edge: and the soil and grass have the characteristics of hill prairie.

June 1.—The wind continued,—a perfect gale—nearly all night; covering everything with a penetrating dust, which it raised from the prairie, so lately soaked. There is a breeze now from the N. E. Last night, sand bars in the river on our—windward—side, were *bare*: this morning they are covered with water; while others have *appeared* on the other side, *now*, the windward: this phenomenon must result from the wind; its forcing the shallow water of the very wide river, from one channel to another; they being divided by very extensive islands and bars, which must assist in continuing such an effect. Most provokingly, we found, this morning, good grass extending for ten miles. After all, this strange river has its beauties; nay, there is all the variety consistent with the prevailing flatness. For miles, this forenoon, it was charming: there was a labyrinth of islands adorned with tree and shrub of every shape; some very long, forming vistas,—others, mere dots of verdure, like emeralds set in silver: from thence, all the bright summer day was saluted with songs of birds; the cheerful and chatty blackbird, the whistling curlew, the gay lark, and—queen of songsters—the mocking-bird. Then, I observed a view as strange as beautiful: long narrow islands were fringed with tree tops, through and above which, I could see extensive strips of water; then came the opposite bank with trees just alike, which were relieved against the sky: but water and sky were the same!—thus there were *two horizons* of beautiful trees, which the eye could not distinguish! This novel illusion extended for miles.

But the prairie does not always charm the eye

or the imagination: often its sameness and the monotony of slow motion, lull us to dreamy thought, then, happily, we create of solitude, a world of our own; or people it with the loved absent, or the long dead. To-day, by an easy association, I dreamed of the old warrior explorers from Spain—’ere her glory died—of De Soto Cortez, and others. Hernando Cortez! What a name is there! What hero of antiquity excelled him? None but Cæsar: his military genius resembled Alexander’s; but—as in the comparison of our Washington with the world’s Captains—with an allowance for the scale of action and of means. (*His passage of the Delaware and subsequent campaign gave indications of what he might have done!*) The master-stroke of the career of Cortez, was his desperate march to Vera Cruz, his attack and defeat of the braggart Narvaez and his vastly superior numbers. Truly, his were enthusiastic genius, energy and constancy, beyond all proportion to what Providence implants or requires in man in ordinary times. In the world’s story, among all wondrous events, in Mexico alone History and Romance form an unity. And Cortez, like Columbus, was self-made; he forced his way over great obstacles, with which that age heaped the paths of aspirants from the low classes.

About noon, we saw a company of some fifty wagons, winding a toilsome way to the high-grounds: it was a proceeding as inexplicable as unusual, and gave rise to much conjecture: at last it stopped; we came up abreast—far to their right: then soon we learned the truth: they were burying an infant! It is Sunday; forty-seven wagons and families form a procession, which so slowly and painfully leaves far its course to reach that grassy hill which poetic affection would choose for a place of sepulture. There they solemnly consign to the unblest earth,—to the howling wilderness—the father’s hope—the mother’s love, and her pride. Pity her! it is no common loss! Wonderfully must the outward presence of hardship, severance from the world, and its distractions,—the solitudes of wild Nature, the want of kindred sympathies, strengthen the bonds of family love! Pity the mother! who bears a burthened heart to encounter her rugged and unkind Destiny. Honor those hard woodsmen for their attentions! their hearts are right.

But “march! march!”—shift the panorama! The sand hills approach the river; they are elevated and picturesque; and here is the first prairie dog village; (and as I expected, their inseparable buffalo grass:) the dogs are in great excitement, and never saw such sights. See that old gossip with eager and important bustle, rushing with the news from door to door! but she is now

excusable, and may tell the truth: behold hundreds of horsemen,—a hundred wagons,—hundreds of cattle,—and sheep too! But these marmots are a hackneyed subject. There are beautiful antelopes, too, which excite the hunters. It had turned sultry; white clouds shut in the warm atmosphere, and reflect back the heat like an oven-lid: ahead of us, for a wonder, is a creek-bed, fringed far into the hills with tree and shrub: we pass on, and turn into a sweet green bay (or bend) of fresh grass, and skirted with trees: they are on islands, to which we must wade for fuel; but are close by. Here we make our camp: the sun shines out brightly, but muttering thunders marshall forth black clouds: instantly the wide, green sward, is alive with horses, rolling and neighing with the delight of release and welcome food: next, rises, as by magic, a Canoso city: the men run over to the islands for the driest sticks: curling smokes soon give token of supper. We turn and look back; at a little distance is a long line of wagons, attended by lowing herds. Just now an antelope dashes between, pursued by grey-hounds; shot after shot are fired; the poor animal is hit,—falters,—is pulled down. What an animated invasion of this primeval solitude: the prairie nymphs must shrink in amaze! Since the world began, this beautiful meadow was never peopled thus.

June 2. There has been a hard rain in the night, and its quiet was disturbed by yells from an emigrant camp, half a mile off: why they should thus play Indian, is beyond my comprehension. We march early: the bottom widens much, and is very barren; sand-hills, washed into picturesque shapes, and partially green, invariably bound our view to the left; and to the right, the river variegated by islands: they nearly all have groves—not regular, forest masses; but each tree has had room to develope, and reveals against the sky, untrammelled beauties, and in infinite variety.

We touched, near mid-day, the river, and found—which is rare—a good watering place; the banks only two or three feet high—are generally vertical; and the horses then can scarcely be forced into the opaque water, which, if only an inch deep, looks bottomless. It is surcharged with mud, and millions of odds and ends of all things near, which its great swiftness keeps suspended. Here, too, was found clear, cool water, in a well only two feet down; just above, were the remains of many Indian fires, and buffalo bones, and the willow frames of old wigwams.

We are too early for the backward grass season, but here it has been swept off by ten thousand buffaloes. After a fatiguing march of 32 miles in eleven hours, we encamped on a spot which, having escaped the annual fires, the buf-

faloes have neglected. There is no fuel but *bois de vache*.

June 3.—We have rain at camp every night; but it seems to extend little further; and the dust, when there is not a side wind, is so annoying, that we sometimes abandon the road. This morning, at marching, blue-black clouds overhung the sand-hills, to which they imparted their hue; and their irregular sketchy outline, presented a singular and beautiful appearance; but it must be a very desert that is not pleasing in early summer morning! And if this flattered us with hope, of even the picturesque, we were this day disappointed. We had, once, however an unbounded water view up the river; and the fast growing signs of buffalo, gave some excitement to the dull march.

When it was time to stop, there was great difficulty in finding any grass. We turned, at last, into a long strip of meadow, between trees and bushes—so very rare on shore—and the river bank: the buffalo has been before us; but we have found some scant grazing;—it is buffalo-grass,—very backward, and looks like curled grey horse hair.

Three fine horses were picketed beyond the screen of bushes, out of sight of camp, or any other animals; as usual in such cases, they were uneasy; imagining, perhaps, something fearful in the bushes; or, more likely, were excited with the fear of being abandoned in these unwonted solitudes: be this as it may, about sun-down they broke loose, and scampered off for the hills: some men were hastily mounted and sent in pursuit; but they have returned late, unsuccessful.

June 4. Ten men were sent at day-light, on a new search: I feared it would be unavailing, as horses will join and run with buffalo; but fortunately, the trails of their ropes were discovered in the heavy dew, and they were brought back in two hours. Meanwhile, two empty wagons were sent back to Missouri, with a small escort, with broken-down horses: "all flesh is grass," and the grass is very poor.

This proved the great day of such excursions: the day of meeting buffalo. It was toward noon that they appeared in large numbers on the hills at our left. Immediately the fever rose; and as party after party prepared and rode off for the chase, the coolest heads became affected: we knew that even better opportunities would certainly occur; but the first fresh view of the chase became almost irresistible to all but old hands like myself. We see them charging helter-skelter, up hill and down, without prudence, skill or regard for horse flesh: the perverse wind brings from the rear clouds of dust, which add confusion to excitement. Let me attempt to describe a fragment of the scene: A horseman

seen dashing at a gang of twenty or thirty; he appears to penetrate their close order, and they are dividing into two parties; he has selected his victim; a puff of smoke appears; the report is heard; then a wounded buffalo rushes forth alone, but followed by the hunter, who is re-loading, and loses ground: now he gains again; is very near; we eagerly expect his discharge; but no! they are diverging rapidly! the horse has shied in affright, and the buffalo too, has dodged: the horseman pulls up and tries again: now he regains his place near the flagging animal; the smoke is seen again, and the report follows more slowly: they have stopped; the bull is tired—enraged and desperate: he is at bay: with a toss of his vast head, he makes a sudden and fierce dash at his enemy! Our hunter stops not to show his skill, but flies with prompt good will; fifty yards is all, and both again have halted: another shot! and now the bleeding and baffled beast turns to fly again; and there! they have disappeared over the top of that far off hill.

An hour or two after, a horseman is seen gradually nearing us: he approaches very quietly, and puts on an air of business-like coolness. Oh! nothing extraordinary has happened; he even appears unconscious that a tongue is conspicuously dangling to his cantle. It is his trophy! and, when green, to my taste, good for little else.

Meanwhile, the “forks of the Platte”—the junction of the “North” and “South” branches—has been passed, and few but the guide has known it. Cheated of knowledge and view of a principal point of note! too bad! We have got far out from either river, and can just see the water of one, and a fringe of trees beyond, which, no doubt, mark the course of the other. We are ascending the South Fork, but shall cross over in a day or two, to the North. Now we stop to water at a small, running branch, the first we have seen; it is without a tree: a buffalo calf approaches, and is evidently trying to join our cattle; but some men turn it off: there is the mother, which a hunter pursues up the steep hills: it is exhausted, but his horse refuses to go near; he has fired—probably ineffectually: we pass on. At 3 o'clock, we encamp at some ponds, in the middle of the bottom. Many horse loads of meat are brought in: the buffaloes—nearly all cows and calves,—are not yet fat.

We pass continually, companies of emigrants; they all have many breeding cattle. The girls must consider as a lively feature of this dull region, (or they are not common girls.) For our part, it is reported that one of them has been seen actually—that is, evidently invested with a “tournure;” who would believe the tyrant Fashion held so wide a sway!

June 5.—This morning at daylight, the buffalo had approached so nearly among the horses, that the officer of the guard sounded an alarm: they were driven off without accident. We were soon abreast of the point of bluff between the two rivers; it is eighteen miles above the junction,—we are 30° west of the meridian of Washington city. We are now fairly on the buffalo grass: its sod is a near approach to wooden pavement. This branch is not half so large as the main river; but the general character is exactly the same, near the bluff, but extensively winding, is a kind of slough; the river water soaking through the sands here, rises perfectly clear: there is a new feature—large bare spots, white with salt.

Again to-day—and it was very warm—we had buffalo chasing, chiefly by officers, who killed an abundant number. I now first indulged; mounting my led horse—too spirited and fractious for ordinary use—I passed forward to meet a herd that had just forded the river, and I knew would cross to the hills a little forward of us, *against the wind*, as their instinct invariably leads them: it was given them, it is supposed, for their protection; but they carry it to an extreme which I have often observed lead to their destruction. But my buffaloes are in motion, and will not wait a discussion: as I passed the head of the column, a friend thrust into my hand a six-barrel pistol; taking it almost mechanically, I dashed forward after the herd, which are now at desperate speed: my noble Brown is in his element, and goes joyfully to work; he soon places me alongside a fortunate bull, whose destiny it is to test the value of this patent plaything. With some difficulty, I succeeded in snapping it twice, and then consigned it, indignantly, to the uttermost depths of my off holster: I now draw my old Harper's Ferry “buffalo slayer,” and select a barren cow—round behind as a barrel,—at five paces—all at full speed—and deliver my fire; the shot soon stops her; she keeps her head toward me, and I fire several times before her quick motions allow me to strike her full through the lights; the blood instantly spirts from her nostrils, and she is soon out of pain—cut up and in a wagon.

We passed this morning, an emigrant camp; they were lying by,—had lost oxen, frightened off by buffalo,—several persons were sick,—a poor woman at the point of death. This Oregon should be a paradise!

The hills beyond the river are wilder and more elevated than before—all there looks arid, sandy, desolate; this side, we wade through sand; *all* is strange: prairie-dog villages; antelopes; large grey wolves; buffalo, attract but little attention or remark; but of all, how strange seems the

eternal wind—the high South wind; to what purpose does it day and night, so fiercely blow—blow! A flat muddy river, sand, buffalo and wind, are the universe! But no; ungrateful; three rose hushes bloom in my tent, and I have almost ice water from a hole in the sand close by: and that beautiful hare so gracefully bounding over the plain, was it not made for man's pleasure? or food for wolves?

June 6.—The clear stream on which we encamped last night, is a very singular one; it rises in the flats near the river; but does the river supply it? it is clear and cold, has quite a current, and contains fine large fish, which the river does not.

It was a sultry morning, but soon arose the South wind, which has blown a gale with most unpitying persistence all the day. After travelling a few miles, the guide bore down to the river; on the way, we were diverted by the pursuit of a young hare, by a number of men on foot; it was captured after many laughable tumbles, occasioned by its doubling.

The column marched right through the river; it was about 800 yards wide, and from eighteen inches to three feet deep; the quicksand made it laborious and tedious. The regiment then dismounted, and the horses were held to grass wherever it could be found. I passed over alone to a long island near the shore; it was grown up with grass, young willows, and the most delicate and beautiful rose bushes, in bloom and very fragrant.

I stood on the point of the island and gazed down the river, from whence shone the morning sun; our wagons were slowly making the winding passage, followed by cattle and sheep; to the right was a vast meadow, which insensibly swelled into green hills; on its bosom, like a string of white beads, were seen extending to dim distance, the tops of Oregon wagons; a few buffaloes seemed calmly looking on; the hills gradually melted in perspective, to a faint, blue horizon, terminating in the water view; for the river here, adorned by many green islets, and sparkling in the sunlight, extended below, as far as the eye could wander; on the left was a vast range of sand hills, on which, for ages, the rains and winds had worked their pleasure; exposing, at places, great masses of white marl in fantastic shapes: in the foreground, armed men and horses lounged or grazed at ease in picturesque groups. The high wind, though monotonous, gave music to the foliage, to the tall grass, and to the rippling waves; these waves, and the unbounded reach of river, reminded me of the ocean; nay, there the ocean was before me! that ocean whose visible grandeur expands the conception to compass the vast earth, whose ceaseless motion types

the moral unrest—the troublous action of the toiling world.

The music of the wind, which hushed, or softened to accord all other sounds—the happily mingled beauty and majesty of the view—my pleasing and isolated position, and the repose, snatched from that action which now was only pictured to the eye, had an irresistible charm: I fell into that dreamy state, in which, while the senses, keenly alive, are intoxicated with pleasure, the soul is soothed to happy thought; is winged by beauties to the high and abstract sphere of its nobler elements; or, skimming the fairy arches cast by Memory to the oases of the desert life behind, these meets, in rosy bowers, the absent loved! then, blissfully oblivious, we soar again with flattering Hope, to fall, with sudden shock, in the darkness of the land ahead. For, alas! while thus we dream, stern care plucks us by the skirts: we shrink, and struggle, and linger, to drain the cup of happiness; but our earthy element drags heavily; a voice, trumpet-tongued, awakes us to the REAL.

Truly, the trumpet had sounded; the men, the horses, had gone from careless rest to labour; all the living elements of the scene had disappeared; the sun himself was veiled; and I was now in a wilderness, nearly as tame and dull as it had been to every careless mind—to every untutored eye. But the fleeting beauty so painfully described, *was* real! and its enjoyment was mine!

It is wonderful how many go through the world with eyes shut, with minds unawake; but without the keen relish of the beautiful, without souls sensitive of lofty emotion, they have the enjoyments of animals, and are dull to painful reactions.

June 7.—A winding valley, a hundred paces wide, is overhung by a lofty white cliff on one side, and by the thick and most glossy foliage of ash trees on the other: a crystal streamlet murmurs amid the grass, over its gravel bed; a crescent silvers just the top of the precipice; whilst between it and the tree-tops, the stars look down through this pure, dry air, with a wondrous lustre: here and there camp-fires, dying out, cast an uncertain and pale light upon white tents; the horses, hungry and grazing in the obscurity, doubtful of this strange spot, make uneasy sounds, always answered by the rest. Since nightfall, an emigrant company, belated like ourselves in the passage over to this Northern Platte, passed at random through our straggling camp—blinded by the lights—in much danger of upsets, at which women and children were plaintive, and to the detriment of picket ropes, and discomfort of our horses and tired men.

I was lying on the grass by a small fire, greatly fatigued, but with face upturned in dreamy

enjoyment of all this beauty, so strange to the long wanderer on treeless plains—a sentient beauty! of the Heavens and earth, which seemed to look down upon me as a long expected guest! My friend joined me.

I. F. “Ah! gazing at the stars? The three mortal hours we passed on the verge of the table land, whilst the guide sought a clew to this strange labyrinth of hills, or mountains—”

C. “And found it, much thanks to the buffalo, and the aid of their paths—”

I. F. “Were enough, with an empty stomach, to evaporate an ocean of romance.”

C. “Considering, too, how dry it was; we had not drank for thirteen hours.”

I. F. “Considering, too, you slipped off alone to the island yesterday, and ‘fell asleep;’ but, as I verily believe, only dreamed; for, in our silent ride to overtake the regiment, you were still rapt, past all observation.”

C. “What on earth was there to observe? there was sand, wind, and ten miles!”

I. F. “And nothing more?”

C. “There were wild hills to our right; and I remember a great ravine, a torrent bed, which I thought would make an excellent ambushade; nothing more.”

I. F. “Then you overlooked something strange, and twenty times repeated, a natural paradox; a miniature and extravagant illustration of the formation of all our Western valleys, where the banks are always the highest ground; namely—little *ridges* of sand and gravel, only four or five feet over, all coming from ravines, and crossing the bottom to the river, and evidently made by water; little aqueducts, with scarce a rim to hold the water!

“The wind changed, too, and a whirlwind on the river, raised the water in a column, as of steam.”

C. “Ah! I dare say I was still half asleep; the wind and waves, and monotonous cries of cattle drivers on the river, were very composing, a regular lullaby. But, what a mighty table land was crossed to-day, the very top of the earth! While no sense was cognizant of anything higher, this plain seemed to slope away! The total absence of forest, is essential to this grand illusion, and I doubt if Europe present an instance of it.”

I. F. “They seem favorite resorts of buffalo; we observed it on the Arkansas. Those were grand chases we had this morning!”

C. “To be so unsuccessful; the buffalo run down a slope at racer speed; their strength is principally before, and ‘they let go all holds.’”

I. F. “This oasis is truly beautiful! and with a surrounding wildness and desolation, which have a real grandeur; for miles, we could sel-

dom see over a gun-shot in any direction; it seemed that nothing but water, which had everywhere riven the sides of the steep hills—could have found the outlet, which, in fact, it made; then the thin column, far winding, now disappearing in part and next seen in the most surprising positions; the grizzly bear alarm, and the strangely echoed shouts; the clouds of dust bursting through the gorges! nothing gave promise of this quiet nook which delights the senses, while it ministers to every want.”

C. “Thanks, for the broken wagon which kept us here, whilst the rest went on to the river.”

I. F. “This must be a kind of Indian post-office: we found arrows and lance poles singularly marked and disposed; and various colored strips of cloth with evident arrangement, a record by symbols, which, no doubt, is plain to them.”

C. “As I gaze up from this deep vale—now so dark—on that planet so serenely bright, the little opening between rock and leaves, seems but the gateway to a path of ether, never so short and inviting! Methinks I see a pitying smile which reveals the hollow littleness of all our eager struggles.”

There are times when the lethargic soul shrinks even from itself; is numb; nothing can excite it; we forget to hope! And with some such speech, or soliloquy, to which I heard no answer, I must have slumbered, and dreamed; but my acts and troubled thoughts were life-like, and of which the stars were certainly no portion: I would not repeat it, but I was tortured by a dear friend, who seemed to know me not, or to be estranged; and there was a spell—as in a nightmare—which always made me powerless to clear up the cause, or exact nature of the calamity. This heart-pain half aroused me; but I scarce knew where I was; there was a sense of something wrong; but my apathy, or a kind of *ennui of sleep*, was so profound, that I lay wondering whether or not, I still belonged to the world; and so, must have slept again; for then I surely dreamed: a night alarm led me to the door of an ancient castle; and though all were then dumb with fear, I knew a flood was coming down far slopes that threatened with death; but beyond, I looked and saw, on a plain which was a lofty mountain top, a vast multitude; the earth’s habitants, mingled, I thought, with celestial visitants; for their faces shone; they sat motionless on horses, and wore helmets and bright mail; but Terror was on the multitude, and a baleful and uncertain light shone from their midst. Then, there was a rush downward of strange animals, like elephants and horses; which, I thought, would trample down all that

stood in their way: next, the mailed warriors charged, with lances set, upon flying men on foot, who were like no others I ever saw; of red countenances, and strange garments and mien; they too were armed, and resisted, but many were slain; and, as they drew near, the warriors fought too, with each other; and thus was supernatural war brought with awful reality, to the very door, which I struggled to maintain against them all. Suddenly I was in a hall with several of those who had fled on foot, and asked them in the Spanish tongue, who, and whence they were? and was astonished that they knew such language, when they answered, "from Egypt."

Next, I was conscious of flickering gleams of light, which seemed reflected from cavernous arches, and of rumbling reverberated sounds. I was half awake with awe, which fancy again was softening, when a glare of light—a crash, as from the crags overhead, and a sudden fall of water, recalled me to life, and my aching limbs to motion; and I stood upon my feet in "Ash Hollow."

Notices of New Works.

THE GOLDEN CHRISTMAS; A Chronicle of St. John's Berkeley. Compiled from the Notes of a Briefless Barrister. By the author of "The Yemassee," &c., &c. Charleston: Walker, Richards & Co. 1852.

We have passed a few hours very pleasantly in running over this little Christmas tale of Mr. Simms. There is about it a freshness and healthiness of tone very agreeable, in these days of false sentiment, fabricated passion, and almost universal striving after the "effective." In Major Bulmer we recognize more than one trait of a most excellent and entertaining old gentleman of our acquaintance, and in Ned, his son, a very strong resemblance to a personage equally real. Mr. Simms is accustomed, however, to make his characters something more than mere copies of humanity in general. Major Bulmer is a most life-like portrait, but that is not all—he is the South Carolina gentleman of the Old School, with all his eccentricities, his humours, his oddities, and strange anomalies, painted at full length. Irascible, yet kind: tyrannical in dictating to master Ned in the most delicate matters, yet yielding at once when he perceives that his son's affections are really engaged; stately, yet amiable and yielding; worldly, yet practising the fine, delicate teachings of the old "Christian gentleman"—he strikes us as something very attractive and excellent, and, what is saying much for the author, very distinct and unmistakable in his broad characteristics. A few loftier and grander traits would make such characters models for their own generations and all coming after them.

The other characters of the "Golden Christmas" are well and skilfully drawn; and though we cannot approve of the clandestine meetings, letters, &c., by which young Bulmer with the aid of his friend, deceives Madame Gi-

rardin, the plot is in general both pleasing and gratifying: gratifying above all for the old English "poetic justice" so carefully observed in the *denouement*. The description of Christmas festivities at the Barony is also very graphic, and these scenes—equally with the Boar Hunt, the party, the upset, and the shopping on King street—and drawn with precision and brilliancy. We are always pleased to meet with works of this description, aiming to describe American localities and personages; and the strong interest manifested by the public in many such volumes recently published, seems to auger well for our literature and literary taste. Many portraiture of English characters, by English authors, have made a great noise in the world, with much less truth and freshness about them than our Major Bulmer.

We repeat that the "Golden Christmas" is throughout a very pleasant and readable tale, and, at least, in our opinion, far superior to the thousand and one strained and unnatural fictions which periodically inundate our booksellers' counters.

For sale by J. W. Randolph.

THE GIRLHOOD OF SHAKSPEARE'S HEROINES, in a Series of Fifteen Tales. By Mary Cowden Clarke. New York. G. P. Putnam. 1851. Tale V. *Meg and Alice: the Merry Maids of Windsor.*

We have already expressed our opinion of the series of tales illustrative of Shakspeare, of which the present is the Fifth. Mrs. Clarke has afforded much agreeable entertainment to the lovers of the great bard, by her romantic elucidations of the text;—for the object of these small works is to supply from chance-hints and apparently unimportant passages, a further account of the heroines of the various plays, and especially to unfold their earlier characters. That the authoress has scrupulously followed Shakspeare, down to the most trifling details, names and dates, the notes at the end of the tales abundantly prove. Of course the outlines are in the main the same as in the full-developed personages, but much skill was required to take from the delineation all the worldly experience and matured individuality of womanhood, and thus throw them back, so to speak, into the fresh atmosphere of early girlhood.

No one will say that Mrs. Clarke has not succeeded in this attempt. In "Katherine and Bianca" she has most signally succeeded. In "Ophelia" and "Portia," the characters of Shakspeare are thus metamorphosed into children with rare power and freshness, and in the present tale, "Meg" and "Alice" are the Meg and Alice of the "Merry Wives" as they must have been in early womanhood.

Sir John Falstaff, Shallow, Slender and Dame Quince are the characters, and the reader from this may judge that the work is entertaining. We commend to him the tale and the whole series.

For sale by Nash & Woodhouse.

ISA, A Pilgrimage. By Caroline Cheesbro. Redfield Clinton Hall. New York. 1852.

The heroine of this story is a sort of Greeley in petticoats, who goes about talking obscurely of Woman's Rights and Social Reform, and is represented by the author as that fearful thing—a woman of strong mind, which, however, she never gives us any evidence. Rescued from the poorhouse, at a tender age, by the humanity of a lady residing in Richmond, and brought up as a member of the family, she first falls in love with the author, but crushes the feminine sentiment in the bud, and, when arrived at womanhood, goes off to edit a socialist newspaper in some distant city. In this praiseworthy ex-

prise she is assisted by a half-civilized, but highly intellectual being—one Alanthus Stuart, an atheist, whose whose books she has read with enthusiasm before making his acquaintance. Thrown together in this manner, these worthies do all the mischief in their power, by heaping ridicule upon religion, assailing existing institutions, and endeavoring to overturn society. They are especially savage upon the institution of marriage, which we are taught to believe is repugnant to nature and subversive of good morals. To carry out their consistency in this respect, they form a connexion which the French (with more tact than ourselves) designate as a *mariage au trizime arrondissement*, and are made the parents of a child who inherits, we suppose, their own mental vigor and superiority of will. The conclusion of the story presents us with a death-bed (the heroine's) made tranquil by unbelief, at which Alanthus and a Christian minister are present; the atheist referring to the scene in triumph over the man of God. Such is the outline of "Isa, A Pilgrimage." We need not say that to us the effect of the book is painful—shocking—we might add disgusting. We do not know who sits behind the mask of "Caroline Cheesbro;" some one probably of the new-light school of New-England, but we fear for her principles if "Isa" is a revelation of her own being.

As a literary performance the book is barely respectable,—what may be called heavy reading, and is full of affectations and bad English. Such words as 'enchantire,' 'syllabellie,' 'mistakeless,' Caroline will hardly find in any dictionary.

"Isa" was sent to us by J. W. Randolph.

COURSE OF THE HISTORY OF MODERN PHILOSOPHY. By *M. Victor Cousin*. Translated by O. W. Wight. In Two Volumes. New York: D. Appleton & Company. 200 Broadway. 1852.

We are disposed to doubt very seriously whether this republication of M. Cousin's great work was judicious in the Messrs. Appleton. The French professor has proved no exception to the general rule, that they who write histories of philosophy, make their volumes each the vehicle of some darling hypothesis of his own. M. Cousin's system is upheld throughout the two volumes before us, and that system has never found favor in our sight. Built up, as it is, of the most incongruous and fragmentary materials, and presented to us under the delusive title of Eclecticism, it seems, to our judgment at least, but another form of teaching the philosophical scepticism of the German idealists.

As regards that part of this work—its translation—which has fallen to Mr. Wight, we must say that it has the air of being well performed. We have not the original at hand to compare the two, but the flowing style of the English version demonstrates the translator's familiarity with the foreign language.

For sale by A. Morris.

MEMORIES OF THE GREAT METROPOLIS: or, London, from the Tower to the Crystal Palace. By *F. Saunders*. New York: G. P. Putnam, 155 Broadway. 1852.

The pleasantest guide-book that has ever fallen under our observation. Mr. Saunders has succeeded in combining the literary reminiscences of London with the mere topographical description of its streets and squares, in such a manner, that the forms of buried authors rise before us as we follow him along. Burly old Samuel Johnson revisits Bolt Court, and attenuated Charles Lamb fig-

ures again at the India House. We walk into Edmund Curll's bookstore, and step in to see Dryden at Will's. Mr. Saunders is a genuine cockney in his love of London, having been born, we believe, within sound of Bowbells. His acquaintance with all the haunts of the great metropolis is, at all events, very accurate, and those who cannot go to London, will derive a very correct impression of its vastness and magnificence by reading these "Memories" in connection with Cruchley's Map.

Nash & Woodhouse have the book for sale.

LYRA AND OTHER POEMS. By *Alice Carey*. Redfield. Clinton Hall, New York. 1852.

The two most distinguishing gifts of Miss Carey's muse are great exuberance of fancy and a wonderful richness of diction. The unpoetic reader of these poems, whose vocabulary is not copious, will either rise in an ecstasy of delight, or in a condition of utter bewilderment, at their splendid imagery and gorgeous coloring:—we cannot conjecture which result is the more probable. There are many sweet and touching compositions in the volume, which bring a holy moisture to the eyes and are calculated to make one better and purer than before. But taken altogether, they are somewhat obscure and monotonous, and exhibit—shall we say it?—traces of imitation. It is not difficult to see the influences of Milton, Keats, Mrs. Browning, Longfellow and Tennyson upon Miss Carey's style. She reads too much of the poetry of others to write independently. To point out the beauties of the present collection would be no short task—"Annie Clayville," the "Death Song," "Jessie Carol" and "Home-sick" please us most.

A. Morris has the book for sale.

THE STANDARD SPEAKER; Containing Exercises in Prose and Poetry for Declamation, &c. A Treatise on Oratory and Elocution. By *Epes Sargent*. Philadelphia: Thomas, Cowperthwait & Co. 1852.

This admirable work, which has been compiled with great taste and discrimination, ought to supersede all the elocutionary school-books now in use. The original portion of it is excellent, and the selections embrace some of the choicest gems of English literature in prose and verse. The publishers have done themselves great credit, by the handsome style and clear, accurate typography of the publication.

It may be found at the bookstore of Harrold & Murray.

TALES AND TRADITIONS OF HUNGARY. By *Theresa Pulszky*. Redfield. Clinton Hall, New York. 1852.

HUNGARY IN 1851; With an Experience of the Austrian Police. By *Charles Loring Brace*. New York: Charles Scribner, 145 Nassau Street. 1852.

Though Monsieur Louis Kossuth has somewhat prejudiced the cause of Hungary in the eyes of the American people, there is yet a remarkable interest felt by our countrymen in the condition of that unhappy land. Books, therefore, which relate to Hungary meet with a ready sale, and here are two, of diverse character, which are likely to find great favor with the public.

Madame Pulszky's collection of Hungarian legends is really delightful. Kossuth has been highly complimented for his acquaintance with the English language, but all who read these "Tales and Traditions," will see how far Madame Pulszky has exceeded him in the acquisition of a pure English style, free from strained conceits and foreign idioms.

Mr. Brace's volume is a full and satisfactory account of the State of Hungarian affairs during the last year. It will be recollected that this gentleman underwent some experience of Austrian tyranny by imprisonment in the dungeons of Gros Wardein, and the reader will find in this work a graphic narration of the incidents of that outrage. Pleasant sketches of men and manners intersperse the political reflections of the writer throughout the whole, which is presented to us in clear and beautiful type, set off with handsome lithographs.

Both of these works may be obtained of Nash & Woodhouse.

ROMANISM AT HOME. *Letters to the Hon. Roger B. Taney, Chief Justice of the United States.* By *Kirwan*. New York: Harper & Brothers. 329 and 331 Pearl Street, Franklin Square. 1852.

"Kirwan" is the *nom de guerre* of the Rev. Dr. Murray—we say *nom de guerre*, because that worthy divine carries war into the ranks of Romanism with great spirit and effect. His former Letters to Bishop Hughes excited a sensation in the religious world by their point and directness of aim, and elicited a compliment even from the learned Catholic prelate to whom they were addressed. The present series, written from the Eternal City itself, exposes some of the more remarkable of the Romish practices which obtain under the very shadow of the Vatican. The reader will find them highly interesting.

The book may be purchased of A. Morris.

ESSAYS ON LIFE, SLEEP, PAIN, ETC. By *Samuel Henry Dickson*, M. D. Philadelphia: Blanchard and Lea. 1852.

The fame of Dr. Dickson in his profession, has long been coextensive with the spread of medical science. The present volume, if he had written nothing else, would establish for him an enviable reputation in Literature. Some of these essays first appeared in the pages of the Southern Quarterly Review, where they were generally read and admired, and the present publication of them in one volume will meet with universal favor. They are marked with acute observation, the utmost delicacy of sentiment, subtle analysis, and great affluence of style.

The volume may be obtained of A. Morris.

MUSINGS OF AN INVALID Second Edition. New York: Published by John S. Taylor, No. 143 Nassau Street. 1852.

This book is quite good enough to assure us that the author could have made it infinitely better, had he chosen to do so. A strain of quiet humor pervades his Musings that reminds us frequently of Lamb, and there are not wanting occasional touches of deep pathos. The style, however, is deplorably slipshod, and there is no method or arrangement whatever in the author's speculations. In spite of all this, we have enjoyed the book exceedingly, and we can commend it warmly to the public. For the remittance of One Dollar the publisher will send the volume to any part of the United States post-paid.

We have received it from the Methodist Book Concern.

NOTES, Explanatory and Practical on the Book of Revelation. By *Albert Barnes*. New York: Harper & Brothers. 1852.

This volume completes the Commentary on the New

Testament commenced, many years ago, by its distinguished author. It was not originally designed by him to extend his critical labours beyond the gospels, but the public favor with which the earlier "Notes" were received, and the amount of good accomplished by them induced the author to persevere, and he has now arrived at the end of the sacred volume. *Finis coronat opus*. No commendation of Albert Barnes' Notes is needed at our hands. They are much too widely and favorably known.

A. Morris has the present volume for sale.

THE ORATIONS OF MARCUS TULLIUS CICERO. *Literally translated by C. D. Yonge, B. A.* Vol. 1. London. Henry G. Bohn. York Street, Covent Garden. 1851.

This is the latest volume of Bohn's Classical Library—a series of translations from the great authors of Greece and Rome, by means of which the English reader has been introduced to the splendid literature of the age of Pericles and the age of Augustus. The matchless orations against Verres which stand as the finest efforts of ancient oratory, are comprised in the volume before us which will be followed up by others making a complete edition of Cicero's works.

For sale at all our bookstores.

RECOLLECTIONS OF A JOURNEY THROUGH TARTARY, THIBET, AND CHINA, during the years 1844, 1845 and 1846. By *M. Huc*, Missionary Priest of the Congregation of St. Lazarus. 2 vols. New York: Appleton & Co. 1852.

Not only was Monsieur Huc the most indefatigable of missionary priests, as his labors in the "apostolical Vicariate of Mongolia" abundantly show, but he has contrived to write of those labors after a very charming fashion. His work has greatly interested us in a twofold manner—as a record of travel, and as a self-revelation. Few tourists have given us a fresher or more truthlike account of what they have seen. In this respect the "Recollections" are capital. But as revealing the character of the author, they are yet more agreeable. Monsieur Huc seems to be writing an autobiography, and the subject thereof—like the greater number of the Catholic priesthood—is as delightful an old gentleman, as fine a specimen of *bonhomie*, as one might wish to encounter. With an almost childish simplicity of character, he exhibits a 'smartness' that would do no discredit to a Vermont pedlar or a Mississippi boatman.

Monsieur Huc, among other things equally novel, describes, in his "Recollections," the religious rites and ceremonial of Buddhism or the faith of the Grand Lama. These volumes belong to the Popular Library of the Appletons and are well printed on good paper.

They are for sale by A. Morris.

CLARET AND OLIVES, From the Garonne to the Rhone By *Angus B. Reach*. New York: George P. Putnam. 1852.

The last and decidedly the best issue of the *Sear* Monthly Library. Fresh notes of travel are as rare as these days, as black swans, and Mr. Reach writes in a strikingly piquant and original style. Our limits forbid making extracts—else should we quote largely from two pages. But we cannot give our readers either a sip of the Claret, or a taste of the Olives. We can only commend them to get the volume, which may be bought at any bookstore for twenty-five cents.

SOUTHERN LITERARY MESSENGER.

PUBLISHED MONTHLY AT FIVE DOLLARS PER ANNUM—JNO. R. THOMPSON, EDITOR AND PROPRIETOR.

VOL. XVIII.

RICHMOND, JUNE, 1852.

NO. 6.

Notes and Commentaries, on a Voyage to China.

CHAPTER VII.

The rights of a ladder; A queer specimen of a fine officer; Blood of the dolphin; Duff; Crossing the equator; Splice the main brace; Being sick at sea; Mess-table sketches; "No gentleman;" What characterizes a gentleman; A booby; Las Roccas; Nativity of ship's company; Mother Carey's Chickens; Usage of the sea-service; What a fall may do for the faculty of memory; Speak a whale-ship.

April 13th. Latitude 4°39' north; longitude 35°01' west. The wind still favorable.

This morning a lieutenant reported to the first lieutenant that the carpenter did not get off from the steerage ladder when he was coming. The carpenter was immediately called and told that neither he nor any of the "forward officers," (under this term are included the boatswain, gunner, carpenter and sailmaker,) should hereafter use the steerage ladder. "I give you this, sir, as an order; you can obey it or not as you think best." Soon after, the sailmaker inquired whether the first lieutenant would object to an appeal to the captain from the forward officers; the answer was, "Certainly not; whenever I give any order which you think presses unfairly, you have a right to make a respectful appeal to the captain. I think it is a right of every officer. I order you to use the main-hatch ladder, because it is most convenient to your apartments."

The appeal was made; the decision of the captain sustained the order of the first lieutenant.

No doubt the "forward officers" fancied that they might use the steerage ladder without interfering with the duties or discipline of the ship; and they probably imagined that being forbid to use the ladder was in some way disparaging to them. On the other hand, it might be contended that the steerage ladder was the only common route of the officers of the ward-room and steerage to their respective apartments, and that the forward officers could not use it without passing through the steerage, the apartment common to midshipmen and passed-midshipmen. The convenience of all was therefore increased by rescinding the number of persons who habitually

passed by a narrow thoroughfare. There could be no question that the main-hatch ladder was most convenient to the apartments of the forward officers; but it is, also, by custom, the common route of all the shipped men to and from the berth-deck, and these gentlemen were liable constantly to meet sailors on their way. It was this circumstance which caused the forward officers to prefer the steerage ladder, upon which they might occasionally encounter a commissioned officer, when one or the other must yield the passage.

It is probable the moral effect of this order was to render the lieutenant, whose report provoked it, temporarily at least, disagreeable in the eyes of the forward officers; and no doubt, they charged their exclusion from the steerage ladder to aristocratic notions of their superior officers.

This evening the merits of several officers were discussed. One of the gentlemen said that "Captain — is as fine an officer as there is in the service, barring that he is always in debt, has a bad temper, and that he will get drunk." A certain lieutenant (now deceased) was mentioned: he borrowed some \$500 from a surgeon, who, in the course of two or three years, several times asked for the liquidation of the debt. At last the lieutenant declared to the surgeon he would shoot him if he ever asked for the money again. To expect the payment of borrowed money from an officer possessed of \$2,000 a year, besides his annual salary, does not seem unreasonable; yet, even here there was certainly a wide difference of opinion, whether honestly entertained, is a question I leave to the decision of casuists.

Friday, April 14th. Latitude 2°52' north; longitude 33°35' west: thermometer 80°F. At meridian a heavy fall of rain, and change of wind not in our favor. A number of flying-fishes were caught during the morning. It fell almost calm in the afternoon. Caught a dolphin about three feet in length; the stomach contained three flying-fishes, one of them partly digested. Found the blood corpuscles in this animal to be larger than those of the human subject; in other respects they presented the same characters under the microscope.

Saturday, April 15th. Latitude 2°11' north; longitude 33°32' west. Rain. Mess-cooks were busy preparing the dessert for Sunday's dinner—The materials are wheat-flour, raisins, water and

a little salt; good housewives need not be told that it must require no small skill in cookery to make them into a light, tender pudding. Yet, by dint of stirring, and perhaps by aid of standing twelve or fourteen hours in the kid in the shape of a stiff batter, before it is included in a bag for boiling, quite a popular dish is produced. This "duff" is eaten with molasses.

April 16th. Latitude $1^{\circ}37'$ north; longitude $33^{\circ}1'$ west.

April 17th. Latitude $0^{\circ}15'$ north; longitude $33^{\circ}13'$ west: thermometer 83°F . Breeze light; at six o'clock P. M. we found the ship was in the Southern hemisphere. I have now crossed the equator for the fifteenth time. On this occasion the custom of admitting Neptune and his tritons on board to shave and maltreat enophytes for the amusement of old sailors was departed from, and instead, "all hands" were called "to splice the main brace," that is, to drink an extra or unaccustomed allowance of grog.

For two or three days past I have been very unwell. The remark of a much esteemed mess-mate of a former cruise was brought to mind. He was seriously ill at a very good boarding-house in Philadelphia, and was carefully attended, but during convalescence, he remarked, "After all, there is no place like a ship to be sick in, because there is every thing at any hand for any emergency!" He was a bachelor then; now he has wife and children, but whether he still maintains this opinion I do not know.

If there be a time when the inconvenience and depressing influence of ship-life are more strongly impressed upon the voyager than at any other, it is when disease lays hold of the body so far as to shake the mind with fearful conjectures as to the result. Selfishness may exaggerate the absence of the bodily comforts of home, and sigh for the light of day, an atmosphere uncontaminated by the odours of bilge water and tar; for clean transparent water cooled, if desired, with ice; for a dainty mess of gruel or *soupe maigre* of unsuspected cleanliness: but what is most missed is that solace which a sufferer can derive only from the sympathy of loved ones, a sympathy manifested by numerous little acts of kindness and attention, which are best appreciated by the sick when wanting. It is no small deed to put yourself beyond the reach of the household affections for any considerable period. Residence in a man-of-war for years, is something better than in a railroad car, or in a stage coach, but is not equal to a river steamboat for "creature comforts," which are there always within reach. A river steamboat surely affords not very appropriate accommodations for sick men; and in this respect a man-of-war is far better, but with every care and attention on

board, better accommodation is almost always attainable on shore.

Without meaning to betray confidence, I may relate some of the personal history and opinions occasionally told at mess. It is not uncommon to discuss at table the merits of officers, particularly if they are remarkable in any particular. A lieutenant was named to day, who was praised by one as a martinet; while others characterised him as haughty, silly, tyrannical, tantallizing and "no sailor." "If you were to squeeze Captain ——'s little finger for five minutes, it would yield more seamanship than you could get out of Lieutenant ——'s whole body under a hydraulic press for a month." Another remarked, "He thinks the best use officers can make of sailors, is to flog them; he would flog a whole watch if every man was not on deck within five minutes after the bell struck eight."

A commander was named, and pronounced to be the first officer in the navy. No one present offered a word in objection; on the contrary, every one offered some reason, or alluded to some trait, to prove him to be an accomplished and efficient officer in any and in every sense of the word. "But," added one, "he is a religious man, and when he gets mad he suffers most awfully; because under such circumstances it is natural for him to swear, but he works religion against nature, and the contest almost strangled him, although religion always carries the day, seeing she has a powerful ally in the third article of the law of 1800, which, you know, makes swearing a court-martial offence."

It will be perceived, from the above samples, that the portraits of navy officers, drawn by respectable artists, are to be received as sportive sketches or caricatures, rather than as deliberately designed pictures; yet they sometimes possess a truthfulness of outline, which makes them speaking likenesses of the originals, in spite of a little excess in coloring. Wanting as they do Daguerreotypy exactness, these pictures are still accurate enough to show that sea air is very conservative of the moral imperfections of man, and to teach us that we should not be disappointed to find no more virtue, generosity, liberalism or forbearance in the exercise of power, or less vice, prejudice, avarice or meanness than may be met in an equal number of men of other vocations. Men employed as officers in military service, are generally so conspicuous as to be readily observed; and hence their salient points, whether virtuous or vicious, are quickly seen by the community and noted, especially by respectable artists who delight to render their representations somewhat spicy in order to tickle the prevailing taste of the times. There is a danger to be apprehended from this fashion of free

discussing the characters of men; in the hands of a humorist an absent brother officer may afford infinite amusement without much injury to his reputation, but if skill in delineation be united to a malicious disposition, the minds of listeners may be very seriously prejudiced against a really meritorious man. Indeed, a fair reputation might be entirely destroyed by heedless misrepresentation, designed only to furnish present amusement. It would be well, perhaps, if every one could be taught never to say any thing about a brother officer, disparaging, until ready to hold himself responsible for his statement. To say an officer is "no sailor," is equal to charging incompetency upon him; and it is a charge that it might not be easy to disprove. I remember to have heard it related of the naval times prior to 1812, that a sailing-master of one of our frigates, upon a certain occasion, cast himself on a camp-stool beside the ward-room table, and buried his face in his hands in an attitude of grief and vexation. He rolled his head about and sobbed aloud. A mess-mate asked the cause of his distress, and received in broken tones an explanation: "The Commodore, d—n his soul, has put an insult upon me that will carry me to my grave. If he had said I was 'no gentleman;' or that I got drunk; or cheated at cards; or lied, I might have got over it, I think; but Jack, my boy, it was worse than all these together, for he said to me, (an old, experienced sailing-master in the service as I am,) says he, 'Sir, you're no sailor!—and you may go below!' Oh! I shall never be able to show my face on the quarter-deck again.—d—n his soul."

It has been substantially asserted in more places than one, there are many excellent, worthy gentlemen in the navy who are not distinguished seamen; and not a few highly accomplished seamen who cannot readily pass muster as gentlemen. Macaulay, (History of England,) speaking of the British navy, says, "There were gentlemen and there were seamen in the navy of Charles II. But the seamen were not gentlemen, and the gentlemen were not seamen. A very ancient Commodore has the credit of having said, "Make gentlemen of your officers, and the natural consequences will be, you will not have a sailor among them at the end of ten years."

If the gallant old commodore understood the term gentleman to designate a variety of the *genus homo*, characterised by remarkable precision in the fashion and fit of his garments, the prominence of white kid gloves, (even in the rain,) and a luxuriance of hair on the lip and cheeks, redolent of perfumes, and noted for repugnance to pay landlords, tailors and laundry maids their just claims, while ever ready to "venture a V on a turn of a card" in the presence of

company, he was correct in the notion that gentlemen could not be sailors. But in fact, a man may be "every inch a sailor," and measure no less as a gentleman, if I am not mistaken in the meaning of the term. By a gentleman I do not mean a dandy; nor an animal who constantly refrains from using his hands under an erroneous impression that it is degrading to employ them, except for a very few purposes, such as manœuvring a tooth-pick on the front steps of a fashionable hotel, or an opera-glass at a dramatic entertainment. A man of education, good breeding and civil manners, is said to be a gentleman, but these qualities alone are not enough to constitute a gentleman. A man of courage, truthfulness, integrity, frankness and intelligence, who is civil in his deportment, who respects all men without regard to their vocation, and who always acts on the Christian principle of doing to others as he would others should do unto him under all circumstances, is worthy of the title of gentleman. Surely such qualities are not incompatible with a perfect knowledge of seamanship, or of any other professional knowledge, whether scientific or mechanical. But there are some who regard prodigal expenditure of money as the criterion. A hostler pronounced a man to be "a first rate gentleman," because he gave him a half dollar for holding his horse while he took a drink at the bar of a road-side inn. Costume of a particular fashion, in the estimation of some few hastily thinking people, is essential to respectability and social position. But fine clothes, fine manners, and fine words may disguise a man, who, when placed beyond restraint of law or superiors, would avail himself of opportunity to overreach a child, to deliberately wrong a woman, to betray a trust or a confidence for profit; who would play the braggart, be overbearing, tantallizing, exacting or tyrannical towards inferiors, while he is at the same time towards superiors a very polite, attentive, cringing sycophant and parasite.

Personal selfishness, carried to any remarkable degree, is inconsistent with the qualities which characterize the high-toned gentleman, because selfishness cannot be indulged without invading the rights of others. Among the first principles of gentility is to recognise the claims of all, and yield to them due respect; to demand only what is clearly right, and to submit to nothing which is clearly wrong. It unfortunately happens that men possessed of self-esteem or vanity in a high degree are prone to over-appreciate their own qualifications while they depreciate those of others; and thus blinded by conceit, they do not perceive the merits of men among whom they live, and thus misled they may perhaps innocently, do them wrong. Men

thus constituted are apt to indulge in extreme views, and to regard the most valuable labors of their fellows somewhat contemptuously. They find it difficult to modify their egotism, or come to a compromise upon any subject; and if placed in power, they are governed in their deportment chiefly by their desire and will, without regard to the opinions, feelings or rights of their subordinates. Their own views of peculiar advantage or interest are alone consulted. Yet the same men are honest, honorable and respectable in all their relations of life, except only when their own interests are in any way involved in their actions. Such gentlemen do not understand the injunction, the command of the Greek philosopher, "know thyself," and never subject themselves to the wholesome exercise of self-examination; an exercise which may be freely indulged without danger to the moral health of the most worthy members of society.

April 19th. Latitude 3°46' south; longitude 34°29' west: temperature 84°F. The wind is against us. There are dangerous rocks in our route, lying between the island of Ferdinando-de-Norhona and the coast of Brazil. The danger of these rocks, called Las Roccas, is augmented by the fact that nautical authorities are not agreed as to their exact position, a fact which illustrates the importance of accurate surveying. Our English chart places the Roccas in 33°33' west longitude; Horseburgh, in 33°06'; Owen, in 33°7'; and Purdy in 33°07', a difference of 27 miles between the English authorities. According to Bowditch, the American authority, the Roccas are in 33°10' west.

April 20th. Latitude 3°03' south; longitude 33°44' west: temperature 83°F. Finding it impossible to clear Cape St. Roque on the course the ship was steering, the vessel was tacked last evening, and we are now running to the eastward.

April 21st. Latitude 3°20' south; longitude 33°12' west: temperature 83°F. We have advanced very little in the past twenty-four hours. At sunset last night a booby, (*Sula fusca*), alighted on deck, which broke the monotony for a short time. The bird is about two feet five inches in length. It has a strong, conical, roundish, sharp bill about four inches long, and a keen eye. With the exception of the belly, which is white, the rest of the plumage is of greenish, or rather grayish brown. Owing to the length of its wings, the bird could not set them in motion on the deck; its efforts to fly excited the mirth of the spectators. After being a prisoner about two hours, it was set at liberty.

In the course of this afternoon we passed a vessel, about ten miles distant, supposed to be bound to the United States.

April 22nd. Latitude 3°45' south; longitude 33°27' west: temperature 86°F. To-day the decks were thoroughly "holy-stoned," that is, scrubbed. At half past eleven o'clock, A. M., the look-out on the fore-topsail yard shouted, "breakers ahead." We presumed we were near the Roccas by our reckoning, which makes the position assigned to this reef on the English chart correct.

At 1 o'clock, P. M., a line of sand and foam, glittering like frosted silver in the sunshine, was visible from deck, it extended several miles, and was estimated to be distant from the ship about five miles. This reef of coral rises scarcely above the surface, and would be fatal to any ship that struck upon it at night, especially if the wind were fresh. There seems not enough dry land, even now when it is almost calm, for fifty men to stand upon. A current sweeps past to the westward, at the rate of two miles an hour, which would drift a vessel situated to the eastward of them upon the Roccas, in spite of every precaution, because there is no bottom available for an anchor.

Numerous sea birds were sailing above the breakers, and individuals were occasionally seen to dive, no doubt in pursuit of fishes, but we were too far distant to observe their success. Many sharks were seen, and about three o'clock, one was caught, which was only about five feet long. As usual, it was speedily despatched, and its spine was dissected out of the body to be converted into a walking-cane.

Several on board were anxious to land, some to gather shells, and others, because they imagined no person had ever been on shore there willingly, and for this reason, they would have accomplished what others had not done.

April 23d.—Easter Sunday.—Latitude 4° 52' south; longitude 33° 12' west; temperature 84°F. A vessel passed at a distance, presumed to be the British mail-packet from Pernambuco.

April 24th.—It rained heavily from eleven till one o'clock. Since the rain, it has been calm and sultry. Our dead reckoning places the ship in latitude 6° 22' south; longitude 33° 22' west.

The company on board this ship numbers in all 217 souls, of which number, 73 are not citizens of the United States. The places of their birth are as follows:

At sea,	1	Canada,	2
Russia,	1	Scotland,	6
Prussia,	1	Ireland,	36
Nova Scotia,	1	England,	23
France,	1	U. S., including	
Malta,	1	12 negroes,	144

They are classed as follows: Passengers 2; Commission and Warrant Officers 24; Petty Officers 37; Seamen 37; Ordinary Seamen 44;

Landsmen 30; Boys 9; Apprenticed Boys 8; and Mariners 26; making an aggregate of 217.

The man born at sea is of Irish parents. He at first declared, in the strongest Hibernian brogue, that he was born in New York, but finding his statement doubted, he added, in a somewhat ingenuous manner, "The *rale* truth is, I *waz* born in New York, but it happened the day before my mother arrived."

April 25th. Latitude 6° 53' south; longitude 33° 01' west; temperature 48° F. It is very sultry this morning. Moths are found on board; it is feared woolen clothing will suffer. To-day the crew was exercised by divisions—a sort of company drill—and two rounds of shot and shells were fired.

This morning a Mother Cary's chicken was caught.

Ornithologists describe this bird under the generic names of *Thalassidroma* and *Procellaria*.

"This ominous harbinger of the deep is seen nearly throughout the whole expanse of the Atlantic, from Newfoundland to the tropical parts of America, whence it wanders even to Africa and the coasts of Spain! From the ignorance and superstition of mariners, an unfavorable prejudice has long been entertained against these adventurous and harmless wanderers, and as sinister messengers of the storm, in which they are often involved with the vessel they follow, they have been very unjustly stigmatized by the name of Stormy Petrels, Devil's Birds and Mother Carey's Chickens. At nearly all seasons of the year these Swallow-Petrels, in small flocks, are seen wandering almost alone, over the wide waste of the ocean.

"On the edge of soundings, as the vessel loses sight of the distant headland, and launches into the depths of the unbounded and fearful abyss of waters, flocks of these dark, swift flying and ominous birds begin to shoot around the vessel, and finally take their station in her foaming wake. In this situation, as humble dependents, they follow for their pittance of fare, constantly and keenly watching the agitated surge for floating mollusca, and are extremely gratified with any kind of fat animal matter thrown overboard, which they invariably discover, however small the morsel, or mountainous and foaming the raging wave on which it may happen to float. On making such discovery, they suddenly stop in their airy and swallow-like flight, and whirl instantly down to the water. Sometimes nine or ten thus crowd together like a flock of chickens scrambling for the same morsel, at the same time pattering on the water with their feet, as if walking on the surface, they balance themselves with gently fluttering and outspread wings, and often

dip down their heads to collect the sinking object in pursuit. On other occasions, as if seeking relief from their almost perpetual exercise of flight, they jerk and hop widely over the water, rebounding as their feet touch the surface, with great agility and alertness.

"There is something cheerful and amusing in the sight of these little voyaging flocks, steadily following after the vessel, so light and unconcerned, across the dreary ocean. During a gale, it is truly interesting to witness their intrepidity and address. Unappalled by the storm that strikes terror into the breast of the mariner, they are seen coursing wildly and rapidly over the waves, descending their sides, then mounting the breaking surge which threatens to burst over their heads, sweeping through the hollow waves as in a sheltered valley, and again mounting with the rising billow, it trips and jerks sportively and securely on the surface of the roughest sea, defying the horrors of the storm, and like some magic being, seems to take delight in braving overwhelming dangers. At other times, we see these aerial mariners playfully coursing from side to side in the wake of the ship, making excursions far and wide on every side, now in advance, then far behind, returning again to the vessel, as if she were stationary, though moving at the most rapid rate. A little after dark, they generally cease their arduous course, and take their interrupted rest upon the water, arriving in the wake of the vessel they had left, as I have observed, by about nine or ten o'clock of the following morning. In this way, we were followed by the same flock of birds to the soundings of the Azores, and until we came in sight of the isle of Flores.

"According to Buffon, the Petrel acquires its name from the Apostle Peter, who is also said to have walked upon the water. At times, we hear from these otherwise silent birds by day, a low *weet, weet*, and in their craving anxiety, apparently to obtain something from us, they utter a low twittering '*pe-ūp*, or chirp. In the night, when disturbed by the passage of the vessel, they rise in a low, vague and hurried flight from the water, and utter a singular guttural chattering, like *kūk kuk'k'k'k'k'*, or something similar, ending usually in a sort of low twitter, like that of a swallow.

"These Petrels are said to breed in great numbers on the rocky shores of the Bahama and the Bermuda islands, and along some parts of the coast of East Florida, and Cuba. Mr. Audubon informs me that they also breed in large flocks on the mud and sand islands of Cape Sable, in Nova Scotia, burrowing downwards from the surface to the depth of a foot or more. They also commonly employ the holes and cavities of rocks near the sea for this purpose. The eggs, according

to Mr. Audubon, are three, white and translucent. After the period of incubation, they return to feed their young only during the night, with the oily food which they raise from their stomachs. At these times, they are heard through the most part of the night, making a continued clattering sound like frogs. In June and July, or about the time that they breed, they are still seen out at sea for scores of leagues from the land, the swiftness of their flight allowing them daily to make these vast excursions in quest of their ordinary prey; and hence, besides their suspicious appearance in braving storms, as if aided by the dark Ruler of the Air, they breed, according to the vulgar opinion of sailors, like no other honest bird, for taking no time for the purpose on land, they merely hatch their egg under their wings, as they sit on the water!

"The food of this species, according to Wilson, appears to consist, as he says, of the gelatinous spora of the gulf-weed, (*Fucus natans*), as well as small fishes, barnacles, and probably many small mollusca. Their flesh is rank, oily, and unpleasant to the taste. Their food is even converted into oil by the digestive process, and they abound with it to such a degree, that, according to Brunnich, the inhabitants of the Fero Isles make their carcasses to serve the purpose of a candle, by drawing a wick through the mouth and rump, which being lighted, the flame is for a considerable time supported by the fat and oil of the body."

The fidelity of the above description by Mr. Thomas Nuttall* will be at once recognized by all who have had experience at sea. The facts stated, I have witnessed again and again at different times; there is nothing related for truth which cannot be established by any number of competent witnesses, which is more than may be safely asserted of many statements relative to human history, or to human institutions. The usages of the naval service of the United States, for example, are not as readily ascertained and stated as the habits of the remarkable petrel, known under the name of Mother Carey's chicken.

At dinner, to-day, it was asserted by one of the gentlemen, that it is a duty of the flag-lieutenant to keep watch at sea on board a Commodore's or flag-ship. The correctness of this position, was at once denied, and the usage of the sea service was appealed to for a decision. Opposite sides of the question were advocated; one party declared they had never known a flag-lieutenant to keep watch at sea, while the other stoutly maintained the reverse. One gentleman

was very confident in his knowledge of the customs of the service, and based his confidence on the circumstance that had served on board of no less than twenty two different vessels in the navy. After patiently hearing the testimony on both sides, I formed an opinion that there was not sufficient evidence to decide what is the custom of the naval service is on this point, though it was enough to show that the flag-lieutenant sometimes at least, was not expected to keep watch at sea. It can scarcely be doubted that all questions on the duties of officers, might be placed beyond a necessity of reference to the usage of the sea-service by devising rules or statutes on the subject.

A striking instance of the difficulty of determining what is or is not usage in the naval service, occurred within less than three years, and has been recently alluded to in a congressional debate. A sailor, while on shore in a port of the Mediterranean, assaulted a lieutenant who was in command of the ship to which the sailor belonged. By order of the lieutenant-commander, the sailor was seized, carried on board ship, put in irons, and confined until brought to trial before a court-martial convened in New York. He was kept a prisoner more than three months, and it was stated before the court, that he had been gagged and "bucked." It is believed these facts were stated with a view to induce the court to award a mild sentence, on the ground that the prisoner had been already punished, in part at least. Be this as it may, it appears that of the twelve Captains, who constituted the court, not one understood the word "bucked," or the kind of infliction it implied. The lieutenant-commander knew what "bucking," was, and ordered the man to be punished in this way; he was the incensed party, the accuser as well as the judge, and directed the execution of his own sentence. But it does not appear that "bucking" was considered contrary to the "custom in like cases at sea," or that the lieutenant-commander had, in the opinion of the court, in any way transcended his legal authority, notwithstanding, no member of the court could explain the meaning of the term. The prisoner was sentenced to be dismissed from the navy with a "bad conduct" discharge, or similar infliction, which must have been considered by the man a small addition to being gagged and bucked, and kept in irons for three months.

This outline was given to me by a member of the court, and is related from memory. The court sat sometime in the beginning of the year 1850, and the record of its proceedings, which is no doubt on file in the Navy Department, can be referred to, if necessary, to correct any error of the above story, which is given here exclusively

* A Manual of the Ornithology of the United States and Canada. By Thomas Nuttall, A. M. F. L. S. The Water Birds. Boston 1834.

as an illustration of the value of the "usage of the naval service," as a rule of justice and equity.

The details of the case have not been published; but even in ignorance of the testimony, a conjecture may be hazarded that the offence charged was striking or offering to strike his superior officer, and for this reason, was to be adjudicated under the 13th, 14th and 15th articles of the law of 1800, which have been already quoted. Then, if "bucking" he proved to be a punishment in accordance with the usage of the sea-service, it was nevertheless, illegal in this case, because the 32d article provides that only the "crimes which are not specified in the foregoing articles, shall be punished according to the laws and customs in such cases [namely, those which are not specified] at sea." This man's crime was specified and provided for in the law; and therefore, any mode of punishment not stated in the statute, whether by gagging, bucking, or crucifying, even if those were or are customary, is illegal. Whether a civil court could award damages, as for mal-treatment, in such a case, is a question; but whatever the law may be, it does not seem in accordance with justice or equity, that a sailor, illegally punished by a superior officer, (whether he be a military officer of the naval service, or a civil officer of the merchant service,) should have no remedy.

April 26th.—Latitude $8^{\circ} 39'$ south; longitude $33^{\circ} 36'$ west; temperature 84° F. Several rain squalls to-day. To-day, a sailor was wounded accidentally by a boarding-pike, during exercise at "general quarters."

April 27th.—Latitude $11^{\circ} 38'$ south; longitude $33^{\circ} 31'$ west; temperature 82° F. A run of 180 miles in the past twenty-four hours, has made every one hopeful; all are anticipating the time of arrival at Rio de Janeiro.

The comparative value of steamers and sailing ships for purposes of war, was a subject of discussion to-day. The liee-officers on board, seemed to be equally divided in opinion on this point: one gentleman, for whose judgment in nautical affairs I entertain high respect, exclaimed—"Give me a frigate with an eight knot breeze, and I will whip any steamer that ever floated."

At sunset every day since sailing, it has been the custom to reef topsails, without reference to the state of the weather. This evening, one of the men, hurrying aloft, fell a distance of about fifteen feet to the deck. He had no external signs of considerable injury, but it was remarkable, that he could not tell the number of his hammock, nor the number of his mess, nor the name of any one of his messmates, and yet he was entirely coherent on all other points.

April 29th.—Latitude $18^{\circ} 15'$ south; longitude $35^{\circ} 45'$ west. To-day a great event in our cruise has happened. The first despatches from the ship since losing sight of the United States, were put on board of a whaling barque, bound direct to New London, Ct. She has been five months without seeing land; has been absent two and a half years, and is now returning home with a full cargo of oil. It was pleasant to observe the pleasurable excitement produced by meeting this whaler, all sea-worn as she appeared. Her sails were thin and white from long exposure to the sun; but her bunting streamed out brightly, and her hull was well sunk in the sea, indicating that she was full laden. A whale's jaw-bones decorated the stern; her whale-boats rested bottom upwards between the masts, and at her main-mast head she wore a black ball, more than a foot in diameter, fixed on a staff, a signal of triumph which told other whalers that her cargo was complete. When her commander answered our hail, "Bound to New London," and signified that he would receive a letter-bag on board, every body whose duty permitted him to leave the deck, rushed below to seal up his packet. The boat which bore our letter-bag was followed by all eyes, and every body wished fresh and fair breezes to the whaler, whether because she had been already so long at sea, or because we fancied our letters were anxiously waited for, it is not necessary to explain.

"IF AROUND YOU SAY."

BY P. L., ESQ.

If around you say
Humn the merry golden-booted bees,
And an emerald splendor from the trees
Falls upon the day :

If with far-sent words
I am beckoned to the forests fair,
Where the violet scents the summer air,
And the joyful birds

Scatter in the shade
Long, melodious, never-ceasing trills,
Which to list to is a cure for ills
In the old years dead.

If around you say
Bloom the many-tinted tender flowers,
Flooding with perfume the light-winged hours
Of the golden day :

And that dim and far
Swim the silvery vapors, while the sky
Holds but a single cloudlet soaring high
White as the morning star :

Can I choose but come
With the swiftness of a fawn unbound,
Or a sunbeam, or a flying sound,
To my own heart's-home ?

1 May, 1852.

HISTORY OF RICHMOND.

CHAPTER TWELFTH.

CONVENTION OF 1851.

CONCLUSION.

In closing the history of Richmond, we shall give some account of the proceedings, and some sketches of the members, of the Convention that has recently sat in this city. We will make mention also of the government of the corporation, as it exists under the new charter; and refer to any matters of interest that may have been overlooked in the preceding chapters. This Convention has met, and this charter has been granted, since the previous pages were written. Time has not yet placed its mark of approval or of censure upon either, and although the historian is but the recorder of those opinions which time and experience have dictated, we can still, in observing the men and the course of this Convention, and judging of the future by the past, form some opinion in regard to its influence upon our State, and of the position which it will hold in history.

The dissatisfaction with the Constitution, as made by the Convention of 1830, was universal throughout the western portion of Virginia. Nor was it in much better odor in the eastern part; so that in fact, John Randolph's prophecy of its length of life, when he said that it would not live half a century, or even a generation, has proved true. The result of the labours of all the mighty minds collected in Richmond, in that Convention, has come to nought. The Constitution which they made, had an existence of only twenty years, and like a feeble, delicate youth, did not even reach maturity. The question was submitted to the votes of the people in 1850, whether they wished another Convention for the purpose of amending the Constitution, and by a very large majority, both east and west, decided in its favor. At once the whole State was agitated, from end to end, by the various candidates and their various propositions for reform. The questions of White or Mixed Basis were very much confined to their respective portions of the State; party politics, the well-known rallying cries of whig and democrat, and the indistinct titles of radical and conservative, marked out the opinions of different candidates all over the State. It would seem to have been intended that this Convention should be chosen on different principles from those by which the last one was selected; then, party politics were not made a ground of choice, and our people were more careful than in this one, to select able men who had been thoroughly tried, and who had already

done good service, without regard to political titles or party names. In this Convention, there were very few who had at all distinguished themselves in Federal politics; few who had a reputation to lose; and scarcely any who could point to their past honors and former renown as guarantees of great usefulness, or in anticipation of mighty effort. In one Convention, we had assembled our greatest, wisest, most renowned men, and they had disappointed us: we now reversed the mode of choosing with expectation of reversing the result. We tried the one, and it had failed; we then tried the opposite: let us now see how this succeeded. Old men, as they looked on this body assembled in the capitol, and thought of the former Convention of renowned names, spoke disparagingly of their youthful appearance, and predicted that they would never compare with their predecessors. Yet there was an appearance of vigor and of youth about the men composing this assembly, which the former one had not; few gray heads were to be seen; and none of those men, with antiquated reputations, whose powers had rusted for years in retirement, were to be met with among its members. It was an interesting sight to see this body of men, collected from the various and totally dissimilar parts of our State, assembled first in the capitol, and when that was claimed by the Legislature, in the Universalist Church; with the experience of all the past to guide them, with knowledge from personal observation of the defects in our then existing system of government, and with the eyes of the whole State turned on them with hope in their good sense and patriotism. Much was expected of them; there was such scope for the exercise of talent, knowledge and intellect, (as the question was one of government in all its various applications, and Virginia had always hitherto witnessed such imposing displays of eloquence and talent,) that the people looked forward with great interest to the eloquent efforts and solid results promised them. When they came together, it was found that apart from the division into whig and democrat, and into great parties on the Basis question, previously existing, there were almost as many elements of discord and disagreement as there were individual members in the body. It was the strangest assemblage of different opinions ever collected in Virginia; varying from high conservatism to the extreme of infinite radicalism, with all the variations and shades that it is possible for the mind of man to conceive. The Convention may not inaptly be compared to an immense kaleidoscope, which from its turnings and shakings, evolved every variety of figure and appearance. This character of the Convention resulted from two errors made in selecting its mem-

bers. One was that party service and party prejudice were called in to influence the elections. We thus had an abundance of men thoroughly trained to volubility in reference to federal politics, to those of the State, and of their own section; men fluent and able in that unclassical style of declamation, called stump-speaking; who divide the character of their oratory between denunciation and endearment, applying the terms of each respectively to political friends or opponents. These men had a reputation to make, and by the tongue; their diligence in the use of that powerful member cannot be sufficiently commended—considered only, however, as an exhibition of persevering industry. As it would have been far more difficult to have held the tongue still, they scarcely deserve credit for the use they made of it. If the same diligence of spirit prevailed generally in Virginia in acting, as it did in these gentlemen in speaking, the entire work of regenerating the State could be accomplished at once. Some of these men seem to have thought, that to *reform* meant to *overturn*, and that their work was not to amend and alter the Constitution of Virginia, but to destroy it, and casting aside the rubbish of the old, from the brick and mortar of their own brains to erect an entirely new structure. Had their efforts succeeded, the result would have been, (the materials being drawn from such sources,) walls of mud and a roof of lead.

Another error consisted in the fact, that a very large proportion of the members were lawyers; 97 out of 135 were of this profession. We mean no disrespect to this ancient and honorable class of men, (for from it have come forth some of the best men, and also some of the wisest statesmen this country has ever produced,) when we assert that whenever its members are collected in large masses, and in that capacity have affairs of State committed to their discussion and deliberation, they have rarely failed to do mischief. It is almost impossible for two of them to take a similar view of the same thing from the same point of observation; and consequently in affairs of government, where so much variety of opinion prevails, they would be expected to differ as widely as the poles, and as often almost as the meridian lines that can be drawn upon the surface of the globe. We think it may be laid down as an axiom, that a country governed by its lawyers, is the victim of misrule. And while we might instance France during and before the Reign of Terror by way of proof, we are content with the government of Virginia for the past forty years as an illustration. The State has been governed by a predominance of lawyers in its legislature. No one can doubt the facts, whilst cause and effect may be denied them, that

Virginia has been badly governed, and that her law-makers have been mainly drawn from the legal profession. Like fire, or water, or any other useful element, they are good and necessary in proper place and in proper quantities; in large masses, however, like these elements, they are unmanageable and destructive. The number of lawyers in our State is about 800; and of these 97 sat in Convention—a much larger proportion than that representing any other class of the community. In fact we have been cursed in Virginia with an abundance of small lawyers and still smaller politicians. These two characters are often combined together in the same individual, and form a class of political animals called *pettifoggers*, the like of which cannot be found in any one class of plagues or monsters that ever existed; whose parallel must be sought among the curses sent upon the Egyptians of old; yet who cannot be represented by any one of those curses, but whose nearest resemblance would be formed by combining together, in all that is disgusting and disagreeable, the plague of lice and the plague of frogs! This class had also its representatives among the members of the Convention. With these elements, then, of discord within them, the Convention assembled on the 14th day of October; and after a few days' session adjourned to meet in January, 1851. The reason given for this adjournment was, that as the census returns could not be obtained before the first of January, the comparative strength of Eastern and Western Virginia could not be ascertained until that time; upon these returns, the new apportionment of representation could be correctly based; and the Convention might thus proceed more clearly and more rapidly with its work. The chief reason of this delay, however, was that members might have time to arrange business, to attend the fall courts, (an instance of lawyer legislation,) and be ready and prepared to despatch the work of the Convention when they returned. This delay seems to have been the parent of many other delays. It was a measure expensive to the State, (for the pay of members went on during this time of recess,) unnecessary and unwise. This was the first error; it introduced a dilatory spirit into the entire body. Another and a greater one consisted in publishing the "Supplement." The speeches delivered were not only published in full,—although that would have been bad enough,—but a detailed account of every uninteresting conversation held in the Convention was also printed. A narrative as useful in the general, although not as interesting, as would have been the annals of the famous war between the birds and beasts, wherein not only lions and eagles, but also moles, bats, weasels and mice are

said to have flourished and acted ! It was doubtless hoped, by some who advocated the measure, that the threat of taking notes and putting them in print, would check the volubility of certain members. Vain hope ! the profusion of words and superabundance of talk prevailed like an epidemic influenza throughout the body ; and the Supplement no more checked the flow of language than would the preparing a reservoir, and clearing a course to it, prevent the pouring into its basin a "weak, washy, everlasting flood" from numerous muddy and nauseous springs. We will not go into a detailed account of farther errors committed in the commencement or during the session of this body, (the subject would be painful and wearying,) but will, according to our custom, lead out some of those who took a chief part in the debates, or who otherwise demand notice, describe them and their style of oratory, and give some account of the result of their deliberations. In so large a body, so variously collected, there were some men of great abilities and strong minds ; as well as others, whose intellects and acquirements were such as to excite astonishment at their presence in the Convention of Virginia. There were guns of every calibre, from the 64 pounder down to the very smallest pocket pistol. In listening to, or in reading, their deliberations, we find very great use made of the published debates of the Convention of 1830 : by some they were referred to as authority, and by others for purposes of ridicule and condemnation. It was plainly to be seen that there was a great need for some well written Constitutional History of Virginia. Such a work, from an able pen, would be a valuable contribution to the literature of our country ; yet it would require the comprehensive intellect of such a man as John Marshall to do justice to the subject. How great would be the extent of time that such a history would cover, and how many interesting changes would be contained in its pages. Commencing with the clumsy efforts at Constitution making, of the learned blockhead who sat on the English throne, while Smith was trying to build up Jamestown ; marking the changes that gradually occurred as the colony increased in size, the important ones that were made during the time of the Commonwealth and Cromwell, and the still more important laws and regulations made by Nathaniel Bacon and reversed by Gov. Berkeley, we come to those great and lasting alterations that resulted from the spirit of the Revolution. This wrought a greater change for us than Runnymede and Magna Charta did for England. Taking note then of the unsatisfactory results of the Convention of 1830, and of the entire and radical revolution made by that which has lately closed its sessions, we would have traversed the

most extensive field of constitutional history that could be presented. The extremes of despotism and radicalism would both be placed before us ; and it would increase our admiration of the men who made these changes, and of the law-loving people who both dictated and submitted to them, to mark that the Constitution of Virginia has been of slow and gradual growth, and that no violence or popular outbreak has ever accompanied these changes.

It would appear, however, that the Constitution of Virginia, as commented on in the debates of 1830, was not fully understood by many of the members of this body. These debates, and sundry works also on political economy, being apparently swallowed whole, and like strong, rich food disagreeing with weak stomachs, produced an intellectual indigestion ; by which complaint many were prostrated, until the Universalist Church resembled a hospital, and debility of mind and barrenness of thought prevailed.

We will now speak of the men of this Convention : and in doing so, we will not bring out the Richmond delegation, because they dwell among us, and are well known to our citizens ; it is unnecessary to describe, to those who sent them, the person, manner and style of speaking of the able delegation representing the people of Richmond.

Henry A. Wise occupied an important and prominent place in this Convention.—not only because he had obtained a national reputation, by having served a long time in Congress, and having occupied a prominent place in party politics,—not only because of his eloquence and talents ; but also because he took so decided a part in the debate, occupied so much time in speaking, and also from the fact that he, an Eastern man, advocated the Western Basis of Representation. His political course has been an eccentric one ; he has revolved around no central sun, but has had an irregular orbit of his own. We find him changing from party to party, and from one political title to another. His political character is not understood ; probably the key to it is this, that he delights in opposition, and even if agreeing in opinion with another, arrives at his conclusions by a different train of reasoning from that of the person with whom he agrees. Accordingly, we find him changing his course to suit his convenience, generally when the party with whom he acts is successful, and there are too many with whom he has to agree ; and often appearing to adopt opinions for the sake of differing from those around him. It is highly probable that had he been born in the West among White Basis men and principles, he would have adopted and advocated the Basis of the East from this spirit of opposition ; as it is likely that,

from his Eastern birth and breeding, he now adopts the Western view of the Basis Question. In appearance, he was one of the most remarkable looking men in the Assembly, and would attract attention wherever seen. His face seemed full of cavities,—hollow cheeks, large hollow eye-sockets, and the most cavernous mouth; when he spoke, the eyebrow seemed thrown up towards the top of his head, and his mouth, immensely opened, like a gate on its hinges; so that he appeared to be all eyes and all mouth—two very good features and faculties in an orator. His face is full of flexibility, and by the easy play of its muscles expresses every emotion and passion of the mind. In fact, the whole face speaks in every muscle and fibre of it. When at rest, his relaxed features, tall, loose-jointed figure, and slight, spare form, give no promise of physical power; yet the length and frequency of his speech, and his earnest, violent gesticulation show that he possesses great power of endurance. From out this cavernous mouth, flow streams of eloquence, these hollow eye-sockets are filled up with the blaze of the eye, and the very flexibility of his features add force and emphasis to his words. His blue eye, even when quiet, has a daring outlook, that well expresses the character of the man; and in his excited moments, it blazed and burned in the fire of his own vehemence, as if it would consume all opposition, and intimidate all resistance. His action is always abundant, and is of the most vehement and excited character. Totally devoid of grace, which his loose, angular figure forbids, it yet possesses much power and eccentric force; his use of the long forefinger reminds us of Randolph, and like him, he excels in denunciation. His voice is the most perfect and beautiful feature that, as an orator, he possesses; it is at once powerful and sweet; as flexible as the muscles and features of his face, and as perfectly under control; it has compass, variety, depth and clearness, and beside this, it has that peculiarity of sound or accent which constitutes the winning spell of the orator, and which so effectually charms an audience. In his mental qualities and powers, there is close correspondence with his peculiar physical frame and strongly marked countenance. His mind is not of the highest order, nor is it a learned one; it is essentially dramatic. Excitable instead of powerful, acute rather than logical, keen rather than strong, he excels more in the manner than the matter of his speeches. Dealing more in appeals to the passions than in argument to influence the reason; in racy, pointed anecdotes, than in substantial facts; meteoric, not steady shining; he has neither the mind nor manner to lead a great party, or to carry out consistently and perseveringly, any great scheme of

policy. Yet no man, perhaps, ever possessed a more perfect unanimity or agreement of action in his powers and faculties. In the peculiarities of countenance, of figure, of feature and of gesture; in flexibility of voice and endurance of frame; in the singularities of his manner, and in the powers and capacities of his mind, there is a perfect concordance. And in this lay the secret of his power: he precipitated himself upon the subject or upon his opponent, with his entire powers of body and of mind. Face, figure, feature, gesture, flexibility of muscle, limb, voice and intellect, were called into full play; earnestness of manner, keenness of wit, biting sarcasm, denunciation, unsparing ridicule, anecdote, positive assertion, his own past history and his future hopes, whatever was known and whatever might be conjectured as bearing upon the subject, all were brought out, and flung wild-cat-fashion, into the contest. His style of speaking is a chronic passion; it is always at the height of expression, that voice, feature and gesture can give. In his impassioned moments, when the force of his words are thus perfectly aided by voice and manner, his arms flung aloft in every variety of unnatural gesture, his face twisting, his voice almost a scream, and his eye glaring with excitement,—at these times, his words seem like bullets dashed and flung with frantic vehemence in the face of his opponents; he speaks concentrated bitterness, bitter in language, sense, expression and action. Yet this very excitability of character which makes him so dangerous to his opponents, renders him also unsafe to his friends. He not only gets beyond their control, but also beyond his own; and when thoroughly excited, neither knows nor cares what he says; his course is as vivid, as erratic, as zigzag as the lightning, and almost as dangerous. Unfortunately for himself and his party, he will never take that second place for which his natural abilities so well fit him, (for it may well be doubted whether a more able and efficient second man exists in political life,) he will always strive for the first place, and for the entire management of affairs; and by his erratic course, soon wearies, or by getting out of his depth, draws his unwilling followers into destruction.

His many changes may be accounted for because of his natural disposition to differ from the mass of men; his ambition appearing to be that he may be leader of a minority in an attack upon the long established opinions of a majority. He has, however, at length reached a stopping place, as according to his own account, he is now an infinite radical, and beyond infinitude, even the agile mind of Mr. Wise cannot go. Had he been religiously disposed, he would, in ancient time, have founded a new order of Monks; not the Jesuit, (for

there is nothing but candor in this man's character. he could not conceal his opinions if he would,) but the Denunciative Order, condemning everything it did not like, or that was not infinitely excellent in its own eyes. In modern times, he would have belonged to the perfectionist school, and sought compulsorily to make a millenium.

Mr. Wise spoke on every question that came up, and in fact, scarcely a day passed that he did not have something to say. His greatest speech was made upon the Basis Question, towards the close of the debate upon that subject; he was five days in delivering it, and the best proof of his power as an orator, was shown in the intense interest with which this long speech was listened to by the people of Richmond. The galleries and the aisles were crowded with an interested audience; the members of the Convention gave up their chairs to the ladies, so that it was really a mixed assembly of citizens, delegates and ladies, before whom he spoke. The effect of his speech was strikingly evident; and if the true test of an orator, is in his power to convince a mixed audience of the truth of his own opinions, and to carry with him their attention and their sympathies, then Henry A. Wise is one of the most eloquent men in Virginia. To listen to that speech, would give one a very correct idea of Mr. Wise; to read it, would give a very imperfect idea. He must be seen and heard, to be understood; and when thus seen and heard, before such an audience, at such a time of success to his party, and with such a subject, he seems the very prince of stump orators. This he is in all situations; at the bar, in deliberative bodies, or before the people, he is the same,—a stump speaker, and nothing more,—and he never will be anything more. He led the van of the Western party, and perhaps contributed more than any other man to the success which that party obtained. It is but due, however, to him, to say, that he esteemed this Basis advantageous to the East as well as to the West; and hoped, that by giving power into the hands of Western men, they would construct lines of Railroad, connecting East and West, and thus increase the population, and build up the cities of tide-water Virginia.

If we are required to point out the man in this Convention who appeared to possess most power of mind, and to occupy the most prominent place; in a word, to name the strongest man in the whole body, we unhesitatingly point out Robert E. Scott, of Fauquier. No man in this Convention excelled him in those faculties and powers, that fit a man to be the leader of a great party, or that qualify him for and impel him into public life. And while we give him credit for great powers of mind, we by no means esteem him the

greatest orator of the Assembly. Indeed, in point of eloquence, he was equalled by many, and surpassed by others. Summers, of Kanawha, bore off the palm from all competitors on the score of oratory, and reminded us of the mighty men of old, by the glowing ardour and moving pathos with which he spoke. Yet, neither his earnest and persuasive style of speech, which so entranced an audience, nor the startling bursts and rapier-like thrusts of Wise, nor the adroitness and skill of Hunter, nor the energy of action and diffusiveness of speech that marked Sheffey, although they might surpass in momentary effect, could overcome or equal the sledge-hammer logic, hard to withstand and difficult to wield, which characterized Mr. Scott's manner of speaking. His father, Judge Scott, had sat in the former Convention, and was one of its ablest men. Had he not been confined by his practice as a lawyer, and to his court as a Judge, (thus compelling his reputation to be a local one,) had he mingled in public life, he would have been one of the most clear-headed, unflinching, determined leaders, that any party ever had; and he would have deserved and achieved honors in the arena of public life. It is matter of doubt if a stronger minded man was left behind in our State or nation when he died. The subject of this sketch, inherited, in a great degree, his father's faculties, and his father's character. He is a tall, fine looking man, with striking manner and appearance; the eyes blue, with rather a heavy look about them, until he becomes excited in discussion; the hair prematurely gray; the style of face Roman in the prominent arched nose, and the bold cast of feature. His character very well accords with his expression of countenance. He is a man decided and positive in his opinions, fearless in avowing and defending them, self-relying, composed under all circumstances, ambitious and capable of command, confident in his own powers, and yet not rash or unwary enough to despise an opponent, or to neglect preparation for debate. A cautious, firm, wise, and yet a daring man. His great antagonist in this debate, Mr. Summers, described him with no less felicity than truth, when he said of him, "that gentleman has heart and mind enough to energize a whole State." He had previously occupied a prominent place in Virginia, having sat in her Legislature, and taken an active part in State affairs. Yet, his attention has been directed more closely and entirely to his profession, than to politics. His acquirements are those of a learned lawyer, thoroughly informed in all points connected with his profession; his mode of thought and style of expression, exhibit the influence of practice at the bar, and show long acquaintance with the subtleties of the law. He

is a special plender. Going over the ground thoroughly, he is too prolix, and too careful to guard every point of attack; yet he opens up the whole subject in all its details, and when he has finished, there is nothing left unsaid that can aid the side he advocates. He speaks as though he had been accustomed to keep closely to the subject in hand, and to treat of it in its minute details. There is much gesture with him when excited in speaking; it is of that kind, however, which belongs to a lawyer pleading at the bar; neither very varied nor very graceful, yet suited exactly to the character of his oratory. His voice is not under any command; alternately it is a loud, ear-splitting shout, and then falls to a low and sometimes almost inaudible tone. It is defective too; a tendency to stammer, which has been, with difficulty, partly overcome, is still perceptible. There is, consequently, nothing of the stump-orator about Mr. Scott; he would not suit a mixed audience. He is not an eloquent speaker, not flowing, not discursive, not even fluent; he does not stir the feelings or excite the passions, he convinces the understanding. He uses solid argument, close fitting logic and clinching facts. The art of public speaking is not with him a matter of ornament, or an instrument of music, it is a weapon for attack and defence; unsightly, perhaps, yet well tempered and most effective. He uses it as a workman employs a lever, to overturn obstacles, and to arrange heavy materials into a substantial form. You describe his speeches then, not by praising them as beautiful specimens of elocution, or as fanciful emanations from an excited imagination; not as displays of well cultivated rhetoric, nor even as the result of enthusiastic feeling in an earnest spirit; you describe them when you call them powerful, mental efforts. Mr. Scott is a formidable adversary in debate, and possesses, with all this heavy power of logic, the readiness and versatility which belong to men of his profession. No one sees more readily an opponent's weak point, or takes advantage of it with more effect. Possessing great snavity of manner in debate, there is, from the very consciousness of power on his own part, a disposition to hear his adversary's full explanation; and then, after allowing full force to the argument of his opponent, he deliberately sets to work and destroys it, or he grapples with his antagonist, disarms him, and wraps him round with the folds of his logic, boa-constrictor-style, until the unfortunate victim is covered and crushed. The deliberation with which this is done, the cool pleasure taken in it by the operator, as well as the contortions of the victim and his ineffective efforts for release, render the exhibition sometimes a most amusing one. It is a power he is fond of using, and it some times appears to be

too great a violation of the law against cruelty to animals! There is, in the whole character and bearing of this man, added to his talents and acquirements, that moral power which results from the conviction in the minds of all who hear him, that he will not shrink from any consequences to which his words may lead him; that he will maintain whatever he has said at the risk of life, no matter by whom they may be called in question. Mr. Scott never appeared to more advantage than he did toward the close of the debate on the Basis Question. After battling manfully for the Mixed Basis, during a long discussion, it was found, that from the defection of some of the former friends of that basis, it could not be carried. And it was in this time of doubt and defection, whilst the contest was still uncertain in issue, and even after it had been pretty plainly ascertained that the advocates of the Mixed Basis could not carry their measure, that Mr. Scott exerted himself with more than his usual power.

It is a sight worthy seeing, to witness the struggles of a brave man against misfortune, or to mark the heroism with which one man can check the rout of his fellows, and combat bravely in the rear of a retreating army. And no less interesting was it in this war of opinion, when one party was losing and the other gaining, and when confusion was spreading in his own ranks, to see one man stand firm, and bear down upon his opponents with a power and energy that made them fear him. There was on this occasion a might and a recklessness, even a fierceness in the manner in which he spoke, that drew the admiration of his own party, and commanded the respect and even fear of his adversaries. In spite of his efforts and those of his party, who remained true to their principles, he was outvoted, and the white, or unmixed basis, adopted.

Mr. Sheffey, of Augusta, made a very able and eloquent speech in favor of the White Basis. He is still a young man, although from having served in the Legislature for several sessions previous to the meeting of this Convention, he has experience in parliamentary rules and practices. His profession as a lawyer, has given him opportunity of cultivating his natural gift of speech, until he has acquired great readiness and fluency. His style of speaking is of an excited, vehement character, accompanied with a great deal of gesture.—a superabundance, indeed,—especially when much heated in debate. Apart from this excessive gesticulation and unnecessary vehemence,—which time and experience will, no doubt, correct—Mr. Sheffey takes high rank for so young an orator, as a man of talent, industry and eloquence. His speech on the Basis Question, was carefully prepared and earnestly delivered;

although, like many other speakers, he had drawn largely weapons of offence and defence, from the arsenal of arms laid up in such a storehouse as the published debates of 1830. It was impossible for the speakers in this Convention, to strike out anything new; the ground had been thoroughly explored, and the whole subject made plain by former observers. Mr Sheffey certainly distinguished himself for the manliness with which he defended the principles of his constituents, and made a very sensible speech in a very vehement manner.

There were some men in this Convention, who seemed to form a party of themselves. They might be called, not the infinite, but the transcendental radicals. In listening to them, we were perpetually reminded that, although a man might be followed into the third heavens in debate, yet, when he got beyond that, we could not follow him, and were also forcibly reminded of that beautiful quotation from the child's primer, "the Eagle's flight is out of sight!" They, were, however, firm and earnest in advocating their inaccessible opinions, being honest advocates of what they thought right. We may misrepresent those men when we speak of them as transcendentalists, and utopians; we certainly could not understand them.

There were others who came into convention as radicals; yet, finding themselves soon out-radicalled by many more 'infinite' than themselves, rather abated in their pretensions to that title. They expressed themselves in milder terms with respect to their opinions, and were, in fact, somewhat conservative in their tendencies. These may be called indistinct radicals.

Again, there were some who spoke in an offensive tone, and a bullying and menacing manner—who demanded what they wanted with arrogance—who spoke of retiring from the Convention, and even of dividing the State—who justified the contemptible and rascally system of log-rolling that has so long disgraced Virginia Legislation—who endeavored to set one class of the community against another, drawing a distinction between the *rich* and the *people*—who spoke as if they thought the majority of any community had an absolute right to the property of the whole community, and who advocated in fact the irresponsible tyranny of King Numbers. They might well be called Detestable Radicals.

There were others who were well able to take a leading part in these deliberations,—men who rank high as men of mind and character, yet who were too careless of fame or of too philosophical a frame of mind to labor in such a turmoil, or to undergo the drudgery of composing such strifes. They were a class of digni-

fied, quiet-looking members who bore rather the relation of spectators than of active participants in the contest. In this respect they resembled those grave and revered men of great reputation who sat, solely by way of ornament in the Convention of 1830. It may be truly said of this Convention that it was a place of exhibition for men of moderate intellect; its strong men, with few exceptions, were silent and inactive, its weak men were noisy and diligent.

Mr. Chilton of Fauquier was one of the ablest, most indolent, and finest looking men in the convention. A large and rather portly figure, well marked features, ruddy complexion, a massive forehead, bright blue eyes and a countenance expressing at once good nature, humor and intellect made up his appearance. His style of speaking is slow and quiet, with very little action; his disposition is too calm to be much stirred up by the excitement around him; yet there is a vein of humor running through his speeches and breaking out whenever there is occasion. He possesses readiness at repartee, and proved himself a match for any present in a trial of wits. Mr. Wise and himself had an amusing encounter, occasioned by an assault made by Mr. Wise upon the conservative opinions of Mr. Chilton. After a few passages Mr. Wise was called upon to define his position as An Infinite Radical, and in doing so took abundance of time, abundance of words and superabundance of gesture; he spoke "*de omnibus rebus et quibusdam aliis.*" resolved society into its original elements according to the theory of atoms, and put it together again on a plan of his own, and at the close of the speech supposed himself to have given the definition. It was certainly a microscopic one, inasmuch as no one save himself could perceive it. Mr. Chilton rose, and after thanking the gentleman for his explanation, said that the only way in which he could understand it was by comparison, and that it reminded him strongly of Falstaff's bill, "sack five pounds, bread one penny!"

Either from indolence or from indifference to the subject discussed he did not take the prominent place in the debates that was expected of him. The fact too that his opinions underwent a change, during the course of the discussion, rendered him less decided in his course, and prevented his taking any very active part in the convention. He possessed great power in debate; yet it was that of a gun of heavy calibre difficult to wield or bring to bear on any point. And in this case the gun may be said to have recoiled and damaged its own party, inasmuch as Mr. Chilton left the Basis of the East and voted with the western men.

Mr. Ferguson stood among the very best men

in the house in point of strength of intellect. He advocated the white basis with very great ability, and proved himself a forcible speaker well accustomed to debate. He is a large, strongly built man, with a heavy cast of countenance; and at first sight does not appear a man of that talent and power which he really possesses. His eye has a rather dull expression when unexcited, his forehead is high and well shaped, with the brow heavy and lowering. The style of speaking corresponds with his physical appearance. Solid and strong rather than elegant or graceful, he grapples a subject as a smith would seize a mass of iron and hammer it into shape by force of muscle and sinew. He marches boldly up to a subject, without turning either to one side or the other; and without any circumlocution or any seeking for fine words or figures of rhetoric to aid or adorn his progress, endeavors at once to overturn his opponent's position and then to establish his own. He is therefore readily exposed to a flank attack, and often suffers from the adroit and agile assaults of a cunning adversary. Still with admirable pertinacity he maintains his ground, and faces about to every new point of attack. He is a clear headed, independent, strong-minded man, always ready and always able. It is to be regretted that he did not take a more decided part in the work before the convention; as he possessed talent to do well what was done badly by weaker men. While we consider him perhaps to have been equal in native talent to any man in this convention he was not equal in acquired power, in accomplishment, or in influence, to many. He possesses that indolence which so often accompanies intellect, and which renders it useless or hurtful to the possessor or the public.

Mr. Edmunds of Halifax was another very able man who took but a lesser part in the work of the convention. He is evidently a man of talents and accomplishments, his mind being well cultivated in studies, and well trained in debate. His style of speaking is easy and graceful, rather noted for its quiet flow of words and for its logical evolution of thoughts and argument than for impassioned eloquence or a vigorous display of power. His appearance has nothing in it peculiar, or likely to attract attention; it is that of a quiet and dignified gentleman. The speech delivered by him on the basis question, following that of Mr. Summers, was one of the ablest delivered on that side of the question. It showed perhaps more statesmanlike ability than any one speech delivered in the convention, and indicated a high order of talent. The speeches of Mr. Edmunds, however, appear better when read than when spoken, and unlike most of those delivered on this subject will bear reading and re-

ward the reader. A similar remark may be applied to the speech of Mr. Goode of Mecklenburg, although from ill health he was unable to speak with even his usual vigor. He had sat in the former convention, and taken part in its deliberations, so that he was well prepared and well qualified by previous practice and present knowledge to bear an important part in this discussion. His speech was one of much eloquence and beauty; nor did its eloquence of style and beauty of diction detract from its force of argument. Messrs. Conway, Barbour, Purkins, Bocock and others of the young men of the convention made able speeches and took an active part in favor of the mixed basis; and Messrs. Neeson, Hoge, VanWinkle, McComas and many other western men battled stoutly in defence of their own views.

Mr. Andrew Hunter of Jefferson made a speech in the close of the debate that was listened to with great interest. It was delivered at a time when the citizens of Richmond and especially the ladies, had become interested in the discussion from having heard the long stump speech of Mr. Wise; and when it had become customary to consider the convention as a debating society, whose discussions were both amusing and interesting. The speeches were addressed to the chairman, and were meant for the audience. This was the only time that we had the opportunity of hearing Mr. Hunter, and while his speech was less argumentative and powerful than many others delivered, it was very skilfully adapted to the occasion and the assembly. He is a very pleasing speaker in manner and appearance, very adroit in the management of his subject, and very effective before a mixed audience. Mr. Muscoe R. H. Garnett had already acquired reputation throughout our state as a young man of learning and talent. His appearance is youthful, and striking from its air of quiet self-possession. Never appearing excited even in debate, using very little gesture, and exhibiting none of that contortion of countenance so common in our public speakers, nothing can be farther removed from the standard of the stump orators than his elocution. His oratory is that of a student, with the lines of thought still on his brow, speaking that which he has thought out and written down; and this too with no more gesture or excitement of tone than is used when alone. His speech is a soliloquy. This student character belongs to him; he is evidently a good classical scholar, and possesses much general and particular knowledge. Never speaking without full preparation his addresses "smell of the lamp." Learned in the law, and well informed in constitutional history he throws light upon every subject that he touches. Yet whether

offering argument, exhibiting statistics, exposing an adversary's untenable ground, uttering sarcasm, dealing forth wit, or piling up knowledge—there is the same quiet, unmoved countenance, the pale face is never flushed, nor is there any excitement of voice or motion.

Mr. Randolph, of Albemarle, a grandson of Thomas Jefferson, led off that small body of eastern men who left their own party, and gave power into the hands of the West. His course and speeches exhibit a striking example of the well-known axiom, that talent is not hereditary.

We close our list with Mr. Summers, of Kanawha, who was admitted by all who heard him to be the most eloquent man in the Convention. He is a stout, even portly man, of middle stature, with rather a heavy cast of features; an eye neither bright nor dull, and nothing in his appearance to indicate the brilliant and beautiful elocution of which he is capable. He is a shrewd, sagacious party leader, possesses great tact in guiding himself and his cause among difficulties, and penetration in finding out and seizing upon an adversary's weak point. The success of his party is very much due to his eloquence and his efforts. In fact, of the three who chiefly distinguished themselves among the men who advocated the White Basis, Wise, Ferguson and Summers, we are disposed to place him first in point of influence. The imprudence and violence of Wise often injured the cause he advocated; Ferguson was not equal in tact, and was out-manœuvred and rather overmatched by Scott; while Summers was equal in skill and management to any, and overmastered all in point of eloquence. Perhaps to Mr. Randolph and his colleagues, is due the chief meed of praise for this success; yet as much is due to a fulcrum on which strength and skill have placed a lever, and by its aid raised a weighty burden. Strength and skill are praised, and the result of the labor is received gladly; the fulcrum is crushed into the earth and left there forgotten.

When Mr. Summers rose to speak, he at first rather hesitated, and appeared to labor in the effort; yet thoughts, and words too, soon came to his aid, and as he warmed with his subject, his eye became lighted up, his heavy form assumed more ease, the whole countenance beamed with the enthusiasm which he felt, and he stood forth a master of eloquence, swaying and guiding the minds of his audience as he pleased. No man who spoke in this Convention produced such an effect; and this is the true test of eloquence. There was a pathos in his words and tones when describing the state of feeling in, and the grievances of, the West, that melted all hearts, and even touched the well hardened ones of his fellow members. Like all true eloquence, no des-

cription can describe its character, or fully exhibit its power. It was not a storm sweeping all before it, and overcoming opposition by prostrating its opponents; he does not carry away an audience by sublime bursts of declamation, or persuade them contrary to their better judgment, to adopt sentiments they believe wrong: it was not a mere excitement of the passions—it was not simply a conviction of the reason—it was not alone a persuasion of the will—it was not entirely a belief in the speaker's candor and truthfulness, but something of them all combined in exact proportion, and impressed upon the heart and mind by beautiful thoughts and harmonious words. He led captive the will—he convinced the reason—he stirred up not the passions, but the feelings—he inspired a true belief in his own honest and fervent faith in the justice of the cause he advocated—he subdued his hearers by his touching appeals; he roused and thrilled them by his stirring descriptions; he attracted the eye by the ease and grace of his gesture, and pleased the ear by the melody and the harmony of his sentences—in a word, he so transplanted his own opinions, and his own feelings, into his hearers, that they thought as he thought, mourned when he lamented, rejoiced with his joy, anticipated triumph in his expectation, and exulted with him in the prospect of victory. He stood a head and shoulders taller than all his associates in point of eloquence; there was none like him in the Convention or the State. It reminds us of the description we have of Patrick Henry's powers of speech, when we see the effect produced by this man's eloquence. And as the Arab tribes are said to return thanks to God when a poet appears among them, esteeming this divine gift of song as more worthy of praise than any other blessings, so did those who listened to this man of gifted words rejoice that an orator had appeared in our midst, who brought to mind the memory of our former fame in eloquence.

The whole secret of this power consists in earnestness. When the speaker believes firmly and enthusiastically the truth and the necessity of what he says, and wishes his hearers to believe it too, he disarms opposition of its most powerful defence, and lays it open uncovered to assault. However uncouth the speaker; however ignorant and untrained; however offensive even in sentiment, candid opinions, earnestly advanced, are always impressive—always eloquent. And if to this great faculty there be added, only however as subordinates, the graces of elocution, the flowers of rhetoric, the force of logic, and the harmony of voice and gesture, the speaker charms, captivates, and carries with him irresistibly the hearts and sympathies of his audience. Earnestness is the true soul of eloquence.

In comparing the two great champions of the opposite parties, Mr. Scott and Mr. Summers, we are somewhat at a loss how to bring them together, that their respective merits may be estimated. Both are able lawyers—both are effective speakers—both are discreet and skilful party leaders: both powerful, yet different. The one is a logician; the other an orator: the one is anxious to prove his point fully, entirely, satisfactorily, to his own mind—he demands of himself a grade of effort, and brings his argument up to his own high standard of perfection; the other, satisfied with the correctness of his own views, strives with all the earnestness and skill of an orator to convince his audience, and persuade them to his belief. One considers ornament an incumbrance, and strips himself for the encounter of all that he has esteemed superfluous; the other adds ornament to beauty, and tastefully combines elegance with strength: one removes every obstacle from his way, that all may see clearly to the end; the other covers the pathway with objects of attraction and interest, and leads from one to another until the distance is easily accomplished. One handles a quarter-staff, and sweeps down every thing within its range; the weapon of the other is the rapier, gracefully, easily and effectively used by a master of the art. The closed fist is an apt symbol of the one, and its use to grasp firmly and to smite powerfully, well characterises his intellect and his oratory: the open hand marks the other, and is a fit emblem of his power to persuade and his disposition to conciliate.

There were many others in this Convention worthy of description; yet as we have mentioned those who were chief, and who took most prominent part in its labor, it is unnecessary to speak of those that remain. The public was disappointed in the display of talent exhibited. And if the session of this body be looked upon as a fair specimen of the intellectual standing and statesmanlike character of Virginia, then Virginia has certainly degenerated during the last twenty years. She must be in the dotage of second childhood, if we are to judge by the amount of nursery babble and antique garrulity exhibited in its debates. Much eloquence, much intellect, are to be pointed out in individual cases; yet taken as a whole, looked upon as the men of other States look upon, or as history will consider it, (*viz*: as the condensed intellect and character of Virginia,) it has proved any thing but a cause of honor to our State. From its expensive length of session, and copiousness of Supplement—from the radicalism of opinion expressed, better suited to the demagogues of France in the Reign of Terror than to the free and equal citizen of our Republic—from the tame-

ness, to call it no worse, with which one party, the East, defended a time-honored and justice-founded principle, and the submissiveness with which they allowed it to be wrested away—from the desertion of party and of principle exhibited by some, in spite of electoral pledges and subsequent instructions—from the bullying tone of menace adopted by another party, the West, with the threat of retiring from the Convention—and from the successful effect of these threats and menaces in intimidating their antagonists in carrying their point—from all these causes of shame we cannot, as Virginians, point to this Convention, without feeling our State honor to have been lessened by its existence, or without a blush of shame mantling our cheeks when we speak of this contest in its progress and in its results.

But this Convention was not a fair representation of Virginia intellect or Virginia character. The very manner in which it was selected, and the errors made in choosing its members, evidently show that not the best men of the State in general, but the noisiest were selected. We do not hesitate to assert, that a more able and more dignified body might have been gathered in Virginia than this one; and we will go farther, and say that in many instances, the better man was left at home, and the inferior one elected by the people in choosing its members. Yet the very fact that such a body was elected by the people of Virginia to revise their constitution, tends in some degree to confirm the assertion often made of the degeneracy of the State. This assertion we do not believe, there is as much high character in Virginia now as formerly; but we must confess that it is not seen as frequently in public life as it was in times of old.

Tried by her various Conventions, how strikingly does Virginia resemble that mighty statue which the royal sleeper of Babylon saw in his dream. The upper part of fine gold, the middle of silver and brass, the last and lowest of mingled iron and clay. The first glorious and splendid, shedding beauty all around and attracting admiration from every quarter. The second rich and strong, each distinct and each valuable, yet harmoniously and usefully blended in one excellent mass. The third a tottering, unnatural mingling of strength and weakness; neither ornamental, useful or honorable.

The Virginia of our fathers, that Old Dominion of which we have been so proud, no longer exists. We are in a transition state; there is nothing fixed, nothing settled; a middle state is one of doubt, uncertainty and danger; we are in that condition, and what we shall be no one can divine; the froth and foam and trash of se-

ciety is thrown upon the surface as evidence of the fermentation going on within, and by this are we now judged in the eyes of strangers. The old things cannot be restored; we must make the best of what is left us. From the materials of the old, from the knowledge of the past, with the skill of the present and the hopes of the future, we shall yet again build up a character and establish a fame for this good old commonwealth, that shall eclipse all her past honors and make her to be widely, favorably, and reverently known.

There must be, however, another set of architects than these Babel-like builders, who have lately scattered to every part of our State. The changes made are too great, too hastily made, of too crude a character not to offend in some points, and to require revision and changes in many others. Virginia will need, and may yet hope for another Convention of better men, better instructed in the science of government, and capable of producing a better result. This must be in the future, however; the possibility of such another assemblage occurring, would affect this venerable commonwealth, as a return paroxysm of disease would an exhausted patient; she would expire of "deliquium animi," or linger long under constitutional disease, and die of intellectual marasmus. Yet if, after trying the evils of this constitution, it should appear impossible to make a better selection for another Convention, it would be preferable to suffer the certain evils of our bad system of government than to fly from them, and like the fool in the fable, call up an evil spirit whom we cannot lay, and whose power to injure we cannot prevent or resist. The salutary warning, imparted to the people of Virginia, by the existence of this Convention, will not easily be forgotten; nor will they again hastily call into being and action a large and irresponsible debating club, with the name of Reform Convention. A huge, lethargic, self-existing and many-mouthed monster; not Argus-eyed, silent and watchful; not of the Cerberus character, guarding carefully his trust; but something that the ancient poets never dreamed of, unless indeed the one-eyed Cyclops with his eye torn out be a fit resemblance; "*monstrum horrendum, informe, ingens, cui lumen ademptum*."

This Convention met on the 15th of October, 1850, and adjourned the 15th October, 1851, after a session of nearly eight months. The larger portion of this time was consumed in discussing the basis of representation, and when this was finally adjusted, the other important discussions had to be hastily made. So that many things which should have been carefully considered, were acted on without much debate. The members of the Convention were tired of one another and worn out with discussion: the pub-

lic was weary of both. The expense accruing to the State by the session of this body was more than two hundred thousand dollars; an immense sum to pay for so small a return; the balance decidedly against the Commonwealth; no one can doubt that she has lost by the experiment. The Constitution was adopted by 75,740 voters while 11,060 cast their votes against it; and there were in Virginia 195,927 men over twenty-one years of age, (who are all, or very nearly all entitled to vote by this Constitution,) it follows that of the 195,000 voters in the State, 119,000 were either openly or secretly hostile to it; either voting against it at the polls, or unwillingly acquiescing in it to avoid another Convention. The Constitution, (like the one of 1830,) offered no premium or bribe to any who would vote for it by giving the right of suffrage to every one who chose to exercise it in favor of this Constitution. The new voters created by this change of government, were allowed to vote in favor of the change. In fact, the people of the State had no choice—but of evils. It was well known that a numerical majority of voters was in the West, and that they would vote for any scheme, however arbitrary, which contained their favorite White Basis. The only choice then lay between accepting this Constitution with all its evils, and the election and session of another Convention. Under these circumstances the people chose the lesser evil of the two, and the Constitution is now the law in Virginia. Again it was made a party test. As the majority was asserted to be in favor of its adoption, the argument was used to influence some that if they voted against the Constitution they were opposed to the government of the people, &c., &c. This absurd fear of being in a minority influenced many; a fear as contemptible in its character, as is that other fear like unto it, a fear of tyrants.

We may have judged too harshly of this Convention, and may think too meanly of its work; time alone will decide whether our opinions are correct and our censures just. As we were unfortunately present in Richmond during the session of this body, and heard, or heard of, continually, its long drawn discussions and unnecessary debates, we confess to a feeling of exasperation having arisen when we witnessed its waste of time, waste of State funds, and, more than all, its waste of Virginia character and dignity. A state of exasperation similar to that into which one is thrown on entering a country of musquitoes, and finding his ears continually annoyed by the buzz, and his skin pierced and irritated by the persevering efforts of these inquisitive insects. If we examine the different Constitutions of Virginia, we are struck at once with the wonderful completeness of the first one; that one which

emanated from the mind of George Mason.* It was made in a time of difficulty and war; it was quickly made, and it was the work of one man. We consider it the best Constitution Virginia ever had; the departures from its principles have been errors, and the chief of them has been in reference to the right of suffrage. That Constitution was a creation; it sprung forth at once from the mind of this great man, perfectly formed and fully equipped. The two succeeding ones have been made by a process of dilution; the first of them occupied many wise men for the space of three months, and has lasted twenty years; the present one resulted from eight months labor, and no one can predict its time of duration. Their value may be computed in an inverse ratio to the time it required for their completion.

The present Constitution seems to have been made upon the model of that of the State of New York, and may perhaps be well adapted to the people and the institutions of that State. There, Mormonism took its rise—there, the spiritual rappers exert their influence and are believed in—there, the anti-renters display unchecked their mob spirit—there, the abolition party commenced and increased in power—there, is the head-quarters of the freesoilers—there, was the birth place of Aaron Burr—there, is the scene of Arnold's treachery, and there still lives the man of Kinderhook. And because the men of that State are wise, and have dug canals, and have built railroads; because they have received the immense emigration, first from New England, and then from all Europe, to fill up their country and crowd their cities; because they have concentrated wealth and trade, and have built up large and numerous towns, and have, for this piebald population from foreign soils, instituted a system of common schools, and because they have formed a Constitution exactly suited to themselves and their mixed population, which may be all right and proper for the State of New York;—because these things are so does not afford good reason for an imitation of that Constitution by the people of Virginia. We dislike it for two reasons; first that it is an imitation, and second that its model came from such a State. Virginia should originate—not follow, and least of all should she follow New York.

Under the first Constitution, the freehold right of suffrage alone obtained in Virginia, and with it she existed as a great and honorable State. The departure from it, by the Convention of 1830, marked and produced a degeneracy of

character in the public men of the State. The Legislature of Virginia has not been as dignified or as honorable a body for the past twenty years, as it was for the previous fifty-seven. And now that universal suffrage has been established, we may look for a great change for the worse. The Convention of 1830 stripped off the lion's skin, and placing it on the back, concealed the ass who bore it. That of 1851 tore off this useless hide, and exhibited their favorite in all his long-eared beauty. Beside this radical change in the basis of representation, and the adoption of universal suffrage; other changes were made by this body of a similar radical character. An elective judiciary is to be established in Virginia; the justices of peace, sheriffs, attorneys for the commonwealth, &c., &c., are also to be elected by the people of counties or districts. To the election of Governor and Lieutenant Governor by the people, instead of by the Legislature, no objection can be made; inasmuch as the Governor's power is limited, and the office is not a very important one as regards the character of the incumbent. But the mass of the people know as much about electing judges, as they do about electing professors of mathematics. It is strange that in carrying out this system, they did not also allow the convicts in the penitentiary to elect their own superintendant; inmates of our lunatic asylums to choose their own physician; and school-boys to dictate who should instruct them in questions of grammar and geography. Is it to be expected that the many knaves, who exist in every community, are to cast their votes for honest judges; that the man who is half crazed by lawsuits and probable loss of property, is capable of an unbiassed vote; or that the adult children who constitute the mass of men are wise enough and firm enough to select a wise and firm man for a judicial station? These changes in the mode of electing officers, by taking them from the Legislature and giving them to the people, is one of the most severe censures ever cast upon the Legislature of Virginia. It was virtually saying that they had exercised their trust improperly, and that it should be taken from them. We heard much of the degeneracy of Virginia in this Convention, and we were forcibly struck with the truth of the remark so far as those who uttered this slander were personally concerned. It was like a convocation of quack doctors around an alarmed, though otherwise healthy subject; each one exaggerating the danger that he might have more credit for the cure, shouting forth the praises of his own panacea, abusing his rivals, and exhibiting his various remedies, labelled "White Basis," "Universal Suffrage," "Elective Judiciary," &c., &c., *ad nauseam*. Virginia is not de-

* We have fallen into an error, in a previous Chapter, in attributing the Bill of Rights to the pen of Mr. Jefferson. The Preamble was his; the Bill of Rights and all else was written by Mason.

generate; she has been exhausted by a vast emigration from her borders, while other States have been filled up by her losses, or by a foreign population. For some ten or fifteen years past, this emigration has been very much diminished, and she has been slowly improving; increasing in population, and consequently improving in agriculture, the arts and internal improvements. We shall hear, however, every advance in State wealth, hereafter made, attributed to this Convention.

As nothing can be altogether evil we find some things that are good in this new constitution, apart from those remnants of the old one which are retained. Among them is a provision which puts at rest the question of slave emancipation, and another which provides for the removal of the vicious class of free negro population residing among us. Another excellent provision is the one which directs that whenever a debt be created, a sinking fund shall be provided by taxation at the time to pay the interest and slowly redeem the principle of this debt. A valuable expedient for preventing excessive expenditure, and consequent loss of state honor through fear of repudiation. This convention lost none of its members by death or sickness as was the case with the former one. Judge Mason presided over its deliberations from first to last with ease and dignity. His frequent practice in various high offices, as well as his services in the convention of 1830, made him well qualified to preside here. And the assembly consisting of men trained in legislative practices was naturally an orderly body. The courtesy of debate was not broken, and however much members might differ in opinion, or however decided they might be in expressing those differences, none of those scenes of violence were exhibited that occasionally disgrace the American congress.

We intend to speak briefly of the government of the City of Richmond, both in the past and the present. The town was established by act of assembly in May 1743, and was named from a supposed resemblance to Richmond Hill in England. This place derived its name, in the old Norman times, from its peculiar color and appearance; it being really a *Rouge-mont* or red hill upon the banks of the Thames. By act of incorporation, dated 1782, Richmond became a city, and was at that time also made the seat of government. The act provides that the freeholders whether present, or not and such inhabitants and house keepers as possess property to the value of one hundred pounds, shall meet at the court house of the county of Henrico and elect twelve fit and able men, freeholders and inhabitants likewise, who, from their own number shall choose one as mayor, another as re-

corder, four others as aldermen, and the remaining six shall be common council. This election to remain two years; and any vacancy caused by death or otherwise to be supplied by the choice of the mayor, recorder, aldermen and common council in common hall assembled. No person, however, to hold the office of mayor more than one year in any term of two years. In 1803 this charter was amended by dividing the city into three wards, making the election annual, and directing each ward to choose eight freeholders and inhabitants of the ward; of whom one should be chosen as mayor, another as recorder, seven as aldermen, and the remaining fifteen as common councilmen. In 1842 a further amendment was made to the charter of Richmond. By it the freeholders, &c. were to choose nine persons from each ward, who were to elect from among themselves, or from the body of the citizens, one person to act as mayor; from among themselves also one as recorder, one as senior alderman, ten others as aldermen of the city, and the residue to constitute a board, called the council of the City of Richmond. The charter was still further amended or rather an entirely new one granted in March 1851, by which all the officers were directly elected by the voters, instead of being chosen by the common council as heretofore. Besides the members of the city council and the aldermen elected, as formerly, the following officers are those who are voted for by the citizens of Richmond; the mayor, recorder, sergeant, high constable, collector of the city taxes, city assessor, gauger, superintendant of the water works, register of water works, manager of the city poor house, measurer of grain, superintendant of the city gas works, captain and lieutenants of the night watch, and superintendant of streets. This change in the charter was put to the vote on the third Wednesday in April 1851, and adopted by the citizens. Now, under the new constitution, every one can vote who has been a citizen of the State for two years and has resided in Richmond for twelve months preceding the time of voting. Dissatisfaction already exists with this charter; the number of officers to be voted for, and the numerous candidates for each office creates confusion. The newspapers are annually crowded with nominations for office; and candidates make painful sacrifices on the altar of modesty in announcing their desire to serve, and their claims upon the public. In fact the only real benefit likely to arise from this change of charter, is in making the public aware of the vast amount of talent that has hitherto remained latent in our midst; in exhibiting the patriotic spirit of the many citizens who are anxious to serve the people at the public cost; and in developing that

amiability of disposition which shows itself in writing newspaper puffs. The people of Richmond were perfectly astounded when they found the immense number of men, who, if their own statements were to be received, were fully qualified although they blushed to say so, for any office however honorable or arduous. Men who were supposed to possess moderate abilities, suddenly casting aside both modesty and mediocrity, burst upon us in the full blaze of greatness. It was wonderful to behold the effect of the nominations on the candidates:—the lamb-like patience with which they allowed themselves to be named for the sacrifice; their apparent unwillingness to be brought forward, and their real unwillingness to be withdrawn, only, however, lest the people should be disappointed; the amiability of manner and speech that characterized them, and the reliance upon their own merits, upon the discrimination of the public, and upon the twenty, thirty or forty friend power, that had elevated them into notice, were worthy of all commendation. If the charter deserve no other credit, it deserves that of creating and bringing to light an unknown amount of obscure genius, character, talent, and patriotism! And in this respect is no mean rival of that other creator of light, established at the same time—the city gas works!

An Athenæum has been established in Richmond by the liberality of the city council since the previous chapters were written. Rooms are fitted up for the City Library and for the Library of the Historical Society of Virginia, and aid is furnished them to enable them to enlarge their collection of books. For which privileges and aid the public are permitted to have access to these libraries. Lectures are also to be delivered of a scientific and literary character in the same building. And thus the citizens of Richmond will have the best opportunity of receiving both instruction and amusement.

We have thus endeavored to trace the history of Richmond from its earliest period through all its important events down to the present time. We have shown it to have been a place of importance under the Indian rule, and to have been by them marked out for a seat of empire. We have shown that nature has pointed out the place as one central in climate and situation, and has added the advantages of easy defence against invasion, the excellences of a fine healthy climate, superior opportunities for trade and commerce, and the most efficient water power for manufacturing purposes that can any where be found. Besides these great reasons for building up a large and noble city, history has thrown its influences around the place; and the memory of great men and the records of great events, the stirring scenes that gave rise and character

to the Revolution, the might of eloquence, the ardour of patriotism, the fortitude that dared to resist oppression, the courage that overcame tyrannical power; with the calm wisdom and consummate skill that directed successfully those efforts which eloquence and resolution had inspired, and which patriotic courage carried through—all these ennoble and adorn the capital city of Virginia. Her past is rich in historic renown, her present is prosperous and honorable, her future will be glorious and wealthy. She must take the lead in Virginia; her situation, advantages, political position, all combine to give her that proud position. And in the new order of things that is springing up among us, when this good old commonwealth is rousing from her long state of indifference to her own interests, and looking abroad at the success of other states, inspecting her own dilapidations, casting about for some model and guide by which to be governed and instructed, we may hope that Richmond City will take that position as leader which every thing has combined to give her. If her citizens are true to their own interests, they can make her what she ought to be, the leading city of Virginia and of the south. Let her devote herself then to the arts, to manufactures, to commerce; let the mind already within her limits be properly employed in those pursuits which ennoble man and enrich a state; let the past same excite to a generous rivalry, so that the reputation of the dead may be increased by the emulation of the living; let due honor be rendered to every instrument of industry, from the hammer of him who toils at the anvil through every art and every science up to the pen of the man of letters. Let those things be done and one generation shall not pass before Richmond will take her place among the first of cities, not in population perhaps, but in activity, intellect and influence. By her example and from her position she holds in her hands the destinies of Virginia; and we are well assured that she will give to our good old commonwealth—the glorious mother state of the union—that preëminence which her age, her deeds, and her native character mark out as her proper place.

FINIS.

TO ———

On being asked by her to write verses for her Singing.

From jewelled goblets we demand
The choicest wine alone—
And statues from the master's hand
Should be of whitest stone.
Then wherefore ask for words of mine?
The thought itself were wrong;
Thy glorious voice should but enshrine
The purest pearls of song!

MICHAEL BONHAM: OR, THE FALL OF BEXAR.

A TALE OF TEXAS. IN FIVE PARTS.

BY A SOUTHRON.

PART V. SCENE I.

The streets of San Antonio. The clamor and confusion of a rout, mixed with the occasional uproar, keen and quick, of a mêlée à outrance. Mexicans, half-armed and in great consternation, flying across the stage, pursued by the Texians. Enter Alabama Davis, Richard Harris, William Harris, and others, with signs of blood and battle.

Davis. This is no fighting, comrade.

R. Harris. Fighting! No—I'm scarcely breathed for battle.

Davis. Wait awhile; We soon shall hear from Milam.

R. Harris. He has gone Against the Alamo.

Davis. There'll be fighting there: It is their citadel.

R. Harris. Let us join him then. We can do nothing here. We find no foe Worthy the name. Such panic-bitten wretches But sicken me to see. What wait we for?

Davis. The signal.

R. Harris. Would it sound then. How I pant For danger!

[Bugle sounds lively at a distance.]

Davis. Hark! We have it now.

R. Harris. Let's away.

W. Harris, *[to R. Harris, putting his hand on his arm.]* Why haste you thus to death?

R. Harris. I seek it, boy. But you! You follow closely. So much fear, Yet so much rashness.

W. Harris. My rashness comes from fear; I dread to stop behind.

R. Harris. You should be with your mother.

W. Harris, *[aside.]* Would I were!

R. Harris. Follow me closely. You are, at my side Much safer than behind.

Davis. *[Sounds of conflict.]* They're at it now. The shot is sharp and heavy.

R. Harris. Hurra for death! The old King Death that takes the crown from all, Whose subjects are the living; throne's the tomb, Whose columns compass earth. Hurra for Death!

Davis. For victory rather. On, brave comrades, on!

W. Harris. I must go forward. Heaven have mercy on me!

[Exit Davis, Harris and Texians.]

Enter Governor still as Julius Cæsar, with his sword drawn, making desperate passes in the air. He stops breathlessly.

Governor. Phew! Was ever such a stratagem! That fellow has a head for a prime minister. With what skill, what coolness, what audacity, he lied through the whole scheme: and so brave too—that is another merit. Holy Mother! But he looked fierce enough to swallow a regi-

ment. Jesu send that Pedro make mince meat of him. It were my ruin if he does not. What will his Excellency, Señor Don Lopez de Santa Anna, say? Say! He will read my despatches—the rebel army annihilated!—and lo! here it is anew, with San Antonio in their hands. Who could have thought it? But there is the Alamo yet. They will eat bullets before they get that. *[Shouts.]* Ha! more shouts. The enemy in front—between me and the Alamo. Cæsar help me! I am good only at the strategic part of the warfare. The subordinate parts—the mere physical struggle,—blows and shouting,—these are for the common soldier. Santa Maria! They are on all sides. They are here, and there, and everywhere. They come. The sounds thicken. At least they shall find me sword in hand.

[As he is about to rush out, Enter Sparrow, who confronts him. Sparrow is out of breath and almost speechless.]

Sparrow. Ho! ha! who—who are you? An enemy at all events. Have at you, breath or no breath. *[Governor flies, and encounters Crockett at the wing, and is thrown down in the concussion. Sparrow, who has been pursuing him, falls upon and grapples him.]* Ha! ho! The captive to my bow and spear. Shall I spear him, or spare him?

Crockett. Don't eat him, Sparrow, at all events.

Sparrow. Let him holler 'nough, then.

Crockett. I reckon he would if he could talk English, or if he could talk at all, with such a mountain upon him. Rise, old fellow, you are not upon a horse that you should keep up such an awful joggling. Do you know who you've got under you?

Sparrow. Ay! a fat fellow like myself—with more bulk than breath. Eh! Who?

Crockett. You are straddling no less a person than his Excellency, the Governor of San Antonio.

Sparrow. The devil you say!

Crockett. No. I say the Governor. Up, terrapin, and give him breath.

Sparrow. Breath! By the powers! but that's impossible. Give what I hav'nt got myself! The thing's beyond my generosity. But I'll tell you what I will give him Davy.

Crockett. What?

Sparrow. What he wants quite as much—quarter. He lies quiet enough, all but the blowing.

Crockett. And reason equally good for both quiet and blowing, with such a mountain of meat upon him. But don't be too sure of his quiet. He's a famous fellow for stratagems.

Sparrow. Ah, say you so? Then I'll rise with caution and deliberation. *[Rising with difficulty.]* It's one reason why I never like to get down; it's so very troublesome to get up again. *[Governor groans.]*

Crockett. He seems to be relieved. He's coming to. That grunt was good English.

Sparrow. Yes. I understand it. He will probably understand me now. *[Governor rises assisted by Sparrow.]* Hark ye, Don Buffalo, your sword, or you shall have mine.

[Solicits the sword of Esteban with the left hand, while threatening with his bowie knife. The Governor recoils, but yields his weapon.]

Crockett. He takes you at your word. Who says these fellows don't understand English?

Sparrow. Ah, when one speaks pointedly to them. We've only to use a steel pen. I'll try him again in English—he gets on so well. Hark ye, Don Buffalo, set forward, or I'll— *[Makes a show with bowie.]*

Crockett. He learns famous fast—does just as you wish him.

Sparrow. Faith, yes. It's wonderful. Hereafter we'll call an American bowie, an English grammar—an accident—a sort of first Beginner for young Mexicans;—the very rudiments of the language.

Crockett. Ay! and a handful of rifle-bullets, the seven parts of speech—seven is it, or nine?

Sparrow. It don't matter much. They're to learn the language, not we. But I must give this great fellow his third lesson. On, Don Buffalo! [*Pricks him with bowie.* Governor winces and goes forward.

Crockett. That's what you call a bloody noun, Sparrow.

Sparrow. Clearly. You see how he likes to decline it. But look you, Davy, what chance of breakfast in these diggings? After such a night as we have had, one is apt to hunger a little.

Crockett. Well, there was a famous fine supper cooking in the Governor's kitchen last night, but I reckon it's all burnt up afore now.

Sparrow. Burnt up, while we stand here doing nothing, literally nothing—for the country. I'll save it though I perish! Show me to this kitchen—this palace. Let them fight who want to. I have done enough for this bout. A man of my years is not expected to be everywhere. My prisoner will answer for me—what I have done. On, Don Buffalo! I'm mighty sorry to hurry a man of your dimensions; but look at mine—and I am in a hurry. But I will be amicable, even while I push you, and I promise you that we will breakfast together at your own tables.

Governor, [aside and going.] What a stratagem! What a stratagem! Bexar lost, and Esteban de Montezuma a captive! It is something to be able to say that I was taken sword in hand.

Sparrow. Slide, my good Don of Buffaloes, your speed

Is needful, if we both again would feed.

Crockett. Give him more grammar, Sparrow. Blood and 'ouns,

Try him in verbs, and lesson him in nouns, Until he learns my maxim which, if spread Through Mexico, would send 'em all ahead!

[*Exeunt omnes.* Sparrow pressing Don Esteban with the point of his bowie knife.

SCENE II.

The fight approaches the walls of the Alamo. A contested battle field. Alarums. The Mexican infantry recovering under Don Sanchez.

Sanchez. We yet outnumber the rebels. We are two to one.

Fear nothing, men of Bexar. It needs only one bold effort. Follow me. We'll meet them at the Northern gate of the Alamo.

Mexican soldier. They're in the Alamo!

Sanchez. What then! We'll drive them out. They are but

Few. We shall keep them fighting on both sides—Within and without. Come on! God and the republic!

[*Exeunt Mexicans.*

Enter Milam and Texians.

Milam. They fly before us. They can hold no ground With the old Saxon stock. My merry men, But one more tug and the whole field is ours!

Enter Crockett.

Crockett. Hurrah! hurrah! the Governor's in our hands,

Captured by Sparrow!

Milam. Hear you that, brave fellows, The Governor's in our hands. The biggest beast In Bexar captive to the smallest bird That ever flew from Georgia.

Texians, [cheering.] Hurra for Sparrow!

Milam. Here's Crockett too—

Brave Dave, himself a host.

Texians, [cheering.] Hurra for Davy Crockett—Congress Davy.

Milam. Where's Bonham?

Crockett. Is he not here?

Milam. I have not seen him.

Crockett. We parted soon after your first bugle. We had it, tooth and nail, in the ball-room. Twenty to two; and lathered 'em like all the world. I left the Major with his prize.

Milam. What prize?

Crockett. A woman. The Governor's daughter! He's a fellow that can love and fight in the same breath.

Milam. No doubt he's in the Alamo! Harris there, With less than thirty men, maintains his ground, In full possession. The foe without, o'ercome, And town and citadel alike are ours.

One gallant effort more my merry men, And you may sleep on glory!

Crockett. Ay, or in it!

[*Exeunt.*

Chorus of Texians as they follow.

We will show them that the bold,

Still inherit all the fruits,

And their moustaches and gold,

We will pluck up by the roots!

SCENE III.

A wood under the walls of the Alamo. Mexicans partially seen within it. Enter Milam, Crockett and Texians.

Milam. Behold the enemy! They seem prepared, But will not stand our onset. Follow me, To victory, and, if I fall, avenge me.

[*Rushes on. A shot strikes him down. The Mexicans shout—the Texians waver.*

Enter Bonham.

Bonham. What! shrink ye from these dastards—men of straw,

That fight in vapour—never show red-blood, Or sicken at sight of it. For shame!

The old Thirteen, the great Southwest, the North, The Carolinas, Georgia, Tennessee, Countries of Bunker Hill and Saratoga.

Cowpens and Eutaw, Moultrie's isle, Savannah, Are looking to your actions, as their sons,—

They must not be dishonored! To that howl Of these saint-hearted Mexicans—these braggarts,

Give answer, my brave comrades, with another, Shall make them shake with agues. Milam's down!

Stone dead! But what of that: his spirit rises Above us now, and summons us to vengeance.

Out, bowie knives, and let the work be close;

I'll show ye to begin it. Follow me!

[*Charge. Texians rush onward with a shout. Battle fluctuates. At length the Mexicans disappear—the Texians following, leaving in the field of battle a group, Richard Harris dying, and William Harris supporting his head.*

R. Harris. My head swims round. The shadows on my sight

Grow darker. What I've pray'd for is at hand—
I'm dying! Who is it that holds my hand?

W. Harris. 'Tis I—Will Harris.

R. Harris. Faithful to the last;
You've clung to me in danger. But it's over;
The victory is ours—that's sure;—you're safe.

W. Harris. But you!

R. Harris. Will soon be safer still. I'm dying fast!

W. Harris. Oh, God forbid, and spare you!

R. Harris. Wherefore? I

Have rather need of mercy than of life!

W. Harris. May God have mercy on you!

R. Harris. That's right,

Pray for me. I have need of every prayer.

I've been a cold and cruel criminal—

Have spurn'd all natural ties.

W. Harris, [sobs convulsively.] Alas! alas!

R. Harris. How is this boy! You sob—you weep
for me,

As if I were some dearest relative.

W. Harris. You are! you are! Oh, Richard, look
upon me;

Do you know me now?

[Throws off her cap and lets down her hair.]

R. Harris. My reason's gone, I think—or, is it Ellen?

W. Harris. It is! It is!

She that was once your own, your only!

R. Harris. Is

My own—my only still! Hear me, Ellen,

I'll buy your last forgiveness. In my bosom

Search for the packet. It contains the papers

That prove your marriage—the certificate;—

You'll find it sealed with blood!—from Parson Baker.

Believing you had played me false, I slew him,

To hush for ever the last living proof

Of our unhappy union.

W. Harris. Merciful Heaven!

R. Harris. Nor he alone! Your brother John pur-
sued me,

Because of your dishonor—so he deemed it;—

He perish'd by these hands!

W. Harris. Have mercy on him, Heaven!

Let not these murders hang about his soul,

Dragging it downwards.

R. Harris. Pray. I'm failing fast.

I loved you all the while—believe me, Ellen;

And when, at last, I found that you were true,

I would have come to you again, but dared not,

Your brother's blood upon my hands and soul.

Come closer—let me hear you; in my ears

Still tell me of forgiveness. Christ! have mercy!

Look down upon me! Would that I had time

For pray'r; but no! I cannot. Death is rushing

Fast on my heart. His icy fingers grapple

My throat. I choke! My dearest Ellen! *[Dies.]*

W. Harris. His lips are cold. He stiffens in my
arms.

I hear his voice no more. Have mercy Heaven!

Mercy on both! Oh, take us both together!

[Sinks upon the body as the scene closes.]

SCENE IV.

A court of the palace. Pedro and Donna Maria.

Pedro. Art sure of what thou tells't me?

Maria. Ay, as sure,

As pride and hate made jealous of the object

Can make eye, ear and spirit. To Lagunayra,

I saw them speed together. Seek her there.

Clothed in the habit of some fallen Texian

One of your followers. Let him bear a message

As if from Amador. Bid her forth to him,

And take her to herself. Bear her away,

Fast as your love may carry you, to Rosas,

There wed her as you may.

Pedro. The plan's a good one.

Maria. 'Tis the only plan.

Pedro. I'll do it.

Maria. And do't at once!

Or, ere another hour he does it for you,

And we are baffled still.

Pedro. I half despond—

So oft already baffled!

Maria. Because too slow!

You linger now, when on the wings of love,

As I on those of hate, your arm should snatch

The pride of conquest from the unwilling fortune.

Go to! are you a lover and a man,

And talk of being baffled. Man or woman,

True to the lordly instincts of their souls,

Are never baffled.

Pedro. You should have been a man.

Maria. Oh! would I had been. Even now, a woman,

Had I but sway'd in counsel—had you listened,

This night had never happ'd. Delay no more,

Lest that the grinning fortune mock you still

With baffled love and vengeance. in full cry,

With "Hadst thou been a man!"

Pedro. I am a man!

Maria. Prove it then,

In 'haviour of a bold one.

Pedro. In one hour,

She shall be mine forever.

Maria. Yield no hour,

But take the fortune in its moment mood,

Or all the golden opportunity

Goes to the common loss. Away with you.

Nor linger at her pleadings. Harken not

Her cries and supplication. Make your ears

Deaf to all plea, all passion but your own;

And with most absolute certainty make her yours,

In spite of hell or heaven!

Pedro. By Heaven, I will! *[Exit Pedro.]*

Maria. Ay! had I been a man, this night of shame

Had never left such record. I have sunk

Deeper than plummet's cast in the deep sea,

In all that makes the glory of our sex;—

Its holy calm, its whiteness, purity—

The all, that far beyond its hope's fruition,

Were needful to its life. I cannot live,

Unless for vengeance. Vengeance must be mine!

And I will have it, if, faithful to his strength,

This man obeys my counsel. She shall fall

From her high pride of place. She knows my secret—

But shall not gloat, in future state secure,

On the possession. And for him!—for him!

Alas! I love him still!—the fatal passion

Works quivering in my heart, where still one hope

Looks to his passion for the generous sunshine

To gladden it with growth. *[Distant cannon is heard]*

The battle rages,

And the deep roar of the destroying cannon

Proclaim the assault upon the Alamo now.

Let them roar on! My soul, in a like tempest,

Glads in the echoes that still speak for passions

As terrible as mine own. But hark!—these voices!

And he—he here already! He pursues her.

Her flight discovered! I must thwart him now—

By proper artifice must check his search,
While Pedro takes the prey. We must gain time,
Or all is lost once more.

[Veils herself and seems to retire.

Enter Bonham with Textians.

Bonham. Who's here?

Maria, [in affected terror.] Spare me! Protect me,
Señor, from this danger—

These ruffian soldiery!

Bonham. Donna Maria!

Maria. Ah, Señor Amador! Alas!

I have not sought this meeting.

Bonham. Yes, 'tis well,

Dear lady, that we meet. These are not hours,

When, without proper guardianship, your sex

May rove the streets of Bexar. Be't my care

To have you guarded to a place of safety,

Where you will find your uncle.

Maria. Ah, Señor! can it be

That I have forfeited the happy claim

I had upon you in less hapless hours?

Bonham. What mean you, lady?

Maria. Do I hear aright?

You yield me to the fierce and brutal soldier,

For guardianship, at this all-licensed hour,

When plunder keeps the city, and blind fury

Whets every fearful passion known to man!

Bonham. The men who shall attend you—

Maria. Better none.

I thank you, Señor: leave me to my fate!

Bonham. Oh, lady, how you wrong me; but with me

I pray you be secure. Wilt suffer me,

To guard you to Don Esteban?

Maria. Señor, perchance

I cross more pleasant duties. You have cares

That need your presence elsewhere.

Bonham. None to suffer,

By seeing you in safety.

Maria, [aside.] Ay, cheat thyself with that, until too

late,

Thou wakest, to know that woman conquers still,

And, weak in vulgar weapon, works by will!

[Exeunt Omnes.

SCENE V.

A chamber in the castle, the Alamo, Governor Don Esteban de Montaneros seated at a table. Writing materials before him.

Don Esteban. [Solus.] Was there ever such a stratagem? And how to report it to his excellency, Señor Don Lopez de Santa Anna? That I should live to be surprised—surprised in my own castle. Taken prisoner. Captured by a single man. Nay, he was no single man. His name was Legion. Besides there were two, and I was taken sword in hand. Not taken until I was overthrown, with a matter of twenty men upon me. That is a point of which something must be made. The dispatch must be eloquent when I reach that part. But to account for the surprise. What shall be said about that. Ha! I have it. Treachery in Mexico. Don Amador de Aguilar—an assumed name perhaps; but, assuredly a Mexican; a native born citizen of Mexico—one of the deadly enemies of Santa Anna; seeking to sell the country to the Texians, as the Yucatanese have already sold theirs. It was no Texian force at all—very far from it. Mexicans all, every man of them—creatures of some chief conspirator in the great city. Let Santa Anna look to

it—captured, sword in hand, overthrown. I see his danger. I will warn him of it. No want of vigilance can be charged on me, I'm thinking. Ha! here he comes, Don Amador.

Enter Bonham. Maria.

Bonham. Your excellency. I kiss your hands.

Governor. Don Amador, you are very welcome.

Bonham. Señor, I bring your niece as to a place of safety.

Esteban. What, my princess. Ah! you see me not as when we met last night. Such is the fate of war. Julius, himself, was not superior to its vicissitudes. The great Hannibal yielded to stratagems. Scipio was not always successful; and shall I be so presumptuous as to expect from fortune what she did not always grant to Caesar, Pompey, Hannibal and Scipio. No, no, modesty forbids the notion. It would be sheer vanity. I must look for adverse winds. I must expect an occasional cloudy day. My own genius is not always equal. The warrior sometimes sleeps as well as the poet. That was a luckless moment which found me napping. Unhappily, just then, my enemy was wakeful. What a coincidence. But a single moment, and see the consequences. Behold me now, a prisoner. But where's your cousin—where's my child Olivia?

Bonham. In safety at the convent of LaGuayra, Whither I go to bring her.

Maria. Nay, you need not.

Bonham. Need not, lady.

Maria. You will not find her there, Because of certain stratagems of mine, To make her safety certain. Ere this hour She is Don Pedro's bride, and speeds away To the fair town of roses, or perchance To Tuscasito.

Bonham. Ha! Don Pedro's bride— In flight to Tuscasito.

Esteban. Well, let them go— I always meant her for Don Pedro, and don't See why they should have fled at all.

Maria. Ay, but our conqueror does, if I mistake not. He meant her for his own.

Bonham. I did. 'Tis true. I should have asked your blessing Upon our mutual loves.

Esteban. Don Pedro has been hasty. A good fellow, But with no taste for stratagem.

Maria. There you mistake. It was by stratagem He won his bride at last. Don Amador, 'Twas I that counselled him, that, at LaGuayra, Olivia lay secure. 'Twas I that taught him To clothe his follower in the Texian garb, And with a specious message, as from you, To win her to his arms. 'Twas I that next When you were pressing on his flying steps, Arrested yours and gave the needful time, To make the stratagem sure. I crossed your path, Pretended woman fears I never felt, And we are here together while they fly, Unchecked to Tuscasito.

Bonham. Say no more. Oh! treacherous woman, hateful to the last. What has your malice wrought?

Maria. My dear revenge, The only triumph of defrauded love.

Bonham. 'Tis not too late.

Maria. Before you reach La Guayra, They will have wed.

Bonham. False prophetess, in vain Your hateful story. Never will Olivia Consent to his demand.

Maria, [in low tones, approaching him.] He asks her not.

Nurse not this flattering fancy in your thought,
For resolute to make my triumph sure,
And leave your heart as desolate as mine,
I whispered him that woman, in her mood,
Is never more consenting than when most
She makes denial. Bade him never heed
The outward show of anger in her eye,
Or its sharp, bitter accent on her lips;
These, did I say, were natural to the weak,
The frail protectors of the woman's secret.
So stubborn is he made by my tuition,
I tell thee, Amador, he will make her his,
Though the last accent on her palsied tongue
Be gasped in mortal agony.

Bonham. No more.
Woman, away. I'll hearken thee no more.

[*Bonham rushes out.*]

Maria. He has it here. Ha! Ha! he has it here.
[*Presses her hand upon her heart, and suddenly sinks, swooning into the arms of Don Esteban.*]
Esteban, [supporting her to sofa.] Jesu! Was ever such a stratagem!

[*Scene closes.*]

SCENE VI.

A wood near the convent of La Guayra. The convent seen in the distance. Pedro discovered in the wood.

Pedro, [watching.] He's lost within the gate. 'Tis my last hope—

The project is a good one. That old fool,
And dastard, Esteban, would surely name it
A stratagem. 'Tis something more than his;
More like to be successful. How my soul
Burns with impatience. Love and hate unite
To goad me into phrenzies of new passion,
That will not let me rest. Thanks to this woman;
Her subtle wit be honored, that, at last,
When most I felt despondency, could rouse me,
To hope and to performance. Whence her malice,
I neither know nor care, but if it prospers,
I'll take her as my counsellor through life.
Holy Maria, be my patroness,
Give me to triumph now above my foe,
That fierce and wily enemy, and claim
My homage ever after.

Mexican soldier. The gates unfold, my lord.

Pedro. Thanks, holy virgin. Thanks! We have her now.

She's ours. She comes. And victor in the end,
Though Bexar and the Alamo both be lost,
I bless my happy fortune. Hark, aside,
Spread yourselves, soldiers, but concealed be nigh,
So that we lose her not again. She comes.

Enter Olivia and Mexican in disguise.

Olivia. Where do you lead me? Where is Amador?

Pedro, [emerging from shade.] Here's one who loves you better.

Olivia. I am lost, Don Pedro.

Pedro, [takes her hand.] Nay, saved.

Olivia. Unhand me, Señor.

Pedro. You strive in vain. My arms are thrown around you,

Never to loose again. Your father's rights,
And mine, beneath his sanction, both demand
That, with a gentle force.

Olivia. This violence—

Pedro. Is but the action of a faithful love
That will not lose its labor.

Olivia, [screams.] Ambassador! Ambassador.

Pedro. How like a child,
You waste your feeble strength in feebler struggles.
You call in vain. Within the Alamo's walls
Your traitor lover lies. Would you oppose
Your woman strength to mine?

Olivia. Ay! though I perish.
Sooner than yield to thee, I welcome death.
My Amador. Oh! come to me and save.

Pedro. Your shrieks are vain. Your struggles! I must use
The needful force for safety.

Olivia, [faintly.] Amador! Help.

He carries her out struggling. Scene closes.

SCENE VII.

Another part of the wood. Enter Bonham with Texian soldiers.

Bonham. Methought I heard a cry. A woman's voice.

'Twas from this wood it rose, and look, the marks
Of strife upon the ground.

1st Texian. A woman's track.

Bonham. 'Tis hers! 'Tis hers! That fury's tale was true.

Follow me, comrades, as you love me, follow.

[*Exeunt Omnes.*]

SCENE VIII.

The Forest. Pedro and party hurrying Olivia in flight.

Pedro. We are past all danger, and you strive in vain,

Submission now were wisest. You are mine.

Olivia. Oh! hateful, how I loathe thee. Never in vain

The struggle against injustice—never wise

Submission to the criminal. If I call

Vainly on him I love, the God who hears

Will send me a deliverer. Hear me, heaven—

My Amador. Where are you. Amador?

Bonham, [from the forest. Here, my Olivia, here.

Pedro. Pursued? Demonios!

Olivia. Safe, O! safe.

Bonham, [bursting in—*Pedro releases Olivia and turns upon him.*] Ah, villain, you are sped.

Pedro. Fiends light upon you.

Olivia, [passing behind Bonham.] Oh! Amador,—you save me twice.

Bonham. [To Texians.] Drive out this scum while I dispatch this ruffian.

Texians with a shout rush on Mexicans and drive them out.

Bonham. [To Pedro.] Twice have I spared you, villain. When but late

You sunk before my arm, I bade you then
Dread our third meeting. We have met and now
Look to your weapon. Mercy from my breast
Is banished. This last villainous assault
On one who hates and scorns you, has rooted out
All seeds of pity. On your sword your life.
Be ready.

Pedro. I am ready. 'Tis my weapon
And not my will that fails me. If I perish,
Know that in death I hate thee still, as now,
While living, I defy thee.

Bonham. This sounds well.
Stout manhood somewhat qualifies the shame
That stamps the villain's brow. Yon tree, Olivia
Will shield you from the sight of bloody strife—
The man who dreads not foes his crimes have made
Is not unworthy of them. Sob not thus
If thou would'st not unman me, dear Olivia,
And make my heart as tender as thine own.
(*To Pedro.*) Art ready. Fix thy foot upon the turf,
Thou soon shalt sleep on. Look thy last to heaven,
Thou soon shalt face for judgment. To thy prayers
As well as weapon. Now say.

Pedro. *aPoint.*

Bonham. Guard—
And now good sword be true,—good arm be strong,
Good eye be vigilant, and heaven be good.
[*They fight. The sword of Bonham snaps suddenly.*]
Pedro. Ha! Ha! 'Tis mine. 'The day is mine.
Olivia, [rushes out from tree.] Spare him. Oh! spare.
Pedro. Death.

[*Thrusts vengefully—Bonham parries with left arm, does—draws bowie knife and stabs Pedro to the heart.*]

Bonham. Ay, death, but 'tis to thee
Fool! did'st thou think

My life was placed on worthless steel like that.

Pedro, [falls.] Hell's curse upon thee. Thou hast
won the game

At mine own color—the red. Help, ere I fall. [*Dies.*]

Bonham. From this spot, Olivia.

Olivia. Thou art hurt.

Bonham. A scratch.

Thou safe and in these arms, I feel no hurts—
Let us away. Look not upon this sight,
'Twas needful for my safety as for thine
We're victors now. I will recall my soldiers,
Then hear thee to thy father.

Olivia, [sounds bugle.] He is safe.

Bonham. [To Texans who reënter.] As thou could'st
wish him.

Take up the body,
See it well bestowed,
With honorable burial. Follow me.

[*Scene closes.*]

SCENE IX.

A court in the Alamo. Crockett and Sparrow meeting.

Crockett. The very bird I have been looking for, the
smallest of birds, and the most pert. Sparrow, I've a
message for you. You are wanted.

Sparrow. Where! For what! Is a man never to have
rest. Is he always to be marching and fighting, without
rhyme or reason, song or supper.

Crockett. Ah! there I have you. I can put you in
the best of humors by a single word. You are bidden to
the supper.

Sparrow. I'll come! What's for supper?

Crockett. You do not ask who gives it?

Sparrow. I do not care. There are only two parties
to a supper. The man that eats and the thing that is
eaten. I am willing to be the one, and I've done all that
is decent and civil in asking after the other.

Crockett. Well, it will be a rare supper.

Sparrow. That'll please me. I'm rather an English-
man in that respect. I can't bare your *done* meats. No,
the blood nicely trickling still from under the brown
edges, and I am pacified. A rare supper for me always.

Crockett. Bonham gives it, and the governor has a
hand in it; so it ought to be good.

Sparrow. Why the devil should the governor have a
hand in it before any body else?

Crockett. Good reason. It's his daughter's wedding
supper.

Sparrow. Ho! Ho! I see. Bonham's to marry her.
Well, he's a good fellow. I'm sorry for him.

Crockett. Why sorry. She's a good fellow too.

Sparrow. There's a pair of them, and that's reason
enough for some people why they should be paired. But
except the supper which comes with it, and which, I sup-
pose, reconciles so many persons to the thing, I could
never see any fun in a wedding. It's a melancholy so-
lemnity always.

Crockett. But you hav'nt answered me. Will you
come?

Sparrow. Count certainly upon me. I never disap-
point good suppers. I am never cold when they are
warm.

Crockett. You'll be at the wedding also, won't you?

Sparrow. Ah! that's another matter. I'll think of
that.

Crockett. [Bugle sounds—enter Davis.] That bugle,
Davis.

Davis. 'Tis Travis. He takes command. Bonham
is to leave us; to take despatches to Sam. Houston.
Have you heard the news?

Crockett. Any from the States? Old Tennessee, or
Congress.

Davis. D—n Congress. It's made up of old men's
souls and old women's tongues, and a buzzard is the only
means of communicating between them.

Sparrow. That's only since David left. He was the
leader of that body, and his decency went so far that he
refused to spit in the president's silver spittoon, and
emptied five finger basins at a draught. Say you, Davy,
is it true that when the waiter brought you a soupplate
of soup, you ordered him to bring the tureen?

Crockett. God bless you for a sweet singing Spar-
row. But many a fool has left on record the report of his
own braying, printed under the name of a better man.
But let's hear the news that Davis brings.

Davis. The news is nearer home. They say that
Santa Anna is marching down upon us with twenty
thousand men.

Crockett. We must stand a siege then?

Sparrow. Never think of it without laying in a plen-
tiful stock of provisions. A six months siege, for a force
like ours, would need eight hundred beeves, one hundred
barrels of buffalo tongues.

Crockett. Enough! you shall be made commissariat
to see to these things. You'll be at the wedding, Davis.

Davis. Ay! and the supper too.

Sparrow. You'll ask too many, Crockett. A supper
table should be select. I hate to see it crowded.

Crockett. Except with meats! Has any one seen
Kennedy? We want him for the singing.

Davis. He'll sing no more! He fell at the first rush:
Poor Harris, too: you heard about his wife?

Crockett. A sad story that.

Davis. He was a bad fellow, by all accounts, but died
repenting,—and died fighting.

Sparrow. Let me die eating. If any thing can lessen
the pangs of death, it is that you have the means of sat-
isfying the pangs of appetite. You'll see a bird, or beast,
dangerously wounded, still eat ravenously. Some fa-

mous naturalists have gouged out a buzzard's eyes, and plucked off a bird's wings, and, by seeing them eat freely have convinced themselves that the poor devils were not a bit conscious of suffering or loss. I confess, however, I'm not exactly satisfied. If the thing be true, it only proves that God gave the poor things very unnecessary and burdensome appendages.

Crockett. By the powers, Sparrow, before you became a sparrow, you must have been a wolf. What you'll be hereafter, it's hard to guess. You'll be at the supper, I suppose!

Sparrow. In some shape,—yes. [*Ex. Sparrow.*]

Davis, [to Crockett.] We'll go together Davy. I have something for your own ear. [*Exeunt.*]

SCENE X.

An apartment in the Alamo, splendidly prepared and lighted brilliantly. The Governor in state, with Bonham, Crockett, Davis, Sparrow, and other Texans, with Mexican officers, &c. Olivia, with Duenna and Ladies, appears in the back ground.

Esteban, [coming forward.] Señor Don Amador, these are all your friends;

They know the full conditions made between us
Touching the town of Bexar and its people.
You leave us, and, at parting, take from me
My heart's best treasure. You will honor her,
Protect her, love her; be to her what I
Have toiled to be through seventeen happy years,
While I have been her father. You'll find in her,
If that you use her rightly, such a treasure,
As man can find in woman's love alone,—
In her's not always. Here, my child, Olivia:
Give me your hand. 'Tis yours, Don Amador.
Be witness Señores.

Bonham. Sir, I take the gift,
Not ignorant of its value. 'Tis a treasure
Such as I still shall cherish in my heart,
Secure from spoil without, secure from hurt
From erring mood of mine.

In other lands,
Where'er our lot is cast—whether we build
Our cabin here in Texas, or afar,
Among my native hills of Congaree,
Erect our happy roof-tree, in my heart,
As fondly as in yours, her happiness
Shall be the creature of my busy thought,
From sunny dawn of morning until night.
To this, with solemn pledge, in sight of heaven,
I bind my soul forever.

Esteban. She is yours!

Olivia. My father, O! my father!

Esteban. Speak, my child.

Olivia. If I have vex'd you, father—If, capricious,
I've given unheeding ears—

Esteban. Never! Never!
You still have been a child most dutiful;—
Will be a wife. Go to him. Make him yours
By love, by duty, and by gentleness,
As you were mine. My faith is in his pledges;
He will not wrong the venerable white
Of this old head, by harming hair of thine.
Kiss me, my child. I bless you ere I yield you!

Crockett, [to Sparrow.] Dang it, Sparrow, he's a sensible old gentleman after all. I can't tell what he said exactly, but I understand what he meant to say.

Sparrow, [to Crockett.] He's giving away his daugh-

ter—that I see, and he behaves well. I'm a little sorry I squeezed him so hard, when I had him down. But stay! Who's this?

Crockett, [to Sparrow.] Dickins! The Princess.

Enter Donna Maria, supported into the midst and laid upon a sofa.

Bonham, [aside.] She here!

Olivia. My cousin!

Esteban. My poor Maria! You were wrong to come. You only harm yourself.

Maria. I know it, uncle;
But could not bear, at such a time as this,
My childhood's first companion and my friend
To lose forever, with no word, no prayer,
For pity and forgiveness. You, too, Amador,
Ah! look not thus upon me. Never more
Shall my wild passion, wrought to madness, vex
Your generous nature. See the ravage here
Of twelve short hours. A week—another day—
And you will yield that tear upon my grave,
Your heart denies me now.

Bonham, [aside.] There's mischief in her eye!

Maria. Olivia! Cousin!

Olivia. Dearest Maria!

Bonham, [aside to Olivia.] Stay! Do not go!

Maria. Alas! you love me not. My moment madness
Has turn'd your heart aside from me. A life
Is blasted in a moment. Fifteen years
Of childish play and prattle—girlhood's dreams
Still nightly interchanged—dear confidence
Such as youth only cherishes—all gone—
Forgotten, as if never known, or worthless!
Will you not grant forgiveness? I have wrong'd you,
But that was in my madness! See you not
I cannot wrong you now. This face no more
Shall wear the smiles of conquest—as this heart
Must banish all those feeble hopes and feelings
That led it once astray. Speak to me, cousin;
But say that you forgive me.

Olivia. Why forgive?

You've never wrong'd me, cousin.

Maria. Ay! but I have;
Cruelly wrong'd you. But that time is past.
I've wakened from my dream, I loathe myself,
Now that 'tis over. Cousin, think of me
With sorrow and with pity, when beneath
Your foreign roof, secure in happy love,
You think on me no more.

Olivia. Ah! speak not so;
Still must you live—still conquer.

Maria. Amador,
Tell her it cannot be!

Bonham. Wherefore, lady,
So very young—so beautiful as thou?

Maria. No more! I must not hear you! Blessings,
cousin,
Be on you. There! now bear me to my chamber—
My work is done—the latest task is ended—
Now welcome death.

Olivia. Oh, cousin, speak not thus!
You rend my heart.

Maria. I would not—yet I must!
Farewell! Be happy! Yet we should not part
Without one fond embrace, one farewell kiss.

Olivia, [approaching Maria.] Sister—cousin!

Bonham, [anxiously—aside.] I like it not—beware!

Olivia, [aside to Bonham.] Oh! sure we cannot now
deny her this.

I have ever loved you, cousin. In my heart,
Where'er I go, will think of you with fondness,

Having a thousand things in memory,
Of what we were together. This embrace—
Maria. Is death!

Ha! There! [Attempts to stab her, rises from the
sofa and draws forth a concealed dagger.

Sparrow, [arresting the blow.] The woman's mad!

Esther. Jesu! Was ever such a stratagem!

Maria. Still baffled!

Bonham. Disarm her!

Maria. That ye shall not. See!

[Stabs herself.

Bonham. Horrible! It is a fatal blow!

Maria. Or it were mockery.

Go to your beauty, Amador. She faints!

I die, but faint not! Yet one look! I loved you;

I love you to the last! Oh! Amador,

She cannot love as I have done. This hand,

That smote its kindred heart, had, in your cause,

Borne weapon 'gainst a thousand foes—but now!

Support me, Amador. Your arm; yours only—

God! how I loved this man! [Dies.

Bonham. 'Tis over now—

Offin!

Curtain drops while the characters group themselves
around her.

THE DREAM OF SCIPIO.

TRANSLATED FROM CICERO.

1. When I arrived in Africa, being, as you remember, Tribune of the fourth Legion, under the Consul Manius Manilius, my first care was to visit Masinissa, a Prince who, for sufficient causes, was the ardent friend of our family. When I met the old man he embraced me and wept; then raising his eyes to heaven he said, "O Sun most high, immortal thanks be sent thee, and ye deities of heaven, to you all, that before I leave this life you have granted me to see in my kingdom, and under this roof, Publius Cornelius Scipio, a name, at the mere sound of which, I feel my youth revived, for I have always present in thought the excellent man, the invincible hero, that bore it." After this I inquired about the affairs of his kingdom and he gathered from me the news of our republic; the conversation was long and occupied the rest of the day. After a magnificent repast we passed a part of the night in discourse; the old king talked of nothing but Africanus, whose every action, nay every word, were treasured in his memory. At length having separated for repose the fatigue of the journey and of watching so late made me sink into a sleep more profound than usual. Then, no doubt because we had been speaking of him at such length, for the thoughts and conversations of the day very often occasion the dreams of the night; as it happened to Ennius in regard to Homer, of whom he was constantly thinking

and talking while awake: then, be it as it may, Scipio seemed to present himself to me with features more resembling his portrait than his person. I recognized him and shuddered; but he said, "Reassure thyself, my son, banish your fears, and register my words in your memory. See you that city, compelled by me to submit to the Roman people? It is rekindling war, and cannot remain at peace." As he said this from an elevated place, sprinkled with stars, luminous and radiant, he pointed at Carthage. "You are now come little above a mere soldier to attack it. Within two years with the title of Consul you shall destroy it from its foundations, and shall acquire by conquest the surname, which as yet you bear only by inheritance. After you have demolished Carthage, obtained the honors of triumph, filled the office of Censor, visited by authority of the republic, Egypt, Syria, Asia and Greece, you will in your absence be chosen a second time consul, and by the destruction of Numantia you will terminate a most dangerous war. But when you return to ascend the capitol in triumph, you will see the republic convulsed by the practices of one of my grandsons—then, my Africanus, you must show your country all the resources of your genius, courage and wisdom. But here I see the path of the fates obscured as with a mist; for when your life shall have compassed eight times seven revolutions of the sun, and these numbers for different reasons both reputed perfect, shall, in their natural rotation, have brought you to the crisis of your destiny. all eyes will be turned upon you, your name will be in the mouths of all, the Senate, all good citizens, the Allies, the Latins will consider you as their tutelary deity: you will be the hope of your country, and its tower of strength, in a word as Dictator you will reestablish the republic, if, however, you escape the impious hands of your kindred."

2. These last words having drawn a cry of horror from Salius, and deep sighs from all the others, Scipio, with a calm smile, said, "Pray, my friends, let me sleep out my dream. Do not wake me but hear the rest."

3. "To encourage you, however, in serving the republic, know, my son, that in heaven is reserved a certain place, for all who preserve or defend their country or extend its glory; where they are to enjoy eternal happiness. For nothing is more agreeable to that supreme God who governs this universe than those bodies, those constituted societies which are called states. The governors or benefactors of these return hither whence they derived their origin." Here—though startled not so much at the manner of death as at the thought of treachery in my family, I asked him if my father Paulus, and others

whom we thought were dead were still alive? "Yes, they live," he said, "and have escaped the walls of their bodies as from a prison. Whereas what you call life, deserves no other name than death. Open your eyes, you will see your father Paulus approaching." I did see him, sure enough, and I shed a profusion of tears. He embraced me tenderly, and forbade me to weep. When I had recovered myself enough to speak, I exclaimed "O most sacred and best of fathers, why, since the only real life is here, as Africanus assures me, why must I continue on earth, O why must I delay coming to join you?" "Not so, my son," he said, "for unless that God, whose temple is all you see, release you from the prison of the body, the entrance to this place is closed against you, others were made to superintend that globe which you observe in the middle of this temple, which is called the earth. To them a soul has been given from those eternal fires, which you call stars and constellations, spherical and round bodies, animated with divine spirits, they complete their circles with inconceivable celerity. You should therefore, my Publius, as all ought who revere the gods, leave your soul in custody of the body, and not depart from life without permission of him by whom you live, lest you seem a deserter from the post that God assigns you. But live like Scipio and like me your father: be just, have piety much towards your kindred, still more for your country. Such is the path that leads to heaven, to the assembly of those who have lived already, and now freed from their bodies dwell in that place which you see." It was that belt of light, studded with fires of gem-like radiance, which, after the Greeks, you call the galaxy. Thence casting a searching glance around me I saw nothing but wonders of excellence and beauty. I discovered stars that we had never seen from earth, and all were of a magnitude which none of us had ever suspected. The most distant from heaven and nearest the earth was the smallest, and shone with borrowed light. As to the others the earth is nothing in comparison; it appeared to me so small that I was ashamed of our empire, which is no more than a point as it were upon its surface.

4. As I continued to survey it with fixed attention, "How long," said Africanus, "will your soul be rivetted upon that object? Art not aware into what temples thou art come? Behold this marvellous whole composed of nine circles or rather of nine globes. That which embraces all the others and controls them by its presence is the seat of the most high God. There the fixed stars are set, which revolve with the everlasting motion of that sphere, then within it follow seven other spheres which revolve in retrogres-

sion, opposite to the course of heaven:—one of which is for the planet we call Saturn; next comes that brilliant orb, propitious to the human race, by men called Jupiter—to this succeeds Mars; whose lurid fires gleam terror to the earth. Lower down, and near the centre, is the Sun, the king and moderator of the Stars, soul of the World, principal of its harmony; an immense body, whose light illuminates and fills all. Venus and Mercury serve him as for escort. The Moon, enlightened by his rays, revolves in the lower circle. All below this is mortal and perishable, except the souls of men; which are given them by the bounty of the Gods. For the earth, which is the ninth sphere, and is placed in the centre, is immovable, and below the rest; towards which, all bodies naturally tend."

5. Charmed with this spectacle, I recovered myself only to exclaim, what do I hear? What concord as delightful as it is serious, thus fills and ravishes my ears? "It is," he replied, "the Music of the Spheres, which they produce by vibrations and movements, which following each other at unequal but concerted intervals, form, by a happy mixture of sharp and grave sounds, this regular variety of harmony; for so great movements cannot pass in silence, and according to the series of nature, of two extensive sounds, the one must be sharp and the other grave. For this reason, the Heaven of fixed Stars, which is at the summit, and its revolution the most rapid, causes a sharp and precipitate sound; whereas, the grave is that of the human circle, it being the lowest. As for the earth, the Ninth Globe, it remains motionless in its humble seat, as the centre of the Universe. As to the other eight spheres, two of which, Mercury and Venus, have the same powers, they produce seven sounds in seven different tunes, a number which is the tie, as it were, of all things. By imitating this harmony, whether with instruments or by accents of the voice, some men have opened for themselves a way for their return to Heaven, as all others have done, whose sublime spirits have cultivated upon earth, things worthy of their celestial origin. The force of these sounds which fill the ear, at length have hardened it: hence, it has become the weakest of your senses. Thus, the people who live near the Cataracts of the Nile, when that river precipitates its waters from the summit of the highest mountains, are deafened by its excessive noise. It is as impossible for our ear to sustain that which is the product of the infinite celerity of the Universe, as for the eye to gaze upon the Sun, and endure the impression of its rays." I admired all these things: and yet I could but cast, from time to time, a lingering look towards the earth.

"I see," said Africanus then, "that your eyes

still turn to that abode of mortals. If it appear to you small, as it really is, learn to despise it, and fix your views on heaven. What glory, worthy to satisfy your desires, can you find among men? You perceive that this earth is only inhabitable, here and there, in a few narrow portions which seem like spots interspersed amidst vast solitudes; that the inhabitants, thus insulated, can have no communication with one another; that being dispersed without order and in every direction, you can expect no renown from them.

6. "You see also that this same earth is encompassed by circles which are called zones; that the two extremes, each of which has for its centre one of the poles, are always buried in ice and snow, while the middle and largest is scorched by the rays of the sun. There remain then only two which are habitable; on this side is the Southern, the feet of whose inhabitants are planted directly opposite to yours, and the people of course for you as if they were not. With regard to this Northern zone, where you are, observe how little of it you occupy; for all that portion which you inhabit, narrow towards the pole, more extended from East to West, is no more than a little island surrounded by the Atlantic, which you call the Great Sea, the Ocean, though with all the pomp of these names, you perceive how diminutive a thing it is! There stands the Caucasus, and there flows the Ganges; now who among us, from these cultivated and inhabited regions, has been able to spread his renown beyond these limits. Will your name ever be mentioned in the more remote parts of the East or of the West, of the North or of the South? These parts, struck off, you see for yourself what a mere speck is left as the whole theatre of your glory—and those who speak of you, how long will they speak!

7. "Though the men who shall live after us, informed by their fathers of our great actions, were disposed to transmit them to their descendants, the ravages of floods and conflagrations, which must necessarily occur in the course of things, would not permit our renown to be lasting, much less eternal. Besides, what would it avail you to be lauded by the lips of the future, since you have been unknown to the generations of the past, perhaps as numerous, and certainly better. It would avail you the less, as you could not leave a whole year in the memory of those who might hear mention of your name. The vulgar measure the year by the revolution of the sun, which is but the single planet; but it is not truly completed until all the planets shall return to the same position which they once had, and after a long rotation retrace the same plane of the heavens; this year would contain more

ages than I could venture to state. For as the sun disappeared to mortals at the time when the spirit of Romulus entered these temples; so when, after the return of all the planets and all the signs to the point they were at then, a similar eclipse shall be observed at the same hour, the year will be complete. But know, that of such a year the twentieth part is not yet elapsed. Thus without hope of return to this eternal mansion, the seat of all good for the souls of the virtuous, how contemptible must appear this human glory, whose longest date is but a moment of the year? If then your aims are high—if you would raise yourself to this eternal country, despise the applause of the vulgar; limit not your hopes to human rewards: enamored of the charms of virtue, under her sole guidance aspire to solid glory. What others say of you is their own affair; that you will be their theme is certain; but their discourse will not extend beyond the narrow bounds you see. All popular renown must have an end; it must perish forever through the oblivion of posterity."

8. At these words, I exclaimed, "O my Father, though I have followed from childhood the footsteps of Paulus Emilius and yourself, without disparaging your example, yet since the services we render our country, open to us the gates of heaven, animated by the prize that is now set before me, I shall redouble my efforts." "Do so," he replied, "and recollect that not yourself, but only your body is mortal; for that is but the shell of yourself, and not you. Our existence is comprised in our soul, and not in this visible form. Know, therefore, that you are a God. Yes, a substance that combines force, memory, sentiment, foresight, that moves and directs the body over which it presides, as the Supreme God moves and directs this universe can be no other than a divine Substance; and as an eternal God guides this universe, which in part is perishable; so an immortal spirit animates your frail body. That which moves always of itself is something eternal; that which does but receive or transmit motion, necessarily dies as soon as it loses it. Thus it is only a being that is author of its own motion, which never ceases to move, because it never deserts itself; nay, more, it is a principle of motion: a principle can have no origin; it is the cause of all, and can have no cause: if it had a cause it would not be a principle. Now if it had no beginning, it can have no end. A principle destroyed could neither be reproduced by another, nor create itself anew; for every principle being of its nature creative, it cannot be created. The principle of motion, therefore, can only exist in a self-moving being; and it is impossible that such a being should be born, or that it should die: otherwise nature

comes to a stand; and thus deprived of that motion it received from its first impulse, all its properties must cease.

9. "Since it is evident that whatever moves of itself is eternal, who does not see that such is the nature of the human soul? For every thing that is moved by a foreign impulse is inanimate; that which lives has an inward and peculiar principle of motion; and such is the nature, such is the property of the soul; and if it is the only being that is self-moving, it is neither created nor mortal. Employ it in the noblest of exercises—in the service of your country. The soul that is thus exercised, that has been warmed with this zeal, will soar the more lightly to this mansion which is its true country; and its flight will be the more expeditious, if, while it is in the prison of the body, it sallies abroad, and detaches itself as much as possible from its confinement, and in the contemplation of those objects that are without it. As to the souls of those who, devoted to sensuality and enslaved by pleasure, have for the gratification of their passions, violated all the laws of God and man, such souls after their separation continue crawling in the mire of earth; and are not readmitted here until after many ages of pain and woe." He disappeared, and I awoke.

The "Erl-King" and the "Fisher."

FROM THE GERMAN OF GOETHE.*

THE FISHERMAN.

The water rushed, the water swole
An angler by it lay
And watched his cork—with quiet soul—
Upon the surges play:
And as he sat and pondered there
He saw the flood divide:
And lo! a maid with streaming hair
Rose up from out the tide!

She sang to him, she spake to him
Why tempt my brood beneath,
With human will and human guile
Up to a burning death?
Ah! did'st thou know how happy are
The little fish that play
Below, thoud'st leave thy world of care
And dwell with us for aye!

Sink not the moon and much-loved sun
Down in the quiet sea—

* All that these new versions of such well-known lyrics have to recommend them is the literal nature of the translation.

And from the waves, their race begun,
Rise doubly fair to thee!
Do not the heavens so deep and pure—
The moist blue-gleaming sky—
Doth thine own countenance not lure
To dews that never die?*

The water rushed, the water swole.
It bathed his naked feet,
A faint delight poured on his soul
As when the loved ones meet!
She spake to him, she sung to him,
(He heard the torrent roar)
She clung to him, she sung to him,
And he was seen no more!

THE EARL-KING.

Who gallops so fast through the night-wind wild
A father it is with his tender young child,
Tight round the child is his stalwart arm
And he wraps him more closely to keep his limbs warm.

"My boy thou art pale! to my arm why dost cling?"
"Father! and dost thou not see the Erl-King!
The dread Erlie-King with his crown and his train!"
"My boy it is nought but the shadowy rain."

"Dear child, sweet child! wilt thou go with me?
Such beautiful games I will play with thee!
So many bright flowers bloom on that shore!
Such robes has my mother of golden ore!"

"My father! my father! and dost thou not hear
The promises Erlie-King breathes in my ear!"
"Calm thee, my little son, be at thy ease
'Tis only the whistling wind in the trees."

"Darling, sweet darling, thou'lt go now with me?
Thy servants my beautiful daughters shall be—
They shall swim in the dance for my dear one's delight,
And shall rock thee and sing thee to sleep every night."

"My father, my father! and see'st thou not there
Erlie-King's daughters float by on the air?"
"My child, my child! I can see on the way
Nought but the old waving willow so gray."

"I love thee! thy sweet face has seized on my heart
And willing or not, boy, the Erl-King's thou art!"
"My father, my father! the Erlie-King's hold
Has chilled me and killed me! I'm cold—I'm cold."†

The father, with groans, gallops fast, terror-wild—
To his heart gathers closer the cold sobbing child—
He came to his castle—he shuddered with dread—
He looked—in his arms lay the little child dead.

AN OLD FRENCH TOWN.

(COPIED FROM MY JOURNAL.)

Dijon—200 Miles from Paris, July 11. 1851.—As I came out of Paris, I could not help experiencing a feeling of sorrow, as I thought I would see it again *nevermore*. I took off my hat as I passed the Tuilleries, and strained my eyes with a last gaze at the dome of the Pantheon and the towers of Notre Dame: of the Place de la Concorde and the Madeleine, I had previously taken a more deliberate and solemn adieu. I should like to indite in prose or rhyme, as best I might, a farewell to this city, in some respects the wouffullest on earth. But I have no time now; there is no opportunity of making up arrears in a journal, for on a tour as rapid as this, he must be very diligent who, by short notes, can keep abreast of his subject.

We left Paris at half-past ten. The railway was very good, but the rate of travel is slow, and therefore the better for travellers who wish to see the country. Some of the features of a country you take in better by railway travelling, than by any mode more leisurely. You have before you a slow-moving panorama, which presenting whole views at once, gives impressions more general indeed, but at the same time more distinct than when you receive them in detail.

It was delightful to get out into the country after having been pent up in Paris. No one knows the loveliness of verdure, and the endearing features of nature, till his vision has been long starved by the sight of brick and mortar around, above, and beneath. How sweet the air came over the wide fields, to us who had often been prying about the stifling alleys of the Latin Quarter! The day was of delightful temperature, and the weather had pleasant vicissitudes. Now a dark looking cloud would gather and pass away with nothing more than a pattering shower, and then the sun would shine out to be presently withdrawn again. The season of the year is the most favorable one for scenic effect. The grain crop is just ripening—(this surprised me, as I thought that in this part of France the season would be in advance of that of Virginia, and our harvest is over before this time,)—and its golden hue contrasts beautifully with the green of the vines, sometimes deep and sometimes pale. The grass for the most part is cut, and is standing with a most home-like look in haystacks;—you cannot give the honest haystack a foreign look—or wains with four horses, one before the other, are carrying it home—or men are mowing, and troops of laborers, mostly women with broad-brimmed straw hats, are making the

hay. So, too, they are working in the rows of the vineyards, binding the vines to the sticks which support them. A vineyard is not in appearance what I had supposed. It looks very much like a field of Lima beans, or hops upon short poles. The vines are very thickly planted, and are cut down nearly to the ground every year. The ploughing is done by four horses harnessed *tandem*, and the plough is aided by a large wheel, or wheels attached in front to the beam. The characteristics of the scenery, are absence of woods, and of all enclosures, minute subdivisions of the land, and the abundant cultivation of the vine. The valleys for the most part are given up to the growing of wheat and oats; the crops are good and of a most surprising uniformity in quality, but I saw none that seemed to be very remarkable for yield. I looked round with the hope of seeing growing some Indian corn, but I met with none. (After all, there is no crop equal to it: in the list of American blessings—I mean those peculiar to America, I set down first liberty, second cotton, and third Indian corn.) The hills are for the most part conical, swelling up bold and steep, but sometimes two hills will slope towards each other and enclose a lovely recess, or what is expressed by the Latin word *sinus*. The hills are cultivated to their summits, in vineyards interstriped with grain or other growth, and from the variety and contrast of their ribbon-like colours, are indescribably beautiful. As we approached Dijon, the country became much more hilly than before, and reminded me so strongly of home, that it made me melancholy. The thought came over me, that I might die away here in a foreign land. How many miles intervene between me and home, and I am adding to the distance at the rate of 200 miles a day. The streams that we have been crossing flow into the Atlantic, and we are now just at the head of those emptying into the Mediterranean. “Messieurs, voulez vous bien avoir la complaisance de descendre à diner—le diner est prêt?” What an interruption! And could any other than a French servant give notice in so graceful a manner, that dinner was ready? What an old looking place this Dijon is! with its stone houses, tile roofs, and tile steps and floors. There is a sort of variegated tiling here, which has a very singular appearance; it looks as if the roof were oil-cloth of the gayest colours, and of a very large pattern. The house we are in, Hotel de la Cloche, has two courts, and curious balustrades, and stairways. The landlady, (I have hardly ever seen a *landlord* any where in France,) is smiling and everything but pretty, the servants exceedingly polite, and the dinner better than the landlady and the servants put together. We met with two gentle-

men and a lady, Americans, who could not speak a word of French. The lady said she understood French *except the pronunciation*. It is surprising how many people are mistaken as to their ability to hold a conversation in a foreign tongue. A plague upon all liars!—meaning to include in this gentle anathema, all that pretend to teach in any small given number of lessons, all that one needs, or indeed, any thing that is of service. We could not get on to-day by the regular conveyances, and of irregular there seemed to be none. So we agreed to remain here a single day, not, indeed, unwillingly, as we wished to see at our leisure, this first-rate specimen of an antique French town, the former capital of Burgundy, when Burgundy stood next the throne and close to it. We visited first the museum, where there are some remarkable remnants of the middle ages; among them the tombs of Philippe le Hardi, and Jean sans Peur, his son. These monuments are chiefly remarkable for the figures in alabaster which support them, (about 40 to each monument.) representing a procession of monks in grief at the death of their master. A writer says of them—“All are represented as mourners, but with the most skilful variety of feeling—one in all the anguish of grief; a second equally afflicted, but tranquilly resigned; and a third stupified with sorrow—all as true as if you had the convent before you. The draperies are admirable, and whether we consider the goodness of the design or the skill of the execution, we confess that it would be hardly possible to rival at the present day, the skill of Claus Sluter the Dutchman, for he was the artist.” They are indeed exquisitely wrought. Some of the figures, whose faces as well as every part of the body, are entirely concealed by their cowls and frock, yet express most powerfully their emotions by their attitudes and the adjustment of their garments. What, however, most interested me in this room, was an exceedingly well-executed statue of Bossuet, who was a native of Dijon. In an adjoining room I saw copies executed by a skilful artist of the Apollo Belvidere and of the Venus de Medicis. I have hitherto seen only casts of them, and I suppose that I shall never see the original statues; and therefore I examined these with the greater attention. The Apollo is tall—I should say about six feet and an inch. The limbs are not large, a little bow-legged, with long arms, and the least trifle in the world corpulent. The countenance, though handsome-featured, is inexpressive. I remember reading a description of the original by a German writer, in which he speaks of the flush of victory suffusing his brow just after he had slain the Python, but I saw nothing of this in the copy. The Venus is of medium height, waist not taper, but of

good size, and not long—a little bit knock-kneed; her neck is tapering, and beautifully set on her shoulders, and her head as well set on her neck; her breasts are prominent and rather largish; her hands and feet finely shaped, but not very small. There is not the slightest expression of passion, or even voluptuousness about her. It is by no means as captivating as the Greek Slave. These statues are mere copies, it is true; but yet, as they have been executed by good artists, with great care, upon accurate admeasurement, they doubtless give some good idea of the originals. They disappointed me. So did the veritable specimens of ancient sculpture that I saw in the Louvre. Indeed the feeling grows upon me that the moderns are superior to the ancients. I have long been of this opinion with regard to literature: there is of course no comparison in the experimental sciences and in works of utility, and I now begin to think that in architecture, sculpture and painting, the moderns are fully their equals. I have seen no statues elsewhere that I admired, as I did some in the Crystal Palace, and no stained glass like the gallery there. In this last particular, however, I am comparing the moderns with the mediæval artists. In the same room with the statues already mentioned, I saw one of the Gladiator, which I like better than that of the Apollo. It is shorter, stouter, more muscular, and every way more expressive. We went to the church of Notre Dame, and that of La Flecke, the latter so called, from the arrow-like appearance of its tall spire. These churches are ancient and striking specimens of the Gothic style, but I did not see any thing in their structure particularly noteworthy. All the Gothic churches that I have seen, are very much alike. A main nave divided into three aisles, by two rows of columns that run along its length; these are sometimes plain pillars, as in Notre Dame, and sometimes beautifully clustered columns, as at St. Denis. The centre aisle is of course the body of the church, with the grand altar at one end and the organ at the other. There are no pews, but the space is occupied and very much disfigured, by a great number of the plainest and ugliest straw-bottomed chairs that ever I saw. The side aisles are divided into chapels, and contain the pictures and confessionals. From the top of the columns spring the ribs of the groined arches of the ceiling, meeting usually in the centre of the roof. Sometimes on a level with the top of the columns, there runs around a small colonnade, or gallery, making a succession of openings or small niches. At the hour for service usually is found a small collection of worshippers, who dip their fingers, going and departing, into the holy water found at the entrance in two vessels, which very commonly are large

specimens of a peculiar sea-shell. In one of the churches in Paris. (St. Sulpice I think,) are two shells of this sort, said to be the largest in the world. Ah, but this holy water is dirty! It looks stagnant, and is full of dust, to say nothing of the cleansings of an untold number of unclean fingers dipped into it. The worshippers are for the most part serious, and many of them seem devout. I have not seen any thing that looked like the worshipping of images. I saw in this church at Dijon, a company of about 40 pleasant looking boys, sitting together near the railing, who told me upon enquiring, that there was to be an exercise in the catechism. I resolved to tarry a little and hear it, for it is the first instance, (and it proved to be the only one,) that, in the multitude of Catholic churches that I have visited, I have met with any thing that pretended to be designed for instruction. Their ordinary service is not only unintelligible, as being in a dead language not understood by the worshippers, but is inaudible, because of the size of the buildings, the reverberation of the least sounds, and the low and rapid mumbling of the performing priests. Presently the priest appeared on the other side of the railing, and instantly the boys kneeled on their chairs and said a short prayer, the priest doing the same. He then commenced his instructions, sitting in his chair. He told them that on former occasions he had given them instruction as to two other sacraments, baptism and confession, (I believe,) and that he would instruct them as to confirmation, its nature, the disposition proper for receiving it, and its effects when properly received. The counsel seemed sound, and his manner was most earnest and affectionate. When he had made his little exhortation, he called upon one of the boys, who rose and repeated the answer to the first question in a fluent manner, and then the priest proceeded to examine him in detail, very much in the way that I have heard the shorter catechism examined on. My prejudices against the Catholics are diminishing, as I see their devotion at worship, and especially when I look upon the countenances of some of the Sisters of Charity, whose kindness and self-abnegation cannot be doubted, nor their purity impeached. And yet I am but the more convinced that many of their doctrines are not only erroneous, but anti-Christian, that their service is in itself an insincere formality, that their priesthood as a body are corrupt and immoral, and that the effects of the long-continued influence of this religion are manifest and devastating. I think that the rural priesthood and rural population, must be more virtuous than that of the cities.

We went to Salons, a remarkable eminence not far from Dijon, from the summit of which we

had a view of the surrounding, or rather underlying country, champaign, and variegated with vineyards and grain fields now yellow for the harvest. The horizon showed in the far off distance the Jura mountains. How varied is the beauty of the works of nature! Uniformity will mark the works of man, let him attempt as he may to disguise it. Castles, temples, pictures, statues, how have they ravished my senses with their magnificence and beauty!—but they are alike—I look over them now much quicker than I did at first, because I detect under different combinations the identical forms of beauty that I have seen elsewhere. But not so with nature. There is even in objects of the same class, an absolute diversity that makes every new object a novelty. Lake Leman and Loch Lomond, how different from each other, and both from our own great lakes. Yon Jura mountains, how they call aloud to my heart, because they remind me of my own loved Blue Ridge—and yet they are not alike. I have sailed on the Rhine, and stood gazing into the ultra-marine depths of the Rhone as it rushes forth from Lake Geneva, and how different they are from the Hudson, the Ohio, and the Mississippi. I have seen lovely cultivated landscapes in Kentucky, but not like those of England; and I have seen the wide spread prairies of the West, but nothing did I ever see before like the plains of Burgundy. What incredible diversity meets the traveller and draws forth his heart in wondering admiration for the Creator of all. Different lands, tongues, trees, flowers, birds, animals, by sea and on land, all different—nothing the same, but the sky above, and the God above the sky.

To-morrow at half-past three in the morning, we start in a diligence for Geneva. Baptiste is to rouse us. Capital fellow is Baptiste. At half-past two he called us up, gave us breakfast, supplied us with *provisions de voyage*, and at four we sat off in the diligence for Geneva, which we were to reach, and did actually reach, at six the same evening—121 miles in 14 hours, pretty good driving, counting in the long ascent in crossing the Jura mountains. A diligence is like an omnibus, holding from twelve to seventeen persons, and divided, the smaller ones into two, the larger into three compartments, entirely separated, the one from the other, so that no communication is possible between the occupants of them severally. The first division is called the *Coupé*, holds three persons, is comfortable rather, though confined, has an indifferent look-out, and is higher priced than the others. This was occupied Dr. A. M. N., a Chaplain in the navy, and myself. The other compartments are called *Intérieur* and the *Rond*, besides which there is on the top a covered space, called the *banquette*,

which accommodates two or three persons, and on the larger sort of diligences, still another in rear, and on top, being a sort of dickey. The diligence is drawn by four horses ordinarily, but whenever we had to pass over a stage road more hilly than usual, we had five horses, the three leaders being harnessed abreast. The horses for the most part, are quite common-looking, stout, but heavy, and as dirty as if the curry-comb was an obsolete idea. Nothing could look more slovenly than their harness, of which it may suffice to say that among all the teams that we used, I was never able to find a pair of harness exactly alike. Even when uniformity was attempted, there would be some difference apparent, but ordinarily no pretence was made, of securing even similarity—one horse would have a collar, and the one next him would be working without any—one would have chain traces—another leather, and a third ropes. The reins held by the driver, were long thongs of untanned leather. Yet these horses drew along the lumbering vehicle at an average of more than nine miles an hour. The stages, it is true, were not more than five or six miles each, but they went at a gallop up hill and down. Our route led us at first through, I suppose, the widest and most fertile, cultivated expanse that ever I saw; indeed, I did not think that in the old world were to be found such rivals of our western prairies. The road passes right through the midst, with the grain growing up to the very wheel tracks. There are no enclosures, fences, or hedges, to mark out the limits of the innumerable little properties—few trees, no side roads, and hardly paths. It would seem as if from the time of sowing, until that of securing the crop, they never entered upon the ground with any kind of wagon; thus every inch was cultivated, and contrasted strongly with the fields in England, where so much ground is lost in hedges, ditches, roads, and byways. Wheat was the principal crop, and although I have seen in our country single fields with a heavier yield, I never saw any considerable extent of land that would give any thing like as high an average. I saw but little grass, except along some small streams that we crossed, where the ground was evidently too wet for grain. The clover and lucerne that I saw them cutting, was not as good as I have often seen at home. The agriculturists do not live in farm houses, but in little villages, where the houses, built of stone in heavy walls, and covered with thatch so old that moss is growing and blooming on it, are crowded together with heaps of filth before the doors. The villages have narrow, dirty streets, and seem to be intended to be the closest imitation possible of the worst parts of a city. It seems surprising that people should prefer living in these close quarters, to having a nice, quiet little home, with a garden and play-ground for the children. I suppose that this habit of living is owing to something connected with the former tenure of the land, and to the fact that in early violent times, the inhabitants gathered together for protection. They likewise, in this way, economise ground, which is of course very precious. What cattle, cows, horses, sheep or hogs are allowed to graze, are herded—generally by the children, lads, and girls, and the little ones who are taken that they may be *minced* at the same time with the cattle. I have often seen very domestic looking, and happy little circles; for they sit together on some suitable spot, and huddle close to talk—a little dog generally makes one of the group. I never saw any one with a book or paper in their hands. Yet at Dijon I was informed by more than one person, that the laboring population, with rare exceptions could read and write. They look healthy and contented, and sufficiently well dressed. Their clothing, though plain, is suitable and decent, and never ragged, except in a few cases of beggary or something near it. The women wear immense straw hats, comfortable gowns, of which the fashion is to be rather short, and blue stockings fitting close around their tidy ankles. They wear, very generally, the *sabot*, or wooden shoe, which is unseemly, and I should think uncomfortable, but it certainly protects the feet very well. The men in the fields, and those driving carts, of which we met a great many, are clothed quite as well as laboring white men with us. The children were, without exception, comfortable looking. As to their food, I can only judge by their ruddy countenances and their well-developed frames, men and women, though they are not of a large size. There is no doubt that they eat less meat than do our laborers North and South; but this will not establish that their condition is below that of laborers in America, any more than it would be true to suppose that their repasts, at which a bottle of wine is always found, are equal to those in our country which have the same accompaniment. Each country must be estimated with reference to its own productions. Meat is cheap with us, and wine is cheap here; that our laborers have an abundance of meat, and that these have an abundant supply of wine, is undoubted, but a comparison of the mode of subsistence of the two respectively, would demand a much more extensive investigation.

The absence of farm buildings, and of enclosures, gave to the country the appearance of being owned by one mighty lord, but hardly a *chateau* was to be seen, and very little of any thing to testify to the existence of an aristocracy, either of birth or wealth; herein every thing

being in striking contrast with England. The country has nothing of that sort of beauty which is the glory of English scenery; lawns and parks, groves, hedgerows, fine cattle and sheep. This is a beautiful country, but beautiful mainly to the eye of the agriculturist, who must admire the world of wealth with which these wide-stretching plains abound. And yet no one can be insensible to the beauty as such merely, which belongs to waving grain, checkered here and there by by a vineyard, a strip of potatoes, or of green sward. Bless the yellow grain, and the plain, but honest-looking Irish potatoes! No distance, or climate, or any thing else seems to affect them. Here in the midst of Burgundy, they look just as they used to do in Rockbridge, and my heart warmed at the sight of them.

I was struck with the way they work oxen here, or cows, for both are here subjected to the yoke. They pass a band from the yoke to the head around the horns, and thus the animals draw with their heads instead of their necks, as with us. We caught to-day our first sight of Mont Blanc, it being, as we were informed, about 150 miles distant.

The Burial Stone of Manhood's Prime.

BY. H. H. CLEMENTS.

Half way upon the road of life
A marble mausoleum stands;
And all that is with anguish rife
Hath there been traced by viewless hands:

It can make answer for the loss
Of hours that darkened as they flew,
And never can the gathered moss
Erase the record from the view;

Of hardness it may be the type
Of the world's judgment upon those,
Who with their tears all record wipe,
Of wrongs endured from friends and foes:

Of coldness it may represent,
The heart that laughed our love to scorn,
Or scoffed some motive kindly meant,
Before the act was fully born.

The eye that reads thy page aright,
All human history may scan,
For such from infancy to night
Hath linked the universal plan.

This marble stone doth give the sign
Of promise fair, but faith untrue;
Like fruit that clustered on the vine,
But withered slowly as it grew.

It doth restore the captive thought
Caught in its flight to endless years,—
Unchained, like Paul from prison brought,
To stand with Christ and his compeers.

One face doth watch it sad and pale,
The signs and seals of hopes to see;
Like one who gazed o'er Tempe's vale,
And viewed a pure divinity.

The airy tracery unwreathed
About its form—above, below,
Resembles what the tempest breathed
Upon the Alpine's brow of snow;

But like that snow, shall quickly fade
From nature's brow away! away!
Bearing the traces which it made
To a remoter life—Decay!

There is no death; the autumn flower
Which trembles in its frozen need,
Bears life's illimitable dower,
And scatters in the wind its seed.

Whate'er the future may provide,
Or fate's relentless mandate wills,
All stainless, may thy other side
Be free from such a train of ills.

So let thy promises release
The heart's despair—the soul's alloy,
That they at length may dwell in peace,
Like Sabine girl and Roman boy.

PINE FORK PLANTATION:

A CHRONICLE OF OLD DAYS IN THE OLD DOMINION

BY PEN INGLETON, ESQ.

I.

A VIRGINIA PLANTER.

PINE FORK was an old, huge, stone-chimneyed, swallow-haunted mansion, which stood, in the year 1680, on one of those pine-and-cypress-skirted streams, which water the county of Surry. It was built of substantial timbers, inasmuch as bricks were at that time almost wholly unknown in Virginia: its chimneys, (nearly a dozen in number,) were of stone; and you would at once have observed the peculiarity in the windows. The panes were small and diamond-shaped, the upper portion arched, and all were secured by thick, nail-studded shutters, which were evidently constructed far more with an eye to defence than beauty or convenience.

This even then ancient plantation-house was the abode of a certain worthy and estimable old gentleman, Colonel Ralph Purnell by name, his family, and some fifty or three score slaves, not to mention his "indented servants," sold into servitude for a term of years, and scarcely in any degree less slaves than the negroes. To the honor of Colonel Ralph be it said, these numer-

ous dependents of his almost baronial estate, were never heard to complain of their lot, and had you uttered in their presence the word "Christmas," or "Easter," bright visions would immediately have arisen before them of plenty, holiday and merriment. These three things are the summit of the negro's happiness, and the merriment is a consequence of the two former. Those were, indeed, happy times, and when the "whole plantation" approached the mansion playing on their rude fiddles, thrumming banjos, and rattling on tin pans and calabashes, to the tunes then in vogue, you might have easily perceived that they were wholly content, and that if they indeed wore the "chains" which figure so in rhetorical flights, those chains were wreathed with flowers—entirely concealed by them. Colonel Ralph Purnell, the master and lord of Pine Fork, was a worthy specimen of the old Virginia gentleman-farmer—but here he is before you.

It is a bright May morning, and the fresh breeze floating in through the open window is laden with the perfume of a thousand woodland flowers. Colonel Ralph is seated in a large arm-chair, in the spacious dining-room;—not an apartment, be it understood, with a rich carpet on the floor and walls covered with beautiful paper, and surrounded by a snowy cornice as in modern times; but a great room with a floor of oak; the walls of rough timber, against which spears, hunting-axes, antlers, fox-heads and guns are fixed; the ceiling of smoke-embrowned rafters, which support more than one beautifully tapering rod for ensnaring fish in the neighbouring ponds and streams, and numerous three-pronged spears for night-fishing—"gigging," as they called the sport at that time. The only approach to the decorations of our own time is in the pictures hung around the old walls:—the ancestors of the Purnell family. But after all they can scarcely be said to bear any resemblance to modern portraits—those old iron-clad chevaliers, and ruffed dames gazing down so primly on their descendants banished to the barbarian colonial life of Virginia; and the old fashions of their costume, give the walls of Pine Fork a more ancient appearance still.

Colonel Ralph is a gentleman of from fifty to fifty-five, good humored and jolly, but full of practical energy, which it requires but a glance at his well-formed mouth to perceive. There is about him, in his manner, his tone, his very gestures, much of that self-importance so often engendered—we might say so universally—by the isolated life of a wealthy country-gentleman ruling despotically, and without appeal from his decisions, over so large a number of human beings. But this is mingled with much good-

humored kindness, and would the Assembly only "mind its business," and not dictate to him, as he is accustomed to say, none under him should ever complain of their lot. This "Assembly," which acts so important a part in our day, and whose legislation is so implicitly acquiesced in, was a very different thing in 1680; and Colonel Ralph's peculiar notions on the subject are exactly those of all his compeers. He hates the name and grudges every tax imposed by it:—he takes no note of its action; he abuses it unmercifully when he is forced to know its proceedings. Colonel Ralph hates the Assembly, which very reasonably dissents from the proposition that he, or any of his brother barons, are supreme in their small kingdoms, and this important body, together with the Governor, serves him as a stalking horse for all his superfluous ill-temper.

On the identical May morning when we have taken the liberty of presenting him to the reader, the old gentleman was attentively perusing a small brownish sheet of rough paper, which bore at the top in large straggling letters, the words, "*Virginia Gazette*" and purported to be issued by a certain "Mr. John Buckner at the Berkeley Arms in James City." This was the first newspaper which had ever made its appearance in the ancient Dominion and Colony of Virginia; was strictly a court journal in character; and conscientious historians have since come to the conclusion that his excellency, Thomas Lord Culpeper only permitted it to be printed from his great desire to conciliate the colonists before fleeing them.

"Good!" exclaimed Colonel Ralph; and so suddenly, that a large negro, then engaged in setting some pine splinters in a blaze in the fireplace, opened his eyes to an immoderate width. "Here's Paul again, by my faith!"

"What! Paul Hansford—Cousin Paul?" asked a gay voice behind his chair.

"Yes, Amy; no less a personage than Mr. Paul Hansford."

"From London?" said his daughter.

"Certainly. Here is the notice of his arrival."

"Let me see," said Amy, taking the paper. "'Proclamation—ordered and decreed that all the followers of [the rebel Bacon]—pshaw! Ah! here it is. 'Among the gentlemen who arrived in the ship *Virginia*, eighty-five days from London, are Mr. Wm. Spotswood, Mr. Thomas Kildress, Mr. Paul Hansford, who has just finished, we understand his course at Oxford, and'—"

"Just finished his course at Oxford!" grumbled the old man. "No doubt he is vastly improved—not a doubt of it!"

Amy laughed rather irreverently.

"Vastly improved no doubt!" she repeated

imitating the old gentleman's grumbling tone. "Why can't we have a college at Jamestown, I should like to know?"

"A college! We have a college?"

"Certainly, papa," said Amy, seriously, "why not?"

"We have a college?" repeated the Colonel scornfully.

"Yes: have we not as good a right as any other country?"

"Right!" exclaimed her father.

"Isn't this a free country?"

"A free country!" repeated Colonel Ralph, with profound disdain; and overcome at last by rage, "a free country, say you! May the curse of heaven fall and blight such freedom as we enjoy! Freedom—free country! Oh, yes! free when we are trodden down and despised by these "Excellency's"—free, when the cursed Assembly does as it pleases with us and ours—free when men in authority may do what seems good to them! A college forsooth! You do not know what my Lord Berkeley said before the Commissioners: 'There are no schools or printing presses in Virginia, and will not be I hope these hundred years; for knowledge brings disobedience, and discontent with the best government.' That's what our new master too would say. Right! Free country! College! pah! with our rights trampled on, our best men ruined for their virtues, Bacon poisoned"—

"Poisoned, papa?"

"Yes, poisoned! and would to heaven this smooth Lord Governor heard me. Poisoned! and that because he was a man, not a serf! What an age do we live in—we freeborn English gentlemen! "Right," "freedom"—they are names, what more? "Right," when we are fleeced and cheated—when, if we ask redress, we are laughed at for our pains; "right," when we are allowed no printing presses in the land; "right," when we have no journals but this miserable, cringing, obsequious,—aping!"

And Colonel Ralph, with flushed face and fiery eyes, hurled the unhappy, *Virginia Gazette* upon the blazing faggots in the fireplace, where in an instant it was consumed. At this exploit Amy clapped her hands and burst out laughing very irreverently, declaring her father to be a roundhead more fiery than the fiercest cavalier.

"I will no longer read the miserable, sawing affair!" said the old gentleman, indignantly moving about in his seat.

"What then will you read, papa?"

"Nothing."

"And what of the news?"

"There is none but some new extortion of

the Governor, some new injustice or presumption of the Assembly: pah!"

"Extortion of the Governor! Why were you not one of the followers of the rebel, Bacon?"

"Was I! What mean you?"

"Why here is a fine proclaimed on all such: now"—

"You mean I am not mentioned, do you baggage?"

"You have not been fined."

"Wait! it is morning, but not day yet, as the saying runs. I am not forgotten."

And the old gentleman raised his head proudly.

"Well, well," said Amy, coquettishly twisting round her taper fingers, a curl of her long sunny hair, and rattling the key basket which hung upon her bare round arm, "well, papa, no more politics: but you are going to send for Paul? He will be a great acquisition, you know."

"Hum—I am far from being as certain of that, and as pleased as you seem to be."

Amy tossed her head.

"I care anything for his visit," she said.

"Well then we agree," answered the planter. "These young gentlemen come back with their lordly airs, so fine, and polished, and elegant in everything, that simple plantation life is not good enough for them, far too rude for their aristocratic stomachs. A fig for such popinjays!"

"Why, papa, you went yourself," said Amy, laughing; "are you describing your own case?"

"Pshaw!" said the old gentleman, a little put out at the recollection of his early extravagances—"nonsense! I hope I had better taste."

"But Paul was such a fine fellow," said Amy, with the utmost indifference; "I remember him perfectly."

"Yes, yes," grumbled Colonel Ralph, "the devil take your fine fellows! Take care his fine conceits don't impose on your inexperienced nature, Mistress Amy!"

"Oh!" exclaimed the young girl, disdainfully.

"Ha—what now?" said the old gentleman, with a smile. "What say you?"

"The idea of my falling in love with him!"

"You mean that Master Paul had better take care himself, eh?" said the old planter, laughing gaily, while surveying with a glance of pride and affection his beautiful daughter—"he is as much in danger as yourself, eh, Mistress Amy—though he is some twenty-five or six, you but eighteen?"

"I meant nothing of the sort, papa," she replied, with a pout. "I don't want to marry Mr. Paul Hansford."

"Who is the chosen one then—Ned Jones?"

"Ned!" exclaiming Amy, clapping her hands.

"What! that walking lexicon and law book? Save me! I'd rather die an old maid!"

"Ned's a fine, honest fellow, though, Amy, and"—

"Certainly, papa, but"—

"But me no buts; you shall marry him!"

"I will not!"

"Little baggage!"

"A fig for your legal popinjays!" said Amy, in a pompous tone, and imitating the planter's manner; they think a simple country girl is too unimportant to be amused; and they talk of *cognovits*, *writs*, *retraxits*, entails, remainders and fee simples, like veritable parrots!"

"Go to!" said the old planter. "Rosin!"

Rosin, an old and aristocratic looking negro, with a white head, and a burly figure clad in an ancient suit of his master's, rose from the corner near the buffet, where he was polishing a silver tankard.

"Breakfast!" said his master.

Rosin bowed respectfully; then going to the door opening toward the kitchen, "Breakfast!" he said, in a commanding and magisterial voice, to some half-dozen negroes lounging about the steps.

Rosin himself brought forth the great round of beef, and his myrmidons hastened to cover the broad board with platters, pitchers of milk, broils, hominy, and every adjunct of a substantial plantation breakfast.

"Where are Jack and Lory?" said the Colonel.

Rosin drew himself up. "Mas Jack, he in bed, sir," the old negro replied with dignity.

"In bed is he—at this hour?"

"I tell him it was late," said Rosin, "but he fling whip at my head, and abuse me, sir."

"The rascal! if I was there with that horse-whip, I'd wake him and abuse him in another manner. Where is Lory?"

"Mas Lory gone away, sir."

"Gone where?"

"I disremember 'zactly what he say, sir, but I think he tell me he goin' to ten' his traps."

"Ah! what's bred in the bone will come out of the flesh. But go and see if Jack is awake: lying in bed when every one is up!"

"It's no use," said the lazy voice of that gentleman himself; "I'm up, and hungry to-boot. My appendages, respected progenitor and amiable sister," continued he, fidgeting his long and black moustache, "are, I know, in an unrepresentable state, but pardon me. Rosin, hand me that broil before the Colonel: he is about to help himself, I see, to the best portion." And Mr. Jack Purnell sat down.

II.

A PLANTATION BREAKFAST.

It was a cheerful and pleasant picture which the sun, scattering its bright and beautiful rays across the hills and streams, lit up that morning at Pine Fork. The hale old planter, with his broad, open brow, grey mustache, bold, lofty bearing, and stalwart form, clad in the rich costume of the period;—his beautiful daughter, whose whole figure was illumined by the golden sunbeams which fell on her pale yellow hair, and on whom her father cast, from time to time, glances full of admiration and pride, as on some fair jewel one is blessed with;—lastly, Mr. Jack Purnell, with his handsome, though somewhat listless face, and his rich surcoat of many colors—these personages, with the back ground of the old brown walls, with their spears and antlers and portraits, formed a picture which had in it much that was pleasant and agreeable to look upon.

"Your laziness has lost you the news, Master Jack," said the old planter. "I hope hereafter you will come down in a reasonable time—for your own sake, if not for our own."

"Lost me the news," said his son, with his mouth full: "how so?"

"See! there are the mortal remains of the *Virginia Gazette*."

"And what was the news, respected governor—nothing, I suppose, as usual, but 'Proclamation of his Excellency.'"

"Yes, the ship 'Virginia' has arrived."

"Well."

"And guess who came from London,—no from Oxford," said Amy, correcting herself.

"From Oxford? What!—Paul!"

"Yes: Paul."

The young man whistled.

"What is that for now?" said the old gentleman; "you are going to abuse the boy I should say."

"No, not abuse him—but there's nothing in him; I always said there was nothing in Paul."

"Come now, Jack," said Amy, "you shall not abuse Paul; are you not ashamed!"

The young man looked at his sister. "Were you engaged when the hopeful saint left us some years back, my dear?"

"Impudence! To presume to say I cared for Paul," cried Amy, while the old planter laughed heartily at this set-to between the young girl and his promising son, "I only wish you were as good as he was when he went away; you never were as polite or kind to me as Paul, and you know it Jack."

The young man put a knuckle in his eye—

"Unfeeling sister," he said, "to hurt the feelings of her own affectionate brother!"

"Never mind," said Amy, tossing her head, "when Paul comes you will see what an elegant fellow he is."

"Elegant fellow!"

"How much he is improved by his travels, and"—

"I want you to let me talk!" cried her brother in despair. "I am overwhelmed, beat; I give up. Shall I say enough?"

Amy shook her head at him, as much as to say she would be even with him yet.

"I wished to inform my respected progenitor," continued Jack Purnell, "that I was going to Jamestown to-day at any rate, and would carry any message to Paul."

"To Jamestown?" said his father. "For what, Master Jack? To get some new law books."

"Oh, fudge!" said the young man, drumming with his fingers, and much annoyed at this allusion to his indolence.

"I must send you to England, Jack: there really is no field here for such tremendous talents, learning and application as you possess."

"I say Rosin!—order my horse to be saddled."

"Where are you going—to Jamestown?"

"No: but you are all so disagreeable here, that really"—

"He's going to see May Jones," said Amy. "he won't deny it."

"Yes, I am. I promised her I would come this week, and considering what an affection for your humble servant, a certain young lady in that quarter has"—

The young scapegrace finished his sentence with a twist of his moustache and an air so conceited, that it nearly brought a storm upon his devoted head from Amy, whose particular friend Mary was.

"Affection is there?" said the Colonel. "Reciprocated of course?"

"The liking, sir, is mutual."

"When's the marriage to take place?"

"With Miss Mary?"

"Yes, you rascal."

"It's all arranged for the thirty-first of June. But enough, respected sir, for once. I am going to Jamestown."

"For Paul?"

"Yes."

"What horse will you ride?"

"Whitefoot—by-the-bye, where is Lory?"

"Gone to see to his traps, I suppose."

"Traps, eternally traps! Why that boy must have a hunting and trapping fever."

"His nature is such," said the old planter musingly; "a strange nature in that and many things. You know how this little Indian boy became a member of the family. Found half-dead after that terrible combat we had in '70 with the Tuscaroras. It was in Hawk Hollow over there—did you know that before?—and Lory was then eight years old, as nearly as I could guess. You were away then?"

"But I have made Lory's acquaintance since, and I must say he *does* play a first rate fiddle-bow, though his fancy is too mournful; such slow Indian airs!"

"Ah! he has much to grieve for," said Colonel Ralph thoughtfully; "much that you know nothing of."

"He's a splendid hand at backing a colt, and the only fault I have to find with him is, that I am sometimes afraid he is going to bite me."

"Bite you?" said Amy.

"Yes. It was only the other day I said to him, 'Lory where did that funny red mark on your arm come from—what is the meaning of that double-headed arrow?' 'That is my name', he answered proudly. 'I am an Indian—don't speak ill of the Indians.' Speak ill of the Indians!" cried the young man;—"the very idea of praising them! But then Lory is a good fellow, and why make him blaze up and look as if he was going to spring upon you with that long hunting knife at his girdle? I have seen his eyes glow and flash like fire, when persons have spoken ill of the Tuscaroras."

"His tribe," said Colonel Ralph, "though now none I believe are left in these parts."

"I love Lory dearly," said Amy.

"And here he is," said the Colonel, looking through the window. "Rosin, my pipe, riding-whip, and hat!"

And they rose from the breakfast table.

III.

THE INDIAN, LORY.

Amy ran out to meet the Indian, and exclaimed, clapping her hands gaily, "Oh! what a sight!" She had some reason for saying that Lory presented that appearance usually designated by the phrase in question.

He was mounted on a little rough-coated Indian pony, not more than half the size of an ordinary horse, with a long mane, ever-moving ears and diabolical looking eyes. Across the saddle, in front of him, the Indian carried a young and well-fleshed doe, or rather it hung suspended there, not "larding the lean earth," but leaving all along the road a trail of blood, streaming from a wound just beneath the eye where the

ball had entered. He carried in his right hand a long rifle, and from a hickory hough which crossed his shoulders, hung a dozen opossums, hares and squirrels.

Lory himself was a young man of eighteen or nineteen, tall, supple, and vigorous, but very slender. The copper tinge of the Indian blood was less distinct in his complexion than might have been expected, and his long, black hair, slightly undulated, falling on his shoulders. His face was more sedate than animated, and his dreamy, twilight eye, seemed to be fixed at times on other and far-away scenes.

Lory's position at Pine Fork was rather anomalous in its character. He was an Indian—that is, one of an abhorred race—the child of a hostile and wandering people; yet the old planter treated him as a son, and had afforded him every facility for acquiring knowledge and cultivating his mind;—had here indeed acted towards him like a most tender father. The consequences of this civilized culture from eight to eighteen—during ten years that is to say—was a nature half Indian and barbarous, half white and well-informed:—full of the most singular anomalies.

It would require a most delicate pencil to delineate the relations existing between Amy and Lory—as far as the young girl's feelings went. As to Lory, he was irredeemably in love with his girl playmate. He was an Indian after all in heart, and the bold, determined, buoyant nature of Amy had impressed him more strongly than a more gentle and unshrinking character could have done. While she looked upon him as scarcely more than a playmate, and certainly would have laughed heartily (though that proves nothing,) had you told her she “cared for” Lory:—with him his love was his life.

He dreamed of it on moonlight nights, when the tall pines were bathed in silver, and the far-off river glittered like a sunlit scimitar;—he told it to the air in the deep pine forests, on sun-flooded hill tops, and in glooming valleys. It was a fairy vision of hope and happiness to him when lying in the shade he dreamed away the long, slow, golden afternoons. It never left him in the wildest deer chase, and the remembrance of Amy, of the very shadow of the curl upon her cheek would make his bounding blood bound faster still. All the energies of his strange, wild nature betrayed themselves in his passionate love: in Amy's presence he forgot the world, convention, everything around him; and saw but her in the wide universe. A word from her would send him further, make him undergo more hardships than you would dream of: his whole being was subservient to the young girl's, and there seemed to radiate from her form—her presence,—a strange, magnetic influence, which took his

reason prisoner. It was more than love; it was infatuation.

Yet Lory had never told this love in words—scarcely in looks and sighs. This tenderness for the young girl, and his assiduous efforts to comply with all, even her slightest, wishes, were looked upon by all, perhaps by Amy too, as springing purely from their long intimacy, as brother and sister:—no one as yet had said that Lory, the Indian boy, loved Amy, the daughter of the wealthy Colonel Ralph, his protector.

“Perhaps by Amy too.” Here there is nothing with certainty to be predicated. Whether or not the young girl looked on her Indian playmate, as any thing more than brother and friend, must ever remain a mystery; though after events would seem to indicate that Lory occupied at least a different position in her life. Amy, perhaps, could not have told you herself; how much more difficult, then, or rather how impossible to speak with certainty on the point.

Lory bent his eyes tenderly on the little white hand laid upon the pony's mane;—then in his deep, sad, Indian tones, said,

“Here is a doe for Amy.”

“Poor thing! what did you kill it for? it looks so pitiful.”

The Indian smiled gravely.

“It was written on bark,” he said, “from the beginning of the world. Lory was to kill the doe this morning, always.”

“The devil, Lory!” cried Jack; “your doctrine is damnable heresy—heresy, heresy, my dear fellow: not orthodox. This is the predestination idea, eh, governor?”

“You had better be studying the record in Gay and Blondil, instead of disputing on religious dogmas,” said the old gentleman puffing at his pipe for a few moments before riding over his estate, “Let Lory's religious opinions alone.”

“Hear him, said Jack; “just hear him. He tells me to go studying Gay and Blondil this fine May morning, and it not coming on till next October. Really the fathers of the present day are unreasonable to that extent, that—halloo, Lory! take care of that devil!”

This exclamation was drawn from the young man by a very simple circumstance. Amy had placed one of her delicate slippers on the foot of the Indian, and with no other assistance but his hand, vaulted up behind him. Then laughing gleefully, she made Lory spur his pony to a gallop, and they both disappeared on the fantastic little animal in the fresh-leaved and dewy forest. What a sight was it! The doe stretched across the saddle, the long oak bough over the Indian's shoulder full of opossums and squirrels, Lory with his grave face and dreamy eyes, Amy with her long yellow curls rippling round her face

like a golden cloud blown upon by the wind, and last, not least, the diabolical little animal, rearing and tossing his head from side to side at every fresh burst of laughter—nothing could be imagined more singular.

In the winding wood-road, they very nearly ran over a gentleman and lady, who were leisurely approaching on horseback the mansion of Pine Fork.

"Goodness!" cried the lady, reigning up.

"It's me—Amy," cried the young girl, laughing; "howd'ye May! Turn back, Lory."

IV.

MR. HUSKAT, INDIAN POST-MASTER.

Mary Jones (it was no less a personage than herself) was accompanied, as we have said, by a gentleman who was generally known, simply as "Ned." A family tradition only alleged that his name was Edward Jones. This gentleman was her brother, and an ardent lover and practitioner of the law.

Miss Mary was a young lady of undeniable "style": her cheeks were red, her lips carnation, her teeth dazzling, and her hair and eyes like the raven's wing. Her seat in the saddle was easy and graceful, and her appearance altogether decidedly attractive. With these few words, we dismiss this meritorious young lady who is not destined to play an important part in our narrative—though she certainly did in the annals of the Purnell family; since she became in after-times, Mistress Mary Purnell, or if the reader prefers it, Mistress Jack Purnell.

The visitors were received with much cordiality by Colonel Ralph, who then betook himself to the affairs of his estate; and by Jack Purnell, who was much pleased to find that he could enjoy Miss Mary's society, without the trouble of a five mile's ride. There was soon much gossiping of neighborhood matters; discussions of marriages, and deaths and absences; then some little political conversation:—much speculation, whether his Excellency was really about to enforce the law on the subject of the "followers of Bacon"; much bantering of Jack Purnell for losing a case of great interest at the last court; and many remarks from the young ladies on the last fashions.

It happened that at the very moment that Miss Mary was laughing at Jack for his ill success in the abovementioned suit, her brother Ned was giving Amy a long and minute account of a case involving the decision of a new and important principle, which he had recently gained.

Carried away by the interest he felt in the "point," Mr. Ned Jones was branching out into a little speech, to the great annoyance of Jack, who "hem'd," and endeavored to change the subject. But the enthusiastic lawyer continued: Amy, laughing in her sleeve, and encouraging her visitor with signs of fresh interest whenever he paused. At last, it became intolerable, and seeing from Amy's laughing face, that she was taking her revenge:

"I say Ned," said the young man, "stop that prosy law-talking, and tell Mistress Amy something about the last frill, or the new arrangement of the hair upon the forehead. She can't appreciate your scientific distinctions between contingent remainders and executory devises, though the difference is simply that between tweedle-dum and tweedle-dee. Come Miss Mary: it is a charming morning, and I know nothing that promises more pleasure than a stroll in the woods. Let us go over to Hawk Hollow, to the spring. The morning is cool, and will be for two hours yet."

"Agreed." And Lory being called from his room, where he had gone to wash the blood of the deer from his hands; Miss Mary having retired and relieved herself of her long skirt; and Jack having stuck upon his head something in the shape of a dilapidated castor, they sallied forth, and bent their steps toward the Hollow in question, where a stream, pouring between abrupt hills belted with chestnuts, cedars and stately pines, went brawling through the sunshine and shadow, over huge old mossy rocks.

Jack was in close conversation with Miss Mary, and Amy was scattering her jests and laughter for the amusement of Mr. Ned Jones and Lory. In the midst of one of her most amusing stories of some one in the neighborhood and their affairs, Mr. Ned Jones was waylaid by a certain farmer Williams, who wished him to bring suit in an interesting affair of trespass *vi et armis*, which had just taken place: and he was captured and carried away, to Amy's huge mortification. She duly resolved, then and there, never to marry a lawyer: which may or may not be a good rule, as times go. Lory and Amy locking arms, walked on slowly, therefore, and talked pleasantly.

Slowly, for the day was bright and beautiful as ever was day yet born of flowery mid-May. The air, how fresh and pure! the leaves, how tenderly green! the deep blue sky, how heart-enthraling with its swimming, snowy clouds, piled up magnificently! Lory was very happy that fair day, with Amy's little hand locked tightly in his own, and her blue eyes turned to his face at every word. He could have wished no other heaven then, but to have lived on ever

there, walking in the Spring woodland with his beloved, for all time. The happiness in his heart gave Lory's face too, a new attraction. Always handsome, and striking, his countenance now glowed with unaccustomed beauty: his lips wore a sweet, tender smile, and his soft, black eye, seemed brighter, and yet more dreamy than ever, with his happiness. Only his dreams were usually, when "envious night" had torn Amy from him, of an idealized love, of whom the young girl was part, not the whole:—now he dreamed (if the word may be used) of her alone; for she was at his side—there, close beside him, with her hand in his! and he had but to turn his eyes to see her!

Lory was awakened so to speak from his dream by the words "White Hawk!" which seemed to issue in a mysterious manner from a copse near by. This voice, which soon added to itself a presence in the shape of a quick-eyed Indian boy, respectfully informed Lory, that Mr. Muskrat, the Indian trapper, occupying, as all knew, the hut against the large stream-washed rock below them, craved there his presence for a moment. Lory was about to dismiss him with a gesture of refusal, very short and decided, when Amy interfered, and said she wished to go. Whereupon, the Indian nodded, and the boy disappeared like a shadow.

Mr. Muskrat was an old, wrinkled Indian, of seventy or eighty, who had been living in his present mansion, some score of years, and ostensibly supported himself by hunting and trapping. He was, moreover said, over and above these avocations, to practice a certain trade, which has since passed from such honest hands, into those of those of the government. In a word, his hut was the depository wherein had lain at different times, thousands of birch-bark, willow-skin or parchment letters—secret, treasonable and the like. Mr. Muskrat apprised his customers that a letter was in the post, by a certain little "Swallow-wing," lithe of limb and swift of foot. In Bacon's rebellion, it was said that the old gentleman had driven an unprecedented business, standing as he did on the White and Indian boundary—that he had embraced the occasion to raise his prices four hundred per cent—and by dint of address and maneuvering, had completely ruined a Mr. Smythe, who had established a private post, in Crauktown, a thriving village, now, alas, no more. Old, avaricious and malignant, (to the whites at least,) Muskrat lived here alone in his little cottage, hung round with fishing nets, spears, and wicker traps, not to mention the host of tawny skins—alone but for the little Swallow-wing; and if there had been ever any suspicion attached to him as an Indian fighter, and secret-agent in past years, this was dying

away and decreasing with his increasing age, and apparently feeble existence. Such was Mr. Muskrat, trapper and post-master.

He received Lory with the most extraordinary respect, far more than he vouchsafed to Amy; peremptorily refused the money offered; and sitting down in a corner, on a large pile of skins of deer, raccoons, and other forest game, seemed rapt in thought, while his keen eyes not for a moment left the young man's face.

Lory read over the discolored sheepskin on which were traced some outlandish scratches, and then laying his hand on his lips.—a gesture which Mr. Muskrat improved by stealthily touching his breast and murmuring "ough"—apologized to Amy, and left Mr. Muskrat's dwelling.

"Amy seemed surprised," he said, gently, "at this old man's manner to Lory."

"Certainly I was, I should say that you were a king and he your subject."

Lory raised his head proudly with a movement plainly unconscious.

"He knew me as a child,—my father did much for him, and they loved each other."

"Your father?"

"Red Hawk: a Tuscarora. Amy has never seen him. He was killed twenty long years ago, they tell."

"So Muskrat loves you, Lory?"

"He obeys me," said Lory, proudly: but checking himself, "Lory is able, by his father's kindness," he said, referring to Colonel Ralph, "to manage business, which could not otherwise—but this cannot be aught to Amy. Lory wishes love from no one but—"

"But whom?" said Amy, laughing.

"From—from—Amy—" murmured the young man, so low, that it was a mere whisper. Amy felt the words in her very heart, which bounded like a swollen stream.

"Well, Amy loves Lory," she said, with a merry, though plainly, a forced laugh, "and now he shall take his sister safely across the bridge!"

Amy emphasized *sister*, with a strong effort at ease and unconcern, which was the purest failure.

Lory raised his large, tender eyes, and smiled: there was much happiness in that smile!

Above them, on the summit of the hill, the figures of Miss Mary and her cavalier were seen clearly against the sky, and a walk of ten minutes, after crossing a "bridge" of two logs thrown over a little waterfall, would bring them to the top. By "take her over the bridge," Amy meant, it seems, something more than simply "accompany": for she threw one arm, without hesitation, over Lory's shoulder, and did not repulse the arm of the young man, which, in turn,

gently supported her. And Lory was uncommonly long in getting ready, trying the footing, and finally crossing; though that very morning, he had cleared the bridge in three bounds, and in the space of a second.

Once on the other side, Amy exclaimed:

"What a beautiful spot! Really, now, I have never known before, the whole beauty of the 'Hollow.'"

Lory had no eyes for the landscape. It was the merest mist: the sun shone only on Amy, on her fair hair, brilliant eyes, and laughing cheeks suffused with blood.

"It is very fair—as the woods are always," replied the Indian in his grave, gentle voice, though it still slightly trembled, "but the woods are but the frame."

"Oh, there's Mary and Jack," cried Amy, interrupting him rather abruptly, "we have seen all here: come, let us join them."

Amy was mistaken. They had not seen the tall, gaunt figure of the old Indian, who, standing in the thick copse, followed them with his eyes, saw them cross the bridge so lovingly, and made out, spite of his old eyes, their every smile and gesture. He shook his head and looked up to the sky.

"It is blue now," he muttered, "but the clouds come next—next the storm and the lightning. Muskrat is old, and wants nothing: let the Great Spirit take the child in his hand, and hold him up—ough!"

—

V.

WHAT HAPPENED TO MR. JACK PURNELL ON HIS WAY TO JAMESTOWN.

It will be remembered, that Jack Purnell mentioned his desire and purpose of visiting Jamestown on the morning of the day we have introduced to the reader the Pine Forkians. It was impossible, however, and it was ten o'clock on the next day, when the young man set out for that abode of metropolitan splendor and luxury, "James City," otherwise Jamestown, which we are assured, contained no less than fifty houses and two hotels.

He arrived late in the evening at a tavern some eight miles from the river, in which tavern, the county court of Surry was accustomed to hold its sessions; and found that his companions for the evening (provided he did not at once retire to bed) would necessarily be a number of uproarious teamsters who, having stowed away their tobacco-laden wagons under an immense shed, constructed for the purpose, were making merry on the strength of the money they would next day receive in exchange for it, at Jamestown.

They had calculated the amount to a shilling, and consequently knew precisely how far their present extravagance ought to go. They thought they knew exactly the sum they were to receive—but they had unfortunately reckoned without his Excellency, as will be seen.

They received the young man with much sullenness, for at that time, no lines were drawn more clearly, than between the small farmer, and the wealthy landed-proprietor, who, like Colonel Ralph, drove his coach and four, dined on days of ceremony off silver plate, and drank rich wines bought at enormous prices, "over seas." Many of these men had visited Pine Fork, and though they could not allege that they had been insulted by the Colonel's servants, or made to feel their position, by any one of the family; yet, they had, on their return, told how the old gentleman had only raised his eyes from the richly bound book he was reading in his library, and asked them to sit down, without getting up himself: and how the identical, now present, Mr. Jack Purnell, had seen them enter the hall, with great nonchalance, and had scarcely taken the trouble to turn his eyes on them. They did not charge that young gentleman with absolute, direct discourtesy, for he was easy in his manners, and "not proud," but he "ought to get up when people come in; whether his father, so much older, did or not," etc., etc., etc.

Jack put up his horse, entered the main room, and called for some supper; after that, for some Jamaica, and finally for a pipe. Then standing before the large fire-place, wherein a few blazing pine sticks were dispelling the slight coolness of the fresh May evening, he betook himself to his reflections with the air of a man who thinks it reasonable that one should take his ease in his inn.

It was not long, before he was aware that the company had made him the subject of conversation, for more than once, he heard the words "old Colonel," and "his son": and saw more than one pair of eyes bent on him. Finally, one of the company said:

"I'm cold: let us have a little more fire if you please, Mr. Purnell."

"Certainly, sir," replied the young man, moving.

"Move further," continued a second, evidently somewhat affected by the numerous potations of Jamaica he had swallowed, "I'm cold too."

"I am not before you," said the young man, frowning, "do you mean to insult me, sir?"

The man who had spoken, rose, threw off his coat, and came up with his doubled fist to his adversary. Mr. Jack Purnell replied to this demonstration, by drawing from his overcoat pocket a pistol, which he cocked. The effect of this

was perfectly miraculous on the irate farmer. He retreated backwards, endeavoring to get out of range of the muzzle, picked up his coat in haste, and vanished through the door.

His retreat was hailed with a burst of laughter, and shouts of derision by his own associates; and the victor was looked upon with admiration.

"Now, gentlemen," said the young man, "I have but a word to say. You have done an unworthy thing, to insult me here this evening, when you have received no provocation at my hands. I have heard you utter my father's name, and couple with it the words 'proud,' and 'high folks.'" Well, I ask you now, if a man who has taken a little Indian child into his house and educated him, and placed him side by side with his own children, is proud? I ask you if that man is the sort of person you mean by 'high folks,' when he has eternally opposed the governors and the Assembly, who are his tools, and lately marched with Bacon, who fought for you equally with himself, and for that, will yet pay his fine? I ask you, last, if my father, Mr. Ralph Purnell, would ever have insulted a solitary man here, without friends?"

And seeing that the company remained silent and astonished at this frank and hard-hitting address:

"Take till to-morrow to think of it, gentlemen," he added, "and if you think you have acted wrongfully, don't do so next time."

And Mr. Jack Purnell, astonished to find himself grave and dignified, took up a lighted candle, and went to bed, followed by many murmurs. They were to meet again, as will be seen.

VI.

HOW LORD CULPEPER PROCLAIMED THAT THE
"PIECE OF EIGHT" SHOULD BE WORTH
SIX INSTEAD OF FIVE SHILLINGS,
AND HOW IT WORKED.

The young man arrived at Jamestown without further accident. Paul Hansford was found without difficulty, and the greeting between the two young men was very cordial. Paul was formerly a great deal at Pine Fork, where he was a great favorite with his uncle Ralph. But it was not quite as certain that he would continue such now, when, instead of a light-hearted boy, he returned a man of "finished manners" and ostentatious courtesies to all, with a little dash, or rather at times a most unmistakable mixture of what, in our day, we term "exquisitism."

Jack Purnell delivered his invitation to Pine

Fork, and that invitation was accepted by Paul Hansford with much empressement. "He would be delighted to see his dear friends at the Fork:" he said "he would there live over again some of the days of his boyhood: he expected that Cousin Amy would scarcely recognize him, (smoothing gently his light mustache,) and Uncle Ralph think him a bore because he could no longer break a colt with such perfect ease as formerly. He would go—he would go that very day—as he must hurry off to "Woodville," his own proper estate, which they told him, wanted the master's eye badly. He had seen much brilliant life in London, many great people, and many celebrated places in his travels—but what, after all, was glitter and show and parade, to one's own native country, with all its sweet recollections of childhood and early youth": and he wound up with a maxim in Spanish, to the effect that perhaps the past time was the best.

"Decidedly," thought his cousin, "Paul has improved—vastly improved: when he left us, he was the wildest scape's grace that ever tormented his thin-skinned relations: oh, he was awful bad! worse than me a thousand times, and I'm not a saint! Now he has lost it all. "Paul" has become "Mr. Paul Hansford"—success to him!—Mr. Paul, with a winning voice, a soft, gentle smile, a clear, white complexion, and beautiful mustache, which he evidently takes all manner of pains and trouble to keep nice and soft. Jack, my dear boy," continued the heir of the Purnells to himself, "it behooves you to have an eye on Mary Jones, your own particular sweetheart; for how can she meet this modern silken love-paladin, and not discard you at once. Oh, Jack! Jack! You should challenge the paladin at once, this Captain Paulus Æmilius, and so put an end to him: else you are but a booby, and perform on that most disagreeable of instruments, the second fiddle!"

We are bound to say, that there was just as much affectation in this mental speech of Mr. Jack Purnell's, as in the uttered one of his friend and cousin. If any one trait predominated in the first-mentioned gentleman's character, over every other one whatsoever, it was a sublimated and magnificent vanity: a vanity so enormous, that the simple idea that there was any danger of Miss Mary Jones falling in love with Paul, caused the originator of that ironical idea, the most extreme amusement. It was singular, but true.

Paul Hansford had his horses and his travelling conveniences all ready, and he informed his cousin, that they would, if he pleased, set out for Pine Fork that very evening, provided two hours were allowed him to dress himself and pay his respects to his Excellency, the Governor.

To this Jack very readily consented, and immediately after dinner, they sallied forth toward the Government house, to see that remarkably handsome, courteous, smooth, plausible, and gracefully-attentive gentleman, Thomas Lord Culpeper.

When the young men were shown into his receiving room, he was conversing with several rough-looking men, for the most part with whips under their arms, whom Jack Purnell immediately recognized as his associates on the preceding evening at the "Surry tavern."

"Real sweet-leaf you say, gentlemen?" continued the Governor, reclining in his arm-chair well lined with velvet.

The farmers, or rather wagoners, declared with many protestations, that its equal was not to be found.

"And it is now in the Public Warehouse? Ah! Mr. Hansford, your servant; Mr—"

"Mr. John Purnell, my cousin, your Excellency."

"Mr. Purnell, your visit affords me much pleasure, I assure you"—and as if by accident, the Governor's eye fell on a paper containing that identical name, which he had just written. He slid it under another blank sheet with a smile.

"A moment, gentlemen," continued his lordship, "business before pleasure, you know, and I have this little affair to finish with." Then turning to the wagoners—

"Stowed away is it?—well, how much?"

"Eighty hundred weight, your Excellency."

"Precisely eighty?"

"Yes, my Lord."

"Which amounts, my friend, I believe, to—but your certificate from the Warehouse keeper?"

"Here it is, sir."

"Very good—and I owe you—let us see: eighty hundred weight—"

"Two hundred and seventy pieces of eight, your Excellency."

"Two hundred and seventy?"

"Yes, my Lord: is it wrong?"

"Why, certainly!"

"Not as much as that, at five shilling the piece?"

"Yes, at five shillings: but are you ignorant of the proclamation?"

"The proclamation!" they exclaimed.

"See what good advice I brought your Excellency from your noble Uncle," said Paul Hansford, in a lamb-like tone. The Governor looked a little displeased, and bowing superciliously:

"A moment, if you please sir," he said.

Then he continued turning to the wagoners and speaking with much blandness:

"I owe you, my friends, not two hundred and seventy pieces of eight, but two hundred and twenty. That coin is, by proclamation, raised to the value of six shillings. Is it possible you have overlooked it in the "Gazette?"

And Lord Culpeper actually beamed with suavity and benignity.

"What—your Excellency—says—"

"Only a small difference," said he.

"A difference of fifty pieces of eight is not small to a poor man, sir."

"For your sakes, my friends, I regret it, but laws are equal, and affect myself as well as you."

"But, your Excellency, don't you see—"

"Do I see—what now?"

"That if a man has put away, much of this money when it was worth only five shillings—"

The Governor shrugged his shoulders.

"It will now turn out a fortune when the piece is worth six," continued the speaker.

"My friend," said the Governor, calmly, "I do not ask you to sell me your tobacco—if you are dissatisfied, go home with it again."

"Go back?" And the tobacco-raisers saw, on all hands, loss, trouble, vexation.

"Shall we finish the matter? Come, speak, my business is somewhat urgent."

"Your Lordship—couldn't you—"

"A single word, my friend: The proclamation is published; the piece is worth six shillings. Don't debate the matter."

"Well, your Excellency. But unlucky was the day we set out for Jamestown," they grumbled.

And receiving the two hundred and twenty pieces of eight paid them by the Governor's secretary, they left the room, casting moody and sulky glances at the Governor, Mr. Paul Hansford, and Jack Purnell. An unlucky word from Paul had betrayed his agency in the matter of the proclamation.

Lord Culpeper smiled.

"It is singular what hard heads these Virginians have in matters of business—excuse me Mr. Purnell, but I am a sufferer by the quality in question, directly. Here have I spent half an hour in a debate about a miserable sum of fifty pieces of eight. Why, the time, alone, is worth double as much to me."

And his Excellency blandly smiling, turned the conversation. He was a most agreeable and winning gentleman, was his Lordship, Thomas Lord Culpeper, by the grace of the King of England, Governor of his Majesty's Colony of Virginia: and Jack was half disposed to imagine that his father's prejudices had misled him.

In half an hour they left the "palace," mount-

ed their horses, and leaving the pleasant streets of Jamestown, crossed the river, and bent their way toward Pine Fork.

VII .

THE ATTACK ON THE SURRY TAVERN.

Riding leisurely along, and observing how the country became, at every step, more wild and uninhabited, the young men came just at night-fall to the same tavern at which Jack Purnell had stopped on the day he had left Pine Fork; and as fate would have it, not long after their arrival the tobacco-raisers and their vehicles made their appearance from the direction of Jamestown. They soon commenced making merry, though still much cast down by their disappointment, and for some time, did not observe the two young men who were seated on the back porch smoking. When they entered, they were scrutinized with an attention very different from the listless curiosity shown on the entrance of strangers. They finally made signs to each other, nodded, frowned and shook their heads in a manner which might have proved to Mr. Paul Hansford, that they had not forgotten his agency in the proclamation, and to Jack Purnell, that his lecture had not escaped their recollection.

The young men either did not notice these hostile manifestations or were indifferent to them. They supped quietly, smoked once more in the open air, and soon, marshalled by the landlady, retired to rest in the same chamber.

Jack immediately fell asleep; Paul, however, amused himself for half an hour, by thrumming on a small guitar, which he had brought in his hand, while entrusting the remainder of his "things" to his servant, who had directions to follow him to Pine Fork next day. But soon this amusement palled, and taking off his elegant riding boots, and his still more elegant English riding suit, Mr. Paul Hansford yielded himself to slumber.

Jack Purnell had slept for three or four hours, and it was near midnight when he was aroused by the clattering of footsteps on the passage running by his door. He started up, rubbed his eyes, and the next moment a stealthy knock at the door attracted his attention. He rose quickly and opening it, saw a little negro boy who, shading a pine torch with his hand, said in a low voice:

"Massa Purnell, Mas Jack."

"Who the devil are you?" said the young man, only half awake.

"Me, little Pluto," said the boy.

"You look like him," quoth Jack.

"Boss better git up," said Pluto, disregarding, possibly misunderstanding this flout at his complexion, "Boss better look out; wagon drivers comin' up here!"

"What! who?"

"Boss, wagon drivers: dah! dey done open big door!"

And without further word, Pluto, whose gratitude for certain small sums given him from time to time by Jack, did not extend to an ambition of martyrdom, flitted away like a shadow.

Jack Purnell saw the shadow of the huge frontiers man moving toward him, and he first clearly comprehended his danger. He called loudly to Paul, and this not waking him, ran and shook him; then returned with a bound to the door, which he closed and secured with its heavy bar just as the giant threw himself against it.

Paul Hansford very reasonably asked an explanation of his friend's thus arousing him; and this explanation Jack was about to give, when he was saved the trouble, by a rush upon the door outside, which made the strong oak bend and crack.

"Those devils are attacking us," said Purnell thrusting a pine torch into the flickering embers and throwing a sudden light upon the room.

"Wh—what!" cried Paul; "but we are attacked, are we cousin Jack! That is enough." And going to the chair where his clothes were deposited, he came back with a huge holster pistol he had extracted from the pocket of his overcoat.

"Open the door!" yelled the assailants.

"Listen to me!" shouted Jack Purnell, at the top of his voice. "I have in my hand two pistols—two more ready. Leave my door, or I will fire!"

The reply to this was a rush on the door by the half-drunken frontiersmen. Paul Hansford advanced, and placing the muzzle of his pistol through a circular hole near the latch, fired.

"It is life or death now," the young men muttered, and were about to fire again, when an enormous uproar, far surpassing that created heretofore, was heard throughout the inn. This cry was "Fire! the Injuns!" and it was uttered by the menials, who flying for shelter to the strongly fortified kitchen, disclosed to the wagoners a disastrous sight!—a band of Indians rapidly pillaging their wagons of their valuables, by the light of the burning outhouses, which threw a bright glare on their fierce copper countenances, and wild costume, if such they wore.

The attack on the door of the chamber was of course abandoned at once, and seizing what weapons they could find lying in corners, or on mantels, the wagoners rushed upon the Indians frantic, at seeing their goods thus borne away

before their eyes. The swarthy plunderers retreated at first—slowly retreated, bearing away the fruits of their robbery: but no sooner had they reached the forest, whither they were followed by their white enemies, than they rallied, were joined by another party almost equal in number to the first, and bursting on the frontiersmen, in ten minutes killed, or made them all prisoners.

The flames had long since caught the main part of the tavern, and the two young men, still in their chamber, and occupied hastily throwing on their clothes, saw a cloud of smoke which rose in one white mass from the floor and threatened to suffocate them. They threw themselves frantically against the door, fumbled at the bar which the strength of their assailants had forced upon the iron staples, and opened the door at last. It was only to fall into the arms of a dusky warrior, the foremost of a hundred others. Their rich dresses suspended over their heads the uplifted weapons, and the two young men were made prisoners before the smoke was out of their eyes.

Having rifled the tavern, and seeing that nothing remained for them to plunder, and nobody to kill, the Indians commenced their retreat, as the whole country was no doubt now upon its march, full of curiosity to find out what caused so brilliant a bonfire in the direction of the "Surry Tavern." After much guttural debate, it was decided that the wagoners, one and all, should be bound together with the landlady, and placed thus helpless in the kitchen, there take their chances for a rescue by their friends, or failing that hope, be burnt to death; and this being decided upon, and carried into execution, the Indians mounted Jack and Paul on horseback, with their hands bound behind them, and set off rapidly into the forest.

Day dawned when they were not more than five miles from Pine Fork, deep in the "Cypress Swamp" tract, where the Indians purposed concealing a portion of their booty. To prevent the young men from discovering the place selected for the purpose, their eyes were bandaged, and then commenced a continuous, though subdued "palaver." This, which was interrupted by many sonorous "Oughs!" by which the Indian expresses all his emotions, whether of discontent or satisfaction, pleasure or pain, was wholly unintelligible to them: at present they seemed to express strong disapprobation. At last, however, they became plainly more approving:—finally, when half an hour or more had passed, and when Jack Purnell had for some time heard a voice which seemed to him familiar, a scattered "good!" was heard. In the end, after a still more earnest, (though to them unintelligi-

ble,) speech from the familiar voice, an unanimous and satisfactory "Ough! ough!" testified the general approbation.

The young men suddenly found their hands unbound, and their eyes unbandaged.

They looked around them on these swarthy faces, and the strange costumes they had assumed, with amazement. A small fire carefully shaded from throwing too much light, lit up these wild forms with singular effect.

Jack Purnell, however, had no eyes for the Indians. He saw standing calmly before him, with grave eyes and lips, no less a personage than Lory.

"You are both free," said Lory.

"How!—we are—you!" stammered Jack, amazed and doubting his eyes.

"These Indians are friends to me," said Lory, calmly; "and they have granted me your lives. Had Lory not been here they would have killed you—for you encumber them.

Such of the Indians as understood any English, here grunted an approbatory "ough," which had a most disagreeable effect upon the young men's nerves.

"And we are free, sir—unconditionally free?" said Paul, with wonder.

"Muskrat!—Muskrat!" muttered the savages, who comprehended the young man rather from his tone and gestures, than his words.

"They mean," said Lory, "that you may leave them a present, if you choose, at Muskrat, the trapper's hut."

"And you alone, Lory, have delivered us," said Paul, puzzled to death.

"I am the son of Red Hawk," said Lory, proudly. "Red Hawk was a great brave:—he is dead, but alive!"

"Ough! ough! ough!" rose in reduplicated murmurs from the Indians, who regarded Lory with much esteem and respect apparently; and after much gesticulation, speeches exchanged with the young chief, and, to tell the truth, many regretful looks at their unbound prisoners, and their waving locks, the wild band set off deeper into the swamp. In ten minutes they had disappeared like a vision, a dream.

"Is it possible we are free, Lory!" cried Jack, looking around him, as though he really doubted his senses.

"Free—yes, wholly free: and this spot is scarcely a league from the Fork. From that knoll through the trees you may see the lights." And after uttering these words, Lory's calm, grave face sank upon his breast.

"You a chief!" cried Jack.

"I am called Lory, the Indian," said he, "but my name is White Hawk."

"These were Tuscaroras?"

"Nearly all of them."

"Tuscaroras, or Delawares, or what," said Paul Hansford, "we are free, which really seems to me, cousin Jack, the most important fact of all: thanks to you, sir, to whom I return my best acknowledgments, we may now continue our way."

"One word," said the Indian, sadly, "Lory thanks him who is Lord of all, and looks down equally on the white man and the Indian, that he has this night been enabled to save his tribe—the Tuscaroras—the commission of another outrage, though to them your murder would seem different, being pale faces. I was here by accident, and shall return with you. Do not speak to any one of this meeting with me. I am not what I seem, though so poor and weak at best. Say that you were taken and set free; but nothing more."

"We promise," said the young men; and then without exchanging a word, they bent their way through the thick brushwood toward Pine Fork, in solemn silence.

Behind walked Lory, musing, it seemed, sadly; but when the moon rose up, his lips moved and he smiled.

(To be Continued.)

The Heart Can Trust No More.

BY REV. SIDNEY DYER.

Hopes once gone are gone forever,
They return not to the heart;
Though we seek them, yet they never
Will again their life impart.

Thus, if Love's first vows are broken,
Every dream of bliss is o'er
Truth once sullied is the token
That the heart can trust no more.

Wealth and beauty swiftly flying,
Outward griefs can all be met;
While on plighted vows relying,
Fortune's frowns bring no regret.

But, if truth has once departed,
Love's fond dreams of bliss are o'er,
Then alas! the broken-hearted
Feels the heart can trust no more.

MODERN ORATORY.

When we consider the influence which has been exerted in every age and country by orators, how armies have been raised and governments subverted through the potent agency of the tongue, the subject selected cannot be deemed trivial. The power by which a speaker breathes into an assembly of men his own individuality, leads them captive, and makes them willing instruments to accomplish his purpose, is a mighty and a fearful one. Eloquence of the tongue is possessed by few, but it is influential with all. The humblest and most illiterate have sensibilities which can be touched, and passions which can be swayed by him who can express breathing thoughts in burning words. The faculty of eloquence is a talent not to be hid, but to be exercised for noble ends. For its proper use the possessor must give an account in the courts above. It springs from the heart, deep, earnest, and spontaneous. Not easily defined, its presence is always felt, sometimes it pleases the fancy, sometimes impresses the reason, but in its grandest Demosthenean exhibitions it seizes imagination and will, holding the hearers spell-bound, as if entranced by a heavenly vision. Goldsmith says: "A man may be called eloquent who transfers the passion or sentiment with which he is moved himself into the breast of another." As a general rule, the man of purest motive, of sincerest conviction, will be greatest orator. The earnestness of a mind fully convinced, spreads to and through an audience with the rapidity of the electric spark. "Si vis me flere, dolendum est primum ipsi tibi." This precept is worth more than many volumes of rhetoric without it. Eloquence to be of the highest order must "apply and command the dictates of reason to the imagination, for the better moving of the appetite and will." It is best judged of by its effects. He who accomplishes his object by speech, who carries his point, whether at the bar, in the senate, or on the stump, must be considered, in some degree, an orator. Nature and art combine to form the eloquent man, the former the granite basis, the latter the elegant superstructure. Oratory, where properly used, is one of the most beneficent of agents, accomplishing reforms, building up truth, pulling down error. It may be used, and too often is, by unprincipled men, to mislead and betray the people. The great epic poet of modern times, John Milton, ascribes the faculty of eloquence to Belial:

"He seemed
For dignity composed, and high exploit;
But all was false and hollow; though his tongue
Dropt manna, and could make the worse appear

The better reason, to perplex and dash
 Maturest counsels: for his thoughts were low :
 To vice industrious, but to nobler deeds
 Timorous and slothful."

There are many Belials in real life of whom we should beware. Like Satan touched by Ithuriel's spear, they stand revealed when tried by the rules of sound morality. The well-wishers of their country and their race, are bound to use all honorable means to prevent the spread of evil counsels. The cultivation of eloquence should not be neglected by the good, it will not be by the wise. Whether the ancients or moderns have excelled in oratory, is a question which has been much and ably discussed. The ancients bestowed more attention on oratory as an art, were more critical in their choice of language, and addressed themselves more to the imagination and passions of their hearers. The moderns address themselves more to the reason, introduce a greater number of facts into their speeches, and are less violent and elaborate in their gesticulation. The committing to memory and of delivering carefully written compositions was quite usual in ancient times. A recent writer in *Blackwood's Magazine*, recommends its adoption by modern speakers. The modern orator collects the facts for his speech, usually leaving diction and gestures to spring from the excitement of the moment. The moderns pay more regard to the substance, the ancients paid more to the form and delivery of an oration. A speech to be appropriate and effective, should neither be entirely *ex tempore*, nor altogether prepared. That which springs from new and unexpected circumstances, should be so artfully joined to what is the result of careful preparation as to defy detection and appear one harmonious whole. This faculty was possessed by Fox in an uncommon degree. The ancients have produced the greater models of oratory, but the moderns the greater number. Liberty and popular institutions are necessary to the development of the noblest form of oratory. Wherever eloquence has a theatre meet for it, there it is stimulated into being and growth. This heaven-born plant sickens and dies under the shade of despotism. Among the causes which tended to the full development of oratory in ancient Greece and Rome, may be mentioned these: the judges especially in Athens, were numerous, little governed by precedent and much by appeals to their feelings; in Greece, while she was a democracy, the period of her greatest excellence in oratory, all honors were in the gift of the people, a people so intelligent and of so exquisite a taste, that a high degree of oratorical preparation was a thing of absolute necessity; in Rome, the highest honors of the state, consul-

ships, tribuneships, positions in the army as well as in the Senate, awaited those who could please the popular ear. Age seems not to dim the great names of Demosthenes and Cicero, familiar to us as household words. Their respective countries produced many other great orators, but they all fade in comparison with them as stars before the risen sun. Demosthenes is, perhaps, the noblest model of oratory. He combined in his efforts, in admirable proportion, appeals to the reason and the feelings; his passion and enthusiasm were based on the granite foundation of rigid argumentation. Cicero paid more attention to the graces of speech, was more artistic, copious and orate. Demosthenes had more rugged strength, more of that vehemence which bears away all obstacles. When speaking, Cicero thought more of himself, Demosthenes more of his subject. Both were models of industry; both, life-long, strove for the highest excellence in their difficult art, adding to transcendent natural genius, the greatest culture. Noble exemplars! never to be forgotten or disregarded now or in coming time. The best and truest eloquence is that which twines all ornament, all appeal, to the passions and sensibilities, around the massive pillar of clear and solid reasoning. He, he is the great orator who binds the reason first, for then his hold is firm, strong and enduring. There are many obstacles in the way of the modern orator. He addresses masses less under the influence of their feelings, less poetical, every way more practical and scientific. The 'supplicatio pedis' and the 'percussio frontis et femoris' which were frequently used, even at the bar in the time of Cicero, would now be deemed by most audiences extravagant, if not absolutely ridiculous. The modern system of sending pledged representatives to deliberative assemblies whose votes can be predicted with almost mathematical accuracy, is a great damper to eloquence, because one of its most powerful stimulants is removed—the hope and expectation of influencing votes. The wide-spread and powerful influence of the press has made the mere delivery of orations a matter of not near so much importance as it was anciently. Knowing this, the modern orator is too apt to slight the delivery of his subject-matter, being more solicitous to please his million readers than his few hundred or few thousand hearers. Opposition and revolution are incentives to eloquence, but the former must not be overpowering, nor the latter merely a military one. In the early part of the French Revolution of 1789, when the public mind was stimulated to a high degree of activity, orators bold and impassioned were produced, but when the people became cruel and licentious, and government a military despotism, there was no soil

whereon eloquence could grow and flourish. Oratory prepares a nation for a crisis, but it becomes dumb amidst the din of arms and the excesses of a corrupted people. Corruption of national manners leads to a decline of all the nobler arts of life, among which eloquence is one of the chief. In modern times, the nations which have made most progress in oratory are Great Britain, France, and the United States of America, which is due in no inconsiderable degree to their free forms of government. Hume in his *Essays*, speaks very slightly of the parliamentary eloquence of England, but this was in 1742, long before the palmy age of her oratory. She had had a Somers and a Bolingbroke, and other great orators, but they were to be followed by those, "the latchets of whose shoes they were not worthy to unloose." The most illustrious period of British oratory began with the rise of Chatham, and ended with the careers of Burke, Pitt, Fox and Sheridan. In the memorable trial of Warren Hastings, were displayed the gigantic powers of the greatest orators then living—orators who would favorably compare with those of any country at any period. Chatham was gathered to his fathers before the commencement of the Hastings trial; but had he lived, we cannot doubt he would have been first and foremost in denouncing the oppressor of India. Never did so terrible a storm of invective fall upon the devoted head of any man as upon Hastings', around him blazed the corruscations of the sons of genius. We should ever hold the name and fame of Chatham in dearest remembrance, for he was the firmest and most dauntless champion of colonial rights. His voice was not without influence in breathing hope and courage into an oppressed people beyond the sea. They heard a noble Lord in the House of Peers saying: "If I were an American, as I am an Englishman, while a foreign troop was landed in my country, I never would lay down my arms, never, never, never!" Chatham was not unlike Mirabeau in the impetuosity and severity of his denunciation. A greater orator than his son, he had not his administrative talents, his tact, and prudence. But if a great and corrupt enemy of his country was to be struck to the earth, and that by one blow from which he never should recover, he was the man for the act. His eloquence, never very systematic or argumentative, had yet great discreetness and force; it was like a thunderbolt, "scattering that it may reach, and shattering what it reaches." Like his character, his oratory was dignified and lofty; scorning the trite topics of the little men, it ascended "the highest heaven of invention." His denunciation of the employment of savages against the revolted colonists, was one of the finest of his efforts.

Could any figure have been more appropriate, any language more eloquent than this: "From the tapestry that adorns these walls, the noble ancestor of this noble lord, frowns with indignation at the disgrace of his country." High honors have been won by the British statesmen, in parliamentary eloquence, during the present century, but they all yield the palm to the great orators of the last. Britain has produced no orators equal to Chatham, Pitt, Fox and Burke, the brilliant stars of the eighteenth century. Burke and Fox had many points of likeness with many marked differences. Both were great men and great orators in the same high sphere of action for many years. In the earlier period of their career, they agreed substantially in politics. The impetuous Fox was proud to look up to the philosophic Burke as his Mentor. They fought together against a corrupt ministry; they battled manfully for oppressed America, at a time when her friends were few and feeble; they eloquently espoused the cause of humanity in India. On the French Question, the friendship of years was sundered and that forever. Both Burke and Fox possessed eloquence in the highest degree and best sense; both were strong thinkers and deep feelers. Fox, it is true, had his faults, but they were not ignoble in their character; he detested cruelty, scorned meanness, and hated oppression in every form and wherever found. He was the greatest debater of his time, and fully deserved his *soubriquet* of "the Great Commoner." In some important respects, he excelled both Burke and Pitt. He was more direct, more earnest, and applied himself more readily to the discussion of new and unexpected topics. His speeches sound less like set speeches, the products of the closet and the lamp; but in clearness and force, they were not and have not been excelled. Not so rhetorical as Burke's, they were better calculated to move popular assemblies. Pitt was an orator of the first class. His power of reasoning were comprehensive; his language classic, copious, and harmonious; his manner full of dignity and grace. More Ciceronian in his style and more majestic in his mien than his great rival Fox, he was surpassed by him in that sincerity of manner, and that forgetfulness of self, so necessary to produce conviction. Burke, in his oratory, was dignified and imposing, his grasp of a question was comprehensive, and his deductions those of a philosopher. In varied knowledge, in richness of imagination, in beauty of style, and in moral power, he was unequalled. Burke, though more philosophic, more comprehensive, and possessing greater powers of generalization, yielded to Fox in the arts of debate. The speeches of the former read like essays; the essays of the latter read like speeches. The one

was the greater writer, the other the greater orator. The eloquence of Sheridan was sparkling, witty, and ornate; but his wit was sometimes too highly polished, and his oratory sometimes theatrical. His power of denunciation, brilliancy of fancy, and courage in debate, did his party good service through many long and stormy conflicts. Though far inferior to Burke, Fox and Pitt, with whom he usually acted, in the higher qualifications of an orator, he had great tact and quickness in the display of whatever information he possessed. His speech, on the Begum Charge, indeed, by its effects, was one of the greatest oratorical efforts ever made. Wm. Wilberforce must not be forgotten when oratory is the theme. His eloquence was characterized by deep feeling and the purest taste. It was eminently persuasive, but seldom rose into the impassioned. In the celebrated debates upon the Abolition of the Slave Trade, he was the master spirit. Among the great orators whom England has produced in the present century, Canning, Brougham, Mackintosh, Erskine, Windham, Grey, Huskisson, D'Israeli, Derby, Peel, Russell and Macaulay, stand preëminent. I cannot, without being too prolix, indulge even in a sketch of the few mentioned. Brougham and Canning present many points of antithesis. They both had marked characteristics, and were often in mental collision. Unlike in personal appearance, their style of oratory was essentially different. Brougham paid little attention to the melody of language or the graces of the school, trusting to impress by his stores of knowledge. He is a great master of sarcasm and invective, and his power and directness of argument surpasses Canning. The latter was more classic, more witty, more ornate. Not so practical or so comprehensive as his favorite statesman Pitt, he was not unlike Sheridan in the splendor of his diction and the elegance of his manner. In the words of another, "The style of Canning is like the convex mirror, which scatters every ray of light that falls upon it, and sparkles in whatever position it is viewed; that of Brougham is like the concave speculum, scattering no indiscriminate radiance, but having its light concentrated into one intense and tremendous focus." Sir Robert Peel was the most adroit and effective parliamentary speaker of his time; but his feelings were not warm, and he seldom addressed himself to the imagination or fancy. He had too much craftiness, too much policy apparent in every action, to stir to its depths the popular mind. Nor must the eloquent sons of gifted and unfortunate Ireland be forgotten. Her Curran, her Grattan, her Plunket and her Flood, will live while there remains upon earth any appreciation of eloquence in its noblest form. The characteristics of Irish elo-

quence are exuberance, enthusiasm, and a fervor sometimes running into extravagance. The difference between Irish and Scotch eloquence is well expressed by Hazlitt: "The first of these is entirely the offspring of *impulse*, the last of *mechanism*. The one is as full of fancy as it is bare of facts: the other excludes all fancy and is weighed down with facts." Plunket's speech against the Legislative Union of Great Britain and Ireland, and Curran's Defence of Rowan, are worthy of special notice. The description in the latter of universal emancipation, is not surpassed in eloquence by any passage, in any oration I have ever read. Robert Emmet's dying speech is full of the deepest eloquence, and shows how great an orator was lost, in the bloom of youth, to Ireland and to the world. The oratory of Curran was chiefly displayed at the bar; it was impassioned, brilliant with wit, and bright with fancy. Grattan's finest efforts were made in the Irish Parliament. His manner and appearance were somewhat peculiar, but the strength of his thoughts and the grandeur of his language always hushed into silence whatever assembly he addressed. He was more concise and graphic than Curran; less poetic, less humorous, less versatile in his talent. In strong denunciation, in bitter sarcasm, Grattan was unrivalled. On French oratory I must be brief to an unsatisfactory degree. The English have excelled the French in parliamentary oratory, but have produced fewer eloquent divines. The age of Louis XIV. was distinguished by the great pulpit orators, Bossuet, Massillon, Bourdaloue, and Saurin. Bossuet, perhaps the greatest of pulpit orators, was full of dignity, and often sublime. The want of free institutions through the greater portion of her history, has prevented France from producing many popular orators. Her first revolution was not unfruitful in eloquent men, conspicuous among whom were Mirabeau, Barnave, Vergniaud, Danton, and Robespierre. The first was the most distinguished for oratory; and perhaps France has never produced, in that respect, his equal. Abrupt and graphic in diction, fervid in thought and manner, terrible in denunciation, of dauntless courage, and of great versatility—these were the characteristics which made him the ruling spirit in the storm of debate. In the present century, Berryer, Guizot, Thiers, and Lamartine have won high positions in the ranks of eloquence. Guizot and Thiers for many years were rival statesmen as well as rival orators. The former possesses more dignity of manner and style, and takes a more philosophic view of a question; the latter in versatility, in adroitness, and in the power of minute description, is his superior. Guizot is the greater orator, for his audience go away full of the subject of which

he has treated; while Thiers engrosses them more with himself. One is more convincing; the other more astonishing. The eloquence of my own country is an attractive theme, but one so extensive as to require a volume, and not a portion of an essay, for its elucidation. In early colonial times, there was little scope for oratory. The felling of trees, the expulsion of savages, and the procuring of the necessities of life, furnished full employment for the settlers. Besides, the legislative assemblies had but a very limited jurisdiction. They and the people were closely bound down by a power beyond the sea, and were obedient to edicts penned thousands of miles distant. It was not until British oppression had aroused resistance in the bosoms of our ancestors, that popular eloquence became a power in the State. When great questions are forced by circumstances upon the popular mind, genius seizes the golden moment in which to permanently impress, in which to acquire immortal fame. British tyranny in the form of port bills, writs of assurance, taxation of tea, and standing armies, brought to life and light the abilities of men who had been slumbering in their strength. Otis, Quincy, John Adams, and Samuel Adams were responsive to their country's call. John Adams was a speaker of great power, impressing by the force of his ideas and the warmth of his feelings; superior to Samuel Adams in eloquence, the latter did not yield to him, or to any, in solidity of argument, sound sense, and genuine patriotism. Otis and Henry were the greatest of our revolutionary orators. Quincy and Lee possessed more polish, but they possessed less depth of enthusiasm and force of intellect. James Otis in the character of his mind and eloquence, was of the same order as Patrick Henry, Chatham, and Mirabeau. Bold in his figures, strong in his conceptions, his eloquence was overpowering; his blade, if not highly polished, was so massive, that it struck to the earth the strongest of his foes. Henry was beyond all comparison the greatest orator of his time; nor has America or Europe since produced his superior. He possessed deep enthusiasm and lofty courage, a graceful mien, and a voice of great range and power. When in the full career of his oratorical efforts, he might be aptly compared to the eagle soaring with tireless wing and unblanched eye, towards the noon-day sun. He spoke in assemblies distinguished for eloquent men; he was not like Pompey's pillar, which appears loftier from the surrounding plain. When he spoke it was impossible not to listen, and to listen to him was to be entranced. His speeches are very imperfectly reported; many of his finest efforts not being reported at all. Most who attempted to find it impossible to take notes while he

spoke. Not metaphysical, not highly ornate, not elaborate in style or manner, nor variously learned, he had strong natural sense, and a rare knowledge of the human heart. It was his to convince, to persuade, to enchain, to sweep with a master's hand all the chords of human feeling. He

"So charming left his voice, that we a while
Still thought him speaking, still stood fixed to hear.

He resembled Chatham more than he did any other British orator. That grand outburst of patriotic feeling in the House of Burgesses which concludes with, "As for me, give me liberty or death," has never been surpassed in moral sublimity. Said Jefferson, "he spoke as Homer wrote." Said John Randolph, "he was Shakspeare and Garrick combined." The classic and harmonious Richard Henry Lee, and the impetuous Innes, were great Virginia orators, but not comparable to the thunder-bearing Henry. Massachusetts, South Carolina and Virginia have given birth to a greater number of illustrious orators, than any other States of the Union. Massachusetts has produced an Otis, a Quincy, John and Samuel Adams, a Dexter, an Ames, a Choate, and an Everett, and Webster, greater than them all, is her adopted son. South Carolina boasts a Rutledge, of Revolutionary memory, whom Patrick Henry pronounced the most eloquent man in the Congress of 1774. She was proud, and justly so, of her Hayne and her McDuffie, and above all, of her great son, Calhoun. None of his rivals excelled him in clear and condensed argumentation, in the power of thorough analysis, in force of diction, and sincerity of manner. Virginia is not only the mother of States, but the mother of orators. Her Henry, Lee, and Innes have been already alluded to. William Wirt was born, it is true, in Maryland, but he was Virginia's son by adoption. Never much in political life, his eloquence belongs almost exclusively to the bar. In a profession which has produced in this country many profound and eloquent men, he stood, if not first, among the foremost. For many years he was the acknowledged rival of Pinkney, the great Maryland barrister. Pinkney was more elaborate in his manner and diction, more solid and condensed in his argumentation, but in richness of imagination, in the flowers of fancy, in true fervor and naturalness of eloquence, Wirt was unquestionably his superior. William C. Preston, the orator of inspiration, is a native of Virginia. In fervency of manner and richness of imagery, he knows no superior. In one department of eloquence—the pathetic—he excels all living orators. It is somewhat remarkable that
